TO ARCHITECTS, MERCHANTS, BUILDERS, &c.
TRICKETT and PERKIN can supply any quantity of their IMPERISHABLE RAWDON-HILL STONE from their quarries at Harewood, near Leeds. This stone is of a fine grit, perfectly uniform in colour; can be seen to advantage in the much-admired buildings now being erected in Albion-street, Leeds, for the Leeds and Yorkshire Assurance Company, B. Gingell, esq. of Bristol, architect; and also at Harewood House, where it was used for the extensive alterations and improvements made by Sir Charles Barry. They have a high opinion of the stone; no part of the most exposed mouldings, or carved stonework, shows the least signs of decay. The stone has been analysed by an eminent chemist and geologist, his opinion is, that it is the most durable stone in the market, and, as known, must be most extensively used wherever a good, strong, and durable stone is required The stone can be got of any size or length up to 10 tons, is most suitable for steps, stairs, balcony landings, ashlar fronts, columns, tombs and monumental work, &c. &c. Superior grindstones, large or small. Address, S. TRICKETT, Victoria Stone Wharf, Isle of Dogs, sole London agent, who will keep a stock for selection for immediate use or supply, direct from the quarries, by vessel or railway, to order.

BANGOR SLATES.
J. EASTWOOD AND SONS,
KENT ROAD BRIDGE.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Mailtone Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price lists may be had upon application, either personally, or by post. Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in completing this invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Builder and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations; his Slate only which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the returning pieces at railway stations, and wherever there is much wear. N.B The Tariff for 1854 is now ready.
Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Barracks, Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Purfleet, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank street; also by Messrs Sharpe, Tooley street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

TO BUILDERS, MASONS, AND CONTRACTORS.
OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, East-street, Holywell street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving; pipes, pots, &c all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Established 1821.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD FLUESTER respectfully informs Builders, Masons, and Others that he continues to supply the Box-hill Ground Stone, Corsham-down, Combe-down, and Farleighdown Stone, of the best quality, and at the lowest prices. Painswick and Forest of Dean Stone in blocks, steps, landings, or slabs of any thickness. N.B. Stone and other goods landed and carted

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin

List of prices at the quarries and depots, also cost for transit to any part of the Kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY are now prepared to UNDERTAKE CONTRACTS for the EXECUTION of WORKS of an Architectural or Ornamental character This stone is composed of sand-stone grit and other siliceous material, combined by means of that dissolved by the patent process), the result being a material most indestructible in its nature, and by its freedom from stratification, protected from those injuries to which natural stone is liable
Specimens may be seen on application at the Office, and a variety of designs in open Terrace-work, Balustrades, Copings, Fountains, Tombs, Chimney-pieces, Pavements, Ecclesiastical and other decorative work.
Attention is also particularly requested to the Ashlar for facing buildings, and to Patent Hollowed and Dovetailed Building Blocks, manufactured in the siliceous stone, which combine great strength with economy and speed in erection, are perfectly fireproof, and offer peculiar facilities for ventilation and the circulation of warm and dry air.
8, John-street, Adelphi. E. MENDHAM, Secretary.

DRY PINE PLANKS, TIMBER, and DEALS.—Builders and other consumers may effect a considerable saving by purchasing of Mr GEORGE WALLEN, Timber Merchant, of Adelaide-chambers, 43, Gracechurch-street, City, who has a large well selected stock in the docks, which he is determined to sell at the lowest remunerative prices for cash

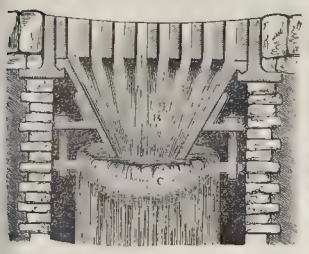
BENDS, JUNCTIONS, TRAPS, &c. 29, HIGH STREET, LAMBETH, LONDON Established 1750.

Water Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so well understood, as to render any recommendation of them almost superfluous. Their cheapness, efficiency, and durability are universally admitted; while the increasing demand for them proves the estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an extensive Stock of Drain Tubes, of every description and size, adapted to the various situations in which they may be required; also the WATER-CLOSET PANS, for the IMPROVED CONSTRUCTION, with interior glaze, far surpassing in utility those manufactured of Brown Stone ware.



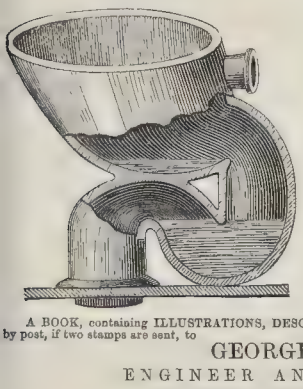
N.B. These are made without the discharge-hole, being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City-road Basin, Dockhead, Bermondsey; Dunn's Wharf, foot of Battersea-bridge; Pratt Wharf, King's-road, Camden New-town; and of CALDWELL, Brothers, 12, Bridges-street Covent Garden.

J. TURNER 2, South Wharf, Praed-street, Paddington; and at WOLWICH.

Drawings and List of Prices will be forwarded free, on application.

JENNINGS'S SKELETON GULLY-TRAP.



With a view to extend the use and REDUCE the COST of this Trap, the Patentee is now manufacturing them without the iron case as heretofore shown.

This REDUCES THE COST OF THE TRAP ONE-THIRD; as also the cost of carriage, and in no way impairs its efficiency; it can be fixed over any Gulley-hole, and the parts B and C take a bearing on the frame as shown; the grating being hinged, falls and secures the whole. If at any time it is necessary to enter a sewer from the gully-hole, or clear the deposit from the chambers, the grating can be raised, and the parts B and C removed without trouble.

The Patentee will be happy to furnish any further information as to SIZES, PRICES, or WEIGHTS, and refer to Towns and Public Buildings in which they are in use.

JENNINGS'S IMPERISHABLE WATER-CLOSETS

HAVE A LARGE WATER SURFACE, TO PREVENT ADHESION AND CONDENSE EFFLUVIA.

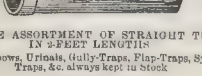
The backs are so formed, that they cannot be soiled. They are free from all machinery, imperishable in their material, displace no impure air, and save the usually expensive lead-trap. In their different varieties of ware, they are fit for the PALACE of the QUEEN, or the COTTAGE of the POOR MAN.

Immediately publicity was given to this Closet, the Patentee received orders to FIX THIRTY-THREE in the GREAT INDUSTRIAL EXHIBITION, DUBLIN; THIRTY-SIX in GUY'S HOSPITAL; NINETY-EIGHT at the NEW WESTMINSTER WORKHOUSES; and their WEEKLY SALE NOW EXCEEDS 300.

ARCHITECTS, BUILDERS, AND PLUMBERS ARE INVITED TO SEE THIS CLOSET IN ALL ITS VARIETIES OF WARE, IN ACTION ON THE PREMISES.

Where also may be seen,

JENNINGS'S STREET GULLY-TRAPS; SINK, AREA, and STABLE TRAPS; LAVATORIES, Angular or Square; URINALS. SLUICE-VALVES, FIRE-VALVES, HIGH-PRESSURE BALL and other COCKS; JOINTS for Connecting Lead and other Malleable Pipes, without Solder; SHOES for Preserving the Corners of Shop Shutters, and securing them without a Bar; SUPPLY-VALVES to CLOSET BASINS, which combine the Waste and Service in one, and require neither Ball, Lever, nor Wire; and many other things necessary to comfort and health.



A BOOK, containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES, can be had free, on application, or by post, if two stamps are sent, to

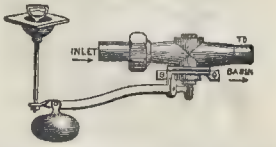
DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

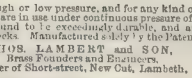
These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.



The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,



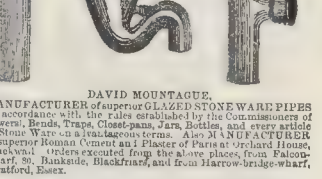
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

LAMBERT'S SELF-CLOSING
LAVATORY AND CLOSET-VALVE

Is a capital for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

SUPERIOR GLAZED STONEWARE
DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14,
VAUXHALL-WALK, LAMBETH.



W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

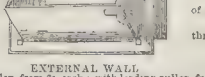
W. N. invites particular attention to the superior quality of the glaze used in its manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rusher and Co.'s Wharfs: Kingsland, Blackfriars, and Mill bank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—W. Peters's, North Wharf, Paddington.—C. Richardson's, South Wharf, ditto.—G. Erith's, Cambridge Heath Wharf, Hackney.—Mulwood and Co.'s Wharfs, Kennington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britton-street, Chelsea; and at the Pottery.

VICTORIA POTTERY, LEIGH,
NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONE WARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 99, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.



STAFFORDSHIRE POTTERY.—
WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill-wall, Poplar. Closet-basins, urinals, bidet-pans, plug-basins, washhand-tables, beer-machine handles, closet-handles, bath-knobs, &c. toilet ware, fancy jugs, paste-pots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.
A DESIDERATUM in SLUICE-VALVES.
FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

SUCCESSFUL VENTILATION.—
WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants, and as they are placed on the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 185, Blackfriars-road, and 17, Union-street, Borough; and of all respectable ironmongers, builders, &c.

PATENT SELF-ACTING VENTILATOR.
TO BE DISPOSED OF, the PATENT of a SELF-ACTING VENTILATOR, suitable for public buildings, greenhouses, &c. Model may be seen and particulars obtained at Mr. H. STANTON'S, Auction and Agency Offices, 53, Chancery-lane.

THE BUILDER.

SALES BY AUCTION.

Sale of Marble Chimneypieces, solid Sienna Marble Columns Marble Slabs of very large dimensions, and Inlaid Slabs of the rarest Marbles

MR. H. PERKINS will SELL by AUCTION, on FRIDAY, FEBRUARY 17, 1854, at ELEVEN for TWELVE o'clock precisely, at FREEMANTLE HOUSE, Freemantle Park, the valuable and MARBLE FITTINGS, all taken down and ready for delivery of the above mansion. The plain marble, about 1200 feet superficial, consisting of slabs of various sizes, in statuary, veel antique, and black and gold, is all convertible, at little cost, into chimneypieces. The inlaid slabs, of costly marbles, are suitable for table tops, and the Sienna marble columns and pilasters, with carved caps and bases and pure statuary, afford an unequalled opportunity to gentlemen about to build.—Catalogues may be obtained of the Auctioneer, Southampton

BARK.—To Tanners and Oak Bark Merchants.—Fourteen Stacks of superior Oak Coppice Bark (estimated contents, 80 tons). To be SOLD by AUCTION by

PULLEN and SON will SELL by AUCTION, on the PREMISES, on THURSDAY, FEBRUARY 16, and following days, at TWELVE, by order of the Improvements Committee of the Corporation of the City of London, the whole of the very extensive and costly FITTINGS-UP and APPENDAGES of Messrs. Bremner and Co.'s late Warehouses and Show-Rooms, 33, St. Paul's-churchyard, comprising splendid inside and centre showcases, of fine Spanish mahogany, glazed with plate and patent-plate glass, fine super mahogany and other counters, extensive ranges of mahogany-edged shelving, nests of about 600 mahogany and other drawers, handsome counter cases of brass and mahogany, with plate-glass, all the superior fittings-up of the counting-houses, including fifteen office desks, a valuable Mordan's patent fire-proof safe, 6 ft. 6 in. by 2 ft. 6 in., three other iron safes, and the erection of a strong room, with wrought-iron doors, marble washstands, mahogany cabinets and bookcases, and fittings of the private rooms, capital partitions, glazed with plate and ornamental glass, and splendid lobby doors, a ventilating air-pump, by Edwards, powerful lifting apparatus complete, by Bunnett and Corpe, iron crane and pulley, two massive gas-burners, elegant three and five light chandeliers, 3,000 feet of gun barrel and metal tube, the expensive fixtures of the kitchens, with capital range, wrought boilers, hot plates and steam closets, cisterns, pipes, and a great variety of valuable property.—May be viewed two days previous; catalogues had at the Architect's office, Guildhall; and of Pullen and Son, 89, Fore-street, Cripplegate.

Pair of Carcasses, near Addison-road, Kensington

MR. FRED. GODWIN has to SELL, PRIVATELY, on highly eligible terms, a PAIR of CARCASSES, built in the villa style, well placed in this improving locality.—Auction and Agency Offices, 3, Halkin-terrace, Belgrave-square.

WAREHOUSES WANTED.—A party is desirous of obtaining substantial warehouses, or ground on which warehouses might be erected, in the neighbourhood of Gracechurch-street, Fenchurch-street, or Mark-lane.—Address, post-paid, Mr. H. L. MORGAN, 11, Langbourn-chambers, Fenchurch-street

TO BE SOLD by PRIVATE CONTRACT, by THOMAS COMPTON, a FREEHOLD RESIDENCE, delightfully situated at Reigate quarry, close to the church, where there is daily service, and within ten minutes' walk of the town and the railway station. The house is in every respect calculated for a large genteel family, having stabling, coach-house, garden, conservatory, ice-house, and offices of every description in perfect repair, and in excellent supply of both spring and rain water.—For particulars and cards to view apply to T. COMPTON, Estate Agent, 76, Coleman-street, City, and Enfield, Middlesex; or to Messrs. Smith and Nash, Estate Agents, Reigate.

DIAL GLASSHOUSES, Audnam, near Stourbridge.—TO BE SOLD by PRIVATE CONTRACT, all that valuable FREEHOLD PROPERTY, known as the "Dial Glasshouses," consisting of two large Flint Glass Works, with spacious potrooms, sheds, offices, and other buildings attached, suitable for carrying on the Glass Trade or any other Manufacturing in an extensive way. Also a piece of wharfing on the Stourbridge Canal, and commanding with the Wolverhampton and Stourbridge turnpike-road; three excellent dwelling-houses, and also a large Piece of Land adjoining, admirably adapted for building, having a frontage of 30 yards to the said turnpike-road, and 131 yards to a private road leading therefrom to the Glasshouses, the whole containing 3a. 0r. 29p.—For terms and particulars apply to JOHN HARWARD, Esq. Solicitor; or to Messrs. OATES and PERRINS, Auctioneers, of Stourbridge.

CHESTERFIELD HOUSE and GROUNDS, containing upwards of 2½ ACRES of LAND, TO BE SOLD by PRIVATE CONTRACT.—For particulars apply to Messrs. ROBINSON and BARLOW, Essex street, Strand, or to Mr. DECIMUS BURTON, 6, Spring gardens

TO BRICKLAYERS, BUILDERS, &c.

SUNBURY, MIDDLESEX.—The excellent BUSINESS PREMISES and the old-established Business, which has been in the same family for a very long period, TO BE SOLD, in consequence of the decease of the late proprietor, James Jacob. For particulars apply to Mr. WALKER, Surveyor, Hampton Wick; Mr. FIELD, Surveyor, Hounslow; and to Mr. WM. THOS. COLLINS, Sunbury. A most desirable first stock in trade may be had at valuation, and the whole, with the household furniture, will be sold shortly by auction if not disposed of by private contract.

SUBURBAN VILLA and VILLAGE ASSOCIATION.—Further SITES near the Crystal Palace, or other suburbs of London, being required for the ERECTION of VILLAS of various sizes for the members of the Association, the committee are prepared to treat for eligible Building Land.

JOHN GREEN, Secretary pro tem.

9, Warnford-court, City, Jan 1854

BRICKLAYER'S and BUILDER'S BUSINESS, WEST END) TO BE DISPOSED OF (100l. only). Mr. PATCHING has instructions to SELL this well-established BUSINESS, with a connection amongst some of the first firms in London, containing about 3 acres, lying, &c. References given, and parties personally introduced to the customers, and being an old-established genuine concern, is a complete bona fide affair. Apply at Mr. PATCHING, Builder's Agent, 35, Greyhound-street, Leicester square

TO ENGINEERS, FOUNDERS, IRON and WOOD SHIPBUILDERS, &c.

A FIRST-RATE BUSINESS TO BE DISPOSED OF, on the banks of the Thames, most advantageously situated. The buildings are all arranged in a very complete manner, and the plant, tools, and machinery of the best descriptions; and all appliances ready to hand for carrying on an extensive and remunerative Trade. Respectable parties will be liberally dealt with, and a moderate capital only required.—Apply to Mr. R. A. CHARLTON, 14, Bucklersbury.

ADVERTISEMENTS.

BUILDERS' BENEVOLENT INSTITUTION.—An ELECTION of THREE PENSIONERS will take place in MAY, 1854. Candidates must obtain forms of application (to be returned on or before 3rd MARCH) from the Secretary, at the Offices of the Institution, 19, Southampton-street, Bloomsbury-square.

A. G. HARRIS, Secretary

2nd February, 1854.

BOROUGH of LEICESTER. — PUBLIC HEALTH ACT.—TO SURVEYORS and ENGINEERS.—All persons desirous of applying for the Office of SURVEYOR to the LOCAL BOARD of HEALTH for the Borough of Leicester, are requested to send in their applications, accompanied by testimonials, addressed to Mr. WM. KELLY, Town Hall, Leicester, on or before the 7th day of MARCH next. The Surveyor will be required to give up his whole time to the service of the Board, and must be competent to superintend the construction of sewers, culverts, roads, and streets; to make surveys, take levels, and prepare plans and sections; and to advise the Board in relation to the erection, drainage, and ventilation of buildings, cesspools, &c. and any matters arising under the Public Health Act, or relative to the improvement or laying out of the estates of the corporation. A practical knowledge of architecture will be a recommendation. The salary will be the clear sum of £200 and the surveyor will be allowed to take one pupil. An office will be provided by the Board. A specimen plan, with a specimen section by the applicant, must accompany the testimonials.—By order,

SAMUEL STONE, Clerk to the Local Board.

Leicester, February 9, 1854.

COMPETITIONS.

TO ARCHITECTS AND BUILDERS.

LOUTH BURIAL BOARD.—The Burial Board for the parish of Louth, in the county of Lincoln, are ready to receive DESIGNS and ESTIMATES for laying out the proposed Burial Ground, with suitable entrances and lodge, and for the Erection of two Chapels, with all requisite internal fittings, and either in one or separate buildings. The site selected for the burial ground is a close of land containing about ten acres, occupied by Mrs. Bowline, and situate between the Spilsby-road, and Ball Piece-lane, in Louth; and it is intended to divide the same into equal moieties, one-half to be consecrated and the other not. The Board will meet on TUESDAY, the 7th day of MARCH next, to receive such designs and estimates as are to be sent, sealed, on or before the 6th day of MARCH next, addressed "To the Clerk of the Burial Board," at his office where a sectional plan of the land may be seen, and any further information had.

CHRIS. INGOLDBY, Jun. Clerk to the said Burial Board.

INSTRUCTION IN ART, General and Special, as afforded at the CENTRAL SCHOOL of the DEPARTMENT of SCIENCE and ART, at MARLBOROUGH HOUSE, Pall-mall, London. The School consists of

I. A NORMAL SCHOOL for TRAINING TEACHERS.

II. SPECIAL CLASSES for TECHNICAL INSTRUCTION.

Mr. RICHARD REDGRAVE, R.A.

The SPRING SESSION will COMMENCE on the 1st of MARCH, and end 31st of July; and the fees are for that period.

1. The courses of instruction are intended to impart systematically a knowledge of the scientific principles of art, especially in its relation to the useful purposes of life. A limited application of these principles is demonstrated with the view of preparing students to enter upon the future practice of the decorative arts in manufactories and workshops, either as masters, overseers, or skilled workmen. At the same time instruction is afforded to all who may desire to pursue these studies without reference to a preparation for any special branch of industry. Special courses are arranged, in order to train persons to become masters of schools of art, and to enable such masters to form local and other schools to teach elementary drawing as a part of general education concurrently with writing.

2. The Lectures and Courses of Instruction are as follows:—

GENERAL COURSE FOR MALE STUDENTS ONLY.

A. Free-hand, Model, and Elementary Mechanical Drawing, Practical Geometry, Perspective, Practical Shadows, Tempera, and Water Colours, Modelling. The Classes for Drawing, Painting, and Modelling, include the Figure from the Antique and the Life; and Artistic Anatomy. Lectures Teaching and Practice, in the Morning and Evening. Fee of the Session, Head Master, Mr. Burchett, Assistants, Messrs. Herman, Walsh, Denby Wills, and Hancock.

B. The Evening Instruction is limited to Free-hand Drawing, Painting and Modelling, including the Figure. Fee, 2l.

TECHNICAL COURSES.

C. Practical Construction, including Architecture, Building, and the various processes of Plane Description, Carpentry, and Metal Working. Lectures, Teaching and Practice, Morning and Evening. Fee, 3l. Evening Course only, Fee, 2l. for Male Students only. Superintendent, Mr. Wilson.

D. Mechanical and Machine Drawing. Class Lectures with Evening Teaching and Morning Practice. For Male Students only. Fee, 2l. Superintendent, Mr. W. Boyes.

E. Surface Decoration, as applied to Woven Fabrics of all kinds, Lace, Paper Hangings, &c. Lectures, Teaching and Practice, Morning and Evening. Fee, 4l. An Afternoon Class for Female Students. Fee, 2l. An Evening Class, for Male Students only. Fee, 2l. Superintendent, Mr. Octavius Hudson.

F. Porcelain Painting daily Teaching and Practice for Male and Female Students. Fee, 3l. Superintendents, Mr. Simpson and Mr. Hulson.

G. Wood Engraving. Lectures, daily Teaching and Practice for Female Students only. Fee, 2l. Superintendents, Mr. Thompson and Miss Waterhouse.

H. Lithography. Black, Tint, and Colour. Daily Teaching and Practice for Female Students only. Fee, 4l. Superintendents, Mr. Brookes and Miss Cranston.

PUBLIC LECTURES.

On the Forms and Colours of Animal and Vegetable Kingdoms, by Professor E. Forbes; on the Human Form, by Mr. J. Marshall, F.R.C.S.; on the History of Ornamental Art, by Mr. Wornum, &c. Admission by Tickets, 1s. each.

3. The Instruction for the general Students is carried on daily, except on Saturdays.

4. Students may matriculate for a period of three years upon paying 2l. in one sum on entrance, or three annual payments of 1l. They are entitled to attend all Public and Class Lectures, the general and technical Courses, to receive personal instruction and to practise in the School at all times; they have also access to the Museum and Library. At the end of the session they may pass an Examination, and have the privilege of competing for Scholarships, varying from 10l. to 30l. a year in value.

5. Occasional Students are at liberty to attend only the particular Courses for which they enter, and have admission to the Museum, Library, and Public Lectures.

6. A CLASS FOR SCHOOLMASTERS AND PUPIL-TEACHERS will meet every TUESDAY and THURSDAY EVENINGS, and on SATURDAYS. Fee, 5s. Superintendent of the Training, Teaching, and Elementary Instruction, Mr. Burchett; Assistant, Mr. Bowley.

At 37 Gore House, Kensington, on MONDAYS and THURSDAYS.

7. A Register of the Students' attendances is kept, and may be consulted by parents and guardians.

8. The SCHOOL FOR THE FEMALE STUDENTS passes through the general courses as at Gore House. Superintendent, Mrs. M'Ian; Assistants, Miss Gann and Miss West.

Fees:—Advanced Classes, 2l. and 4l.; Elementary Class, 20s.; Evening Class, 2l. A Class meeting at Gore House, Kensington, on MONDAYS, WEDNESDAYS and FRIDAYS.

9. DISTRICT SCHOOLS OF ART in connection with the Department are now established in the following places. Open every evening except Saturday, from 7 to 9:30. Entrance fee, 2s. Admission, 2s. and 3s. per month. The instruction comprises Practical Geometry, Perspective, Free-hand and Mechanical Drawing, and Elementary Colour:—

1. Spitalfields, Crispin-street.
2. North London, High street, Camden-town.
3. Finsbury, Williams-street, Wilmington-square.
4. Westminster Mechanics' Institute, Great Smith-street.
5. St. Thomas, Charterhouse, Goswell-street.
6. Rotherhithe, Grammar School.
7. St. Martin-in-the-Fields, Long Acre.

At 1, 2, and 5 Schools there are Female Classes. Application for admission to be made at the Offices in each locality.

For further information, apply at Marlborough House, Pall-mall.

HENRY COLE,
LYON PLAYFAIR, } Joint Secretaries.

Schedules and particulars of the contract may be obtained on any day (Sundays excepted), at the Office of the Commanding Royal Engineer, Birmingham, or at the Offices of the Barracks-masters at Brecon and Newport on the 20th MARCH, 1854. The Tenders are to be sent addressed to the Ordnance Office in London on or before the 24th of MARCH, 1854, and dressed and endorsed agreeably to the directions prefixed to the printed schedules. A deposit of One Pound will be taken from each person applying for a schedule, and eligible securities will be required for the due performance of the contract from the person whose Tender may be accepted.

Commanding Royal Engineers' Office, 77, Lovedays-street, Birmingham, Feb. 13, 1854.

ORDNANCE CONTRACTS for BUILDER'S WORK.—The principal Officers of her Majesty's Ordnance do hereby give notice, that they will receive TENDERS from such persons as may be desirous of CONTRACTING for the performance of Bricklayers', Carpenters', Masons', Plumbers', Glaziers', Paperhangers', Paviors', Plasterers', Plumbers', Slaters', and Smiths' Work, at the undermentioned stations in the Midland and South Wales District, for three years from 1st APRIL, 1854:—

BIRMINGHAM,
COVENTRY,
WEEDON,
NORTHAMPTON,
NEWPORT,
BRECON,
CARMARTHEN.

Schedules and particulars of the contracts may be obtained at the Office of the Commanding Royal Engineer, Birmingham; or at the Offices of the respective Barrack-masters, any day (Sundays excepted) after the 20th MARCH, 1854. The Tenders to be delivered in London, at the Ordnance Office, on or before the 24th MARCH, 1854, addressed and endorsed agreeably to the directions printed on the printed schedules. A deposit of 1l. will be taken from each person applying for schedules, and the person whose Tender may be accepted will be required to provide eligible securities for the due performance of the contracts.

Commanding Royal Engineer's Office,
35, Lovedays street, Birmingham.

TO CONTRACTORS.

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 6th day of MARCH, 1854 from persons desirous of contracting with the Board of Ordnance for the ERECTION of ADDITIONAL ACCOMMODATION for the GARRISON HOSPITAL, at CHATHAM.

Plans and specifications of the works to be done and forms of Tender obtained, on application at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 4th preceding Sunday exceptd.

The person whose Tender may be accepted will be required to enter into a bond with two eligible securities, jointly and severately to be bound under a penalty of £1,584, for the due performance of the contract.

Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Chatham."

No Tender can be admitted after the said 6th day of MARCH, 1854.

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

W. R. OLD, Lieut.-col. Commanding Royal Engineer.

Royal Engineer Office, Chatham, 13th Feb. 1854.

NOTICE.—TO BUILDERS and OTHERS.

ORDNANCE CONTRACTS.

The Honorable Board of Ordnance are about to enter into CONTRACTS for the following descriptions of Artificers' Work, at the several stations in the Woolwich district, from the 1st April, 1854, to the 31st March, 1856, viz.

AT WOOLWICH:

for carpenters, bricklayers, masons, slaters, plumbers, painters, glaziers, and paperhangers, paviors, smiths, and ironmongers, and for

AT PURFLEET:

for the same trades, except painters, glaziers, and paperhangers, and with the addition of plasterers.

AT WALTHAM ABBEY AND ENFIELD LOCK:

for the same trades as for Woolwich, with the addition of plasterers and millwrights.

AT SHOEBURYNESS

for the same trades as for Woolwich, with the addition of plasterers.

The Commanding Royal Engineer at Woolwich hereby gives notice, that such persons as may wish to TENDER for the same, may obtain the schedules, etc. on and after TEN and FOUR, from the 20th FEBRUARY to the 6th MARCH, 1854 (Sundays excepted), by personal application to the Clerk of Works, at the Royal Engineer Office, Royal Arsenal, Woolwich, for the Woolwich and Shoeburyness Contracts, to the Foreman of Works, Royal Engineer office, Purfleet, for the Purfleet Contracts; and to the Clerk of Works, Royal Engineer office, Waltham Abbey, for the Contracts for Waltham Abbey and Enfield-lock. No schedule will be issued after the 6th of MARCH.

Tenders will be received for each trade separately, or for all the trades in one contract, for each station; the parties tendering for such contract to state the rate per cent above or below the schedule prices at which they will perform the works specified in each schedule.

Tenders of both descriptions, to be delivered, prepaid, at the Ordnance Office, Pall-mall, London, on the 7th MARCH, 1854, addressed to "The Secretary to the Board of Ordnance," and marked "Tenders for Works."

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, February 13, 1854.

[For remainder of Contracts see next page.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace grates, soot doors, for the same, hot-water pipes, elbows, tees, syphons, throttle valves, stop cocks, flange and socket elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron Bridge wharf, No. 6, Bankside, London, near the Southwark-bridge.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILESVE'S PATENT CALORIFERE evaporating in twenty-four hours about 6 cwts. of water, without a terme the most severe or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or workmen saved, as I rent thereby consider this reduced by the use of the above valuable stove. It is in operation at Wood paving Company's Works, Pimlico; at Mr. Mackenwies, Architect, of Victoria-street, Westminster; Vogan, Son, and Raymond, Dockhead, and several maltsters, millers, and manufacturers in London and country.—Apply per post to T. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55 King William-street, City.

WARMING by HOT WATER.—Churches, Chapels, Public and Private Buildings, heated with hot water from 50 to 15 Acres, upon the most approved principle, by C. WILLIAMSON, Engineer, Coventry. N.B.—A guarantee given with each apparatus.

NEW HOUSES OF PARLIAMENT.—DEFRIESS'S GAS STOVES, RANGES, and BATHS, just completed for the Kitchens in the above building. A great variety in stock upon the same principle. Gas Boilers from 7l by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas-Meters.—50,000 in use. Testimonials at the Office, 145, Regent-street. Manufactories removed from Hanover-road and 84, Martin's-lane to more extensive premises, New-road, near Albany-street.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

BRASS WORK.—The advantages of direct communication with a bonâ fide Manufacturer are too obvious to need elucidation; to architects, builders, and the trade generally these advantages in their fullest extent are afforded by C. JONES and SON, 36, Monkwell-street, City. Prices and prefwork of every pattern and dimension. Rod and fret work for every purpose. The oldest house in London for door and stallboard plates.

THE attention of Builders is directed to the important improvement in WEBB and GREENWAY'S PATENT IRON BARREL BOLT, which is perfectly even on the back, consequently can be fixed in much less time than the old tower or barrel bolt.
WEBB and GREENWAY also draw attention to their
Patent Brass Barrel Bolts.
Patent Brass and Iron Casement Stay and Fastener.
Patent Double-action Floor Door Springs.
Patent Brass and Wood Knob Cupboard Furniture, with revolving Spindles, Brass Gothic Door ditto, Chimney Glass Knob ditto.
Patent Warwick Piston Latch; Brass Eyes for Cornice Pole Rings; Copper, Brass, and Steel Wemer's Mails.
The above can be had from all Ironmongers throughout the United Kingdom; and from the Manufacturers WEBB and GREENWAY, Brasstounders and Locksmiths, Steelhouse-lane, Birmingham.

GAS CHANDELIERS and BRACKETS.—

The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to leave some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Ironmongery Establishment the large-t and most remarkable in the kingdom, viz. from 12s. 6d. (two-light) to 16l. 16s.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS (all communicating) exclusive of the shop, devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated and japanned wares), iron and brass bedsteads, so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent (per post) free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of New-man street); Nos. 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

IRON FOUNDRY, 80, Goswell-street (late of Brick-lane, St. Luke's).—J. JONES, having made great additions to his STOCK of PATTERNS, begs to inform the Trade that he can now supply them with Plain and Ornamental Iron Columns Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c

BAKERS' OVEN WORK, Force Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

FOUNDRY AND IRON WORKS,

68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE

GLOVER, BROS.,

Hollett the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes Wheels, Pinions, Ladders, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and OG Gutters, Air bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra cotta.

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Look-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,
168, DRURY-LANE, and CHARLES STREET.

FIRE-PROOF CONSTRUCTION.—

FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION of BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron and concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron to the strictures possessing great strength and rigidity, and forming a fire-proof foundation, adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

IRONMONGERS AND MANUFACTURERS,

TO BUILDERS, CARPENTERS, AGRICULTURISTS, AND GARDENERS.

BENNETT and NAYLOR, GENERAL

IRONMONGERS and FACTORS, Sole West End Agents for PARKES' late Winton Parkes celebrated STEEL DIGGING FORKS and TOOLS; also for the only efficient STOVE, with or without a Flue, suited for Greenhouses and Conservatories, patronised by her Majesty, price from 12s. upwards, at the Great Western General Iron mongery Warehouse, 253, Oxford-street, between Park-street and North Audley-street, established for the sale of all descriptions of iron mongery at wholesale prices. GALVANIZING WORKS.—SKAIFE'S

PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-basin, Commercial-road, Lambeth, London. J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges. Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain water, Screwed Gas and Water-pipes; Hooping, Castings, Furnace-pans, Baths, Buckets, &c. wholesale, retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbe's Zinc Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

212 SAFES.—MILNER'S HOLDFASTS,

fire resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best, and cheapest, because the only effectual safeguards against fire, robbery, or violence, for ledger-books, cash, or valuables. Lord Chief Justice Campbell, in summing up in the trials for the infringement of MILNER'S SAFES, was pleased to observe—"He must say he had been astonished to find such strong evidence of their usefulness; up to this hour he had no idea that there were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an invention, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be allowed on all hands; IT SEEMS TO BE A MOST MANIFEST PROVISION FOR AGAINST FIRE, for the water remains permanently held in artificial or natural vessels, AND THE VERY CALAMITY BRINGS THE CURE for the heat releases the water or moisture, and then it is turned into steam, and the steam moistens the substance that is to be preserved, AND SO IT IS AS EFFECTUAL GUARD AGAINST FIRE. Milners' Patent Safe Works, Liverpool; London Depôt, 47A, MOORGATE-STREET, City, London.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED

J. H. BOOBBYER, late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope street, Clare-market, London.

RECENT TESTIMONIALS
of the practical worth and efficiency and security of
CHUBB'S LOCKS AND STRONG-ROOM DOORS.

CHUBB and SON beg to lay before the

public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:—

Ineffectual Attempt upon the Strong Room of the London and North-Western Railway, Liverpool.

"London and North-Western Railway Company,
Liverpool, 17th May, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the Strong Room at this Office, and which completely baffled the efforts of one or more burglars to get at the money-chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant,
"Messrs. Chubb and Son." "GEO. PALMER.

From Mr. Otway, Superintendent of Police, C Division.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your Locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will repair it required.

"I am, gentlemen, your obedient servant,
C. OTWAY, Superintendent C Division of Police.

"Messrs. Chubb and Son, 57, St. Paul's Churchyard."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with Prices and Sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

WIRE STRAND FENCING,

as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or sub-divisions, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.
136, Strand, London.
67, Hyde-park-street, Glasgow.
And at the Works, late Vauxhall.

TO TOOL DEALERS, IRONMONGERS, &c.

Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

NEW PATENT MARBLE CHIMNEY-PIECES Messrs. HARRY and SON, of Scarborough, Invite builders and the public to inspect their New Patent Marble Chimneypieces, which for variety of kind and perfection of manufacture cannot be surpassed. Marble merchants and others have been unable to distinguish them, when fixed, from real marble.—Sample chimneypieces may be seen, and all necessary information may be obtained, at THOS RICHARDSON'S, 113, London-wall, who is the sole Agent in London for the sale of the same.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention, that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath, Hackney. WM. HUSTLER Proprietor.

TO CHURCH ARCHITECTS AND OTHERS.
A BEAUTIFULLY-EXECUTED FONT, made of the Plymouth Bl eskwater[illegible]rable,[illegible]O BE SOLD, a bargain.—For cards to view, apply to Mr. TIZARD, Engineer, 34a, Aldrate High-street, London

TO BUILDERS, MASONS, AND CONTRACTORS.
OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney-pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, block and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Havre, Pas, Paris, and other stone, in blocks, slabs, landings, and head-stones. Yorkstone paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills; Harehill and self-faced slab; rubble; York paving; pipes, pots, &c all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Established 1821.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's-court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

BATH STONE DEPOT, Great Western Railway, Paddington.—EDWARD FLUENTER respectfully informs Builders, Masons, and Others that he continues to supply the Box-hill Ground Stone, Corshamdown, Coombedown, and Farleighdown Stone, of the best quality, and at the lowest prices. Painswick and Forest of Dean Stone in blocks, steps, landings, or slabs of any thickness.—N.B. Stone and other goods landed and carted.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered at her in town or country, may be had on application to MARTIN and WOOD, Market-wharf, Regent's-park-basin.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Select Block, Ashlar, Rangework, &c. Supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

BANGOR WHARF, King's-road-bridge, Camden-town. STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their Stock of Bangor Slates, Laths, Plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c Materials landed, wharfed, and carted.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarry Proprietor, Quai des Abattoirs, Caen, and at 6, Red Lion-street, Borough-market. Contracts taken for any quantities. Cargoes shipped to order from Caen to any port.

GATES and GEORGE, late LUARD, BEEDHAM, and CO., Caen, Aubigny, and General Stone Merchants Caen Wharf, Rotherhithe, London. Goods delivered to order, by land or water conveyance, and by ship to any part of the United Kingdom.

HAREWOOD GRINDSTONES.—S. TRICKETT begs to inform Engineers, Machinists, Gun-barrel makers, Cutlers, &c &c. that he can supply, direct to order, of any size or thickness, the above very superior Grindstones, the cementing particles of which being very tenacious they are suitable for steam-power. Sample Grindstones sent to order.—Address, Victoria Wharf, Isle of Dogs, where a Stock will be kept.
"Cuts like a Harewood stone."—*Old Proverb.*
Grindstones for exportation. Weetwood, Bramley Fall, and Potteneaton direct to order.

WEETWOOD BRAMLEY FALL QUARRIES and POTTERNEWTON QUARRIES.
ANN HUSLER, administratrix of the late John Husler, begs to inform her friends and the building public that she is carrying on the Stone Trade in all its branches; that she has appointed SAMUEL TRICKETT, of VICTORIA-STONE WHARF, ISLE OF DOGS, her sole Agent for London who will furnish samples and prices on application. Estimates given for the supply of large contracts, docks, locks, bridges, or buildings.

A LOT of CHEAP SLATE SLABS, &c. Mr. MAGNUS being about to erect some additional buildings, is desirous to dispose of several lots of Slate Slabs, suitable for LANDINGS and PAVING, which are now in the way.
Also a lot of DRAIN COVERING, and some PLANED SLATE GARDEN EDGING, from 5 to 8 inches deep and ¾ of an inch thick, at 2s 1d per foot run.
PIMLICO SLATE WORKS—39 and 40, Upper Belgrave-place, Pimlico.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marble the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the GOLD MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear.
N.B. The Tariff for 1854 is now ready.
Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Belford-hire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FRILMAN, Millbank street, also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

BANGOR SLATES.
J. EASTWOOD AND SONS,
KENT ROAD BRIDGE.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Linings, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post.—Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.
N.B. Wharf opposite the Wapping Entrance of London Docks.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
(DEPOTS.)
Great Western Railway Station.... PADDINGTON.
Great Western Railway Station.... BRISTOL.
Hope-street, Mount-pleasant ..... LIVERPOOL.
Castle-fields ..... MANCHESTER.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

By Her Majesty's / Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application.
E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

SPECIAL NOTICE.

SCOTTISH EQUITABLE (MUTUAL) LIFE ASSURANCE SOCIETY.
EDINBURGH ..... 36, St. Andrew square.
LONDON ..... 126, Bishopsgate-street.

TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1ST MARCH.

POLICIES EFFECTED ON OR BEFORE 1ST MARCH, 1854, WILL RECEIVE SIX YEARS' ADDITIONS AT THE ALLOCATION AT 1ST MARCH, 1859.

ROBT. CHRISTIE, Manager.
WM. FINLAY, Secretary.
WM. COOK, Agent.
126, Bishopsgate-street, Feb. 1, 1854.

INSTITUTED 1831.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Incorporated by Royal Charters, and Special Act of Parliament.
Head Office—Edinburgh. 26, St. Andrew-square.
MANAGER—Robert Christie, Esq.
London—126, Bishopsgate-street, Cornhill.
Glasgow—163, St. Vincent-street.

The Scottish Equitable Life Assurance Society is an institution peculiarly adapted to afford Provision for Families. It was established in the year 1831, upon the principle of Mutual Contribution, the surplus or profit being wholly divisible among the members; and the additions which have been made to policies at the periodical investigations of the Society afford satisfactory evidence of the prosperity of the Institution, and the great advantages derived by its members. The following examples exhibit the additions already made:—
A policy for 1,000*l.* opened in 1832, is now increased to £1,568 9 4
A policy for 1,000*l.* opened in 1836, is now increased to 1,407 18 1
A policy for 1,000*l.* opened in 1840, is now increased to 1,257 15 7
The profits are ascertained and divided triennially amongst policies of more than five years' duration.
The annual revenue is upwards of 140,000*l.*
The amount of assurances in force is upwards of 4,000,000*l.* sterling.
The amount paid to the representatives of deceased members exceeds 550,000 *l.* sterling.
The total amount of vested additions allocated to policies exceeds 640,000*l.*
The accumulated fund is upwards of 760,000*l.*
Loans granted to members to the extent of the Office value of their policies.
Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's Offices, in town or country.
ROBERT CHRISTIE, Manager.
Dec. 1853. WILLIAM FINLAY, Secretary.
W. COOK, Agent,
126, Bishopsgate-street, London.

ALL POLICIES INDISPUTABLE.

SOVEREIGN LIFE ASSURANCE COMPANY, 49, St James's-street, London.
No charge for policy stamps in future. Sums may be assured payable on attaining the age of 50, 55, or 60, or at death, should that event occur previously.
Advances made on real and on unexceptionable personal security, where the sureties are resident in London, or its immediate vicinity.
H. D DAVENPORT, Secretary

LATHS.—A large stock of PETERSBURGH LATHS of best quality ready for delivery at J. EASTWOOD and SONS, Wellington Wharf, Belvidere-road, Lambeth.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.
¾-inch Yellow, 17s. per square. ¾-inch White, 16s. per square.
¼-inch " 18s. " ¼-inch " 17s. "
1-inch " 23s. " 1-inch " 21s. "
Dantzic Timber, 30s. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

TO BE SOLD, cheap, for cash, about 600 squares of ¾ Yellow and White dry FLOORING BOARDS; likewise about 1,300 7-feet Yellow Deals.—Apply at 14, Wilmington-square, Clerkenwell.

MUIR'S PATENT / PLANING MACHINE.

SAW MILLS, GILLINGHAM-STREET, PIMLICO.
TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principle; Boards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks, and carted home free of charge.
Address to HENRY SOUTHAM,
Saw Mills, Gillingham-street, Pimlico.
N.B. Estimates given for Sawing and Planing.

A LARGE ASSORTMENT of WELL-SEASONED, DRY, PREPARED WHITE and YELLOW BATTEN FLOORING, also a large quantity of SCAFFOLD POLES, FOR SALE, at a low price, at DRUCE'S, No. 3 Wharf, Queen's-road West, Chelsea. Bricks, Lime, Cement, Sand, Plaster, Slates, and Slate Slab, Tiles, &c. on Sale at the lowest remunerative prices. Goods landed and carted. Ladders for sale. Apply to H. P. DIXON and CO. as above. Great facilities for the prompt execution of country orders.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.
1st January, 1854.

By her Majesty's / Letters Patent.

TO BUILDERS, &c.
FOR SALE, at REDUCED PRICES, No 27, WHARF-ROAD, CITY BASIN, the Proprietor retiring from the Timber Trade, a large Quantity of PREPARED FLOORING, in Boards and Battens, from ¾ to 1¼ inch, and seasoned by the patent desiccating process. Also Match-boards, Pine and Deals, Wainscot, Mahogany, and Hornbeam. The Premises to Let, and immed ate possession given.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff. Slating, Battens, Pantile Laths, Oak Plank, Sash Sills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

BEECH and CHESNUT TIMBER.—BRICKLING PARK, NORFOLK.—A large assortment of very fine BEECH and CHESNUT Trees will shortly be offered to SALE by AUCTION in Lots. Further particulars in future papers. The trees, from their size and quality, are well deserving the attention of purchasers; they are standing in and near to Brickling Park, Norfolk, about two miles distant from the town of Aylsham, from whence there is a navigable canal to the port of Great Yarmouth.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Irongate Wharf, Praed street, Edgware-road, near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.
GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. H. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well-seasoned stock of Flooring Boards, Matched Boarding, and Mouldings, of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.
GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate conversion on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.
G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

CIRCULAR SAW BENCH FOR SALE. A good substantial Rack Bench, nearly new, to cut timber 30 feet long and 14 inches deep, with compound fence, saws, rollers, stands, &c. everything complete and in good working order. The above to be sold in order to make room for larger machinery.—For particulars address E. B. Abbey Saw Mills, Reading, Berks.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1853.—In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tube, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

SURVEYOR.

Martin Joseph Stutely, esq. 27, Boroughty-street, Mecklenburgh-square.

Shares, 50l.; entrance, 1s. 6d.; monthly payments, 5s. No deed to be signed. No calls. No forfeiture of subscriptions. No fines for non-payment. No extra payments. Members can pay up their shares in such instalments as they may think fit: 8 per cent. interest allowed upon all deposits, paid-up shares and subscriptions six months in advance. Members may withdraw their deposits or subscriptions paid, with interest. Members are not compelled to build or take land, but may sell their rights to choose allotments. Persons in the country wishing to join can send the transmission by Post-office orders, payable to the Secretary, which will secure admission at once. Prospectuses and forms may be had gratis. Members duly enrolled. Active agents for town and country may be appointed at new and increased rates. Apply to

JOHN P. COX, Secretary.

AT a PUBLIC MEETING held at the Freemasons' Tavern, Great Queen-street, on TUESDAY, the 11th inst.

The Right Hon. Lord Viscount CHEWTON in the Chair,

It was resolved unanimously:—

1. That this meeting, having heard the explanation of the principles of the National Provident Freehold Land Society, is of opinion that it deserves the fullest confidence and support of the public.

2. That the members of the National Provident Freehold Land Society present at this meeting, pledge themselves to use their best exertions to further the interests of the Society, feeling that by so doing they increase the value of their own investments.

The following shares were drawn in the Land: Nos. 438, 324, 152, 54, 17, 16, 26, 152, 95, 68, 66, 11, 7, 7, 25, 70, 545, 224, 45, 82, 48, 370, 62, 35, 44, 204, 272, 66, 2, 238, 409

The following were also drawn, but in consequence of the subscription being in arrear they lose all benefit from the drawing:—302, 484, 337.

CHEWTON, Chairman.
JOHN P. COX, Secretary.

ONE-FIFTH of an ACRE of FREEHOLD BUILDING LAND for 50l. The Freehold Estate at Staines, Middlesex, fronting the high turnpike-road from London, and at present let to the Assistant Railway Station-house to the South-West-ern Railway, just leased for the Members of the NATIONAL PROVIDENT FREEHOLD LAND SOCIETY, is now ready for allotment, with front gardens of 50 feet by a depth of 220 feet. Allotments with front gages of 25 feet, for 25l. each. Plans of the Estate may be inspected at the Offices of the Society. Negotiations are pending for part of the Freehold Estate in Middlesex, adjoining the station on the Eastern Counties Railway, as also for Estates in other Railway districts.

172, New Oxford-street, London

J. P. COX, Secretary.

FINSBURY and GENERAL FREEHOLD LAND SOCIETY.

Established 1847.

The Matcham and Merton Estates will be balloted for shortly. All shares are set previously, on which one month's subscription has been paid, will be eligible for the ballot. Monthly subscription, 4s.; entrance and rules, 1s. 6d.

48, Bedford row

R. A. MARCH, Secretary.

W. TAYLOR and SON, PLASTERERS and MODELLERS, 47, Whittlebury street, Euston-square, beg respectfully to inform Architects, Builders and Others, that they are now ready to execute Work in the above branches to any extent either in town or country, at reasonable prices. ORNAMENT cast, executed with any material, in a superior manner, &c. &c. and as cheap as any other house in London.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers, to their Patent Rails, Sleepers, Fish Joints, and other important improvements now in use on upwards of 200 miles of railway. Every information will be given on application to Mr. CHARLES MAY, C.E. the Manager, or to Mr. WILLIAM ROWDEN, the Secretary, 26, Great George-street, Westminster.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Asphalte for Roofing, Footpaths, Cellars, and all purposes where Asphalte for Railway Arches, 35s per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-floors, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PHILLIPS, PATENTEE of PORCELAIN BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 11, FISH STREET-HILL. No Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

WINDOW-HOLLAND WAREHOUSE, 102, Newgate-street, London—H. and J. DOVE, Proprietors. Window-hollands every width, from 16 to 108 inches; sunblind tacks every width and colour; green baize, from 27 to 70 inches wide; webs, lines, tassels, &c. in every variety. H. and J. DOVE having purchased very largely before the advance, are enabled thereby to offer great advantages in price.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 314, Oxford-street, a few doors Hanover-square, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian Blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; persianed fine blinds, in ditto, 4s. 6d.; outside blinds of striped cloth 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

The Builder.

SATURDAY, FEBRUARY 18, 1854.

ALTHOUGH, since the letters which appeared in our pages on the question of Architects' Responsibilities, we have not given any prominent place to matter bearing upon the subject which was so strikingly brought before the attention of the profession by the proceedings following the accident in the Strand, we need hardly say we have felt that the interests of architects were deeply concerned in the points involved. These are more numerous than what may be connected with the sufficiency of shoring and the maintenance of adjoining buildings, or personal injuries to the public, and indeed include many which have heretofore been discussed in these pages. Yet, considering what is due, whether to the profession or to others, it has become necessary, whatever may appear the immediate result to architects, that the general question should be brought to some definite conclusion.

The main point to be determined is, whether the practical architect is to accept the entire responsibility of direction—down to the most trifling details of materials and workmanship—or whether he should *disclaim* any such extreme responsibility. It is no argument for blinking the question, that there might be injury to himself from one or other alternative, or, at least, it *will* not be so considered. Perhaps the attention of an individual might be absorbed by a small number of buildings, or even by a single unremunerative work: on the other hand, the "occupation" might be "gone," as regards those employers—and they are pretty numerous—who regard an architect chiefly as the superintendent of works. The nature of the responsibility must, however, be decided in one way or other, or the public will hasten the decision,—and indeed should do so. That decision had better be the act of those who have full knowledge of important elements in the question. With frequent reports about falling houses—always perversely placed to the discredit of architects—the recent case may not be the only one exciting the ready rhetoric, though doubtful logic, of some influential portion of the press.

It is not unimportant here to allude to the insufficiency of the present system of remuneration, in the majority of works,—those very cases where the employment of an able architect would be most beneficial, in regard to general taste, and as to social comfort, morals, and health. If the first of the alternatives we have put be assumed—here supposing the architect to be morally justified in accepting such obligations—the system would be even more unfair to the individual than any actual system may be practically; but if assumed without the power of ready performance, the system becomes destructive to those real interests of the community, which we say the existence of professional knowledge should advance. The reconsideration of that which one day involves politely concealed suspicion as to reasons for expenditure, and in another instance is so much the accepted system, that an architect is denied fair remuneration for his labour, ought ere long to force itself upon general attention.

If the other alternative be accepted,—probably until the nature and value of an architect's services were better understood, a greater number of the public would essay to make their own plans, as some of the clergy now do, after a fashion,—or something in place of drawings would be otherwise prepared by incompetent persons. Some may be hardly aware how many of the houses round about London, now are built without plans of any kind,—for a few rough lines on a piece of board, to no particular scale or proportion, can hardly be of real service. Dangerous ascents to entrance-doors, badly-contrived staircases, and inconvenient arrangements generally, are the inevitable results of the omission of the use of available experience and knowledge,—and without reference to matters of art.

We repeat, then, that whatever may appear the immediate results of *declaring* the position and duties and reasonable expectations of the profession, some such endeavour should be made.

Architects' responsibilities may be viewed in two main positions,—as the question of legal liability, and that of moral responsibility. We trust that no architect will attach an importance to the first question at all comparable with that of the other. The principle of the profession not only involves the maintenance of high rectitude and honourable conduct—a position, with few exceptions, we really believe, maintained, whatever the apparent worldly inducements to the contrary,—but the members of the profession *depend* upon the full recognition of a moral responsibility for their ultimate success. It is therefore necessary to inquire not only what an architect contracts with his employer to do for him, and what liabilities he may make for himself by directions to workmen, but it is also necessary to consider what services an employer new to the engagement of an architect would suppose were being rendered; for, all such the architect must supply, or, as an honourable man, must actively disabuse the other of the error.

But considering, first, the legal liability,—After a very patient examination of the matter at stake, we conclude that under any circumstances it is a most serious one. In Mr. Abraham's case, it turned solely upon the evidence, whether the architect by his directions to a number of ignorant workmen, had made himself liable for an accident, which the mere cut of a spade during an instant's averted attention might have brought about; and it is scarcely surprising, whatever the general view of the points at issue, that such a protest as that in the able letter of our correspondent "R. K." should have been entered against the idea which seemed for a while to catch the public mind, that the architect of a building was in any case and every case, to be held accountable for doings of his subordinates, which no possible foresight, and no reasonable amount of attention could prevent. Still, though the architect may not be fairly responsible for what "the builder does merely for his own purposes," he is daily incurring serious liabilities for the advantage of both builder and employer, which occasion him no benefit, and deprive him even of the satisfaction afforded by correctly executed work. Our readers can hardly have forgotten the case of Ivimey *v.* Elliott, tried in the County Court of Southampton, and which we thought of sufficient importance to make it the subject of a leading article in January in last year. In that case it was contended, that where there were unprecedented difficulties, as in the case of an exposed site, the architect, being supposed "to know the laws of nature," was bound to foresee and provide against the special circumstances by unusual provisions. The builder had not put the lap of slates (2½ inches) which was specified: but the judge held that though damage might have in truth occurred from defective execution, the architect was "still liable, because of the original defect in specifications." We avoid remark here.

But, more than this, it was ruled that the interference of a building owner in directions "would not relieve the architect if he were subsequently made aware of the alteration made by his employer;" that is, we suppose, *without protesting against it*, or rather, perhaps, without throwing up his engagement. All these liabilities would have been serious enough; but the real peril in which, as we just now hinted, our professional brethren stand, had still to be shown.

It constantly happens, despite the frequent attendance of the architect, that defects of the most annoying kind will escape attention,—nay, as it were, under the very nose of an active clerk of the works, falsifications of a nature most degrading to the character of the building trades will go on. We are lost in amazement when we look at the extent to which the idea of a special virtue in money-getting seems to sanctify every real vice in most of the callings in life. The object to be attained is often so utterly insignificant, that we know not what motive of self-interest even, can thus obscure the natural moral perception of right and wrong. We have known in the case of the floor of a single room, specified to have grooves and tongues, a portion laid without tongues, whilst the clerk of the works went to dinner,—the last board exposed being adroitly grooved, as though the whole were similar. Not many weeks ago a parallel thing occurred, where an architect had specified a course of slates in cement in the lower part of a building, and where a mere strip, of an inch or so wide, was found in the bed of the bricks at the face of the wall. The story of the piece of "landing," which was built into a flue, is a standing one in the profession. The particular instances first mentioned, were traced rather to the master builder than to the workman, which, indeed, makes the matter more extraordinary; but what hope is there for an architect to prevent such things universally, when lack of principle in the master, and lessening skill in the workman, are against him. And yet the theory of the architect's position, as it stands at present, assumes a knowledge of every one of the numerous trades required in building, superior to the knowledge of the tradesman himself.

But to return to what we were about more especially to notice, and in connection with the case at Southampton. Can we say what the architect is to do, as a rule, in the case of defects discovered—considering now merely the accidental? To direct the work to be taken down, and placed as specified, might, in some cases, ruin not merely the builder, who may be for the present disregarded, but the building owner himself. The good sense of the architect points to one way in which the work will answer the purpose, namely, that way in which it was specified. He must, however, sacrifice his sense of right, and put up with what has newly turned out to be suitable to the private objects of his client. Is the architect, then, to be legally liable for defects arising from a ready remedy which he has been asked to suggest, unaided by the regular course of inductive reasoning which brought him to the determination of the original contrivance. What said Judge Gale in the case referred to? Only this, brother architects! that "if an architect finds out a defect, and suggests a remedy, and that fails, he is equally answerable for all the consequences."

Thus it would appear, as we said a year ago, "that no architect or engineer can try an experiment or a new material with the slightest safety: he will be absolutely at the mercy of every workman disposed to cheat, or of any unprincipled employer inclined to avail himself of his own especial directions to cut down the work to the lowest sum, and saddle the architect with all the risk of cheap building." How will such a view of the question suit the engineers of falling bridges and sinking earthworks?

Yet it is not the less true, that such is the letter of the law; and it behoves architects to

exercise increased vigilance as to the observance of specifications, and increased stringency in dealing with opposition to them; and if ready remedies should be absolutely required, to apply these after protest, and with the full sanction of the employer in such form, as may remove all legal liability.

It is not without reference to the present inquiry, to look at the position of architects elsewhere, as set forth in some papers on the Responsibilities and Rights of Architects and Builders in France, which appeared in our seventh volume. It was there truly stated, that the English law had not been so clearly laid down. The general principles upon which the decisions of courts would rest, however, seem to us the same. In France, an architect is held responsible for every defect arising out of his design, or anything set forth in his plans and specifications. Supposing that he is employed merely to *design*, he is not responsible for defects of the soil, or for infraction of the rights of neighbours, or of the municipal, or police regulations. We are not informed how these latter points would be considered, were the design made, as indeed must generally be the case, for a particular site. Though proceedings might seldom be taken—might the architect in London, not carrying out his own design, in such a case be held liable for contravention of the Buildings Act? It seems not unfair that he should be so, although not for defects in foundations.

When the architect is entrusted with the carrying out of his own design, in France, "he becomes responsible for the faithful execution of the works; for it is he who undertakes to give the workmen proper instructions as to the kinds of materials to be employed, the manner of using them, and the dimensions of the separate parts. If the builder or his workmen deceive him in such a manner as to induce an impartial person to believe that with proper caution the architect might have detected the fraud, he naturally becomes responsible; but he has his recourse against the said parties. But if the deceit were of such a nature as to defy ordinary inspection, then he is exonerated, and the responsibility lies only with those who have been guilty of the fraud." But, it elsewhere appears that in all cases of defects in construction, or foundation, or of neglect, the architect firstly, and subsidiarily the builder, are responsible. The liability ceases with ten years. Moreover, as nothing of importance ought to be executed without his orders, any infraction of the laws regulating the rights of neighbours, or of the municipal or police regulations, exposes him (the architect) to a claim for damages. An adjoining owner may proceed against the proprietor, but the latter has his remedy against the architect. Payment of money by the proprietor without the certificate of the architect, is held to release the latter from responsibility, so far as defects arise from bad execution. It is rightly held that the power of refusing a certificate is the only efficient means that the architect has of controlling the execution of the works. If an architect be called in to value work executed, his obligation to render strict justice to all parties requires him to make a report if he observe that either the "laws of the art of building," or the municipal laws have been violated so as to involve serious consequences.

But, to place before our English readers complete *data* for an estimate of their own responsibility, moral at least—on the French view of the question—we must look at the responsibilities of builders. Notwithstanding the employment of an architect, it would seem that the builder is still bound to the proprietor by his contract; though his engagement implies that he will follow the directions received, where he can *legally* do so. Alterations in the mode of execution, for his security, he must have ordered in writing. Verbal orders are supposed to warrant the builder only so far as they may be "conformable to the rules of art." Should the plans require any new mode of construction, or involve the infraction of existing rights, the builder is to point out any objections to their adoption. His responsibility is covered—except as to the municipal rights—if he obtain a written order mentioning that it was given with the express intention of safeguarding him; but the consent of the proprietor is also required. The municipal authorities can recover from any of the parties.

The builder is not exonerated from the liability for results of defective materials, even though these have been accepted by the architect; and even if the employer furnish any of the materials, and the builder recognise defects, he is bound to call the attention of the proprietor to them, and retains his liability in the absence of a written discharge therefrom. The proprietor would otherwise claim from either architect or builder; though, should the defects be such as the ordinary care of the architect would not discover, the latter can claim from the builder.

In cases of fraud on the part of architect or builder, liability is not confined to the ten years, but extends to thirty years from the date of discovery of the fraud.

In the case of accident or damage, from whatever cause, before the work has been delivered up, the loss falls upon the contractor; though where the contract is for labour only, the proprietor loses the value of any of the labour, the receipt of which has been shown by the fact of having paid for it.

On any of the foregoing points, and others (as set forth in the papers in our seventh volume), where the judgment of practical persons is required, referees are named, to whom, we may remark, the remuneration is by no means considerable.

As to any real difference between the codified law of France, and the law of England as from time to time laid down by the bench, little need be said. The chances for an architect to escape scot-free would perhaps be greatest in this country; though the limitation of responsibility to ten years certain is an advantage. As to the permission to choose which party shall be proceeded against in certain cases,—that is allowed by the general principle of law, where architects are not concerned.

But as regards the moral responsibility, the law would appear to leave no doubt about what would be the public opinion in France. The same view must be taken in both countries, unless the circumstances concerned in the formation of such an opinion are more widely different than they are.

It is obvious that it is impossible for the individual architect personally to examine into every minute detail, yet the law does not make any difference between him and his subordinates in the superintendence: the liability is his. The distance of the building from his usual residence does not affect the question: it would be held that he should have declined to perform duties which he was not sufficiently well paid to see personally carried out.

It might be argued, as to the legal question, that the law attempts to oblige no performance of what is impossible. If the employer were allowed to suppose that the architect would do things, in the way of superintendence, which really *cannot* be done, the employer certainly would not be allowed to recover from the architect; but as we are advised, the courts would not readily assume such impossibility, and would even strain to show the reverse. The public, as represented by the *Times*, see but one responsibility, namely, that of the individual found in the direction of the works.

The really puzzling part of the question arises from the necessity which there appears, to retain the usual clauses as to defective work and maintenance of adjoining buildings—holding responsible the party by whom accidents are mainly caused,—and the necessity likewise, of placing the builder entirely under the directions of the architect. Will the contractor either say, you are the cause of accident by your directions, or, I cannot follow your directions, because I am responsible? Or will the employer, in the case of an accident, say to the architect,—You had the power to interfere, and so, by not interfering, have become the cause of the accident?

It might appear to the architect that the interest of his client, whether as to freedom from a *possible* claim from adjoining owners, or for the efficient execution of the building itself, required a certain course to be adopted. It is clear that an architect, in such case, might hardly avoid removing the legal liability from the builder to himself. He must either debar himself from the exercise of his ability to attain novel ends, and avoid a certain *enterprise*, more than excusable if founded upon knowledge, and such as has given us the chief works of the age, or he must get the distinct sanction of his employer in such cases. The result of the latter course, however, might be, that the employer might often suffer for the real incompetence of the builder, or his workmen. It is a hard case; but who should then suffer? Surely the individual who was to benefit by the solution of novel difficulties, rather than the architect—unless the latter have omitted to exercise the professional knowledge and skill for which he was chosen by the employer. It is useless to say a builder ought to be found who has complete practical skill: in many parts of the country, for small works, such a person is not to be found, or deficiencies are not discovered till too late. Is the architect to assume the position of the builder in such cases? Looking at the matter as to London builders, our correspondents might, indeed, have put the case a little stronger as to the modern system of general contracts. The architect, or his clerk of works, is too often compelled to take upon himself duties formerly exercised by the master carpenter, master bricklayer, or other head of his special business,—and often, has even to instruct workmen in their ordinary manipulation. Those who have had to carry out works in out-of-the-way parts of the country, would be able to speak feelingly as to the difficulties thrown upon them in the way referred to.

Is the architect then to accept *all* the responsibility, legal or moral, involved in these several bearings of the question. As to superintendence, clearly the only obligation he can recognise, is that of doing his best. All else we have shown he should, at the very beginning, precisely disclaim. We shall have to show in what form the course has been taken by one architect. But first, let us make an attempt to demonstrate what are the architect's duties.

This has been in effect done in previous papers. The duty of the architect is mainly to design the building in all its features, whether decorative or constructive, and to supply the drawings, specifications, and instructions requisite for its being executed by the workmen of the locality. The division of labour and the interposition of capital, required for the efficient and prompt carrying out of any important project, oblige him to treat with a master builder, or with one for each trade.—It is right to mention the real argument for the modern system of general contracts, namely, the greater approximation to the cost of the completed building, and that it is also argued that buildings are erected in a much shorter time, when the several tradesmen are subordinate to one having more experience in the direction of workmen, than any professional man can be expected to have, as well as peculiar means of turning labour to the best account, through his possession of capital. The men of different trades have to attend upon each other, and work together, and much time might be lost were it the business of the architect to see to each one's falling into his place at the proper moment.

It is the duty of the architect to procure contracts for the work at a fair price; and such duty would obviously not suffice without his seeing to these contracts being observed. During the progress of the works he must also be ready to give any special instructions that circumstances require, or as to modifications necessary.

Whilst the architect has thus to do with the actual fabric erection, the builder is to supply the materials, tools, labour, and manual skill; but that duty hardly could be completed unless he were able readily to apprehend the common forms of construction, and even to obviate the necessity of great particularity in the description of them. It appears to us, then, that there is an important distinction in cases such as that which produced this inquiry—and which distinction does not appear with sufficient clearness in the letters of our correspondents—namely, that between a tool or machine, and what is part of the works. *Ordinary* scaffolding seems to us to belong to the head of builders' tools; shoring we are inclined

to differ about with our correspondent, and rather place it as belonging sometimes to the one head and sometimes to the other. That matter we must shortly say a few words about specially.—But where the ordinary tools, or the means of the locality do not attain the object, the architect must design, or direct, with a view to supplying the deficiency; that is to say, unless the work is to be brought to a deadlock.

We are inclined to think that it is rightly enough assumed that the work is to be executed by the ordinary skill and appliances. Without further reference to the constantly discovered incapacity of workmen in the country, a particular arrangement in construction may require new forms of (even hand) tools to execute it. In such case, no line of demarcation such as exists in ordinary cases can be maintained. Just as much as (in the case put by "R. K.") the centering of a bridge—a mechanical contrivance incidental to the performance of the work, rather than part of the structure—is to be specially designed, so the same necessity is constantly arising even in the form of a plane or the shape of a turnscrew. Even in regard to scaffolding—in certain cases an architect cannot avoid taking upon himself responsibility for both design and superintendence. We have already expressed that view, by asking—who, in the place of architect, was to be held responsible for the accident at the New Crystal Palace,—there having in view, a responsibility apart from that to the employers, or as regards life and limb, and which last point has yet to be considered.

That any one so largely responsible as, after all points have been noted, an architect must remain, should be better paid than at present, there can be no question. In ordinary affairs the proper principle is to remunerate in proportion to responsibility; but in the case of an architect's remuneration, will any one tell us that 5 per cent. upon an outlay of a few hundred pounds pays for the mere labour and time? As a Liverpool architect says to us,—if architects are to stand in the position of underwriters or insurers, their commission should be increased.

Were we all good citizens in Plato's republic, and no one dishonest enough, for the sake of gain, to cheat the other, doubtless the duty of an architect would be merely to design and specify, and direct such few modifications afterwards, as might be required. As we have some hope in the perfectibility of human nature, we dare say, when our race has been long spent, and perhaps, our journal even, numbered with the things that were, so happy a state may gladden the ranks of the race of architects. Let us contemplate even at this long interval, the remarkable prospect. Brickwork bonded according to the methods described in books, withes of flues built with pieces much larger than marbles, sand that will leave the fingers without a stain,—no positive need to mount the scaffold or to step the joists: builders and workmen, and manufacturers—all anxious to do right—not taking pleasure in cleverly doing wrong. But all this is not, and nothing like it is the case now.

Little as the public know of the serious expenses which are entailed upon them by the actual state of things—ready as every one seems to pay for a house upon any principle of assessed value *except* that of the sufficiency and durability of its internal construction—the notion of the advantage of superintendence seems more generally established than that of the value of design. With some of the Church Building Societies, an architect is little better than a superior kind of clerk of works,—an officer deemed necessary for matters structural, mechanical, or negociatory; but not expected to have, or at least to maintain, any opinion on questions of actual convenience, or of art. So little, till lately, was the importance of design felt in ordinary habitations, that it is to the absence of that element that we may attribute all the chief evils which there have been, and which are, indeed, still retained in the dwellings of the poor; and be it observed that the first steps towards improvement were taken, because the real point for attention was allowed to be demonstrated by the assiduous labour in contrivance, of an *honorary* architect. The value of similar *design* in other cases, even in structural features, the public has yet to learn.

But whatever the understood position of the architect, the question of remuneration we still hold to be distinct from that now before us, which is simply—What are the duties which an architect does, or ought to undertake; and of this we shall say more in another article.

A TRIFLE FROM BRIGHTON.

THE restoration of the "Old Church" here, St. Nicholas', under Mr. Carpenter, is proceeding rapidly: parts have been rebuilt: the flint face of all the walls and the freestone quoins have been renewed; and, with the exception of the tower, little of the old structure is to be seen. The rood-screen, a very elaborate piece of carving, has been restored and re-erected, and is now being polychromed, with what effect remains to be seen. The font here is ancient and curious: some have thought it Saxon.

Looking over the town from the churchyard—a striking sight,—you may observe that the tower of St. Paul's Church has been freshly carried up a certain height to receive bells. A sermon was preached there on Sunday in aid of the building funds, which was altogether archæological in character, comprising a history of bells, not very new, and a description of the Temple at Jerusalem. More than one of the preacher's hearers were disposed to think him in error when, in alluding to the clearance of the Temple by our Saviour, he described it as open to the sky. Restricting the term to the sacred edifice itself as described in Kings and Chronicles, their doubts would have been well founded. In truth, however, the Temple was a large area, the top of Mount Moriah levelled, surrounded by walls and buildings. As re-erected by Herod just previously to the event referred to, the Temple was divided into three courts, the outermost of which was appropriated to the people: in the inner court the priests officiated, and then came the Temple proper. Josephus, when describing Herod's Temple, after a glowing account of the first enclosure, says, "and there was another not far off with a stone wall, and some two steps up to it, with a partition of stone; and an inscription upon it, prohibiting any strangers to enter there upon pain of death. This inward enclosure had three gates toward the south and north, of an equal distance one from the other, and to the eastward, another much larger, where men that were purified had admittance with their wives; but the women were not permitted to pass any further. There was another place in the middle betwixt the other two, where it was lawful only for the priests to enter; and that was it where the Temple was erected, and before it, the altar, where they offered up their sacrifices. Now Herod durst not presume to enter into that place himself, because not being a priest, he stood prohibited by the law; so that he committed the care of this part of the holy work to the priests themselves; which they finished in eighteen months, when he himself had been eight years a-finishing the rest." This may serve to satisfy the Rev. divine's fair dissenters that it was not *within the building* that our Saviour "overthrew the tables of the money-changers, and the seats of them that sold doves."

To go back to St. Paul's for an instant,—the stained glass in the east window, which we have mentioned before, is amongst the most successful of recent works of the kind.

Brighton is certainly an extraordinary place. Fifty years ago it was a small fishing village, and now it is a corporate town with three miles of houses facing the sea, a "pavilion," which represents two or three hundred thousand pounds, a town-hall which cost 50,000*l.* a pier 30,000*l.* a sea-wall of concrete, on which more than 100,000*l.* has been expended; with Churches, benevolent institutions, and charities of most creditable extent, and occasionally nearly 100,000 residents in the town. It is one of the marvels of this country. Three miles of houses, "and all for *spending* money," as a calculating friend of ours said the other day; "and not for making it." Certainly not for making money, and yet it may be a saving to spend it here: sickness and death are more expensive than healthful enjoyment.

Towards the western extremity extensive building operations on the estate of Baron Goldsmid are going on.

At Hove Church, hard by, some stained glass windows have been put up by Hardman, of Birmingham, and Hedgland, of London. We were told, too, of elaborately carved altar and organ screens, by Mr. Baker, but did not see them. We were glad to hear that the Privy Council contemplate closing the burial grounds and vaults in Brighton, on the 1st of June next.

At Old Shoreham Church some works have been going on, including a new roof to the chancel, with coloured decorations executed with discretion. Is the odd crinkum-crankum new window through the buttress here original? New Shoreham Church, of the Norman transition period, as our readers know, wants sweeping. When we last spoke of it, three or four years ago, we mentioned finding a bevy of damsels engaged in rubbing the two brasses which are there. Before they could have done this last Saturday, they must have removed half an inch of dust from off them, collected under that cover-slut matting. The triforium in the chancel here and the wall-arcade are particularly interesting; as, indeed, is the whole building.

If we really should have war, the inhabitants of Brighton will probably remember that in 1545 a French admiral, with a large fleet, made a descent here, and began "to burn and spoil the country." They may, however, console themselves by further recollecting, that on the beacons being fired the inhabitants thereabouts came down so thick and so quick, that the invaders were compelled to fly with loss, and did little hurt. At the present moment the place looks pleasant enough to invite a descent from any quarter: the sea is like a mill-pond, the air balmy and exhilarating, and the far-stretching rows of verandahed houses are sparkling in a glorious sunlight.

THE LATE MR. ARUNDALE, ARCHITECT.

ACCIDENT has led us to delay an expression of the regret with which we heard of the premature death of Mr. Francis Arundale, at Brighton, on the 9th of September last; but we cannot allow the event to pass by without a brief record of the career of one who has laboured earnestly and well, although not in a field likely to produce large pecuniary returns.

Mr. ARUNDALE was born on the 9th of August, 1807. He served his articles for seven years with the elder Pugin; and, on the expiration of the time, accompanied Mr. Pugin in his tour of Normandy; and in conjunction with Messrs. G. B. Moore, Ferrey, and Talbot Bury, made the drawings published as "Specimens of the Architectural Antiquities of Normandy." In 1831 he went out to Mr. Hay, who was investigating the antiquities of Egypt; and made drawings of all the principal remains in that country. This gave the tone to his future life. He afterwards joined Mr. Catherwood and Mr. Bonomi; and in 1833 visited the Holy Land, and made a very large number of drawings and sketches. He was one of the very few Christians who have obtained admission into the Mosque of Omar, built on the site of the Temple of Solomon; and of this he made careful drawings. Altogether he was nine years in the East. When in Upper Egypt he inhabited one of the excavated tombs, where, probably, the seeds of those maladies were laid which afterwards terminated his life. After returning from the East, Mr. Arundale visited Italy, Greece, Asia Minor, and other parts, where he made numerous drawings. He had previously published his journal made in the East, and when in Italy commenced, but did not finish, a reprint of the works of Palladio. More recently, in conjunction with Mr. Bonomi and Mr. Birch, he published a work on Egyptian antiquities, but he had not the art of descending, to popularize, and the sale was small. He had of late years painted several large pictures in oil, from his sketches abroad. Occupied as he had been entirely as an architectural artist, in the first part of his career, he

had not practised as an architect: the only building we know of executed by him, is a Boat-house, in Birmingham, which he designed for Mr. Bowyer Adderly.

We may add that Mr. Arundale was married to a daughter of Mr. Pickersgill, the Royal Academician, who remains with a small family to deplore an irreparable loss, and with this we close our brief notice of an amiable man and an accomplished artist.

LATEST EXCAVATION AT NINEVEH.*

The unmistakeable allusions made in the tablet and memorial of King Sargan to the building of a city increased the zeal of M. Consul Place, and after a conversation which he had with Colonel Rawlinson, on examining the wide expanse of the old city, M. P.'s attention was fixed by a certain eminence and swelling, as it were, of the site. On making an excavation on this spot, he was struck by the finding of a large slab of marble, which was succeeded by others. Further excavation laid bare the four sides of a large hall of 25 m. 10 long, by 20 m. 40 broad, which was completely inlaid with marble. As these were, however, devoid of inscription or sculpture, nothing but the laying bare the floor of the hall will, perhaps, lead to a knowledge of its destination. M. Place has observed several similar mounds between the circumference of the ruined walls, which much excited his curiosity and expectation. The latest discoveries made at Khorsabad have led, therefore, to important results, but their effectuation has cost much labour, as deep cuts were to be made, large tunnels dug, so much so, that more than 4,000 cubic metres of a clayey and compact soil and earth had to be removed on the backs of men. M. P. thence extended his researches to a certain number of artificial hills, or mounds, which lay in a periphery of 10 lieus from Mossul, on the left bank of the Tigris. Successively, thirty of these hillocks were examined, as Bachiccha, Karamles, &c. For the sake of beginning the excavations on the banks of the Zab, where the Chaldæan Catholics had indicated several such unexplored sites, every difficulty resulting from the inundation of the Tigris and the rapacity of the independent Arab tribes was to be encountered. At Karamles two hills were examined, in one of which a floor of alternate layers of bricks, sand, and bitumen was found, similar to those of the palace of Khorsabad. In the other, some octangular marble columns, with entablatures similar to the Doric, were found. M. Place, conjointly with Colonel Rawlinson, thinks that these ruins are of Parthian origin.

But it is also on the left bank of the Zab that of late the existence of similar ruin-bearing hills has been ascertained. The principal are Tell-Chenef, probably also of Parthian origin, Khad-Elias, &c. These lie south-west of Khorsabad; those to the north of that city, like Tell-Giurgor, led to the excavation of vases, gold ornaments, &c. As this hill is very similar to that of Sherif-Kan, where the English have found such beautiful articles of gold, ivory, sculptured basalt, &c. M. Place will continue his researches on it. But the most important discovery has been made at a hill called Maltai, being one of the range dividing the plains lying beyond the first tier of the Mesopotamian mountains. Maltai, in Chaldæan, means entrance. Along a rivulet running close by, rises a steep mountain, with long rows of perpendicular rock, resembling walls built by Nature. On one of these rock-walls, large bassi-relievi are incised, containing thirty-two figures, 1 m. 33 in height. They comprise three compartments, and represent persons standing in rows, and holding in their hands the staff of command, crowns, or rings, branches of trees, &c.; they are seated on the backs of animals, bulls or lions, *not* resembling those of Khorsabad, as they have neither wings nor human heads and turns.

The hill of Bavian, north-east of Khorsabad, possesses also, like that of Maltai, a number of these bassi-relievi cut in the rock. They are undoubtedly the work of Assyrian artists, and amongst them is, nearly on the top of the hill, a sculpture, divided into nine compartments, representing the images of Assyrian kings, of natural size, and which resemble those represented at Khorsabad. Four of these figures, being out of reach of destruction, are in a beauteous state of preservation; and these images incised in the very rocks of the mountains present a huge, mystic aspect, and appertain eminently to a primitive race of men. Similar monuments of the Parthians and Persians are only imitations, made after these Assyrian prototypes.

Having, in fine, returned to Khorsabad, and for ascertaining what lay behind the before-mentioned double row of columns and terraces, a long *trenchée* was opened, which soon conducted to a wall, 5 feet high and 21 feet long, which was completely covered with painted and enamelled bricks, in a well-preserved state. This kind of mosaics represents divers subjects, in which human figures, beasts, and plants, are depicted. These were the first Assyrian *pictures* hitherto discovered; and it is the more interesting, as they can be connected with another recent discovery of M. F. Fresnel, made on the site of old Babylon. *Ktesias*, in his description of the Palace of Babylon, mentions some pictured bricks which adorned the walls of the building. They represented scenes of the hunt, as also mentioned subsequently by Diodorus Siculus. When M. Fresnel examined the mounts of *débris* of the palace of Nebuchadnezar, he discovered a number of painted enamelled bricks, which seemed to be the remnants of the pictures alluded to. They exhibit parts of wild animals, tails and paws of dogs, lions, panthers, &c. The paintings discovered by M. Place possess great analogy to those Babylonian art-works of Ktesias and Diodor. Both prove, that with *primitive* nations, painting (and sculpture) were of a purely decorative character; and that it was only the nations of a subsequent civilisation who individualised these art-works, for placing them anywhere that occasion might require.

* See p. 62, ante.

FOREIGN ARTISTIC INTELLIGENCE.

Vienna. Remodelling of Art-Unions, &c.—The art prospects in the Austrian empire are of the most discouraging nature, and it is only the so-called "Austrian Art-Union" which exhibits some signs of life. It has of late compiled some new laws and regulations, which have been submitted to Government for approval. The so-called masters schools, as well as the preparatory school, of the Vienna Academy of Arts will have now an occasion to exhibit their capabilities, as the paintings and ornaments of the Lerchenfeld Church have been entrusted to the professors of the Academy and its pupils. Drawing and modelling have been introduced in the industrial schools (*Industrie Schulen*), which may be called the acme of Austrian educational establishments. The architectural activity at Vienna is of the same stagnant character, as the new barracks of the Biber bastei can be called at least only utilitarian. The restorations are of greater import, as, for instance, that of the Tirna chapel of the cathedral. The best, however, is that of the old chapel of Castle Grafenegg, a jewel of gracefulness, taste, and colour-brilliancy of the rich style of the beginning of the fifteenth century. The exhibition of the Austrian Art-Union for January comprised seventy-five works, amongst which a picture of M. Czermak, of Prague, representing the once poet-laureate of Emperor Rodolph II. begging on the bridge of Prague, attracted considerable notice.

Cologne.—Utilization of Sweepings and Refuse.—A company has been formed here for the establishing of a great *poudrette* manufactory (*noir animalisé*). The vast quantity of manure required now for agricultural purposes, makes such an establishment one of great import in all large cities.

Album of the Paris Literary Fund.—For the sake of being able still more to assist indigent authors, the *Société des Gens des Lettres* has decided on the publication of an album; the whole proceeds to be devoted as grants to supplicants for aid. M. Milhaud, of Paris, has already purchased the copyright for 10,000 francs.

New York Crystal Palace.—Amongst the 675 oil paintings exhibited, 140 were German and sixty-five from Düsseldorff; which latter were much valued by the Yankees, and those of Hassenclever (now dead) were those most sought after.

Art in the Black Sea.—M. Durand-Brages, the well-known French marine painter, has been sent to join the French fleet in the East, for perpetuating by his brush the naval deeds which may happen there.

Prof. Liebig.—The King of Bavaria has confirmed a decision of the chapters of the Maximilian Order for Science and Art, nominating Baron Liebig chairman of the chapter of that order.

Care for fine Paintings.—Although the restoration of the two masterpieces of Rubens, "The Descent" from and "The Exultation of the Cross," at Antwerp, had been restored with perfect success, the Minister of the Interior (incited, probably, by some proceedings elsewhere), has named a commission, consisting of the painters, Messrs. Navez, Gallait, Wappers, &c. for examining and reporting on the present condition of the fine-art works.

INSTITUTION OF CIVIL ENGINEERS.

TIDAL WORKS.—LOCKS.

On the 7th inst. the paper read was a "Description of the Navigation and Drainage Works recently executed on the Tidal Portion of the River Lee," by Mr. N. Beardmore. The first part contained a general description of the ancient navigation of the river Lee, and of the gradual improvements introduced into the class of barges frequenting it, and the burthens carried by them. Allusion was made to the difficulties and continual delays which had prevailed up to a very recent period in the tidal portion, forming the junction with Bow-creek and the Thames, at Limehouse; difficulties which were aggravated by the navigation being the common supply for five tidal mills. The new works consisted of stop-gates, across the main channel of the Lee, near Old Ford-lock, established for preventing the water from being drawn down by the tidal mills to the eastward; also a lock for a similar purpose and to pass barges on St. Thomas's-creek, near Bow-bridge; and a new overfall, to pass surplus water to the Three Mills. Three large new flood-gates, each 18 feet in width, were constructed near Four Mills, with a new tidal lock, adjacent to the spot, in order to pass vessels into Bow-creek; the ancient system being to pass craft by a single pair of gates, only available by drawing down the head water, and frequently, during neap tides, the water did not rise high enough to enable the gates to be opened at all.

On February 14, (Mr. James Simpson, president, in the chair), the paper read was "On the Principles and Construction of Locks," by Mr. A. C. Hobbs.

The author's object was to give a brief review of the mechanical principles involved in the construction of locks, and the degree of security hitherto achieved by manufacturers.

The paper commenced by asserting, as an axiom, that the highest point of security to be attained in the construction of locks, must consist in the fact, that the possibility of picking or opening them, without their true keys, should depend entirely on chance; and that notwithstanding the immense variety of locks already invented, there were really but three absolutely distinct principles involved in their construction, —so classed without reference to dates and for convenience of description. The first principle included all locks having a series of fixed obstructions, or wards, in and about the key-hole, to prevent any instrument, except the key, being turned in the lock: this principle was shown to be inefficient, however complicated the construction might be, as the wards themselves afforded the means of ascertaining the form of key required to open the lock.

The second principle was that of the letter, or puzzle-lock, which appeared to carry out the principle or doctrine of chance to the fullest possible extent. But in this case, also, a method was shown, by which the lock could be opened as easily as in the former; proving that the inventor of that class of lock had failed to accomplish the object of producing a fastening whose security was dependent only on mere chance.

The third principle, or last class of locks, included all those possessing a series of moveable

pieces called slides, pins, tumblers, &c. placed within the case of the lock, and which pieces must be operated upon and moved into certain given positions, by a key, before the bolt could be shot. This principle was illustrated by descriptions of the Egyptian lock, the Bramah lock, the inventions of Barron and of Bird, the Detector of Mitchell and Lawton, and the later improvements of Chubb and Cotterill (of Birmingh) and others. Allusion was then made to the great reliance which, until recently, had been placed on these locks, and an explanation was given the principle, on which all locks of this description, could be as easily picked as their predecessors. (?)

The author then commented on the necessity of doing some simple and effective means by which the defect, common to all the above locks might be remedied, without adding materially to the cost. This desideratum he had endeavoured to secure, by the introduction of what was called a moveable stump, which projected, instead of being rivetted into the bolt, was fixed to a piece, moving upon a centre, or pivot at the back of the bolt. The action of this piece was such as to render it impossible to obtain the true position of the tumblers, for, on any pressure being applied to the lock for the purpose, the stump, by its motion, locked the bolt, and left the tumblers at perfect liberty. The author stated his conviction that this apparently slight alteration rendered it impossible to open such a lock, except by the mere chance or accident of a key fitting it; there being no possible means of ascertaining the form of key requisite to open it surreptitiously. Since the introduction of this lock, several attempts had been made to produce the same result, without actually copying the original, but with very little success.

An additional principle of security, devised in America, was then pointed out, in the celebrated permutating bank lock, invented by Robert Newell, of the firm of Day and Newell (New York). Previous to the introduction of that system, permutating keys had been used, but they required that the lock itself should be altered, to suit any new adjustment of the bits of the key, whereas, in the American lock, the key alone, being altered, produced by its own action, the corresponding arrangement in the lock: by this ingenious contrivance, the person using the lock became his own lock-maker, and was able to render the key useless to any other person, by a simple change in the bits, after locking the door. Such locks, whose numbers of permutations varied from 720 to 479,001,600, according to the number of bits in the key, were intended principally for strong rooms of banks, and other establishments where large amounts of property were deposited; they were, therefore, comparatively expensive, and were necessarily of larger size than locks required for ordinary use.

METHOD OF MODELLING IN PLASTER FOR SCULPTURE.*

The tools used are:—

1st. *Trowels*, the handles of wood, the blades of gutta percha, set in metallic backs or sheaths. These are of various forms and sizes, and, being elastic, the plaster can be put on with them somewhat as with a brush.

2nd. *Chisels* of various shapes and sizes.

3rd. *Scrapers.*

4th. *Perforated or open files*, every tooth having an opening in front of it through the body of the instrument, so that the filings or dust may pass through and escape from the outer side, thus leaving the teeth unclogged and free to act. A common file or rasp would soon fill, and cease to act upon the plaster. The open files are of various forms and sizes, straight, curved, rounded, flat, &c. They are made of steel or of hoop-iron, and by a machine which punches the holes at the same time that it raises the teeth. The form is given to the file after the holes and teeth have been made.

Having the tools, a material must be prepared, and this is plaster of Paris. Suppose the work projected is an erect statue, the process is as follows:—A pair of irons corresponding to the bones of the legs in direction, though not necessarily in shape, must be set up on a platform, rising nearly as high as the hips, with the lower ends bent sideways in order to have a good anchorage in the plaster which is to form the base of the statue. Around these irons the base is commenced by pouring a sufficient quantity of mixed plaster to form it. We have thus before us a platform of plaster, with a pair of irons standing in it. The statue must now be built up with *bricks* and *mortar*.

The bricks are made of plaster, and the mortar is plaster and water.

The bricks are made by laying down a piece of oil-cloth upon the floor and pouring upon it a quantity of plaster, made liquid with water. So soon as this begins to harden, it must be scored, like short-cake, so that when quite set or hard, it may be easily broken into many fragments of various shapes and sizes.

Having a quantity of these bricks on one side and a barrel of mixed (fluid) plaster on the other, and a trowel in the hand, the work is commenced by sopping a brick in the fluid plaster, and placing it against the base and side of one of the irons; and then another and another, filling in the crevices with plaster-mortar. Thus the work goes on, until the body is reached, when it is continued in the same way, except that a cavity is left in the centre, to be closed at the neck, which is made solid, and re-opened in the head.

Having the figure (legs, body, and head) up, the chisels are now to be used in roughing it into the general human shape. This done, the arms are to be added. A long *brick* is sopped at one end in fluid plaster, and placed against one shoulder. It soon adheres, and forms the nucleus of the upper arm. To this is added another long brick, to form the fore-arm. Additions are then made to fill the arm out. The whole is now gone over with the chisels, taking off here and adding there, as may be found necessary, until the chisels are no longer required. Then the open files come into play. They act like planes, and soon produce even surfaces, taking off all irregularities. The trowels are still useful in filling up cavities and making slight additions. Small brushes are useful when very little is to be added.

It is necessary to cover the bricks entirely with a coating of plaster, for otherwise they will appear, and disturb the harmony of the surface. The surface, moreover, should be kept quite clean, else the plaster will not adhere. It should always be brushed before putting new plaster on, and, in case the work has been laid aside for a long time, the whole surface must be scraped or filed before beginning anew; otherwise the plaster will not adhere firmly.

If an alteration be desired in the position of the head, the arms, or even the body, it can be made by sawing the parts in two, and then re-uniting them by forcing fluid plaster (with a syringe) into the fissures. The arms can be taken off and finished separately, putting them on from time to time to see the effect.

It is unnecessary to keep the model wet: the dryer it is the better.

There are other details of the process which would require too much space to specify.

The advantages of this process of modelling over the clay process are numerous: I will mention a few of them.

The plastering is unchangeable: it neither shrinks nor swells; and it does not require wetting and covering with cloths or oil-cloths, to keep it intact and in order.

No moulding is necessary to transfer the form from clay to plaster. The model for the marble is not a cast; but the plaster-figure, as it came from the artist's hands, is itself the model.

The process is less tedious than clay-modelling, for by means of the *open files* more can be done with plaster in a day than with clay in several days.

A clay model cannot be changed materially after it has once been commenced; for the iron skeleton which sustains every part of it is a fixture. But in the plaster-model, the iron framework is only in the legs: all the rest can be cut apart, and varied from the original design in accordance with any afterthought of the artist and this is a very great advantage.

Modelling in plaster is not new, but my way of doing it is new; at least I know of none who have done it, if I except such as have been instructed by me. But my method would offer very little advantage over the old way of working in clay, were it not for the open file, an instrument quite new and of my own invention. It is made by a machine constructed by me for the purpose, and which produces them rapidly and with very little manual labour.

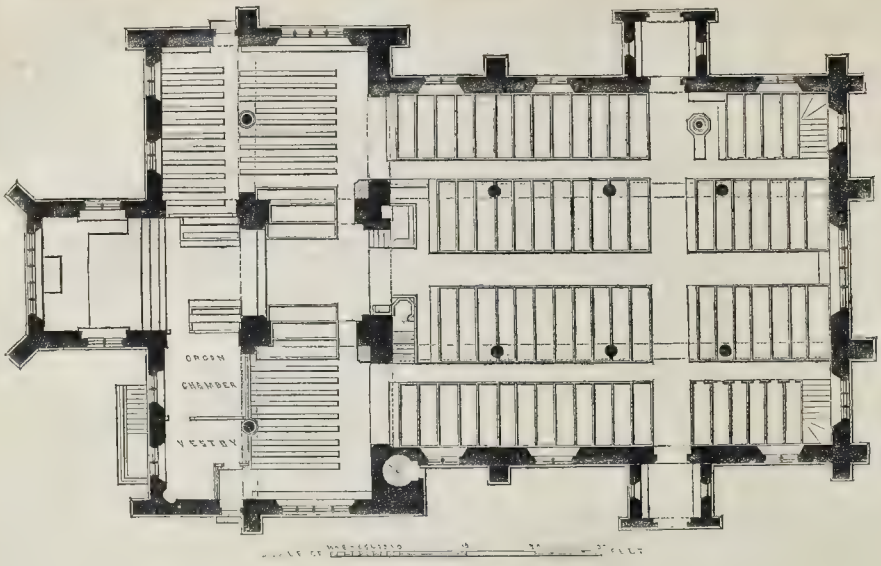
In Florence there are models of statues several hundreds of years old, done evidently in plaster, but roughly done. The difficulty always has been to *finish* a plaster-model. By my method, and with my instruments, the highest finish can be obtained with ease.

HIRAM POWERS.

* We have received the following account of modelling in plaster adopted by Mr. Hiram Powers, from a friend of the sculptor.

THE NEW CRYSTAL PALACE AND "PRACTICAL ART."

LECTURES have lately been delivered at several institutions on the building at Sydenham, on the principles of "Practical Art," and the Beautiful in Decorative Design and "Art-Manufacture," and on "The Laws of the Science of Colour, in relation to the Decoration of Rooms, to Furniture and Dress," by Mr. Edward Hall, F.S.A. Illustrated by diagrams, and specimens of manufactures. In the course of his description of the project of the Crystal Palace Company, the lecturer endeavoured to show the real origin and the history of the Exhibition of 1851, and of the building in Hyde-park. He strongly urged that the influence of so remarkable a collection of the works of Nature and Art, as that to be displayed at Sydenham, was of national importance, not only in regard to education, but by the elevation of the standard of morals which it would effect, by supplying the place of inducements to low vices—those inducements which existed in mere deference to the necessity for some relaxation or other—which, however rightly to be purchased by labour — was yet a natural desire. In the other lectures, he explained the general principles of form and colour, attaching the chief importance to the structural principle exhibited in all good architecture. At the London Mechanics' Institute, the lecture theatre itself afforded a good opportunity for illustrating certain errors in design, such as iron columns in imitation of Sienna marble, and mouldings with a niche and figure, represented in paperhangings; as also some of the arguments in proof of the universal desire to express the beautiful, even in the commonest forms of fittings and furniture. The lecturer thought that the well-directed exertions of the "Department of Art" would fail, unless seconded by self-education amongst those who make the demands which have to be supplied by the manufacturer. In the course of the lecture on colour, he referred to "colour-blindness," as explanatory of some of the difficulty often felt in comprehending the science, and on which point a letter by him had appeared in the *Builder*.



STAINED GLASS AT MARLBOROUGH HOUSE.

HAVING seen in the museum at Marlborough House the other day some painted glass exhibited as "the mode of execution described by Mr. Winston with reference to picture glass paintings," I wish to ask, through the medium of your Journal, whether Mr. Winston considers this as a work of art fulfilling the best conditions of a glass painting, or conceives the composition, drawing, or handling to be equal to the well-executed and masterly figures so often met with in cinque-cento glass paintings? This subject has of late engrossed so much attention that it is desirable to know, for the guidance of the public, whether this is the painted glass advocated by one presumed to be an authority in these matters. H. C. G.

*** We submitted the inquiry to the gentleman in question, and append his reply:—

"Allow me to assure your correspondent, 'H. C. G.' that I have never seen the painted glass to which he alludes, nor have ever expressed any opinion respecting it, nor have ever authorised any one to couple my name with it in any way whatever.

"C. WINSTON."

PLAN OF COCKERMOUTH CHURCH

COCKERMOUTH CHURCH.

Cockermouth Church, after much local contention since the fire, to which we alluded at the time, has been rebuilt, and is now very nearly completed. The plans of Mr. Joseph Clarke, of London, were adhered to by the committee; and the cost, we understand, has not exceeded the original estimate of 4,500*l*. The east window has been filled with painted glass, by subscription amounting to 300 guineas, as a memorial to the poet Wordsworth, who was born in the town, and educated as a child at the grammar-schools, in the church-yard. Various other windows are promised. The convenience of the railway was brought to bear on the materials; and as it was found difficult to procure the local free-stone, the grit from Prudhoe, in Northumberland, has been used for the greatest part of the church. This, with the blue lime-stone walling, forms a good contrast. An organ, by Bishop, and a heavy peal of eight bells, by Mears, will be put up, as soon as the church is fit to receive them.

PROVINCIAL NEWS.

Lynn.—As the tenders for building the new Corn-exchange here greatly exceeded the estimate of the architects, the committee of the corporation would not accept any of them without the sanction of the council, who resolved, however, that the work be immediately proceeded with, and the lowest tender, namely, 2,450*l*. was accepted, being that of Mr. Philip Edmunds, of Lynn.

Bury.—The twenty designs sent in for the covered provision-market are hung up for public inspection in the Town-hall.

Colchester.—The exterior and interior of Wivenhoe Church are about to be renewed, at an outlay of 2,000*l*. Amongst the principal subscribers are Mr. J. G. Rebow, 500*l*.; Mr. N. Corsellis, lord of the manor of Wivenhoe, 300*l*.; Rev. E. T. Waters, rector, 100*l*.

Ipswich.—A monument has recently been erected in the Church of St. Mary-at-Tower, in memory of the late Rev. J. G. Hawkins, B.A. by his pupils. The monument consists of an arched recess in the masonry of the wall, immediately above the sittings appropriated to the pupils of the grammar-school, surmounted by a canopy springing from carved bosses. Within the recess is a brass bearing the inscription. The design was by Mr. R. M. Phipson.

Wisbech.—The harbour here is to be deepened, and the banks of the Nene to undergo a thorough repair. Mr. Leather is the contractor, and the estimate of the present work is about 120,000*l*.

Trumpington.—The church of this place has been lately restored in the interior and reseated. The stonework has been cleaned from white-wash and plaster, repaired and refaced by Mr. Tomson, and the area filled with new seats by Mr. Rattee. The memorial window erected by Mr. Litchfield, and executed by Constable, is also a new feature.

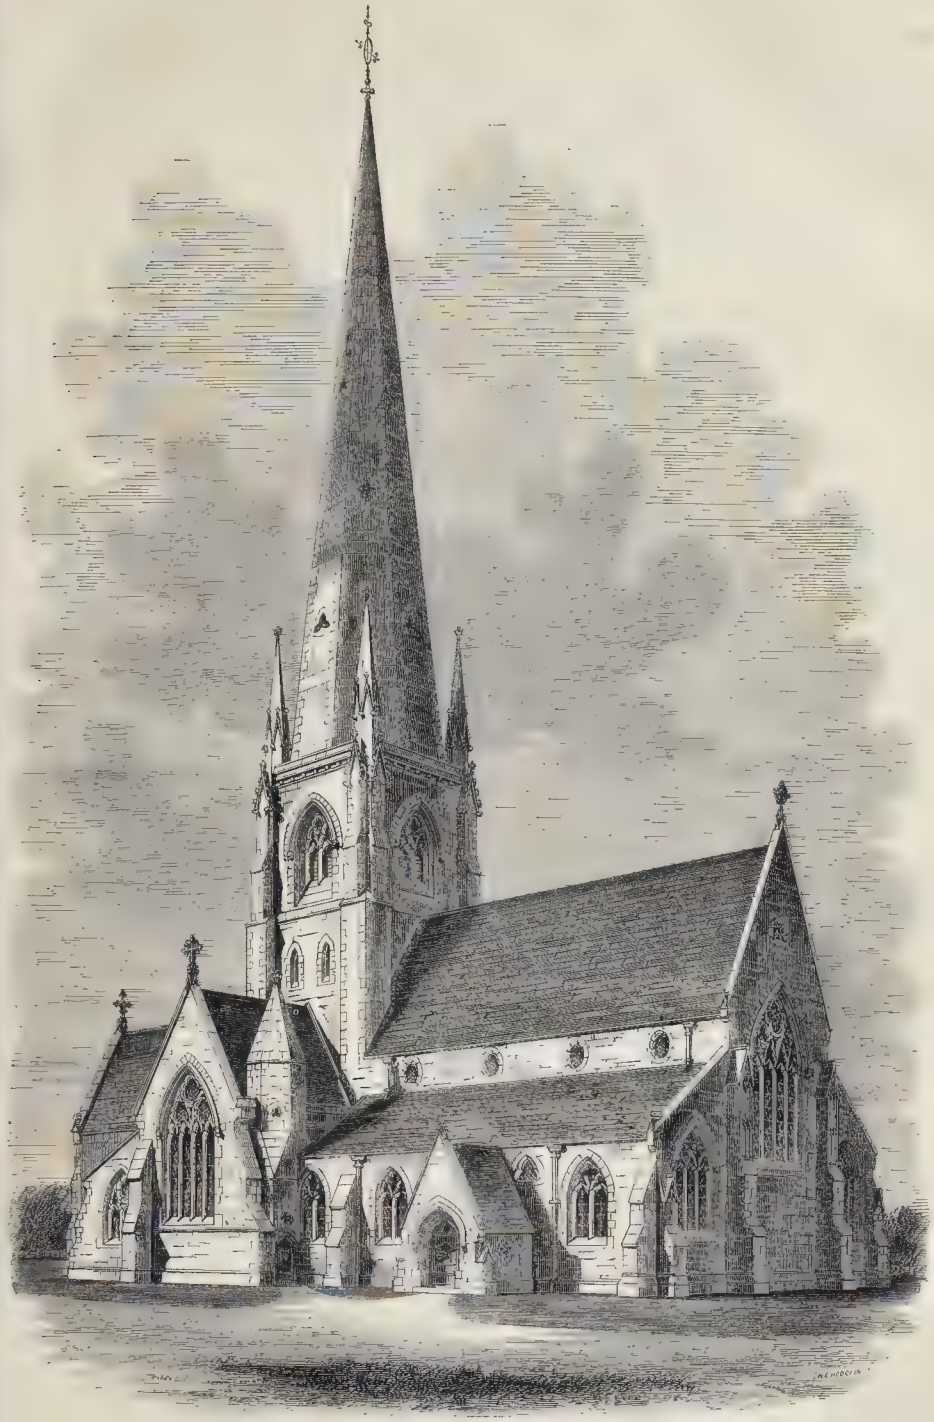
Oxford.—A "delegacy" has been appointed to consider the question of erecting a museum, with particular reference to the principle of constructing a building surrounding three sides of an area, which should be covered in and applied to the purpose of a general museum, receiving light from the roof. The fossils, minerals, and shells, collected by the late Admiral Harvey, have been received from Edinburgh.——The president and fellows of St. John's College, have voted 1,400*l*. for filling the remaining windows in the chapel with stained glass.

Crewkerne.—The parish church of South Perrott, near this town, has recently undergone considerable reparation, under the supervision of the rector, the Rev. John Wills. Among recent improvements is the introduction of stained glass in the chancel window. This window is of three lights, with trefoiled cusps, surmounted in the heading by two quatrefoils, under a circular (but once a pointed) arch. The three lights, which are filled with lozenge panes of ground glass, with *fleurs-de-lis*, display three circles in colours, representing the birth, last supper, and crucifixion of the Saviour.

Ruthin.—The gas directors here have unanimously resolved that the manufacture of gas upon the hydro-carbon principle be totally abandoned as soon as circumstances will permit the removal of the present retorts and substituting others in their stead.

Bingham.—The tender of Mr. Ralph Wharton, of Nottingham, for the completion of the entire works and plant required to light up the town of Bingham with gas, has been accepted. Mr. Jatland, of Nottingham, is the engineer.

Richmond (Yorkshire).—The inhabitants of Richmond propose to have the ancient castle of Richmond restored and adapted to the purposes of a depôt for the arms and stores of the West Riding Militia. A memorial has been presented to the Duke of Richmond, the owner of the ground enclosed within the walls of the castle, declaring the wish of the inhabitants, and requesting his grace's permission to that effect. The council of the borough have also made a like request.



Barnsley.—Out of seventeen designs for Salem Chapel, four have been selected in the meantime by the building committee from which finally to choose.

Peterborough.—The beautiful stone organ-screen erected by Dean Mont, in Peterborough Cathedral, is about to be removed to the west side of the transepts.

Lowestoft.—The contract for the erection of a new railway station here has been taken by Messrs. Lucas, Brothers. The building will contain the ornamental with the commodious. It will have an eastern and northern frontage. The roof will be of sufficient span to admit a cab-stand beneath it, and will be also carried about 50 feet farther west; and the platforms, while they will be considerably wider than at present, will be carried double the length. The necessary offices will all be upon the same enlarged scale.

REBUILDING OF DONCASTER CHURCH

The contract for the mason's work is made. The total amount to be paid by the committee is 19,520*l*. of which 3,430*l*. is for the tower above the level of the top of the roofs. The contract for the stone work of the South Chapel, which Mr. Forman had taken upon himself, is 1,780*l*. We learn from the *Doncaster Gazette*, that there will be a reduction from the amount to which the subscriptions are applicable, in consequence of the discovery of larger blocks of stone in Mr. Wrightson's quarries, and the use of Mr. Woodyeare's stone in the place of a more expensive stone which was originally contemplated. It is hoped that the saving from these alterations will amount to not less than 1,000*l*. If this be so, it seems that the entire expense of the foundations and stone work, including the architect's commission thereon and the other incidental charges up to that point, will not exceed 22,000*l* ground level. The contractor is Mr. Charles [illegible]son, the younger, of Northampton. There [illegible]considerable difference in the tenders. One [illegible] above Mr. Ireson's was about 43,000*l*. and the [illegible] amount of his contract. 3,500*l*. more than

COCKERMOUTH CHURCH.—Mr. Joseph Clarke, Architect.

NEWS FROM IRELAND.

GRANTS have been made by the Commissioners of National Education for building and furnishing seventy-five schoolhouses. Some have been in progress of building and will shortly be completed: others are only lately commenced. Two model schools have been opened, one at Athy and the other at Galway: the former has a model farm attached thereto. Preparations for district model schools at Waterford, Limerick, and Kilkenny have commenced, and two additional district model schools are proposed at Belfast.

A new church is to be built at Cong, Galway.

The Cork Athenæum, in progress of erection at Camden-quay, near the Royal Cork Institution, will afford sitting room for 2,900 persons. The general dimensions are 165 feet by 54 feet. Sir John Benson, architect.

Lord Cremorne is about to erect a church at Rockorry, county Monaghan. Mr. W. J. Barre, Newry, architect.

The model lodging-house agitation is daily gaining ground in Dublin, and it is a very generally and earnestly expressed desire that ere long many of the well-known "rookeries" may be razed, and comfortable, clean, and well-ventilated habitations provided for the poorer classes. That the lower order of the Irish only require to be spurred on to improvement of their condition, has been fully established by the experiments already made, and if the arrangements of the working committee be based on a good principle of organization, we entertain no doubt of their success.

Lord Stuart de Decies has contributed 150*l.* towards the erection of a new church at Ballynoe, and we hear that several other donations have been received, which have placed the project on a firm footing.

A new masonic-hall is to be erected at Armagh, and on the occasion of a late anniversary meeting, a set of plans and donation of 5*l.* were presented by Mr. McCurdy, architect, Dublin.

A new church is to be built at Silvermines.

At Roundtown and vicinity building operations promise to be brisk this spring, and we also hear of projected improvements at the north side of the city, in places hitherto almost uninhabited. The recent severe weather has almost totally suspended all building works.

At a late general meeting of the Royal Institute of Architects in Ireland, Mr. Jacob Owen, V.P. in the chair, Mr. J. H. Owen read a paper on dampness in walls, and suggested means for preventing this annoyance, which caused some discussion among the members.

Galway promises to be busy when the season sets in. At Oughterard new schools are to be erected, and at Clifden a new convent and church. The ordnance barracks will most likely cost about 75,000*l.* and engage a large number of hands.——The Brannock lighthouse in course of erection is far advanced. Mr. Halpin, the inspector, and Mr. Crowe, of Dublin, the contractor, had a narrow escape from drowning by the upsetting of a boat. Several other works are spoken of.

THE "BLOOM" ON ROMAN CEMENT

A SANITARY QUESTION.

ON page 41 of your journal, a correspondent, "Inquirer," has brought forward an interesting question of sanitary importance, though, if I understand his remarks correctly, he is certainly not aware of it.

The complaint is, that when Roman cement is applied to the outside of houses, and then painted either with white lead or with the oxide of zinc,—a black bloom comes through, sometimes within six weeks, and at others not for as many months; and he wishes to be informed if he may expect a recurrence of the evil after he has repainted the houses now affected by it. He seems to consider that the evil is in the cement, caused by some process of the manufacture, and limits the period of the complaint to the last four years.

I understand by the words "black bloom," that very disagreeable appearance which is seen on the exterior of many houses, and is of rather common occurrence: if your correspondent means the same, he certainly may expect its return after repainting, for the fault does not, I consider, lie in the cement, perhaps not in the paints,—you will perceive he has used *both* kinds, but most assuredly it is caused by bad drainage. The complaint is not new: in fact, it is now becoming rather old. It is one of the main points to which I direct my attention when surveying houses for my clients. Should there be the slightest appearance of it, I first look for any sewer grating in the street, opposite or near to the house; when, if there be, I bring that objection strongly before my client; but if there be not a grating, and he feel otherwise satisfied with the premises, I always insist upon the drains being put into perfect order before the lease is taken. Your correspondent, from these remarks, will judge how to proceed.

Having often had this subject in mind, I have observed that the bloom is most frequently to be found in streets running north and south or nearly so; and in most perfection on those houses opposite to, and within one or two of, the sewer gratings. The streets where this bloom is worst have generally bad sewerage; consequently the drainage of the houses is bad, and consequently the other houses, though not near the gratings, are more or less affected. The bloom is seldom to be met with in the streets of the City: it is frequently seen in the streets built during the eighteenth century, and is most common in those recently erected in the suburbs and low localities. This bloom is readily washed off, and it is curious to mark the effect which the rain has upon a house where, as in many instances, the balcony of the first floor having prevented the rise of the vitiated air, the paint around the top of the ground floor window has become quite dark; but at the sides a sloping direction is taken, being the portion the rain could touch and wash away, and from the same cause the bottom portion, under the window, becomes lighter in colour.

The worst examples that I have lately seen are some houses at the top of Gower-street, on the same side with, and adjoining to, the playground of the London University School. The ground floors of four houses are stuccoed and painted, and the whole was covered with this bloom of a darkish colour. One of the four has lately been washed or painted, making the three appear very much worse.

In the same number, p. 46, there is an editorial note under the head "Purification of Gas," asking whether the snow, said to contain sulphuric acid and ammonia, which has lately fallen in London, could be the cause of the curious deposit on the painted stuccoed fronts of many houses. Though I presume this has reference to the same bloom which is the subject of my remarks, not being aware of two kinds, I must leave the solution of your question to other hands.

WYATT PAPWORTH.

P.S. Since writing the above, a friend has informed me that native sulphate of barytes is largely used to adulterate *white* lead (query, if applied also to *zinc* paint): the air acting upon it produces a dark grey or bronze tinge: but this would be *in* the paint, not *on* it. A question which I should like answered is, whether a black efflorescence from cement *through* paint, like moss, is caused by ammonia, for nothing seems to cure it.

VULCANIZED STONE.

A FRESH invention has been patented for hardening the soft stones of the country. Specimens have been exhibited of great hardness, susceptible of high polish, which preserve a sharp arris, and are stated to be proof against the alternations of our climate, and to withstand not only the London atmosphere, but even the action of the strongest acids. The proprietors allege that, by a solution, chemically prepared, and laid on with a brush in dry weather, the decay of old buildings may be arrested; and the material acted on, whether stone, compo, or brick, be made perfectly non-absorbent.

The specification says,—"It is proposed (in all cases where it is practicable) in applying any indurating mixtures to enclose the stone or other materials to be operated upon in an air-tight chamber, and exhaust, or partially exhaust, the same, and then allow the indurating substance, whether hot or cold, to trickle down, or flow into the chamber, to fill the vacuum, the effect of which will be that the liquid indurating substance will readily find its way into the pores of the stone or other material, and become incorporated therewith.

Mixture No. 1.—The composition of this solution is as follows:—56 parts by weight of sulphur, dissolved by the aid of steam heat, or dry heat, in 44 parts of dilute vinegar, or acetic acid, containing 17 parts of acid to 8 of water.

In preparing indurating mixtures to be applied to the exteriors and interiors of buildings, whether possessing a surface of brick, stone, cement, or plaster, I employ the following ingredients:—Shellac, 14 parts, by weight; seed lac, 14 parts; coarse turpentine, one part; pyroligneous spirit, 40 parts;"—and other mixtures.

ST. GEORGE'S HALL, LIVERPOOL.

THIS building is approaching completion. The great hall, which, with the exception of the organ and the flooring, is in a finished state, measures in extent 169 feet long, 77 feet wide, between the gallery fronts: it is 82 feet high to the crown of the arch, and contains accommodation for 5,600 persons. It is divided into five compartments, by columns of polished granite, from which springs the vaulted ceiling. Each compartment forms a recess, extending over the corridors adjoining the hall, forming lunettes, which form galleries for the accommodation of spectators. In each recess will be suspended chandeliers. The main ceiling, which, as our readers are aware, is constructed of hollow bricks, is now adorned with octagonal and other panels, in which are displayed, in bold relief, the armorial bearings of the royal family, the Corporation, the Palatinate, and the patron saint, St. George, all highly gilt, and represented in natural colours. The spandrils of the main arch are filled in with allegorical figures of colossal size, representing severally Art, Science, Justice, Temperance, Fortitude, and Prudence. The gallery fronts form a balustrade of elaborate workmanship. The organ will be erected on a raised platform, supported by granite columns, now ready for its reception. It will be fixed in the north end. The lower part of the hall, under the gallery fronts, is finished in solid stone, in which are disposed the six entrance-doors, three on each side. There are niches for statuary, and panelling, filled in with slabs of various coloured marbles. The entrances to the hall will be fitted up with ornamented bronze doors, containing perforated ormolu panels. The flooring will be composed of Minton's tesselated pavement: the preparations for laying this are now nearly ready. The whole of the ornamental plastering has been executed by Mr. Jones, of Mount-pleasant; and the gilding and painting by Messrs. Troutbeck, of Liverpool. The platform for the organ and the stonework round the hall have been executed by Messrs. Cubitt, of London.

SCENERY OF THE STAGE.

Haymarket Theatre.—For Mr. Palgrave Simpson's neat and pointed adaptation of *Un Mari qui se dérange*, produced here under the title of "Ranelagh," two new scenes have been painted, an apartment in the house of Sir Robert Rovely, by Mr. O'Connor, and Ranelagh-gardens in the time of George II. with its alleys, its rotunda and boxes, by Mr. Morris. They are both entitled to commendation. The apartment is exceedingly well fitted up, with carved chimney-piece, wall-hangings, oaken cabinet, and other furniture to correspond: the general effect warm and solid. The view of Ranelagh-gardens prompts to a gossip about all the changes in the site, but we will withhold it for another occasion. Mr. Buckstone, Mr. Vandenhoff, Mrs. Fitzwilliam, and Miss Reynolds play the principal parts, and the piece is a success. Those who have seen the pantomime here (a very excellent one) must have noticed the peculiar extent and completeness of the traps in the stage. A few particulars, one of these days, may be useful to some of our readers likely to be employed on similar constructions.

Olympic Theatre.—Although "The Love

Lock" will probably not be played again (and we much regret its failure, as well for Mr. Wigan's sake as because, being an original piece, such an occurrence tends to lead managers to adhere to adaptations from France), it would be unjust not to mention the admirable scene, "A street in Silberberg," before which the introduction is played, even if we say nothing of the acting of Miss P. Horton, Mrs. Wigan, Mr. Emery, Mr. Robson (as the *old* man only), and Mr. Wigan —the latter especially. The scene represented is one of those German towns, with its inn, its cross, and its mountains, with which we have all been familiar, and was painted with skill and a clean brush.

AN ARCHITECT'S START.

An architect, well and honourably known to many of our readers, is publishing his memoirs in *Bentley's Magazine*. The account of his first start in life is amusingly put. If you wish to judge for yourself, here it is:—"My kind benefactor, H. B. having invigorated me with a week's breathing of the bracing air of Hampstead-heath, and the cheerful tone of my mind being restored by the lively but sympathising socialities of his family, he thus addressed my no less astonished than grateful apprehension:—'W——,' said he, 'to show you the confidence I have in your future success, as my only, but all-sufficient, security, I propose to become your banker, with an advance to the amount of 300*l.*; and, to relieve you from all sense of obligation, you shall hold yourself liable to pay me interest at the highly remunerative rate of five per cent. for the whole, or for as much of it as you may require. Engage, instantly, apartments of a respectable official character, in a good professional locality. Put a brass plate on your door, announcing 'Mr. W——, Architect.' Get your views of the Roman Ruins handsomely mounted: obtain an estimate for having them well lithographed, and for the printing of a suitable accompanying letter-press: let one lithograph be immediately prepared, and have something more than the full number of required impressions taken. By showing the drawings and the sample print, obtain as many subscribers as you can from the profession and other influential persons. So much of your time as remains unoccupied by conducting the publication of your pictorial work, and in filling your subscription list, you will of course give to (at least apparent) professional work in your office. Seek work—and, if you can obtain it, *make* work. Let those who come to see your Roman Views, and to enter their names as subscribers, find you occupied upon plans for things,—you know what,—town halls, and churches, and literary institutions, and national academies. Look out for advertisements "to architects:" try for premiums, and never mind not obtaining them: meanwhile, I'll venture to predict your work's subscription list will support you; and if it does not, something else will, depend upon it!'

So spake my friend H. B. Another friend (previously introduced to the reader, Jack R——), was of opinion that I required 'nothing but to be known;' to which end he facetiously suggested that I should put on a pair of tight 'inexpressibles,' with one red and one yellow leg, and walk daily from Charing-cross to the Mansion-house, till people should become universally bent on learning who the d—l that most distinguished and party-coloured individual might be. Then would follow the answer—'O, that's W——, the author of "Twenty Select Views of the Roman Antiquities," and the prospective designer of the countless architectural works, which will be similarly illustrated by some young aspirant of posterity, under the title of "Select Views of London Remains."' About that time the celebrated Romeo Coates had been manifesting all the advantages that belong to personal eccentricity, by driving about in a car like a cockle-shell, and by dying over and over again, as an amateur Romeo, at the Haymarket Theatre. Perhaps I should have done well, could I have emulated the conduct of the redoubted Coates; but though I lacked not ambition, yet was I passing cowardly; and, if a pun may be excused, in connection with so serious a subject, I fancy that the advice of my friend Jack would have been 'more honoured in the *breech* than the observance.'

I therefore adopted the council of my friend H. B. who although as alive to fun as the well-known caricaturist signing with the same initials, had yet as grave a purpose in his significant performance. I took the front ground-floor room of No. 2, Duke-street, Adelphi, with a sleeping garret in the roof. A brass plate announced me as aforesaid; and I was thereafter to be found as hard at work at my drawing-table, with as much solemnity of aspect, and with as much seemingly important occupation as ever gave professional dignity to *the* Pecksniff of world-wide celebrity. Ah! that dear old drawing-table! I'm writing on it now. It cost me six pounds. It was the first real piece of furniture I ever bought, and it is the last I will part with. It has had three or four new black leather coverings; and has been, for near thirty years, the stage of pleasurable, painful, interesting, harassing effort; the support of my sedentary diligence; and the silent witness of that minute industry by lamp-light which prematurely mounted on my nose a pair of spectacles. My next purchase was a glazed mahogany bookcase, with a most official-like *escritoire*, fascinatingly furnished with drawers gemmed with ivory buttons; with pigeon-holes for folded papers, a falling front, sustained in its horizontal position by brass quadrants, so as to serve as a writing-desk, charmingly verdant with green baize; all the required fitments for ink and pens, wax and wafers, and large drawers underneath admirably adapted for store of drawing-paper and miscellaneous stationery. What with a few books already in hand, some others presented me by H. B. and my third grand purchase, "Nicholson's Architectural Dictionary," I so contrived their 'thinly scattered' disposition as 'to make a show.' A large geometrical and practical-looking drawing in a plain flat oak frame, hung over the mantel-shelf, completed my official insignia; and thus, the scenery and the 'properties' being prepared, the next thing was to act the drama in real earnest."

ROAD FROM BROMPTON TO THE PARKS.

Your columns are no strangers to the efforts now being made to obtain for the inhabitants of Brompton ready access to Hyde-park, through Brompton-square and Princes-terrace, nor to the fact that Mr. Elger, the principal owner of the latter, objects to any communication between the two being effected, on the score that his property, being so superior to Brompton and Brompton-square, would be seriously injured by being brought into contact with it! Now, to say nothing of Mr. Elger's bad policy in so laying out his property as to excite the longings of the Bromptonites to participate in the boon of the opening into Hyde-park, granted to the owners of Princes-gate, &c. but surely not for them exclusively,—allow me to inquire how Mr. Elger contrived to get drainage for his property? Does not all the refuse from his property (and fine as it is I suppose it has some refuse) go through Brompton? Were not the very sewers that convey it built almost or solely at the expense of the then owners of Brompton-square? Did Mr. Elger pay anything towards that expense, or did he adopt a circuitous route, in order to avoid paying any such expense? If his sewers go into Brompton, why have the Commissioners of Sewers departed from their usual course of obliging the ground, road, or way over them to be thrown open to the public? As, then, Mr. Elger is under such obligations to Brompton for removing his impurities, he surely ought to afford its inhabitants every facility in his power for escaping from them into the pure air of Hyde-park and Princes-terrace. That the entrance into Hyde-park was attended with some expense, no one doubts; but still it was a boon granted by public authorities on public grounds, no doubt; and he will remember where it is recorded, and what was the treatment he received, who refused to extend to others the same consideration that he had received himself. And then let him consider which would injure him most, opening Brompton-square at the south end, or closing Princes-gate at the north end, of Princes-terrace? Opening Brompton-square or Rutland-street? Much as you complain of the Brompton omnibuses, allow me to inform such of the inhabitants of Princes-terrace as are not too aristocratic for such modes of transit, that they run with more frequency, are as clean and as well appointed and conducted as the red ones frequenting the Kensington-road; and that should they ever have occasion to extend their walks in the direction of Belgrave-square, Buckingham Palace, and Westminster, they would find a shorter and far more respectable route through Brompton-square, &c. than through Knightsbridge, which, thanks to the military and the present tenure of church property, is never very enticing; and after a very early hour in the day is literally impassable for ladies or families, unless in carriages or under the protection of powerful escorts. W. W. Pocock.

COMMUNICATION WITH THE GUARD.

Seeing in your journal some remarks relative to establishing means of communication between the passengers and guards, and guards and drivers, of railway trains, may I beg the favour of a few lines of your valuable space, to show how the matter really stands. Some years since, nearly thirty different plans were brought before the Society of Arts, at the instance of Mr. Harding, some of them very ingenious. The society did me the honour of awarding their Isis medal for the plan I then proposed, and which plan was exhibited in the Exhibition of 1851, and gained there the approval of the jury's reporter, Mr. Glaisher, in the following terms, at p. 283 (class 10):—"Allen (No. 413, p. 454) exhibits an electro-magnetic railway-train alarm: it consists of a copper chain (wire), intended to be placed over every carriage, the connection between each being established by the *guard-chains:* on the circuit being completed, the ordinary steam-whistle discharges the steam. The arrangements are as simple as well can be."

Now it seems to me, after the numerous plans that have been suggested, that it is complete waste of time endeavouring to devise further means.* It is not means that are wanted, *but a disposition to use them.* I may add, that the guard-chains being used as the means of transmitting the current, necessitated no *additional* connections being made. The plan has been *proved* practicable, and might have this advantage, that in the event of any portion of the train getting disconnected by breakage of the coupling, notice would be given. Mr. Stephenson, Mr. Bidder, Mr. Brunel, and others, saw the plan at the time, and the former gentleman referred me to the Telegraph Company's manager, where, I need not say, the matter ended.

Edward E. Allen.

Another correspondent, referring to the position of danger in which the Hon. W. C. Spring Rice was placed whilst travelling upon the Great Northern Railway, in January last, suggests "that the lamp now in use should, in each carriage, be made capable of being raised above the level of the roof of the carriage by means of a handle, where, suspended in the air, it would be immediately observed by the guard from his watch-box on the top of the last carriage. This would be sufficient *for the night. For the day* (since, perhaps, so small an object as a railway carriage-lamp might not be sufficient to attract attention), an apparatus connected with the lamp, and being a single or, better, a double vane, brightly coloured, would do. The *abuse* of this arrangement by timid or thoughtless people should be guarded against by a high fine."

RESPONSIBILITY UNDER SUB-CONTRACTS.

An action was recently brought in the Court of Exchequer, which affords a useful warning. It appeared that the defendants, Messrs. Rigby, the contractors, of Westminster, took a heavy contract in improving the terminus of the Blackwall Railway, Fenchurch street. They sub-let this contract to several parties, and these sub-lessees, it would appear, sub-let again until the sub-contracts reached the very labourers. The plaintiff in the action, Mr. Creed, resided at the corner of America-square, Minories, and it became necessary to cut a corner of his house away. In repairing this damage, some of these sub-contractors recklessly cut the gaspipes; and in their haste to make the most of their contract, neglected to take steps to prevent the escape of the gas. The consequence was, the gas rushed into one of the plaintiff's rooms, and there got confined. Mrs. Creed, smelling the gas, went in search of it with a lighted candle; and upon opening the door of the room in question the light caused a terrific explosion. The unfortunate lady was literally blown up, and it is a dispensation of Providence she escaped with her life: as it was, she was fearfully burnt in the face. Both her eyelashes and eyebrows were burnt off, and

* Th's is precisely what we have for years maintained.

her right arm and hand much injured. She was confined to her bed for six weeks; and the issue is, that she is a cripple for life. For the negligence Mr. Creed now sought compensation in damages. The counsel for defendants did not deny the facts as stated, but contended that Messrs. Rigby were not liable in law, they having sub-let the work to other parties, and could not be held responsible for the neglect of another contractor's men. The judge (Platt), in summing up, appeared inclined to this view; but the jury gave a verdict for the plaintiff; damages, 250*l*. The judge upon this gave defendants leave to move to enter a nonsuit, in the event of the Court above being of opinion that the last contractor, and not the first, is liable for negligence.

Miscellanea.

Road North and South.—Now that extensive building the Panopticon is about to be opened to the public, in Leicester-square, to say nothing new of Wyld's "Globe," and the other half-dozen marvels of that locality, will you give a word for a New Street to open out the west end of the National Gallery from Trafalgar-square to Leicester-square, through St. Martin's-street? this would be a short cut, and save much inconvenience, give a western front to the National Gallery, and perhaps add a few feet to that royal "poke-hole" of a place, the sculpture-room: it would also relieve that delightful drive up Dorset-place and Whitcombe-street, for which too much cannot be said in *dispraise*.—T.

Materials for Pottery, Glass, etc.—Few are aware of the great importance of the common and superior clays of this country to our manufacturers. The following statistical and other details are gleaned from the *Plymouth Times*. The Cornish and Devonshire china clays, or Kaolin (with two exceptions), come from the neighbourhood of Bodmin and St. Austle. At least 50,000 tons are annually prepared there for making porcelain, and sent off to the Staffordshire potteries in blocks as white as snow, packed in casks. An increased demand for the clays in question has sprung up of late years in consequence of their use in calico bleaching establishments, and in paper manufactories, many thousand tons being now used to give these substances an artificial body. About 25,000 tons of an inferior kind are raised at Bovey Tracey. This china stone is a semi-decomposed granite, but in a less advanced state of disintegration than the superior kind of clay. It is principally used as a glaze in the potteries. The total annual value of our earthenware manufactories is about £2,500,000 sterling, of which we export about £1,000,000 worth. About 750,000 tons of coal are annually consumed in making our ceramic wares, an amount equal to that used on the railways of the United Kingdom. The value of the gold consumed in the ornamentation of porcelain is estimated at £54,000. The common potters' clay is used for ordinary earthenware. The estimated weight and value of the earthenware of all sorts made in the United Kingdom are 160,000 tons, and £3,500,000. The exports for the last five years, in round numbers, were as follows:—53,000,000 pieces in 1848; 61,500,000 in 1849; 77,000,000 in 1850; 84,250,000 in 1851; and 89,000,000 in 1852: two-thirds of this quantity went to America. The dark Stourbridge clay is extensively used in the manufacture of crucibles. The fine plastic white clay used for the manufacture of the common tobacco-pipe, of which the consumption is so immense, is derived chiefly from Purbeck in Dorsetshire.

Dartford.—All Souls, Crocken Hill.—Three memorial windows, executed by Mr. Holland, of St. John's, Warwick, have been lately placed in the east end of this church. The church, which is Early English, was consecrated nearly two years since. Mr. Edwin Nash, architect, and the builder Mr. Constable. The centre window is divided into three compartments, with medallions representing the following subjects:—The Crucifixion, below; the Resurrection, in the centre; the Ascension, filling the upper portion. In the windows on either side are depicted the Nativity and Baptism of our blessed Lord, the Last Supper, and the Entombment of Lazarus. The following is the inscription:—"To the glory of God and the memory of Margaret Cecil Perceval, daughter of the Honourable Edward Perceval, and grand-daughter of John, 2nd Earl of Egmont, died on the 23rd of January, 1850, aged 72 years."

Flues.—A correspondent suggests that the cause of so many fires as we have had recently "may be attributed to our present very imperfect means of sweeping or cleansing our chimneys from soot, for it is notorious the ordinary machine generally used barely keeps sufficient space for the smoke to escape; and as in old houses timbers are often near, or may be in, flues, the danger must be very great, and the liability to fire very considerable."—H. B.

Strike Leaders, "Delegates," and Workshop Orators.—Mr. W. J. Fox, M.P. who, if we mistake not, is looked on, among the working classes, as a sort of model member of Parliament, thus characterizes the agitators, whose "occupation" depends on driving those they lead from their occupations, and only continues and prospers so long as they can promote misunderstanding between employer and employed:—"A class has risen up amongst you who get their living by agitation and organization. They toil, not with their hands, but with their tongues. The beer-shop is their factory and home. The loom and the plough know them not; yet they always affect to speak in the name of the working classes. They drill you to clamour, and would drill you to blood and plunder could they do it safely. They fawn on your first faults, and yelp and snarl at all other classes, or at those of your own class who resist their dictation. They are led by your enemies, or pretended friends, to make tools or fools of you for selfish purposes. Through them the demagogue cajoles, the aristocrat bribes, the adventurer plunders, and the spy betrays you; and they are a ready agency for any scheme, however preposterous, criminal, or disastrous." Hear what a fellow workman at Blackburn says of the treatment he has received. He states, in the *Preston Guardian*, that although he had for several months contributed to the support of the Preston strike from the earnings which ought to have gone wholly to the support of his own family as well as of himself, no sooner had he ceased to do so than he was driven remorselessly out of all employment, without a moment's notice, at the instigation of the "delegates," who induce or compel the hands at every mill to threaten a strike against all who decline to "stand and deliver" a determinate proportion of their own hard earnings to support those who will not work for their own support,—a threat which ends, of course, in general, in the expulsion of the "black sheep" with whom the other "sheep" will not associate. "Hundreds of families," says this poor fellow, "are intimidated and compelled to pay to the turn-outs through fear of being hooted and stoned through the streets. But the delegates have found another way of doing business. They persuade the whole of the hands at every mill to strike against those who decline to pay. A two loom weaver is compelled to pay 1s. 2d. per week, and a four-loom weaver 2s. 4d. Now I considered this was not right, and I could not afford to pay it, and that is the only reason why I have been turned into the streets with a wife and family, while the delegates are running away with more than 2*l*. per week, besides their travelling expenses. While their money is forthcoming the strike will never end. The delegates are standing out against their masters because they say they cannot do as they like with their own money, and straightway they come to Blackburn and tell people they *must* pay a certain amount of theirs towards their support, or be turned on the streets. Now is this consistency?" There is no despotism more remorseless and cruel than that which some who bewail their own fate as slaves to capital exercise over their own fellow-workers, under the preposterous guise, too, of brotherly *union*.

The Pernicious Escape of Gas and Tar in the Subsoil of Streets.—A correspondent, "W. D." gives an instance of the offensive impregnation of the subsoil of the metropolis to which Dr. Letheby lately drew attention, and which occurred in Bermondsey-street. While repaving, the pernicious effects of the gas escapes, says our correspondent, were fearfully disgusting and onerously apparent, for the soil was literally surcharged and oozing with the stinking poison, and so rotten therewith that the whole had to be removed to the depth of about 2 feet, and replaced with concrete. A manager of gas-works informed him that this was not at all surprising, since "escapes" were estimated at thirty per cent. of the whole manufacture!

Paper from Wood.—A patent for the manufacture of paper from wood fibre has been taken out by Messrs. Watt and Burgess. It is said to be equal to any writing-paper now selling at 7d. a pound. The cost of production is stated to be somewhat under 25*l*. a ton—more than 12*l*. less than the price of rag paper now in use. What with straw paper, and wood paper, there seems to be an end to the fear of rags not being capable of coping with the growing literary wants of the age. Doubtless it was this very fear, together with the cost of rag paper, which led inventive minds to the idea of using other fibrous substances such as straw and wood, as substitutes for linen and cotton fibre in the composition of paper.

American Lead Trade.—The following is a comparative statement of the import of lead at the port of Philadelphia for the last four years:—

	1850.	1851.	1852.	1853.
Coastwise... pigs	48,333	38,837	41,011	29,250
Foreign..... ,,	11,971	14,787	13,881	11,387
Total... pigs	60,304	53,624	54,832	40,637

The Artesian Wells of Colchester.—In a lecture recently delivered at Colchester by the Rev. J. T. Round, he gave the following details as to the artesian wells in and about that city. There are already five wells, varying in depth from 244 to 353 feet. The oldest, that on the works of Mr. John Mann, when first opened, yielded twenty-five gallons per minute, and the water overrun a pipe 12 feet above the surface: it still supplies from eighteen to twenty gallons per minute. Mr. Samuel Brown's shaft descends into the chalk at least 167 feet, which, with 140 feet to arrive at the chalk, makes the total depth at least 307 feet. The water overflowed a pipe of 13 feet 6 inches above the ground, and still fills the tanks at a level of 10 feet 6 inches above the surface. In boring Mr. Hawkins's shaft, out of 150 feet before chalk was reached, 115 feet were gravel in three beds: this shaft descends 150 feet into the chalk, and therefore the whole depth is about 300 feet. The most recent of the five artesian wells here is that at the waterworks. This is the deepest, inasmuch as it pierces 210 feet into the chalk, which, added to 143 feet in reaching the chalk, gives a total depth of 353 feet. When this shaft was sunk, the supply at Mr. Nicholl's well at the bottom of East-hill ceased to flow over the surface. In other places it has been found necessary to sink a much deeper shaft. The work of boring is at this moment going on at Combes, near Stowmarket, in order to obtain a supply of water for the tan-works of Mr. Webb, where the shaft has already reached the depth of 820 feet.

The London Omnibus Traffic.—The following statistics of the omnibus traffic of the metropolis will be read with interest:—"There are daily plying through the streets of London 3,000 omnibuses, each carrying 300 passengers daily, or 2,000 a-week, which makes for the entire omnibuses 6,000,000 a-week, or the enormous number of 300,000,000 passengers a-year. Supposing each passenger paid a threepenny fare, the amount expended annually upon omnibuses would be 3,000,000*l*. An omnibus coachman driving an omnibus six miles a-day,—which is below the average, although he may not drive a greater distance than five miles each journey, yet passing the same ground over again, he would, in the course of seven years, perform the extraordinary distance of 173,890 miles, or 521,640 miles in twenty-one years, which several coachmen have done without varying route—say from Chelsea to the Bank. And yet, after all this labour and all this travelling, although each day they carry in their hands from 8 a.m. to 10 p.m. a hundred weight and a half (the supposed weight of the strain upon the horses) they have not, but in very few instances, saved sufficient to pay their funeral expenses. The manual labour employed comprises the following:—Coachmen and conductors, 6,000; horsekeepers, 3,000; occasional drivers and hangers-on, 2,000; total, 11,000. The value of the metropolitan omnibus establishment is estimated at 962,000*l*. viz. horses worth 600,000*l*.; omnibuses, 300,000*l*.; harness, 60,000*l*.; and sundries, 2,000*l*. In the expenditure figures 787,000*l*. for corn, 275,000*l*. for straw, 750,000*l*. for hay, and 7,800*l*. for horses' shoeing; to which are added, 156,000*l*. for wear and tear, and 110,000*l*. for harness, exclusive of stabling and its accidents.

How to employ our Convicts.—This becomes a very serious question in relation to the abolition of transportation: it is one we have ourselves occasionally considered, and among other suggestions in our columns may be remembered one for the employment of convicts in granite quarries, another in the preparation of composts for manures, and so on. The conversion of our navy essentially into a steam force, suggests another way in which convicts may so far expiate their offences to the public, by supplying the navy with coals. And considering the conduct of our colliers, who no sooner obtain a rise in their wages, than, like negroes when emancipated, they prefer idleness for half the week, to any real improvement in their resources or condition, we do not think that their interests need be specially regarded in this question so long as they thus disregard their own. Besides, coal and other mines, ought really to be worked only by those who deserve no better than to grovel in the earth; and even three months' hard labour in a coal mine would doubtless have a salutary influence not derivable from mere prison discipline.

Orkney Antiquities.—The relics of the aboriginal inhabitants of Orkney are still thickly studded over the islands; but year by year they are diminishing in number. These may be divided into buildings or dwellings, barrows and graves, with the implements and weapons found in each, and standing stones. The buildings or dwellings are of three kinds:—1. Subterranean cells, constructed entirely beneath the natural surface of the surrounding soil. 2. Picts' houses, built wholly or partially above the natural surface, and in external figure and appearance closely resembling barrows or graves. 3. Picts' castles, broughs or burgs.

Palestine.—A society has been formed with the title of "The Palestine Archæological Association," having for its object the exploration of Palestine and the adjacent countries, with a view to the discovery of objects of antiquity. The prospectus says:—"If Egypt and Assyria have afforded so many valuable monuments to the truth of history and tradition, it may reasonably be expected that Palestine would yield as rich a harvest. Why should not the sites of the ancient cities and towns of the Hebrews, and of the aboriginal inhabitants of Canaan, be explored? And why might not the localities of important monuments—especially of the Hebrews—be sought for under the guidance of Scriptural authority and of tradition; as, for instance, the Egyptian coffins of the patriarchs at Hebron and Sychem—the twelve stones set up by Joshua at Gilgal and in the Jordan—the monumental record of the Law in the Stone of Sychem—the Sacred Ark, supposed to have been concealed by the prophet Jeremiah in some recess—with many others which will suggest themselves to the Biblical reader?"

St Alban's New Corn Exchange and Markets Competition.—In answer to the advertisement which has appeared relative to the above, thirty designs were received, from which the committee selected six, and ultimately by general opinion decided in favour of that submitted by Mr. James Murray, of Coventry, who was recently the successful competitor for a similar building in the latter place. Most of the competitors' names, it is said, were attached to their drawings.

Rochdale Cemetery Competition. — The chief premium has been awarded to the plans sent in by Mr. F. E. Stephenson; the second to Mr. David Lowe; and the third to Messrs. Abram Stansfield and Son.

The Metropolitan Coal Trade.—If the shipping interest took alarm at the introduction of coal by railway into London, and hence withdrew the usual or adequate supply of coasters from the trade, as they seem to have done, surely the recent extortionate rise in price must ere now have convinced them that the growing wants of the metropolis still require at least as large a fleet of colliers as ever they did; but the severity of the season along the coast, we believe, has had something to do with the deficient supply, and many vessels were actually lost. Moreover, the working classes are in no small degree indebted for their dear coals to the late strike movement, which extended to both colliers and sailors, the wages of both of whom were more than once raised, and which led to idleness among the colliers for almost one half of every week, instead of to the promotion of their industrial welfare, hence producing a scarcity of coal, and so helping greatly towards doubling and even tripling their price to the other working classes, in order to support the colliers in their idleness. An immense quantity of coals, however, has been delivered in the port of London within the past month of January No less than 193,146 tons, in 641 vessels, have arrived, 83,900 of them from Newcastle, 40,905 from the Hartlepools, 34,771 from Sunderland, 6,380 from Wales, 1,155 from Scotland, and so on. The railways also have been endeavouring to make up for late deficiencies. While in January 1853, coals by railway into the metropolis amounted to 48,000 and odd tons, in January, 1854 they amounted to 69,000 and odd. Of the latter, 34,900 and odd came by the Great Northern, 15,800 by the North-Western, and 8,000 and upwards each by the Eastern Counties and Great Western.

The Leeds Town-hall Tower.—The Leeds Town Council have agreed by a majority of twenty-five against sixteen to make a further grant to the new town-hall committee of 1,500*l.* for carrying the vestibule wall to the height of the roof, as a basis for a future tower, according to the design of the architect, as engraved and approved in the *Builder*.

Metropolitan Sewers (Deptford Pumping Station) Bill.—On the second reading of this Bill in the House of Commons, Mr. W. Williams objected to it on the ground of want of confidence in the present commission, and the intention of Government to replace it by a new one. Mr. Fitzroy stated that the purpose of the Bill was merely for the purchase of land for works that must be proceeded with.

The New Street between the Eastern and Western Parts of the Metropolis.—The writer of the remarks in our last on this subject has set forth his views more fully in a pamphlet on the subject.* The alternative he proposes to the line laid down, besides the high level street from St. Paul's Churchyard to Holborn, is "a straight street from Cheapside crossing the last-mentioned line, and then merging into another straight street (nearly a mile long) through the middle of the site of the Fleet Prison, up to the junction of Long-acre and Endell-street." "At Fetter-lane this new street would be in proximity to Fleet-street and a commodious junction made therewith."

* Weale, Holborn

The Ordnance Map of the Metropolis.—The parochial boundaries and the existing sewers being about to be engrossed on the ordnance map, the Sewers Commission have voted 100*l.* for the purpose of having the boundaries correctly ascertained.

Peculations of Builders' Labourers.—In the Marylebone County Court, an Irish labourer named Fox sued his late employer, Mr. Johns, a builder, for 12s. being four days' wages alleged to be due to him. From the defendant's evidence it appeared that he had been very much robbed of scaffold ropes, &c. and on watching caught plaintiff in the act of walking off with about 20 lbs. of rope wound round his body and hid in a basket. The judge refused to allow him a single halfpenny of wages, so that his rope's end, which ought to have been laid well on his own hide, cost him about 15s. besides loss of time, character, and employment.

Newcastle-upon-Tyne Antiquarian Society.—On Monday, in last week, the anniversary meeting of this society was held in the old Castle, Mr. J. H. Hinde in the chair. One of the secretaries read the report, from which it appeared that the catalogue of the museum was progressing satisfactorily; and that the funds were such as to pay the expenditure incurred. Various donations were announced, and objects of interest exhibited. A paper on the birth-place of the venerable Bede, contributed by Mr. R. Brown, of Sunderland, was then read. Office bearers for the ensuing year were elected.

Napoleon and Fairbairn.—The French Emperor gives frequent manifestations of downright goodwill to England: let us hope he dwells more on his great uncle's prognostication of future *alliance* between France and Britain in defence of European interests, than on the adoption of that uncle's ancient enmity towards us. A graceful compliment has just been paid us by the Emperor. Last year the Institute of France honoured Mr. Fairbairn, of Manchester, the engineer, by electing him one of its corresponding members, and he went lately to Paris for the purpose of taking his seat in the Academy. While there he received an Imperial invitation to the Tuileries, and was honoured with a lengthened interview, his Majesty presenting him at parting with a diamond box, marked with the Imperial initials.

West-End and Crystal Palace Railway Company.—This company has agreed with the Brighton that the former receive a rental of 8,000*l.* per annum for the use of the line for through traffic. The cost of the line, as estimated by Messrs. Bidder and Fulton, the engineers, is to be 400,000*l.* The Brighton Company have agreed to work the line at the rate of 42½ per cent. upon the gross traffic receipts. The works commence in spring, and the line will be opened in about eighteen months, from Chelsea new bridge to the Brighton Railway at Sydenham.

Sunderland Workhouse Competition.—We are requested to mention, that in lieu of a statement on this subject, which was printed in December last, the result is, that the first prize has been awarded to Mr. Oates, of York; and the second prize to Mr. Middlemiss, of Sunderland.

London Streets.—"Observer's" letter, in your last number, induces me to refer to the very dangerous state of the road from Charing-cross to Regent-street, from the iron sockets of water-plugs standing up like so many land-marks many inches above the granite; rendering this thoroughfare a most perilous one, both to the horse and his rider or driver. The consequences which may ensue from this neglect are fearful to contemplate. A timely repair or adjustment in the levels of the road may save a valuable limb or life.—H.

Birmingham Exhibition.—This exhibition has closed, after a successful season. The total amount of sales, including those through the medium of the Art-Union, reached 1,323*l.* 16s. During the last fortnight, when the price of admission was reduced to 2d. nearly 9,000 persons visited the exhibition.

The Architectural Societies of the diocese of Lincoln, and of the archdeaconry of Northampton, purpose holding a joint spring meeting at Leicester, some time in May. A local committee is being formed to receive them.

Cannon-street, City.—Permit me to suggest, that the new street now forming from London-bridge to St. Paul's, be called Canning-street, instead of Cannon-street. The trading world would appreciate this alteration, as a compliment to commerce and to that illustrious man.—Observer.

Milled Lead.—In the article on Plumbers and Plumbing, page 52, a passage is quoted from "Gwilt's Encyclopædia" (par. 2,214), by which it would appear that he does not advocate the use of milled lead. It will be seen, however, by referring to paragraph 1,784, that Mr. Gwilt's opinion decidedly coincides with that of the writer of the article.

E. B.

The London Corporation Coal-tax.—Messrs. Longman and Co. have just issued a sixpenny tract on this subject, by Mr. John Dickinson, F.R.S. Mr. Dickinson gives a complete explanation of the origin, progress, and operation of the tax, which constitutes at present an *annual* charge of above 187,000*l.* on a prime necessary of life, levied, not on the inhabitants of the metropolis alone, far less of the City, but on every inhabitant of every town, village, hamlet, and country dwelling within twenty miles from the General Post-office in the city of London! This "black mail," as it may well be called, it is here asserted, has progressed by underhand tricks, played upon Parliament and the public, in inducing the former to increase and extend the power of the City Corporation to levy this tax, under false pretences, or in Bills with designedly misleading titles and pretended purposes; and as for its operation, to have long and specially oppressed the poor, on whom it has conferred in return no benefit whatever, even in the shape of metropolitan improvements, which, in the opening of great thoroughfares, have, on the contrary, militated greatly against the convenience, comfort, and health of the metropolitan poor. The recent inordinate rise in the cost of coals throughout the metropolis brings this subject with peculiar force before the public eye at this moment.

The Photographic Society received a large number of visitors at a *conversazione*, on Tuesday evening last, in the Suffolk-street Gallery. It was a source of gratification to us to find that the observations we have considered it our duty to make recently, had been received on all hands in the spirit in which they were written, and that the views which they set forth, were received as correct. We anticipate with confidence good results, and shall be amongst the first to congratulate the council when these appear.

Doncaster School of Art.—A meeting convened by circular, was held in the Guildhall, in this town, on Thursday in last week, for the purpose of establishing a School of Art in Doncaster, in connection with the Government Department of Practical Science and Art at Marlborough-house. The Rev. J. Campion was called to the chair. Mr. Young Mitchell, the head-master of the Sheffield School of Art, gave an explanatory statement of the Sheffield school. He thought that Doncaster was peculiarly well situated for a school of art. The town possessed all the elements of success. There was no class of workmen to whom a knowledge of art would not be useful — to some it was absolutely essential — such, as wood-carvers, die-sinkers, chasers, carpenters, cabinetmakers, masons, and blacksmiths—but it would be a narrow mind which could regard art in its utilitarian aspect only. All would benefit by it. It elevated the mind, opened the perceptions, and shed a refining and civilizing influence over the whole community. Many practical questions were put to Mr. Mitchell, showing that the meeting were in earnest. A resolution that a school be formed at Doncaster, was unanimously agreed to, and a provisional committee and secretary *pro tem.* were appointed.

Good Hope for the Cape.—A company is proposed to be formed in London for constructing railways at the Cape of Good Hope. The intended capital is 600,000*l.* The promoters ask for a guarantee dividend from the Colonial Government.

How to make Wood look old.—Wash it, says a country paper, with a weak solution of sulphuric acid in water. A strong solution, as every one knows, will burn and blacken it entirely. Thus the shade may be deepened *ad libitum*. If the wood be dry at heart, it is said that this mode of treatment will even preserve it better than paint: it is therefore recommended for garden and other external erections in wood instead of paint.

Battersea-Park. — The Commissioners of her Majesty's Works and Buildings are proceeding with the necessary steps for the clearance of the ground for this park. On Tuesday, the materials of about twenty houses were brought to the hammer, by Mr. W. R. Glasier, the auctioneer. This was the second sale, the first having taken place in December last, when the materials of the old Red-house, White-mill, &c. were disposed of. On Tuesday, also, the workmen commenced the necessary operations for the formation of one of the permanent entrance roads.

Men and Masters in the North.—The *Elgin Courant* mentions, that from the increasing stir occasioned by the erection of a number of new buildings, a great demand at present exists in that quarter for operative masons. The masters have just advanced wages to 4½d. an hour; and notwithstanding the influx of hands from other localities which this rise has produced, the supply is considerably below the demand.——The ship-carpenters of Montrose have been on strike for 24s. a week, in place of 20s.

[ADVERTISEMENT.]

HOT-WATER APPARATUS.

At a time when the merits of various methods of warming buildings are attracting public notice, attention is respectfully requested to that of the circulation of heated water in large iron pipes, as superior to any other. It combines the great advantages of an agreeable heat, as the water in the pipes can never exceed a temperature of 212 deg. thus avoiding the burnt smell usually proceeding from steam-pipes, and hot-air stoves or flues, safety from fire, cleanliness, and great durability; and last, not least, considerable economy in the consumption of fuel. That these advantages are to be secured when the apparatus is erected by those who, from many years' attention and experience, understand its principles, such testimonials as the subjoined, of which many hundreds can be given to the nobility, gentry, and firms of the first respectability will prove.

BENJAMIN FOWLER, Engineer,
Whitefriars Iron Works, Whitefriars-street,
Fleet-street.

Lithographic Establishment,
17, Gate-street, Lincoln's-inn-fields, 19th January, 1854.

DEAR SIR,—Seeing the letter in to-day's *Times*, alluding to the comfort and security of heating by warm water, tempts me to offer you my testimony as to the efficient action of the system of heating by large hot-water pipes fitted by you in our new building, where from one furnace placed in a fire-proof cellar you have arranged to heat our counting-house and offices, a large and lofty room for thirty draughtsmen, and four large printing-rooms, each about 90 feet by 45 feet, thus enabling 150 workmen to pursue their avocations in a uniform agreeable temperature, without the sign of a fire in the rooms, and free from the consequent dirt and insecurity of an open stove. In addition to the cleanliness, safety, and comfort of this system, the advantage of economy by saving in fuel is secured. If it will be of any service to you, I shall be happy at any time to allow you to introduce any one to inspect your work.

Yours faithfully,
W. DAY, for DAY and SON,
Lithographers to the Queen.

To Mr. Benj. Fowler, Engineer, &c.
Whitefriars-street.

15, Aldermanbury, 27th January, 1854.

SIR,—I have much pleasure in speaking in the highest terms of the complete efficiency of the method of warming buildings by the circulation of water in large iron pipes. The apparatus erected by your firm in 1838, at our London house, and also that at our factory at Luton, erected a few years later, are working most satisfactorily to this day, and during this lapse of time have cost us nothing for repairs. We can also recommend it on the ground of economy, in consumption of fuel, and the freedom we enjoy from smoke and dust, the pleasant state of the atmosphere, and security from fire.

GREGORY CUBITT and CO.

Mr. Benj. Fowler.

ADVERTISEMENTS.

THE TOWN of BURTON-ON-TRENT
ACT, 1853.—GASWORKS DEPARTMENT.—WANTED, by the Commissioners under the above Act, an experienced PERSON, to manage the Gasworks at Burton-on-Trent; he must be competent to undertake the entire management of the works, to inspect the fittings throughout the town, to superintend the laying down of mains and service pipes, to take the registers of meters, to attend to the sale of coke, lime, tar, &c. and to collect all accounts under the gas department. Salary, 150*l.* per annum Apply personally or by letter to the undersigned, to whom applications, in the handwriting of candidates, accompanied by recent testimonials of character and competency, to be forwarded to me, endorsed "Application for Office of Gas Manager," on or before the 14th day of MARCH next. The manager will be required to commence his duties on the 25th day of MARCH next. Canvassing the Commissioners will be deemed a disqualification. By order of the Commissioners, WILLIAM COXON, Clerk.
Commissioners' Office, Burton-on-Trent, Feb. 15, 1854.

TO PARENTS AND GUARDIANS

A VACANCY is now open for a PUPIL in the office of a Civil Engineer. The instruction comprises Civil and Mechanical Engineering, Surveying, Drawing, Taking out Quantities, Estimating, Mechanics, and Rudimental Chemistry.—Address, W. H. WALENN, 7, Duke-street, Adelphi.
A Premium will be required.

LEAD, GLASS, AND COLOUR TRADE.

WANTED, a respectable Young Man in the above business. He must be a competent cutter, and know the nature of colours thoroughly.—Apply by letter only post-paid, stating full particulars, wages, &c to W. P. Mr. M'Dougall's, 11, Upper Thames-street.

TO ARCHITECTS' AND SURVEYORS' ASSISTANTS.

WANTED, by a Surveyor in the Country, an ASSISTANT, competent to prepare finished, working, and detail drawings and specifications, take out quantities, and valuing artificers' work. Apply, by letter, stating age, salary required and reference as to competency, to A. Z Post-office, Woolford, Essex.

TO IRONFOUNDERS AND MOULDERS.

WANTED, a WORKING FOREMAN, to take the superintendence and management of a small foundry.—Apply to FRANCIS ARDING, Albert Iron Works, Uxbridge, Middlesex.

WANTED, for a First-class Painting Establishment in Scotland, an ARTIST, possessing a general knowledge of decorative, figure, flower painting, &c.—Apply to WINSOR and NEWTON, North London Colour Works, Springplace, Kentish Town, between the hours of Ten and Five

WANTED, a respectable Person, practically acquainted with engines and boilers, toservein the capacity of TOWN TRAVELLER, to solicit orders for a patent. An active, steady man would probably find constant employment.—Apply to Mr HEBSO , 15, Duke-street, Adelphi.

NO BUILDERS' CLERKS, &c.

WANTED, in a large town, a BOOK-KEEPER; must have a thorough knowledge of the routine of a Builder's Office, and be a quick and good penman and accountant. Address, stating terms, and prepaid, to S. M. L Office of "The Builder."

WANTED, a thoroughly experienced WORKING FOREMAN of PAINTERS, &c. to take the entire charge of, and thoroughly superintend the restoring of a large job in the country. His services will be required at once A knowledge of plain decorations and specialties. Apply, personally, with references, on SATURDAY EVENING after five, or on MONDAY before nine or after twelve, to Mr. S LOWDEN, Baker, & . 3, Union-place, Clapham-rise

WANTED, ACTIVE AGENTS for the AMAZON LIFE ASSURANCE and LOAN COMPANY, and SICK BENEFIT SOCIETY. A liberal commission and proportion fees allowed. Applications to be made to
ROBERT GEORGE WEARE, Esq.
1, Ironmonger-lane, London. Manager and Actuary
Loans on personal security.

TO ARCHITECTS AND SURVEYORS.

WANTED, a SITUATION by a Gentleman thoroughly acquainted with Book-keeping, Builders' Accounts, & ; and who is also conversant with the routine duties of both professions.—Address, H. C. Post-office, Cheapside.

WANTED, by a Man with a good character, a SITUATION as STOKER, or DRIVER and STOKER. Address, A. C. 50, Commercial-road, Lambeth.

TO ARCHITECTS AND SURVEYORS.

WANTED, a SITUATION, by a middle-aged Man, who is competent to make out finished and working drawings. Salary not so much an object as immediate employment. Good reference can be given.—Address, to W. C. Mr Acres, No. 8, Upper St. Martin's-lane, Long Acre.

TO PAINTERS, BUILDERS, &c.

WANTED, a SITUATION as House Painter and Grainer. Good reference given.—Address to F. H. Post-office, Woolwich, Kent.

WANTED, by a good SMITH and FITTER, a RE-ENGAGEMENT; is a good Gasfitter, Locksmith, and Bellhanger; has erected workshops, conservatories, gates, railing, &c.; also apparatus for the heating of buildings with hot-water, air, gas, &c.—Address A. Z Post-office, New Brompton.

TO ARCHITECTS AND SURVEYORS.

WANTED, an ENGAGEMENT by an experienced DRAUGHTSMAN, accustomed to fair and working drawing, and the general routine of office work.—Address, Y. Z. Mr. Jackson's, Stationer, near the Town Hall, Borough.

TO ARCHITECTS, &c.

WANTED, a SITUATION as CLERK of WORKS. Good reference. Address, L. H. M. 69, Great Titchfield-street, Mary-le-bone.

WANTED to APPRENTICE a YOUTH, aged 14 years and upwards, as a CARPENTER and JOINER; or an IN DOOR APPRENTICE. Good reference can be given, and the same is required.—By letter, W. J. Mr Pratt's, 16, Smith's-fold-bars.

TO BUILDERS AND OTHERS.

WANTED, EMPLOYMENT, by a steady, active Carpenter and Joiner. A good workman, aged 32 Has had the superintending extensive alterations and repairs for the last four years; would be found a very useful man, having a good general knowledge in all branches of the trade. Good reference given.—Address (prepaid), to A. P 40, Harrison street, Gray's-inn-road

A MECHANICAL and ENGINEERING DRAUGHTSMAN, of considerable experience, who has just concluded an engagement on the Continent, would be happy to meet with one in the country. Address, A. Z. Mr Cousin's, Lithographer, 15, Cheapside

TO BUILDERS HOUSE AGENTS, &c.

A RESPECTABLE YOUNG MAN, Plumber, Painter &c. by trade, wishes to ENGAGE himself as SUPERINTENDENT; can estimate, measure, keep accounts, &c. No objection to country. Address to A. W. Office of "The Builder."

TO ARCHITECTS, SURVEYORS, BUILDERS, &c.

A PRACTICAL and ORNAMENTAL DRAUGHTSMAN, accustomed to prepare perspective, working, and detail drawings, take out quantities measure up artificers' work, &c. is desirous of an ENGAGEMENT. A moderate salary only will be required.—Address, A Z Post-office, Peckham.

TO ARCHITECTS.

A GOOD DRAUGHTSMAN and DESIGNER, well acquainted with English and Italian architecture, is desirous of an ENGAGEMENT in town or country. The advertiser is accustomed to prepare finished and working drawings, and can give the highest testimonials.—Address, ALPHA, Office of "The Builder."

TO MASONS AND BUILDERS

AN intelligent, experienced MASON (a leetotaller), fully conversant with all building operations, wishes for an ENGAGEMENT as FOREMAN, either in a yard or otherwise. References undeniable. No objection to work or leave England Age 45.—Address, INDUSTRIA, 5, Warlour street, Soho, London.

TO ARCHITECTS.

A GENTLEMAN, who has had several years' experience in offices of high reputation for Ecclesiastical and Gothic Architecture in General, is desirous of a fresh ENGAGEMENT with a London Architect. He has been thoroughly accustomed to making out working drawings and details, and to the general routine of an Architect's Office.—Address, A. B. 119, High Holborn.

TO ARCHITECTS AND SURVEYORS.

A CLEAR and rapid Draughtsman, writer of specifications, &c is now open to an ENGAGEMENT. Most satisfactory references as to practical ability. Salary moderate.—Address, A Z. 77, Spencer-place, Brixton road.

TO THE IRON TRADE.

AS CLERK, COLLECTOR, or DRAUGHTSMAN, having a general knowledge of the trade, and disposed to make himself useful with the above.—Address, W B Mr Lock's, News Agent, Gray's-inn-road

TO ARCHITECTS.

A CLERK of WORKS is desirous of a RE-ENGAGEMENT; is a neat draughtsman Country preferred. Reference given.—Address, M. M. M Post office, Essex-street, Islington

TO BRICKMAKERS AND BUILDERS.

A PERSON well acquainted with BRICK-MAKING is desirous of obtaining an ENGAGEMENT, either as foreman or by contract, for which respectable references will be given.—Direct, S. C 3, Chapel-street, Manor-place, Walworth

TO LAND SURVEYORS AND OTHERS.

A FIRST-RATE DRAUGHTSMAN and LAND SURVEYOR, having a practical knowledge of lithography, with good testimonials, is desirous of a SITUATION.—Address, L. M. 18, Wedlington-street, Camden-town.

TO BUILDERS AND SURVEYORS' CLERKS.

A CLERK WANTED in the Office of a BUILDER in London. He must have been accustomed to take out quantities, make estimates, and measure up extra works. Address, stating age and salary required, to J. C. Office of "The Builder."

TO NOBLEMEN AND GENTLEMEN.

A YOUNG GENTLEMAN is desirous of undertaking the MANAGEMENT of one or more LANDED ESTATES. The Advertiser being an architect and surveyor, and well able to advise on and superintend all repairs and buildings that may be necessary on the estate. The Advertiser would have no objection to join upon equitable terms a gentleman holding such appointment, who, from age or otherwise, may be desirous of relinquishing the more active duties of the profession. Address X. Y. Z care of J. W Blakely, Esq. Solicitor, Dewsbury, York-shire

TO LAND SURVEYORS, CONTRACTORS, AND OTHERS.

OPEN to an ENGAGEMENT, a thoroughly practical LAND and SANITARY SURVEYOR, LEVELLER, &c and who is also an experienced Contractor and Builder's Accountant. No choice of clime or locality.—Address, A. B. Ball Inn, Lenchall-street.

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

THE Advertiser is desirous to enter into an ENGAGEMENT in either of the above offices. He is a good draughtsman, can take out quantities, measure, and superintend works, and perform the duties usually required. The highest references can be given. Apply by letter, Y. A. 10, Stockbridge-terrace, Vauxhall-bridge-road.

THE Advertiser, a respectable Man, wishes for a SITUATION as PLUMBER, or to take the Three Branches. Good reference can be given.—Address, J. P. 29, Mansion House-street, Lower Kennington-lane

TO CIVIL ENGINEERS AND OTHERS.

THE Advertiser, age 21, who is an efficient Architectural Italian Draughtsman, has a good knowledge of surveying, levelling, plan and ornamental writing, mapping, and civil engineering drawing (being also well versed in mathematics), desires an EMPLOYMENT. Not having been in an office, only a small salary is expected.—Address, A. G. Mr. Hookham's Library, Old Bond street, London

TO ARCHITECTS.

THE Advertiser, who is a neat and expeditious draughtsman, and has a thorough knowledge of detail and construction, is desirous of an ENGAGEMENT in an Architect's Office.—Address, G. G. 11, Lower Grove, Brompton.

BUILDING LAND, with BRICK-EARTH, TO BE LET, TWICKENHAM, MIDDLESEX.—TO BE LET, on Building Leases, a valuable SITE, facing the high-road leading from Richmond bridge to Twickenham, with extensive frontages to the existing high roads and proposed new roads of 2,300 feet, or thereabouts, together with the privilege of making bricks from brick-earth on the property.—For particulars, apply to Messrs. PALMER and NORTLESHIP, Solicitors, 4, Tranfalgar-square; or Mr. ATWOOD, Surveyor, Mortlake, Surrey.

CRYSTAL PALACE.—TO BUILDERS and OTHERS.—BUILDING GROUND TO BE LET on Lease, on the road from the Anerley Station to the Crystal Palace, and opposite the ornamental grounds of the new building. The property consists of upwards of thirty acres, with a beautifully undulated surface, and thickly wooded, commanding extensive views in Surrey and Kent; it is accessible by good roads and railway, being within five minutes' walk of the Anerley station, and one minute's walk of the station of the proposed Crystal Palace and West End Railway. There is good brick-earth over the whole of the ground, and permission to make bricks would be granted to any one taking a considerable portion of the property. Plans may be seen, and further particulars obtained, at the Offices of Messrs. WEHNERT and ASHDOWN, Architects, 42, Charing-cross.

PUBLIC-HOUSE, PUTNEY COLLEGE ESTATE.—A valuable SITE for a Public-house, with a large PLOT of GROUND for Stabling, TO BE LET, on Building Lease, upon very advantageous terms. Also several PLOTS for Shops and third-rate Houses.—Apply at the Offices of G. MORGAN, Esq. 5, Chancery-lane.

FREEHOLD BUILDING GROUND TO BE LET, in the Green Lanes, near Woodgreen, Hornsey, at a moderate ground-rent. The roads and surface drainage are being made. Money will be advanced to respectable parties. A few very eligible Building Lots 80 feet frontage by 225 feet deep, TO BE SOLD, and part of the purchase-money may remain on mortgage.—Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL.—TO BE LET, on Building Lease, or SOLD, several eligible lots of BUILDING LAND, commanding most extensive prospect, rivalling that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 5 acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

ENFIELD. — RAILWAY TICKETS for FOURTEEN YEARS.—TO BE LET, on BUILDING LEASES, or SOLD, eligible PLOTS of BUILDING LAND, immediately adjoining the Railway Station. The estate is high and dry, and abounds in gravel. The roads and drains will be immediately commenced. Free passes by railway for fourteen years have been liberally conceded by the Eastern Counties Railway Company, to parties building on this estate, viz. for each 50*l.* house one first-class ticket, to the head of the house; and for each 30*l.* house, a second-class ticket to the head of the house.—Apply at the Offices of Mr. GEORGE MORGAN, 5, Chancery-lane; or of Mr. A. A. SAWYER, Surveyor, Enfield.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, ribs are unnecessary, and when used in Greenhouses no scorching occurs, its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BUILDING LAND, ISLEWORTH.—TO BE LET, on BUILDING LEASES for ninety-nine years, TEN ACRES of LAND very eligibly situate for the erection of first-class villa residences, having double frontages to the high road from London to Twickenham and the Great Western Railway, and within ten minutes' walk of the Isleworth and Brentford Stations on the loop line of the South Western Railway.—For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, HESTON.—TO BE LET, on Building Leases, for ninety-nine years, 1a. 3r. 3p. of LAND, in lots of 30 feet frontage, and great depths, eligibly situate for the erection of villa residences of from £17 to £40 per annum, on the Great Western Road, in the immediate vicinity of the Spring Grove Estate, in the parish of Heston, and within five minutes' walk of the Isleworth Station, on the loop line of the South-Western Railway. For plans and particulars, apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, TWICKENHAM.—TO BE LET on BUILDING LEASES for Ninety-nine Years, by 25a. of LAND, with extensive frontages to the Richmond and Windsor Railway, and the high road from Isleworth to Richmond, in lots of 65 feet frontage, with depths varying from 133 feet to 272 feet. It is very eligibly situate for the erection of villa residences of from £8. to £40. per annum. Adjoining Twickenham park, and the St. Margaret's estates, and within five minutes' walk of the Twickenham and Richmond Stations.—For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth. If the above be taken as a whole by any respectable man, it will be let at 25 per cent. less than if let in lots separately.

PALACE GROVE ESTATE.—BUILDING LAND, for the Erection of Villas, overlooking the Grounds of the Crystal Palace, with Frontages to the Anerley and Beckenham roads, possessing eligible sites for two first class Taverns and several shops. TO BE LET for long Terms, at moderate ground-rents.—For plans and particulars, apply to Mr. JAS. BRAGG, Surveyor, Devonshire Villas, Rotherhithe.

CENTRAL HILL, NORWOOD, near the Crystal Palace.—BUILDING LAND, for fourth-rate Houses, in this favoured locality, where high rents are obtained, and the demand for such property hourly increasing. Particulars of Mr. JAS. BRAGG, Surveyor, Devonshire Villas, Rotherhithe.

BARKING-ROAD, ILFORD, near the Railway Station.—BUILDING PLOTS for Fourth-rate Houses, at low ground rents, with advances if required. TO BE LET for eighty years.—Apply to Mr. JAS. BRAGG, Surveyor, Devonshire Villas, Rotherhithe.

HACKNEY, near the Victoria-park Station, on the Cambridge-heath Line.—Eligible BUILDING LAND, overlooking Victoria-park. TO BE LET for long terms, at low ground-rents, with advances if required.—Apply to Mr. JAS. BRAGG, Devonshire Villas, Rotherhithe.

BUILDING LAND, FOREST-HILL.—TO BE LET, on LEASE, valuable BUILDING LAND, with frontage to the road leading from the Forest-hill Station to Sydenham, and extending to the railway.—Plans of the ground may be seen, and particulars obtained, at the Offices of Messrs. WEBB ET and ASHDOWN, Architects, 13, Champion's-hill, Anerley road, Sydenham.

FREEHOLD BUILDING SITES TO BE LET or SOLD (bricks and sand included in the ground-rent), adjoining the railway station at Battle, Sussex. Several Plots for Villas (detached and semi-detached), to be numbered from 13 progressively. The situation is desirable in every respect, adjoining the Battle Station on the Tunbridge Wells and Hastings Railway, within fifteen minutes of the rapidly increasing watering places of Hastings and St. Leonard's, and the several villas will overlook extensive pleasure grounds already formed, and will command splendid views of Battle Abbey, the church, the park, and very extensive and delightful scenery. Villas numbered 1 to 12, are erected semi-detached. Also a frontage of about 180 feet by 70 feet in depth, for a row of smaller houses as shops. Bricks and sand are now on the ground, and to whatever extent may be necessary, will be provided by the Freeholder, without charge, except a ground-rent. Leases to contain power to purchase the freehold, or the freehold will be sold at once, and the amount may be secured on mortgage, and, in addition, money will be advanced for building.—For particulars and terms apply to F. ELLMAN, Esq. Battle, Sussex.

FREEHOLD BUILDING LAND, Brick-earth, Farm-house, Orchard, &c. TO BE SOLD or LET, several acres, containing valuable brick earth, near Plumstead-common. Also to be let, on building leases, a farm-house, garden, and orchard, in all about 6 acres, and sites for villa residences, on Shooter's-hill.—Apply to Mr. COLLIER, Surveyor, 7, Clement's lane, Lombard-street.

CRYSTAL PALACE.—BUILDING LAND TO LET, for the erection of villas, directly opposite and close to the Crystal Palace, and facing the proposed railway station.—For plans and particulars apply to Mr. ARTHUR TAYLOR, Architect and Surveyor, 16a, Basinghall-street.

FREEHOLD BUILDING LAND, SHEPHERD'S-BUSH.—TO BE LET, near St. Stephen's Church, very eligible FRONTAGES, on advantageous terms, from the freeholder.—Plans of the estates and full particulars of Mr. PETER BROAD, 29, Tavistock-street, Covent Garden. Omnibus fares, 6d. to the Bank.

REIGATE.—TO BE LET on BUILDING LEASES, singularly beautiful SITES for first-class VILLAS, in immediate contiguity to the railway station and town, and within one hour's ride of London-bridge. There is good sporting in the neighbourhood, and the climate is proverbially salubrious. Maps and views, if required.—For particulars apply to Messrs. PAGE and KELF, Architects, Land Agents, and Auctioneers, Reigate and Dorking.

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND To LET; term, Islington and Turnham green, 30 years. Apply to view at Mr. GREEN, Grove road, Upper Holloway; HARRIS, opposite Lee Arms, Brownlow-road, Queen's-road, adjoining Belmont Distillery, Dalston; PHILLIPS' Counting-house, near Acton lane, Highroad, Turnham-green; or Mr. D. HUGHES, 11, Gresham-street.—N.B. Populated localities; roads and sewers made.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor. 2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, as carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Bricks may be had, delivered on the site of the intended building, at 30s. per thousand.—For particulars apply to Mr. C. HAWBRIDGE, Architect, 73, Cheapside, City.

WATERSIDE PREMISES.—To Manufacturers, Engineers, Timber Merchants and others, requiring waterside premises and railway communication. The Birkenhead Dock Company are prepared to LET on Lease, in lots to suit tenants, LAND fronting the Birkenhead Graving Dock, and connected by railway with all parts of the kingdom. The land has especial advantages for steam saws, saw mills, timber yards, engineers, &c. and is near to the ships. Large burthen Dock dues are chargeable on goods landed or shipped in these docks.

By order, W. H. SLEIGHTMAN, Secretary.

Birkenhead, 6th February, 1854.

BUILDERS and OTHERS desirous of obtaining LAND for the ERECTION of VILLAS of not less cost than 700l. each can do so by choosing out of the remaining plots on a beautiful estate at Walthamstow. Apply at the Offices of the Civil and Counties Freehold Land Society, 76, Farringdon-street.

GOOD 3rds 16 oz. FOREIGN GLASS, in cases of 300 feet each, average size 40 by 30, at 42s. per case; 4ths do. 44s. Also 16 oz. extra do. do. 51s. per foot; Crown squares, in 100 feet lots, varying from 14 by 10 upwards, 2d. per foot; 1-inch rough Plate Tiles, 12s. per dozen. Also Crown and Sheet Glass, in crates, British and Patent Plate, Fluted and Stained Glass, Glass Slates, &c. Sheet Lead, Pipe, White Lead, Oils, Turpentine, Colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to their LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 28, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

PLATE and PATENT PLATE GLASS, of unequalled colours quality, and finish, for glazing and other purposes, supplied by J. LEES and Co. cheaper than any other house in London. All applications for estimates, &c. to be made to the Plate-glass Warehouse and Looking-glass Manufactory, 12, Rathbone-place, Oxford-street.

OSLER'S CRYSTAL GLASS CHANDELIERS, LUSTRES, TABLE GLASS, &c. 44, OXFORD-STREET, LONDON, and at Birmingham, continue to supply their Manufactory, Broadstreet, Birmingham. Established 1807. A large assortment of glass chandeliers for gas, of the newest designs, constantly on view. The more extensive use of gas in private dwellings has induced Messrs. OSLER to direct their particular attention to the manufacture of this class of articles, which, with a view to their general adoption, are offered at very moderate prices. Crystal glass chandeliers for candles in great variety.

MAHOGANY and PLATE-GLASS SHOP-DOOR and FAN-LIGHTS WANTED. Sizes, 7 feet 1 by 4 feet 7 inches, 3 feet 10 by 4 feet 7.—Apply to JOHN W. GABRIEL, 137, Regent-street.

HENRY PASK (late Johnson and Pask), BAKER-STREET, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

REVOLVING SAFETY WOOD and IRON SHUTTERS—SNOXELL, Patentee, 96, Regent-street, and at his Steam-works, 135, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 450 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,.....}

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on much improved principles that its acknowledged advantages and its unthinkness for INTERNAL as well as EXTERNAL purposes are unquestionable. IT NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade for its ready affinity to Stucco, Brick, or other Rough Surfaces, its durability, comparative cleanness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 3 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK —LONDON —PATENT.

not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixture with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BUNDELL, SPENCE, and CO.; when ground and dry by Messrs. T. B MORLEY and CO., and by the Company's Grinding Agents in London, Messrs CHARLES DEVAUX and CO. wholesale agents, 82, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc in fine and superlative painting ships, warehouses, dwelling houses, &c. In Leeds, by Messrs R. ANDERSON and CO. Tinsh-bush. Dry OXIDES and PAINTS, in Kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one eighth its cost of oil paint. It will not decompose or wash off, for which it is warranted pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 1½, and 2s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations &c as a substitute for oil paint; is without smell, dries in an hour, may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 12s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6d. per gallon, ordinary colours; Mineral chocolate brown, 8d.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 2s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finishing in oil colours. Price 10s per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

PERMANENT ZINC COLOURS and WHITE. Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc at prices which render them any advantageous substitute to the Lead, Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and never change by exposure to any Gases, Salt Water &c. For Ships and Machinery, also for all kinds of House Paint use, no other but Zinc Colours ought to be used; insure durability and economy. For Prices, apply to the Patentees, Messrs. GLOVER, GEVELIN and CO. White Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park-basin, London.

DAMP WALLS! DAMP WALLS!—PATENTS COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of long experience; it is unfailing in its application. Entire houses have been papered in a short time after the last coat of plaster has been put on. Also for the repairs of old houses its value is great. A moderate room can be prepared for 2s. 6d.—Prepared only by Mr. J. STENT, Surveyor, Warminster. May be purchased of all respectable Druggists or Paper-dealers for 3s. per quart, or 10s. per gallon.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cements applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing customers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of their Cement with out any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster Londonn, at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Parliament-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stucco'es dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES PHANCIS and SONS, Manufacturers of Roman, Parian Cement, Keene's cement, and all other Cements in use for building purposes, Nine Elms, London

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great extent to which this kind of Lime is held for building in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it to all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington, and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality

SECONDS, PAVIORS', STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks Flagstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

THE CRYSTAL PALACE DISTRICT GAS COMPANY.—Capital 80,000l. in 8000 Shares of 10l. each.—Registered Provisionally under 7th and 8th Vict. cap. 110.—Temporary Offices, 38, Moorgate-street, London.

ENGINEER.
W. M. Stears, esq. 43, Moorgate-street, and Sydenham, Kent.

The calls will be 1l. per share on the 1st of each month.

One of the principal features in this projected is the lighting of it. An eligible site is secured, suitable for works of the first class. The Company has been registered, and all the necessary steps taken for commencing the plant forthwith.

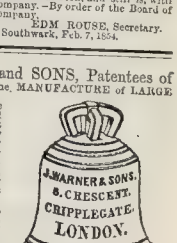
Prospectuses may be had, and applications for shares made to Messrs. CROSLEY, BROTHERS, 30, Cornhill, or at the temporary Offices of the Company, 38, Moorgate street, City.

JOHN DOWNES, Secretary to the Company.

Feb. 6, 1854.

THE CRYSTAL PALACE DISTRICT GAS COMPANY.—Offices, 38, Moorgate-street, London.

No FURTHER APPLICATIONS for SHARES in the above Company will be received after MONDAY, the 20th of FEBRUARY inst.—By order of the Board,



JOHN DOWNES, Secretary.

THE CRYSTAL PALACE DISTRICT GAS COMPANY.—The projectors of a gas company under the above title having repeatedly advertised in the Times and other papers, and also in their prospectus, that "an arrangement or engagement has been entered into for lighting the Crystal Palace," and that "on behalf of such projected company NOTICE IS HEREBY GIVEN, that NO ARRANGEMENT or ENGAGEMENT has been entered into with or on behalf of the above projected company, for lighting the Crystal Palace. The only contract for supplying gas to the Crystal Palace has been, and still is, with the Sydenham Gas and Coke Company.—By order of the Board of the Sydenham Gas and Coke Company.

EDM ROUSE, Secretary.

No. 1, Great Guildford street, Southwark, Feb. 7, 1854.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has hereto fore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Convents, &c. cast for any size, note, or weight, singly or in peals.

PATENT MACHINERY.

Stocked and wheeled ready for firing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Chappers, and pegged on a new system, which gives a superior tone and facility for ringing.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
136, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

BARROWS and LADDERS. — Navvy Barrows, 12s.; Off-heaving Barrows, 23s.; Crowding Barrows, 21s. Ladders, 6d. per round, up to fifty rounds; over fifty rounds, 7d. per round, at J. BARNESS, 2, York-place, Pentonville-hill.—A stock kept on hand, for cash.

CHIMES for SALE.—A SET of CHIMES, suitable for a Peal of Eight Bells, and arranged for Four Tunes, two of which are Sacred. The above are in good condition, and will be sold on moderate terms.—Further particulars of THOS. FIELD, Clock and Watchmaker, Aylesbury, Bucks.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids (hot or cold to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO, Essex Wharf, Essex-street, Strand.

FOWLER'S IMPROVED

WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

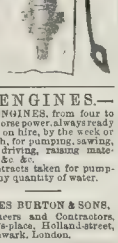
The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 12-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S

ENGINE-PUMP MANUFACTORY,



Whitefriars-street, Fleet-street, London.

TO BUILDERS AND PLUMBERS.

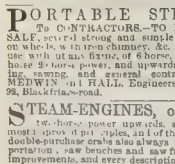
The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

which is recommended, for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the common carriage of expensive rods and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.



Iron and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,

8, Crescent, Jewin-street, London, Manufacturers and Patentees.

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,

Engineers and Contractors, John's-place, Holland-street, Southwark, London.

PORTABLE STEAM-ENGINES.—

To CONTRACTORS.—TO BE LET on HIRE, or for SALE, several strong and simple STEAM-ENGINES, mounted on wheels, on iron chimney, &c. complete, ready for immediate use with or without fixing, of 6 horse, 8-horse, 10-horse, 12-horse, 16-horse 20-horse power, and upwards, adapted for pumping, winding, sawing, and several other purposes.—Apply to MEDWIN and HALL, Engineers and Portable Engine-makers, 93, Blackfriars-road.

STEAM-ENGINES, of various sizes, from

two-horse power upwards, always in stock, made on the most approved principles, and of the very best quality; single and double-purchase cranes also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and CO. Windsor Iron Works, Windsor-terrace, City-road, and 174, Upper Thames-street.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REWARD OF FIVE JURIES," page 331, of the Great Exhibition, rank the Manufactories known so long as "The Pileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.

MAW and CO. send free, per post, their NEW BOOK OF DESIGNS,

with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.

BENTHALL WORKS, near Broseley, Shropshire.

Specimens at 11, Aldersgate-street.

BRICKS from COWLEY and KENT.

Also WHITE, YELLOW, and RED FACING BRICKS.

BLUE VITRIFIED BRICKS;

Fire Bricks, Lumps, and Tiles.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

BRICKS —Malm Cutters, Yellow and Pale

Seconds, Paviors, and Packings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countinghouse, Hoxton Brickfields, Grange walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality, constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

BRICKS.—A large quantity on sale, for

immediate delivery alongside per barges; best sound Grey Stocks, Marl Paviors, Shippers, Bright Fronts, and Place. Apply to Mr W. ALLAWAY, 4 Catherine-court, Tower-hill.

STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c. OF EVERY DESCRIPTION. Drawings, with prices, &c., will be forwarded free on application as above.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

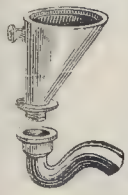
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER 2, South Wharf, Praed-street, Paddington; and at COLWILL, Brothers, 39, Bridges-street Covent Garden.



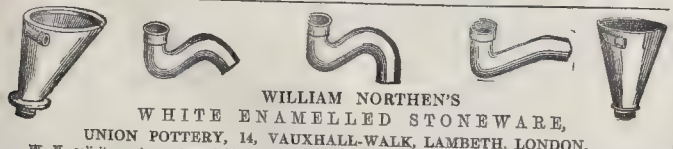
Drawings and List of Prices will be forwarded free on application.

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.



These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

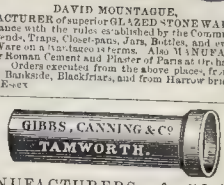
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

WILLIAM NORTHEN'S

WHITE ENAMELLED STONEWARE,

UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.



SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on a variance of terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at the Hard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow bridge-wharf, Stratford, Essex.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers; White Fire Clay, Facing Bricks, &c., &c. Agents.—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.

By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a bib-cock, and yet ensuring a perfect flush of water.

The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Jennings's Closets fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.

CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford-passage, Clerkenwell.

STAFFORDSHIRE POTTERY.—WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill-wall, Poplar: Closet-basins, urinals, bidet-pans, pisterns, washhand-tables, beer-machine handles, cloce-handles, basin-stands, &c. toilet ware, fancy jugs, pans-pots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

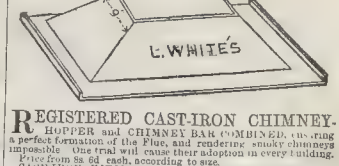
TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 3 inch to 36 inch. Parent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE CURRENT VENTILATOR have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw steam, smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an



EXTERNAL WALL.

With single pulley, from 8s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is close for the evening, at which time a constant supply of fresh air is most required. HAYWARD BROTHERS, sole Manufacturers, 136, Blackfriars road, and 1, 7, Union-street, Borough; and of all respectable Ironmongers, builders &c.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building.

Price from 8s. 6d. each, according to size.

CAST-IRON KITCHEN SINKS, with overflow-pipe, 8s. 6d. each.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O.G. Gutters, Sash weights, STABLE FITTINGS, pumps, bomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of Iron Castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

TERRA COTTA.—Vases, Figures, Capitals, Coats of Arms, Friezes, Consoles, Chimney Shafts, Flower-troughs, &c. &c. manufactured by J. M. BLASHFIELD, Mill Wall, Isle of Dogs (near the West India Docks), and sold at No. 1, Praed-street, Edgware-road, Paddington.

THE BUILDER.

Adams, a very capital Builder's Cart, Trucks, Barrows, capital scaffold poles, boards, purlogs, cord, long ladders, screens, &c; and a quantity of useful Building Materials.—May be viewed the day prior and morning of sale, and catalogues had on the Premises; of Mr. G. Brown, 2, Brompton-place; and of the Auctioneer, 41, Charing-cross

---

HAMPSHIRE.—Naval Oak Timber of superior dimensions, now standing in Hursley Park, Woods, Hedge-rows, and Coppices, within the Manors of Merdon and Compton, consisting of a great number of lots of first-rate fine grown navy timber, suited to the construction of the largest ships, and especially those of Her Majesty's navy which will be SOLD by

MR. A. FLETCHER, at the KING'S HEAD INN, HURSLEY, on TUESDAY, the 28th inst. at THREE o'clock in the afternoon.—Full particulars will be ready by the 14th inst. and may be had on application to Mr. POWLEY, Red House, Winchester; of the Auctioneer, Millbrook, Southampton; and at the Place of Sale, Hursley, February 4, 1854.

LAND WANTED TO BE PURCHASED, or TAKEN on LONG LEASE.—The Governors of Saint George's Hospital wish to purchase ONE ACRE of LAND, within five miles of Hyde Park Corner, to build a Laundry and Washhouse on. Parties having land to dispose of may inquire of ARTHUR BEE, Esq. 88, Pall-mall, within a month from this date. By order, JOSEPH GUNNING, Secretary.

St. George's Hospital, 11th February, 1854.

LAND WANTED.—The Clapham Burial Board are desirous of obtaining a SITE for a BURIAL-GROUND, containing about eight or ten acres and situate within three or four miles' distance from the parish church.—Communications (post-paid) to be addressed to Mr. F. MERRIMAN, Solicitor, 3, Church-buildings, Clapham-common.

BUSINESS PREMISES WANTED on LEASE, in a good situation near the Regent's-circus, Oxford-street, or Piccadilly.—Address particulars to J. JACKSON, 51, Broad street, Golden square.

TO BUILDERS AND OTHERS.

WANTED, large PREMISES, capable of being converted into stabling, and other conveniences, for about 50 horses, situated in or near to a public thoroughfare, between the Great North-ern and Great Western Railways. Particulars (post-paid) to W. & J. Deacon's Coffee-house, Wallbrook, City.

FREEHOLD.—TO BE SOLD, in the immediate vicinity of Victoria-park, eight PLOTS of FREEHOLD BUILDING LAND, facing the high-road from Victoria-park to Bow.—For further particulars apply to Mr. JAMES BROWN, the Marquis Cornwallis, Old Ford; or to G. CLARKSON, Builder, 48, Peuton street, Pentonville.

TO BE SOLD (a chance rarely offered), FOURTEEN ACRES of FREEHOLD LAND, at a price with advantageous terms, situate at Bushey Heath, Bushey, being about one mile and a quarter from the Bushey Railway station, and, as such, having the advantage of the liberal offer now making by the railway company; also a omnibus leaving within five minutes' walk of the land two or three times a day. Part of the purchase may remain on mortgage.—The land and part cultivate be sold.—Apply to Mr. LIGHTEN, House Decorator, No. 8, Bishopsgate street Without, opposite the church.

TO FREEHOLD LAND SOCIETIES

BUILDING LAND for SALE.—Ten Acres of LAND, situate in the suburbs of LEICESTER, well adapted for building purposes, having an open and commanding elevation, a near neighbourhood to Belgrave and the Dover Hills. A valuable bed of clay is close to the surface.—Apply to Mr. INGRAM, Solicitor, Leicester; or to Messrs. BELLAIRS and EDDOWES, Solicitors, Leicester.

VALUABLE GROUND for a CEMETERY, or for a FREEHOLD LAND SOCIETY.—Any Parish requiring ground for this purpose, or Society requiring Freehold Land, profitably let on an improving estate, may hear of about one mile and a half of the station at Sutton, on the Epsom line, may hear of TEN ACRES TO BE DISPOSED OF. There is a fine piece of water, large kitchen garden, stable and shed, and easily drained. It is in the centre of a large cultivated estate, the proprietor of which allows no buildings, and consequently, in the most desirable part for quiet residence.—Apply to Mr. CHITTLES, Surveyor, 8, Parliament-street, Westminster.

TO CARPENTERS, BUILDERS, MEMBERS OF BUILDING SOCIETIES AND OTHERS

TO BE SOLD, FOUR FOURTH RATE CARCASES, of seven rooms each; drains completed into the sewer. Situated opposite the Newberry Arms, Mahlon-road, Kensington-gore. Near Shepherd's-bush, and from the Metropolitan Railway. Are glass and wood completed. Up to the carcases, price £80 each. Two thirds of the purchase money can remain till the houses are finished.—Inquire of Mr. LEWIS, 71, Bayham street, Camden-town.

TO BUILDERS, CARPENTERS, AND OTHERS.

TO BE SOLD, on account of the death of the proprietor, the LEASE of a HOUSE, with large workshops and yard, in the county of Eatonsquare, which has been carried on successfully for seven years past in the above line. This would be found a good opportunity for any one about to commence with a small capital. The premises are good, and in a rising locality.—Apply to Mr. CLARKE, Ironmonger, Bathurst-street, Hyde-park.

ARCHITECTS.—Notice is hereby given, that the Trustees appointed by Sir John Soane will meet at the MUSEUM, No. 13, Lincoln's inn fields, on FRIDAY, the 24th of MARCH, at THREE o'clock in the afternoon precisely, to distribute the dividends which shall have arisen during the preceding year from the sum of £900 Reduced 3 per cent. Bank Annuities invested by the late Sir John Soane, among architects, artificers, and the widows and children of deceased architects left in destitute or distressed circumstances.—Plans of approved designs to be had at the Museum, and must be filled up and delivered there on or before FRIDAY, the 17th of MARCH, after which day no application can be received.

MR. C. FOSTER, Architect and Surveyor, will be glad to receive TENDERS from prudent and competent builders, to TAKE DOWN and RE-ERECT WORKSHOPS, &c. in the City of London. The drawings, specification, and forms of contract will be ready for issue on MONDAY next, at Mr. HARRIS'S, corner of Park street, Liverpool-road, Islington. The Lowest Tender will not necessarily be accepted. Security for the due completion of the contract will be required.

February 8th, 1854.

ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-Square.—NOTICE TO ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 3rd, or TUESDAY, the 4th of APRIL next after which time no work can possibly be received, nor can any Works be received which have already been publicly exhibited

FRAMES.—All Pictures and Drawings must be in Gilt Frames. Oil Paintings under glass, and Drawings with wide margins, are inadmissible. Excessive breadth in frames, as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

Every possible care will be taken of Works sent for Exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The Prices of Works to be disposed of may be communicated to the Secretary.

INSTRUCTION IN ART, General and Special, as afforded at the CENTRAL SCHOOL of the DEPARTMENT of SCIENCE and ART, at MARLBOROUGH HOUSE, Pall-mall, London. The School consists of

I. A NORMAL SCHOOL for TRAINING TEACHERS

II. SPECIAL CLASSES for TECHNICAL INSTRUCTION.

ART SUPERINTENDENT, RICHARD REDGRAVE, R.A.

The SPRING SESSION will COMMENCE on 1st of MARCH, and end 31st of July; and the fees are for that period

The courses of instruction are intended to impart systematically a knowledge of the scientific principles of art, especially in its relation to the useful purposes of life. A limited application of those principles is demonstrated with the view of preparing students to enter upon the future practice of the decorative arts in manufactures and workshops, either as masters, overseers, or skilled workmen. At the same time instruction is afforded to all who may desire to pursue these studies without reference to a preparation for any special branch of industry. Special courses are arranged in order to train persons to become masters of schools of art, and to enable schoolmasters of parochial and other schools to teach elementary drawing as a part of general education concurrently with writing.

2. The Lectures and Courses of Instruction are as follows:—

GENERAL COURSE FOR MALE STUDENTS ONLY

A. Freehand, Model, and Elementary Mechanical Drawing, Practical Geometrical Perspective, Panthamiton, Tempera, and Water Colours, Modelling. The Classes for Drawing, Painting, and Modelling, include the Figure from the Antique and the Life; and Artistic Anatomy. Lectures, Teaching and Practice, in the Morning and Evening. Fee, if the Session—Head Master, Mr. Burchett. Assistants, Messrs. Herman, Walsh, Denby, Wills, and Hancock.

B. The Evening Instruction is limited to advanced Drawing, Painting and Modelling, including the Figure. Fee, 2l.

TECHNICAL COURSES

C. Practical Construction, including Architecture, Bodling, and the various processes of Plastic Decoration, Furniture, and Metal Working. Lectures, Teaching and Practice, Morning and Evening. Fee, 4l. Evening Course only. Fee, 2l. For Male Students only. Superintendent, Professor Semper.

D. Mechanical and Machine Drawing. Class Lectures, with Evening Teaching and Morning Practice. For Male Students only. Fee, 2l. Superintendent, Mr. W. Binns.

E. Surface Decoration, as applied to Woven Fabrics of all kinds, Lace, Paper hangings, &c. Lectures, Teaching, and Practice, Morning and Evening. Fee, 4l. An Afternoon Class, for Females only. Fee, 2l. An Evening Class, for Male students only. Fee, 2l. Superintendent, Mr. Octavius Hudson.

F. Porcelain Painting, daily Teaching and Practice for Male and Female Students. Fee 4l. Superintendents, Mr. Simpson and Mr. Hudson.

G. Wood Engraving. Lectures, daily Teaching and Practice for Female Students only. Fee 2l. Superintendents, Mr. Thompson and Miss Waterhouse.

H. Lithography, Chalk, Pen, and Colour. Daily Teaching and Practice for Female Students only. Fee 4l. Superintendents, Mr. Brookes and Miss Channon.

PUBLIC LECTURES

On the Forms and Colours of the Animal and Vegetable Kingdoms, by Professor E. Forbes; on the Human Form, by Mr. J. Marshall, F.R.C.S.; on the History of Ornamental Art, by Mr. Wornum, &c. Admission to each Lecture, 6d.

3. The Instruction for the general Students is carried on daily, except on Saturdays.

4. Students may matriculate for a period of three years upon paying 2l. in one sum on entrance, or three annual payments of 1l. They are entitled to attend all Public and Class Lectures, the general and technical Courses, receive personal instruction, and to practise in the School at all times; they have at command the Museum and Library. At the end of the Session they may pass an Examination, and have the privilege of competing for Scholarships, varying from 1l. to 5l. a year in value.

5. Occasional Students are at liberty to attend only the particular Courses for which they enter, and have admission to the Museum, Library, and Public Lectures.

6. A CLASS FOR SCHOOLMASTERS AND PUPIL-TEACHERS will meet every TUESDAY and THURSDAY EVENINGS, and on SATURDAYS. Fee, 5s. Superintendent of the Training, Teaching, and Elementary Instruction, Mr. Burchett; Assistant, Mr Hayler.

Also at Gore House, Kensington, on MONDAYS and THURSDAYS.

7. A Register of the Students' attendances is kept, and may be consulted by parents and guardians.

8. The SCHOOL FOR THE FEMALE STUDENTS passing through the general course, is at 37, 41 new-street, Superintendent, Mrs. M'Ian; Assistants, Miss Gann and Miss West.

Fees.—Advanced Classes, 4l. and 4l. Elementary Class, 20s.; Evening Classes. A Class meeting at Gore House, Kensington, on MONDAYS, WEDNESDAYS, and FRIDAYS.

9. DISTRICT SCHOOLS OF ART, in connection with the Department, are now established in the following places. Open every evening except Saturday, from 7 to 9 30. Entrance fee 1s. Admission, 2s. and 3s. per month. The instruction comprises Practical Geometry and Perspective, Free-hand and Mechanical Drawing, and Elementary Colour:—

1. Spitalfields, Crispin-street.
2. North London, High-street, Camden-town.
3. Finsbury, William-street, Wilmington-square.
4. Westminster, Mechanics' Institute, Great Smith street.
5. St. Thomas, Charterhouse, Goswell-street.
6. Rotherhithe, Grammar School.
7. St. Martin-in-the Fields, Long Acre.

At 1, 3, and 5 Schools there are Female Classes. Application for admission to be made at the offices in each locality.

For further information, apply at Marlborough House, Pall-mall.

HENRY COLE, }
LYON PLAYFAIR, } Joint Secretaries.

COMPETITIONS.

TO ARCHITECTS.

NEW INDEPENDENT CHAPEL, Haslingden, Lancashire.—Architects desirous of submitting PLANS and SPECIFICATIONS for the immediate erection of the above building may obtain particulars on application to the Rev. G. W. CLAPHAM, Haslingden, Hon. Sec. to the Building Committee. 5l. will be given for the second best set of drawings. The plans to be delivered by the 31st MARCH next.

COMPETITIONS.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that PLANS and SPECIFICATIONS for TAKING DOWN and REBUILDING the Parish Church at Rusper, in the County of Sussex, will be hung at the Star Inn at Rusper 3 miles from the Fay Gate station, Horsham branch of the London and Brighton Railway, on MONDAY, the 27th of FEBRUARY, and five following days. All persons desirous of contracting for the execution of the work are to send in sealed Tenders, addressed to Rev. JOHN BROAD WOOD, Lyon, Horsham, Sussex, on or before MARCH the 5th. The Tenders to include the taking down the old Church (except the Tower, and the following materials made of old materials. The lowest Tender will not necessarily be accepted.

CONTRACTS.

TO CONTRACTORS

NOTICE is hereby given, that TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 6th day of MARCH, 1854 from persons desirous of contracting with the Honourable Board of Ordnance for the ERECTION of ADDITIONAL ACCOMMODATION to the GARRISON HOSPITAL, CHATHAM.

Plans and specifications of the works are to be seen and forms of Tender obtained at the Office at the Royal Engineer Office, Chatham, between the hours of TEN and FOUR, till the 4th of MARCH, 1854, Sundays excepted.

The person whose Tender may be accepted will be required to enter into a bond with two sufficient sureties, jointly and severally to be bound under a penalty of 1,500l. for the due performance of the contract.

Tenders to be addressed to the Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London, and to be delivered free, endorsed "Tender for Works at Chatham."

No Tender can be admitted after the said 6th day of MARCH, 1854.

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

W. R. GRIFFITH, Inspector Commanding Royal Engineer.

Royal Engineer Office, Chatham, 15th Feb. 1854.

NOTICE.—TO BUILDERS and OTHERS.

ORDNANCE CONTRACTS.

The Honourable Board of Ordnance being about to enter into CONTRACTS for the following descriptions of Artificers' Work, in the Woolwich district, from the 1st of APRIL, 1854, to the 31st of MARCH, 1855, viz.:

AT WOOLWICH:

for carpenters, bricklayers, masons, slaters, plumbers, painters, glaziers, and paperhangers, paviours, smiths, and ironmongers, and upholsterers' work.

AT WALTHAM ABBEY AND ENFIELD LOCK:

for the same trades as for Woolwich, with the addition of plasterers and millwrights.

The Commanding Royal Engineer at Woolwich hereby gives notice, that such persons as may wish to TENDER for the same, may obtain schedules between the hours of 11 A.M. and FOUR, from (except Friday) personal application at the Office of Works, at the Arch Carpenters' and Joiners' Shops, adjoining for the Woolwich, Waltham Abbey, for the Contracts to Waltham Abbey and Enfield Lock. Notice will be issued after the 6th of MARCH.

Tenders will be received for each trade separately, or for all the trades in one contract, for each station; the part extending for such contract to state the rate either above or below the schedule at which they will perform the work specified in each schedule.

Tenders, of both descriptions, to be delivered, prepaid, at the Ordnance Office, Pall-mall, London, on the 7th MARCH, 1854, addressed to "The Secretary to the Board of Ordnance," and marked "Tenders for Work at ....."

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, February 14, 1854.

BRISTOL LOCAL BOARD of HEALTH.

TO MASONS.—The Committee of the Bristol Local Board of Health hereby give Notice, that they are ready to receive TENDERS for the performance of the following Works for Three Years, from the 24th day of MARCH next, viz:—

For the supply of Curb, Edging Paving, and Pennanting of the best Hanham Stone, Frenchay, Welsh, or other Stone of equal quality; and for Setting and keeping the same in the Pavements of the Streets, Squares, Courts, Yards, Lanes, Passages, and Places within the city and county of Bristol, at such times and in such manner as the Local Board and their Surveyor may direct. The Committee have divided the said city and county into Five Districts, and any person or persons willing to Contract for doing the above mentioned Works in all, or any, or each of the said districts, are requested to deliver sealed Tenders for doing the same on or before TEN o'clock on THURSDAY morning, the 23rd day of MARCH next, endorsed "Tender for Paving in District No. 1, 2, 3, or 4," and addressed, "To the Committee of the Local Board of Health, No. 13, Prince-street, Bristol," where a specification of the works, the terms of the Contract, and a form of the Tender, and any other information, may be obtained. Each Contractor will be required to find two good and sufficient sureties for the performance of his Contract. The Committee will not bind themselves to recommend the acceptance by the Local Board of the lowest or any Tender, nor until inquiry and approval of the proposed sureties.

By order of the Committee,

JAMES HARRIS, Clerk.

Offices, 13, Prince-street, Jan. 19, 1854.

TO BUILDERS.

TENDERS are required for the ERECTION of TWO HOUSES, and also for Alterations and Repairs to Five Houses adjoining, situate in High-street, Hanham. The lowest or any Tender will not necessarily be accepted.—EDWARD MANFRED, Surveyor, &c. 20, Melville-terrace, Kentish-town.

[For remainder of Contracts see next page.

THE BUILDER.

RECENT TESTIMONIALS

of the practical worth and efficient security of CHUBB'S LOCKS AND STRONG ROOM DOORS.

CHUBB and SON beg to lay before the public the two following letters, which they have lately received, as affording further proof of the security of their Manufactures.

Ineffectual Attempt upon the Strong Room of the London and North-Western Railway, Liverpool.

"London and North Western Railway Company,
Liverpool, 27th May, 1853.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of your Locks and Locks of your make, which secure the Strong Room at this office, and which completely baffled the efforts of one or more burglars to get at the money-chest in the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant,

"Messrs. Chubb and Son." "GEO. PALMER.

From Mr. Otway, Superintendent of Police, Coventry.

"Police Office, Hertford-street, May 3, 1854

"Gentlemen, I have the pleasure to inform you, that having one of your Locks on the street-door of my house prevented my being robbed last night, as the thieves broke open all but succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.

"I am, Gentlemen, your obedient servant,

"C. O. WAY, Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms, may all be had at the Patentee Locks. Complete Illustrated Lists, with Prices and Sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton

JOHN WALKER, CORRUGATED IRON ROOF and BUILDING MANUFACTURER,

And GENERAL CONTRACTOR,

Works, Mill Wall, Poplar, London, and Gilbrook, Birkenhead

Offices—Corner Fast-street, West London-bridge, and 101, Gracechurch street

CHIMNEY-PIECES of CAST-IRON, manufactured by CHARLES KINDER, at TAPTON FOUNDRY, Chesterfield.

With opening	30	40	48	54	60	66 inch.
£ s. d.	1 10 0	1 15 0	2 0 0	2 5 0	2 10 0	2 15 0

They are protected by a coat of paint, and after being fixed, may be painted to suit the room. Combining a good grate with an indestructible foundation, they are well adapted for offices, public rooms, railway waiting rooms, &c

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

PLUMBIC ZINC.

MOREWOOD AND ROGERS'S PATENT PLUMBIC ZINC.

POSSESSES THE DURABLE QUALITIES OF LEAD, and not requiring to be more than ONE FOURTH AS HEAVY AS SHEET LEAD, is, with great ECONOMY and ADVANTAGE, substituted for that Metal FOR ROOFING, RIDGES, GUTTERS, FLOORING, and all other purposes to which Sheet Lead is applicable.

THE EXPENSE OF THIS METAL IS LESS THAN ONE-HALF THAT OF LEAD.

For further particulars, apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE, STEEL-YARD WHARF, 87, UPPER THAMES-STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.

AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads.

Sash Weights. Air Bricks, 3s per doz. Hooping for bond Iis. per cwt. Cast Lath, 11s per cwt. Sash Pullies, 8s. 6d. per gross. Arnott's Ventilators, 4s each. Elliptic Stoves, with double backs, 2d. per inch.

Register Stoves from 4½d. per inch.

Improved Self-acting Ranges with oven and boiler { 26 32 31 36 inch. 28s. 30s. 32s. 34s each.

Bes Self-acting Ranges, with oven and boiler, wrought bars and bright fittings { 36 38 40 inch. 50s 56s. 60s each.

An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger plates, Levers, and Bell pulls, en suite.

BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.

The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming ironmongery can here select whatever they require at WHOLESALE PRICES.

WALMSLEY'S, 126, 127, 128, LONDON-ROAD, SOUTHWARK (Six Doors from the Obelisk).

Air Bricks, 4s. per doz.
Best Town Glue, 45s. Ditto, Scotch, 57s. per cwt.
Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	10s. per gross

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use which are both cumbersome and extensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two-light) to 16l. 16s.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS (all communicating), exclusive of the shop, devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated and japanned wares), iron and brass bedsteads, so arranged as to classify that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent (per post) free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); Nos. 1 and 2, NEWMAN-STREET, and 4 and 5, PERRY'S-PLACE.

NEW HOUSES OF PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas-Meters, 5,000 in use. Testimonials at the Office, 165, Regent-street. Manufactories removed from Hampstead road and St. Martin's-lane to more extensive premises, New-road, near Albany-street.

THE attention of Builders is directed to the important improvement in WEBB and GREENWAY'S PATENT IRON BARREL BOLT, which is perfectly even on the back, consequently can be fixed in much less time than the old tower or barrel bolt.

WEBB and GREENWAY also draw attention to their Patent Brass Barrel Bolt.
Patent Brass and Iron Casement Stay and Fastener.
Patent Double-action Floor Door Spring.
Patent Brass and Wood Knob Cupboard Turns, with regulating Spindles. Brass Gothic Drop ditto. China and Glass Knob ditto.
Patent Warwick Piston Latch; Brass Eyes for Cornice Pole Rings; Copper, Brass, and Steel Weaver's Mails.
The above can be had from all Ironmongers throughout the United Kingdom, and from the Manufacturers, WEBB and GREENWAY, Brassfounders and Locksmiths, Steelhouse-lane, Birmingham.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. A 200,000 cubic feet room warmed by hot air only, at 60 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOLLEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that make it very desirable for churches, schools, theatres, hospitals manufactories, clubs, houses of any size, nurseries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Apply, per post, to T. BOILEVE, French Engineer, 5a, King William-street, City.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, AND THE TRADE IN GENERAL.
WHOLESALE IRONMONGERY
WAREHOUSE, 18, Blandford-street, Manchester-square (running out of Baker-street, Portman-square), where a large stock is always kept on hand for the exclusive supply of the above trades.
JOHN YOUNG, Burn-bonham and Wolverhampton, Agent and Factor.

GEORGE and SAMUEL CUTLER,
WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gas-holders, Furnaces, and all descriptions of Gas Apparatus (Gas-works erected complete). And manufacturers of Corrugated Iron and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Stoves and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Screw Valves, Cross Bars, and Screws, and Bolts and Nuts, Tubulures, kept in stock.

BUILDERS, Contractors, Carpenters, and others are requested to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEEL and SELDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY,
PLUMBERS,
THE FEAR GARDEN LEAD WORKS, SOUTHWARK,
Invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO TOOL DEALERS, IRONMONGERS, &c.
WILLIAM BAKER, BRADAWL MANUFACTURER.—Manufactory, No. 19, Allsop-street, Goswell-street, London. Best Bradawls at the lowest prices.

G. C. ADKINS and COMPANY,
LEAD MERCHANTS,
HEATH-STREET WORKS, BIRMINGHAM,
Manufacturers of Wrought Sheet Lead, Improved Patent Composition, and Lead Pipe.

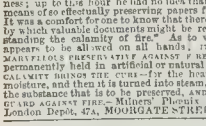
GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's canal-bank, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges. Wire of every gauge, and Wire Netting of all descriptions. Guttering, Rain-water, Soil, and Gas and Water Pipes. Hooping, Castings, Fittings, Gas-pans, Boilers, &c. &c. wholesale and for export. Every description of Sheet Ironwork fabricated. Packages, tanks, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings of any magnitude. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, which is flat and corrugated, also for Morewood and Rogers's Patent Galvanized Plumbic Zinc, Tubes, for exportation; and Plumbic Zinc Portable Emigrants' Houses and Substantial Stoves supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

THOS. B. LAWRENCE and CO. Zinc Dealers and Manufacturers, 10, York-place, London-fields, having removed to their new premises, are selling SHEET ZINC at 40s. per cwt., Perforated Zinc, at 41. per foot; Ram pipes, 4in. 4l. per foot, Cutt's Tin 4l. per foot, and in pipe portions. Chimney shafts, Cowls, &c. equally cheap. Plumbic Zinc, 40s. Zinc Paint and Galvanized-iron Plates. A prize medal was awarded them at the Great Exhibition.

EXTRAORDINARY ECONOMY in COOKING.—FITCH'S EXHIBITION PRIZE OVEN has this year been patented a second time, having received several important improvements. It combines a series of cooking chambers, in all of which the heat is equally diffused, and it having now stood several severe tests, it stands unrivalled for economy, convenience and for the perfection with which it cooks ALL KINDS OF PROVISIONS. In one of these ovens, with three chamfered, a dinner was cooked, in April, 1853, at the Saracen's Head Hotel, Chelmsford, sufficient for 170 persons, at a cost of FOURPENCE only for fuel! The provisions consisted of—

Sirloin of beef, 22½ lbs; five ribs ditto, 28 lbs; two legs of mutton, 22½ lbs, roasted below furnace.

Round of beef, 38 lbs.; four legs of mutton, 36 lbs.; half bushel of potatoes, twenty-four head of broccoli, boiled in first chamber above furnace.



Half bushel of bread, twenty-four pies and tarts, baked in second chamber above furnace.

This oven is admirably adapted for union houses, hotels, schools, and other large establishments; also for farmhouses and cottages.

Manufactured wholesale, retail, and for exportation, at the Company's Works, Chelmsford, Essex, where a large assortment may be seen and prospectuses obtained on application. Price, according to capacity and finish, from £5 and upwards.

212 SAFES.—MILNER'S HOLDFASTS, fire-resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best, and cheapest, because the only effectual safeguards against fire, robbery, or violence, for ledgers, deeds, cash, or valuables. Lord Chief Justice Campbell, in summing up on the late trials for infringement of MILNER'S SAFES, was pleased to observe:—"He must say he had been astonished to find such strong evidence of their usefulness; up to that time he had no idea that there were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an institution, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be all-wed on all hands, IT STEMS TO BE A MOST MARVELLOUS PRESERVATIVE AGAINST FIRE—for the water remains permanently held in artificial or natural vessels, AND THE VERY CALORIFIC HEAT THAT EVAPORATES the boat releases the water or moisture, and then it is turned into steam, and the steam moistens the substance that is to be preserved, AND SO IT IS AN IRRESISTIBLE GUARD AGAINST FIRE.—Milners' Patent Safe Works, Liverpool. London Depôt, 47A, MOORGATE STREET, City, London.

CLARK and HUNT'S IRONMONGERY STOVE and METAL WAREHOUSE, 159, Shoreditch

Improved Self acting Cottage Ranges, with Large Oven and Boiler.

Brick Moulds kept in stock. Any size made to order.

STEPHENSON and PELLL, 61, Gracechurch-street, London, and 17, New Park street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.
W. BISSELL, PATENTEE, WOLVERHAMPTON.

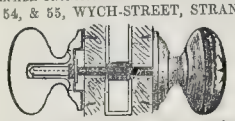
A. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw first. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. The Patentee, in asking the attention of Builders and others, assures them that his cramp possesses great advantages. It is a newer cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, an I will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable

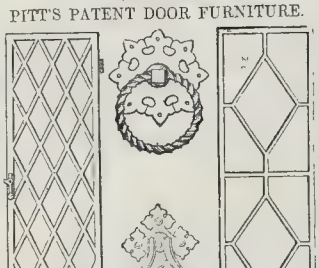
TO GAS AND WATER COMPANIES, CONTRACTORS, AND SHIPPERS.
CAST-IRON SOCKET-PIPES and Patent TUBING, with Connections of all sorts; RETORTS OF IRON AND CLAY; FIRE BRICKS AND FIRE CLAY.

All kept in stock, and sold at wholesale prices.
Tanks, Purifiers, &c. fitted up complete, in London, the country, or any part abroad.
JOHN BURNETT AND CO. 66, BANKSIDE, SOUTHWARK.



HIGGS and GEORGE, Wholesale and Export Ironmongers, Agents for the sale of the Patent Wrought Nails, Cannon-street and College-hill, London. (Removed from 170, Borough.) HIGGS and GEORGE beg to acquaint their friends and the public that they have removed to the above central and extensive premises, where they keep an ample stock of Nails, general Ironmongery, and the Patent Wrought Nails, for the supply both of the home and export demand.

C. LLOYD, DECORATIVE BRASS-FOUNDER and GAS-FITTER, 28, UPPER NORTH-PLACE, GRAY'S-INN-ROAD, manufacturer of Cornice Poles, Picture Rods, and general Brass Work. Bell Furniture, Chandeliers, Curtain Eyelets, Tassel Bands, Gas Fittings, Pipes, Window Brackets, &c. always ready.



TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.
JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Tie Bars, Columns, Girders, Socket Pipes, Rain-water Pipes, Gutters, Railing and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

or at 16, Gresham-street, LONDON.

HART AND SON, WHOLESALE IRONMONGERS, MANUFACTURERS, &c. 53, 54, & 55, WYCH-STREET, STRAND.

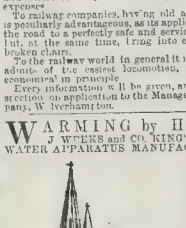
PITT'S PATENT DOOR FURNITURE.

CASEMENTS, HINGES, HANDLES, &c.

NORRIS'S PATENT RAILWAY CHAIR COMPANY beg to draw the attention of Railway Companies and Engineers to NORRIS'S PATENT RAILWAY JOINT CHAIRS.

This patent has received the unqualified approbation of some of the most eminent Engineers of the day, as the most effective, economical, and perfect Joint in use at the present time.

The simplicity of its construction is such as will allow of its application to any line of railway, without causing the slightest hindrance to the ordinary traffic during the time that it is being laid down.



The saving in the preservation of the permanent way and rolling stock, by the application of Norris's Patent, is incalculable; and wherever adopted must very considerably decrease working expenses.

To railway companies, having old and bad roads, the principle is peculiarly advantageous, as its application will not only restore the road to a perfectly safe and serviceable state for many years, but, at the same time, bring into efficient use all the old and broken chairs.

To the railway world in general it is of the greatest value, as it admits of the easiest locomotion, and is most simple and economical in principle.

Every information will be given, and Models forwarded for inspection on application to the Manager, at the Offices of the Company, Wolverhampton.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 15, 1853, which fully bears out the able address of the Rev. H. J. Rigg's, delivered at a meeting of the Architectural Society, wherein Mr Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large

buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.
F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK, pendants, brackets, chandeliers, &c.; compo, tin, and iron gas piping, and fittings in general, sheet zinc, galvanised iron, tin plates, iron wire, &c.; best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp. Observe, 7, Beech-street, Barbican

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c.
RAIN PIPES, &c.—F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O G Gutters, Socket Pipes for Water or Gas, Flange Pipes, H & Water Pipes and Connections, Sash Weights, and other castings; Iron-work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition. Contracts taken to any extent. Goods landed. A powerful crane.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Bars and Castings, 17, GORDON-STREET, GLASGOW.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and stability not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co after the model of the fences of this material in the slopes and Home-park at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES. Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale street, Manchester.

BOILERS for SALE.—Four large Cornish Boilers, One large Boiler with Two Tubes under, all in good condition.—Apply at Grove Boiler Works Great Guildford-street, Southwark

S. TRICKETT, VICTORIA STONE WHARF, Isle of Dogs, informs his friends and the building world that he is prepared to execute orders to any extent, wholesale or retail, by vessel or rail, or from his Depôt, Isle of Dogs, for all kinds of York Block, Westwood, Bramley Fall, New Bramley Fall, Pottlerwicken, Harehill, Westhill, Rawdon-hill, Portland, and other Block Stones, steps, cills, sinks, copings, landings, headstones, fire-bricks, &c. Punctuality, despatch, good articles, and low prices guaranteed. Estimates given for the supply of large contracts.

TO ARCHITECTS, MERCHANTS, BUILDERS, &c.
TRICKETT and PERKIN can supply any quantity of their IMPERISHABLE RAWDON-HILL STONE from their quarries at Harewood, near Leeds. This stone is of a fine grit, perfectly uniform in colour; can be seen to advantage in the much-admired buildings now being erected in Albion-street, Leeds, for the Leeds and Yorkshire Assurance Company, B. Gingell, esq. of Bristol, architect; and also at Harewood House, where it was used for the extensive additions and improvements made by Sir Charles Barry. They have a high opinion of the stone; no part of the most exposed mouldings, or carved stone work, shows the least signs of decay. The stone has been analysed by an eminent chemist and geologist; his opinion is, that it is the most durable stone in the market, and, as known, must be most extensively used wherever a good, strong, and durable stone is required. The stone can be got of any size or length up to 10 tons, is most suitable for steps, stairs, bilcony landings, ashlar fronts, columns, tombs, and monumental work, &c. &c. Supply per grindstones, large or small.—Address, S. TRICKETT, Victoria Stone Wharf, Isle of Dogs, sole London agent, who will keep a stock for selection for immediate use or supply, direct from the quarries, by vessel or railway, to order.

TO BUILDERS, MASONS, AND CONTRACTORS.
OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled dittos; rubbed and tooled sills; Hareful and self-faced paving; rubbed York paving; pipes, pots, &c all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge wharf, City road.—Established 1821

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of any description, of the largest sized blocks. Private Contracts ascertained on application to N. TREGELLES, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Market-street, Recent's-park-basin

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Engineers, and Stone Merchants, to their stock of YORKSHIRE PAVING, and general assortment of stone goods, which are offered at the current prices, and on their usual terms of credit.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

(DEPOTS.)

Great Western Railway Station....	PADDINGTON.
Great Western Railway Station.....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

BANGOR SLATES. J. EASTWOOD AND SONS, KENT ROAD BRIDGE.

A LOT of CHEAP SLATE SLABS, &c. Mr. MAGNUS being about to erect some additional buildings is desirous to dispose of several lots of Slate Slabs, suitable for LANDINGS and PAVING, which are now in the way.

Also a lot of DRAIN COVERING, and some PLANED SLATE GARDEN EDGING, from 6 to 8 inches deep and ¾ of an inch thick, at 5s. to 5l. per foot run.—Price application, either personally, or by post.—Address, JOSEPH BRINDLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, London.

N.B Wharf opposite the Wapping Entrance of London Docks.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedford-bure and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and I are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for
RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Worksh ps, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied as a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to
Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge—office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Lights, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention, that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath, Hackney. W.M. HUSTLER, Proprietor.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London. THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marbles, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St Ann's, and Serpentine Entrance Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests these who may be disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fitness of the retiring places at railway stations, and wherever there is much wear. N.B. The Tariff for 1854 is now ready.

Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary. London, 8, John-street, Adelphi.

FLINTS.—FOR SALE, 600 Tons of large FLINTS, lying at Dover, suitable for glass and earthenware manufacturers. Can be freighted by colliers as ballast to the North. Apply by letter to H. WALTER, 9, Wellington-street, Strand.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.

TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the Office of the Park Estate, Plumstead, near the Royal Arsenal, Woolwich. Price 2s. 6d. per yard. Delivered into barges alongside Woolwich.

GOOD 3rds 16 oz. FOREIGN GLASS, in cases of 200 feet each, average size, 40 by 30, at 42s. per case; 4ths do. 34s. Also 16 oz. ground, do. do. 4d. per foot; upwards. 2d. per foot; 4inch rough Plate Tiles, 12s. per dozen. Also Crown and Sheet Glass, in crates, British and Patent Plate, Fluted and Stained Glass, Glass Slates, &c. Sheet Lead, Pipe, White Lead, Oils, Turpentine, Colours, &c.—G. FARMILOE and SON, 118, St John-street, West Smithfield.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for risizing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, mates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE.

87, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES MILES,

CHEAP ENGLISH AND FOREIGN WINDOW GLASS WAREHOUSE,

18, CHURCH-STREET, SHOREDITCH, NEAR EASTERN COUNTIES TERMINUS.

Builders supplied with every description of

CROWN, SHEET, PATENT PLATE, AND ROUGH PLATE GLASS AT VERY LOW PRICES.

Also Sheet Lead, Lead Pipe, Brass Taps, Pumps, Closets, White Lead, Oils, Colours, Varnishes, Brushes, Paper Hangings.

Glazing for the Trade with despatch.

OLD LEAD BOUGHT OR TAKEN IN EXCHANGE IN ANY QUANTITY.

ORNAMENTAL WINDOW GLASS, at very short notice.—The patterns symmetrically adjusted to size ordered, and free from the much complained of defects in squares cut out of sheets, from 1s. per foot super; borders, 6d. per foot run.—At CHARLES LONG'S, King-street, Portman-square.

PLATE and PATENT PLATE GLASS, of unequalled colours quality, and finish, for glazing and other purposes, supplied by J. LEES and CO. cheaper than any other house in London. All applications for estimates, &c. to be made to the Plate-glass Warehouse and Looking-glass Manufactory, 19, Rathbone place, Oxford-street.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

FARMER and CO. Sash, Door, and Staircase Manufacturers. Counting-house Fittings, Shop and Public house fronts on the shortest notice. Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for any kind of joinery work, &c.—128, St. John-street-road, and No. 1, Edward-street, Penton-street, Pentonville.

WINDOW-HOLLAND WAREHOUSE, 102, Newgate-street, London.—H. and J. DOVE, Proprietors. Window-hollands every width, from 36 to 108 inches, sun-blind ticks every width and colour; green tammys, from 37 to 70 inches wide; webs, lines, tassels, &c. in every variety. H. and J. DOVE having purchased very largely before the advance, are enabled this season to offer great advantages in price.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining Hanover-square, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner. Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 6d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

TO BUILDERS, UPHOLSTERERS, &c.

WINDOW-BLINDS FOR THE TRADE ONLY.—J. WILLIAMS, 1, Rutland-street, Brompton, late managing man for Mr. Burrow, Blind Maker to the Queen, H.R.H. the Duchess of Kent, Office of Woods and Works, &c. still continues to supply the trade only with every description of inside and outside BLINDS, on the best principle and workmanship, on application, to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

SCAFFOLD POLES.—A quantity of good SCAFFOLD POLES for SALE. Apply to Mr. DAVID BROWN, E Warehouse, St. Katharine Docks.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 240lbs. on the square inch, without bursting. The smaller sizes may be had in any feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf road, City-road, London.

ELECTRIC POWER LIGHT & COLOUR COMPANY.—The Electric Colour Company are now able, by the completion of their works at Frogmore-creek, Wandsworth, which are at present in full operation, to SUPPLY any quantity of their DRY ELECTRIC COLOURS, which, from their brilliancy, durability, body, purity, and price, cannot fail to obtain a preference by the trade generally over those made by the ordinary processes. The colours consist of scarlets, reds, yellows, greens, and blues, of all shades and varieties. For price and all other particulars all applications must be made, and all communications addressed, to the Commercial Manager, at the Works.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d. The Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BIRCHFIELD, and Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the low price, and the work guaranteed.—Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

DOBBIN-CARTS WANTED.—WANTED about TWENTY or THIRTY DOBBIN-CARTS in good condition.—Address, stating price and particulars, to L. N. B. Office of "The Builder."

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machines, Presses, Steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,
49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS in every style, executed in the highest class of art. Enrichments for ceilings of every period, elaborate Trompe, Gothic, Elizabethan, pendentive or flat, Louis XIV in much variety, and to any large or small extent. Friezes, Renaissance, animal and many modified characters, executed for the first houses and hotels. Gas fare fronts of the highest eminence. Wall dressings, rich panels of every period, rich Elizabethan and Gothic Pedestals, in many designs. Dog-carts, mouldings, and dressings.

A large assortment of Gothic Bosses to many varied intersections of all sizes, tracery and panel headings for church works, organ dressings, of most periods, and faithfully executed to the finest of each. The general decorations of Drawing and Dining Rooms, Libraries, &c. of very considerable extent as furniture, glass frames, tables, window cornices, screens, cane seats, and the whole range of accompaniments to reception rooms of the first class, as well as more modest.

The facilities and appliances of means enable GEORGE JACKSON and SONS to announce the execution of works of the above descriptions in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

Now ready, 4to. cloth, gilt edges, 25s.

AN ENCYCLOPÆDIA of CIVIL ENGINEERING, Historical, Theoretical, and Practical.

By EDWARD CRESY, F.S.A. C.E.

*** The object of this work is to embody in a single volume all the principles involved in the theory and practice of Civil Engineering. It is intended to form at once a complete manual for the student, and a guide to him in his professional avocations. The first part contains an historical account of the most celebrated works executed by the ancients, followed by a brief treatise on the principles of mechanics, hydraulics, hydrostatics, &c. The second part comprises descriptions of the improvements in engineering science introduced in modern and later times. The succeeding part is entirely devoted to the theory and practice of the science; including canals, docks, and harbours, the formation of railways, railroads, tools, plant, and all the subjects falling under the head of railway engineering.

"A desideratum in the history of engineering science is supplied by the publication of this remarkable volume. There is not a member of the community, from the highest class of to the humble cottager, who will not have materials from it for mind and edification."—*Mechanics' Magazine.*

NEW PATENT LAW (15 & 16 Vict. c. 83),

The CIRCULAR of INFORMATION, with full particulars as to the reduced expense and facility of protection for inventions for the United Kingdom or foreign countries, may be had (gratis) by applying personally, or by letter, pre paid, to MR PRINCE, Patent Office, 4, Trafalgar-square, Charing-cross, London.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects—Portraits direct from Life on Stone, or from Paintings, Drawings, or Daguerreotypes. Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Autotypes copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.

FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to Solicitors, Engineers and Surveyors, Stationers and Printers, throughout the country, great advantages for the rapid and economic execution of their lithography. If required, a plan reserved by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon

LITHOGRAPHY FOR COMMERCIAL PURPOSES,

Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of lithography, as well as part of the kingdom should apply to Messrs. DAY and SON for estimates, and it will be found, owing to the extent of this Establishment, that it will have many advantages, viz. superiority of work, great speed, and moderate charges, can be secured, with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect realisation of a painting in colours "The Blue Lights" after Turner, executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last-named, consisting of two plates, issued in fortnightly Parts of four plates, proves the possibility of adapting fine-art lithography to Periodical Works or Book Plates requiring long numbers cheaply and quickly—and to Geological or other Coloured Maps.

Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches by means of lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,

LITHOGRAPHERS TO THE QUEEN,

17, Gate-street, Lincoln's-inn Fields, London.

LITHOGRAPHY.—C. MOODY executes every description of Lithography for professional persons or the trade: Portraits, Landscapes, &c. sketches and lithographed, or copied from the rudest drawings. Engineering and Mechanical Drawing correctly attended by experienced hands. Presses, Stones Chalks, &c. supplied. Specimens of every class of work for inspection. Terms and instructions afforded.—Lithographic Offices, 257, High Holborn.

TO BE SOLD, at a moderate price, a very handsome CARVED CORINTHIAN ALTAR-PIECE.—For particulars, apply to A. BAKER, Esq. 1, Park-row, Bristol.

The Builder.

SATURDAY, FEBRUARY 25, 1854.

CHEMISTRY applied to the arts is the order of the day. Everything now must be effected through the means of salts and acids, bases and oxides, ethers, alcohols, and volatile fatty acids. If we begin with the domestic arts we stumble at the very threshold over M. Alexis Soyer with his great cookery-book; and then we have Professor Johnson on the food we eat, the water we drink, the tobacco we (don't) smoke, and the brandy-punch we indulge in. If we examine the progress of the useful arts, we find the same curious feature may be traced. Our wool is dyed, our cotton printed, our leather tanned, by complex operations of organic chemistry. Our timber is preserved from dry-rot, our stones are subjected to processes of induration, our walls are plastered with abnormal combinations of lime and sulphuric acid, our roofs are covered with galvanized iron. We have copper smelted, iron puddled, and silver plated by electricity. We can produce mammoth sheets of plate-glass, artificial stone, artificial puzzolana, and flint vases, after the fashion which predominated at Pompeii. Nor do the fine arts hold aloof from the absorbing flood. We have discovered a combination of sulphur and sodium, which, as a pigment, rivals the brilliant lapis lazuli of the early painters. We have discovered new methods of painting on glass, etching on steel, engraving on stone; and, finally, we have made a discovery which would have struck terror to the hearts of the Chaldæan astrologers—the art of painting portraits and sketching landscapes with a pencil of the sun's rays.

It is in the artistic class of these applications of chemistry that we must place the modern art of drawing on stone. We know of no art, scarcely any science, that has made so much progress in so short a space as that of lithography. Half a century ago it was as much of a dead letter as the submarine telegraph. But now it takes rank along with the arts of engraving on wood, on copper, and on steel; and in certain respects it rises beyond these arts; for lithography, it is asserted, supports more artists, employs more printers, consumes more paper, and pays more wages, than all the others put together. Its applications, too, are every day extending, and its resources becoming greater; and notwithstanding the astonishing progress which the art has already made, there are people high up in its mysteries who say that lithography is still in its infancy.

These remarks have arisen from a short visit we made not long ago to the well-known establishment of Messrs. Day and Son, the lithographers. We confess our preconceived notions of the business were by this visit materially enlarged. Messrs. Day have gradually acquired the position of being amongst (if not) the largest lithographers in Europe. Their enterprising speculations connected with the Great Exhibition; their splendid illustrations after Roberts, of the "Holy Land;" and their chromolithographic illustrations of Mr. Digby Wyatt's works, are well known to our readers. But the *modus operandi* of the business is, we think, less popularly understood; and a short account of our visit will probably not be unacceptable.

We were first taken to see "the quarry," as it is waggishly denominated, or the apartment on the basement floor where the stones are kept. This apartment we found to be fitted up with substantial timber racks, securely founded on beds of concrete, and on these were closely piled an enormous number of lithographic stones, numbered and catalogued after the manner of a well-ordered library. The effect on the visitor of this collection of "sculptured monuments" is to recall to the memory something of the associations which might arise from a subterranean research among the sepulchres of Etruria, or the tombs of Thebes; and the effect is not a little heightened when your guide informs you that here is a picture of the ruins of Luxor, there a sketch of the great pyramid, and that the stone which but now is being deposited on the shelf contains a graphic representation of the interior decorations of Pompeii. The stones, we may mention, are exclusively German, chiefly from the oolitic formations on the banks of the Iser and Danube, in Bavaria. We attempted to get something like a precise enumeration of them, but that was impossible. We were informed, however, that there were upwards of 800 tons of lithographic stones on the premises; and, moreover, that a large proportion of these were purchased at a time when large stones cost 6d. per lb. If we add to this, that the stones contain drawings which may have cost from 10*l.* to 30*l.* to execute, we shall form some approximate idea of the money expended in producing this singular quarry.

The first process connected with the art itself, is that we saw carried on in one department of the basement, which is called *graining*. Over a number of water-troughs we observed some half-dozen of exceedingly strong athletic fellows, "bearded like the pard," "moustached like the mason," grinding and rubbing, and graining and polishing, like a lot of marble-cutters,—some exercising the utmost limit of muscular strength in grinding, others practising the utmost nicety of touch in graining, and others polishing with pumice and water-of-Ayr stone. It is truly surprising to see the feats of strength these men display among the large stones. Here is one just polished which weighs perhaps 5 cwt.; but our bearded Titans make no manner of ceremony in carrying the ponderous mass to their shoulders, and transferring it to the lifting-machine, which communicates with the basement and upper story. We may state that this is a branch requiring a considerable amount of skill. To produce a perfectly level surface, a perfectly smooth polish, and a regular grain is no easy matter; yet these are absolutely indispensable to a good lithograph. We may also, in passing, just remark that our friends are all the better for the moustache, since a considerable quantity of fine limestone dust is floating through the air; and that, we know, is not altogether the best atmosphere to enter the lungs.

Leaving the stone-grinders, we were then taken upstairs to one of the draughtsmen's rooms on the first-floor. This room, which is devoted to plans, sections, mechanical drawings, and general work, is large, spacious, and well lighted. At one end sits the overseer, who is just now up to the eyes in Government work for the Patent-office, and has no rest, nearly, by day or by night. At the other end is a species of laboratory for etching the stones, preparing the acids, the colours, and printing ink. Seated all along the front of the benches which traverse the room, we counted some twenty or thirty lithographic draughtsmen, all busily engaged—some engraving, some drawing with ink, and some in transferring the copy to the stone.

The appearance of these gentlemen is somewhat picturesque. We found, on inquiry, they were derived from every nation almost in Europe—the volatile Frenchman, the dark-eyed Italian, the phlegmatic German, the bluff Englishman, the rollicking Irishman, and the canny Scotchman—a peaceful congress deserving study. Just as we had finished our preliminary survey, we saw the large stone had arrived from below, and was deposited on the table. Curious to ascertain the destination of so large a drawing as this seemed intended to hold, we asked the question, and found that it was the plan of an estate in Chancery, which had come in that morning, and of which copies were to be forwarded to counsel by next morning's post. By dint of hard work, a little overtime, and great exertion on the part of the printer, this feat was accomplished within the prescribed period. The method of executing this drawing we may just glance at. The draughtsman first carefully rubs the stone with a linen cloth, in order to procure a perfectly clean surface. He then places next to it a sheet of thin tissue-paper, coloured red with the oxide of iron. A tracing from the copy is then laid in a reversed position over this, and carefully gummed down to the edge of the stone. The next step is to go over this tracing with a blunted point, and when the stone is again uncovered, we see produced a red outline reversed of the original drawing. This outline is finally drawn in with lithographic ink, and then the process is finished, so far as the draughtsman is concerned.

When the drawing is finished, the surface of the stone is coated with a thin solution of gum, which preserves the ink, and prevents the stone from absorbing any extraneous particles. Finally, it is transferred again to the lifting-machine, which hoists it up to another story, where our friends the quarrymen are waiting its reception, to place it on the sole of a large press. Before leaving the draughtsmen's room, we bestowed a glance on the process of engraving on stone. For this operation the manipulation is precisely the reverse of the process of ink drawing. The stone is first coated with gum and acid. It is next covered with a ground-work of red chalk, upon which the lines of the engraving are more distinctly visible. A diamond, or sharp needle, is the instrument employed to cut into the surface of the stone.

Being anxious to follow the higher branches of the art, we shall take the reader along with us to the house opposite, where these branches are carried on. The first room we entered was that where artists were at work on chalk drawings. The difference between a chalk drawing and an ink drawing, we need scarcely explain, is simply one of degree. In the first case, the ink is a fluid; in the latter, the chalk is a solid substance, although composed of similar materials: the former is worked after the fashion of a common architectural drawing, the latter partakes more of a painting. The methods of preparation and printing are likewise analagous. But the chalk drawing is alone susceptible of those nice gradations of tint familiar to our readers and to the purchasers of musical albums and Jenny Lind polkas. The artist goes to work here as if he were making a regular crayon sketch. Considerable variety of method belongs to his work, just as there are varieties of method in water colour or oil painting. Indeed, it is rather a more singular spectacle to see an artist gravely engaged, not with a hair pencil, not with a pencil of black lead but with a crayon composed of divers ingredients, such as soap, grease, wax, and lamp black. When the chalk drawing is finished, it is etched with nitric acid very much diluted: it is then carefully washed, and treated with gum in the same manner as an ink drawing before it is printed. It may only be necessary to mention that the colouring matter in the chalk is a mere convenient arrangement of the artist. Colourless chalk, always provided it were greasy enough, would answer the purpose quite as well. But for the same reason that the engraver uses a red ground, and the ink draughtsman a black ink, so also does the artist employ a coloured chalk, to render his drawing visible. A chalk drawing, we may add, will yield from 3,000 to 5,000

impressions if well treated. But beyond this limit the light tints begin to break up and the whole drawing to become clouded and indistinct.

The room above was devoted, we found, to works in chromolithography—the process of all others the most interesting and important to us. Printing in colours has assumed a degree of excellence which some years ago was pronounced unattainable. We need scarcely mention, confining ourselves to the firm of which we are speaking, their celebrated chromolithographs after Turner and Roberts; but we shall stay for a moment over a plate of an elaborately carved cabinet. This particular print requires for its execution no less than twelve stones. And when we state that on a close examination it is impossible to detect a flaw in the outline or an error in the shade of any portion of it, our readers must admit the precision to which this art has been brought. The pigments employed are precisely the same as those of the painter; and the lithographic artist has to exercise precisely the same skill in his combinations in order to produce the same effects. Let us now illustrate the processes in chromolithography.

The original drawing having been transferred to the stone, by means of paper covered with red chalk, the lithographer then draws upon the stone with a greasy chalk or ink, as the case may be, the whole of the outline of the subject, and as much of the shading as he may think necessary. When the drawing is finished in black and white, the stone is sent to the printer, who, after chemically preparing it for the operation, takes off as many impressions as there are colours required to perfect an imitation of the original. These impressions are laid, whilst moist, upon a corresponding number of supplementary stones, and passed through the press; by which means the outline of the first stone is printed off upon each of the remaining stones of the series, and the artist is provided with an outline upon the latter, identical with that which existed upon the key-stone. "Carefully analysing the amount of each colour in the original drawing, and noting the points of its predominance,—where, in some cases, it is allowed to appear pure, and in others to enter only into the composition of broken tints,—the artist proceeds to indicate upon each stone, in black chalk or ink, the requisite amount for each separate colour. Great care is required to bear in mind the succession of these tints, and to make due allowance for it, since it is obvious that the last printed, by its greater or less degree of opacity, may tend to kill all that has been done before. Great attention is likewise required in order that, when the various stones are worked together, the filling in of one colour shall exactly meet the space occupied by another, without either overlapping and producing dark edges, or leaving white lines or gaps between each tint."

The printer's responsibility now commences: if the stone be washed with acid of too great a strength, all the delicate lines will disappear; or, if etched with too weak a solution, there will be a general tendency in the tints to clog up and become overcharged. Great care is necessary, too, in attaching the paper upon which the impression is taken to each of the stones, so as to cause the colours to fall into exactly their proper places; and considerable practice is necessary before the requisite dexterity can be attained in this respect. Where great rapidity is indispensable, these difficulties are materially increased; because, if any colour be too heavily printed, it will take so long to dry that it will for some time be impossible to work off the remaining tints upon the same impression.

Without entering more fully into details, we will conclude our sketch with a few statistics.

Messrs. Day and Son employ, between artists, draughtsmen, and printers, on the premises, and out of doors, about 200 hands altogether; and on account of the high wages such skilled labour commands, the weekly sum paid in the establishment is considerable. The number of presses at work is about 100; the stones we have seen are over 800 tons in weight; and the value of the paper annually consumed is upwards of 10,000*l.* As to the wages of the printers, these average from 35*s.* to 4*l.* per week; and during the progress of "The Holy Land," the chalk printers could easily make double that amount.

It is only fair to say that in the application of chromolithography the Messrs. Day differ from their competitors in one particular, inasmuch as whilst the latter confine themselves for the most part to the production of occasional specimens of the powers of the art, Messrs. Day practically apply it in their every-day works. We need only instance one or two books to show the extent to which they have applied colour-printing, namely, "Wyatt's Industrial Arts," 160 plates, requiring 1,100 stones; "Metal Work," 50 plates on 300 stones; and the last volume of "Belgium and Germany."

We may add, in conclusion, that this art affords ready means to architects for the exact reproduction of their designs, and that they have already availed themselves of it extensively in the interesting establishment we have just walked through.

ON THE FRENCH AND OTHER METHODS OF CONSTRUCTING IRON FLOORS.

EFFECT OF LIME AND PLASTER ON IRON.

The discussion of this subject was resumed at the Royal Institute of British Architects on the 6th inst.

Mr. C. C. Nelson, Hon. Sec. observed, that on comparing the French and the English systems, which had been brought under consideration, one great point of similarity was found between them, inasmuch as the main supports in each were the rolled iron joists: on the other hand, these joists were much closer together in the English than in the French system; in which latter, however, the iron entretoises, or transverse rods, were placed further apart than the wooden laths in the English system; while the material used for the filling in differed materially, being plaster of Paris, or plaster and hollow earthenware pots in one case, and concrete, formed of lime, sand, and gravel, in the other. Neither of the systems under discussion could be considered perfectly novel; and indeed, so far back as the year 1849, a paper was read to the Institute by Mr. Donaldson, describing a mode of construction adopted by an engineer named Thompson, in a bridge over a railway near Glasgow, in which tubular iron girders, of boiler plate $\frac{3}{8}$ in. thick, were made solid by the introduction of concrete between the plates to render them unyielding and rigid; the girders being then tied and framed together with bars of iron, the space between them was in filled by arched brickwork. With reference to the question which had been raised at the former meeting, as to the expansion of concrete, Mr. Nelson referred to the "Essay on Concrete," by Mr. Godwin, in the first volume of the Transactions of the Institute, for which the first medal of the Institute was awarded, as containing (in pages 23, 29, and 39) the results of experience on the subject, clearly proving that concrete in setting did expand. As to the nature of the French plaster, M. Delassaux had forwarded the following communication in 1846, describing the difference between that material and the "plaster of Paris" used in this country, from which it would appear that the former was a much better material than the latter:—"The English plaster stone is a sulphate of lime, destitute of water, except a small portion of sulphuric acid; it is in fact an imperfect alabaster. The consequences of the chemical composition of this stone are, that burnt and reduced to powder in the usual way, it is not capable of resisting the vicissitudes of the weather, and the small quantity of sulphuric acid it contains prevents its setting quickly or becoming hard. It can, consequently, only be employed for interior plastering, and generally for works requiring but little solidity—its employment in construction is thus very limited. The stone of the French plaster of the environs of Paris is a sulphate of lime composed in the best proportions, the acids being almost equal to the bases; properly burnt it preserves all its acid properties, and reduced to powder and mixed it becomes very hard in one day. Unlike the English plaster, there is no need to grind it very fine,—on the contrary, for strong work it is better to be rather coarse; it is only in decoration that it is employed as fine as the English. In France, along the borders of the Seine, the houses are constructed with this material; for solid construction, grouting the joints of stones, for exterior and interior decoration, and masonry generally, plaster of Paris is employed: for the latter purpose the powder is used rather coarse; mixed with water it forms a factitious crystallization, which, adhering to the materials employed gives them greater rigidity: thus a vault formed of stones badly dressed and ordinary mortar would have but little strength, but the use of plaster with its properties of adhesion and augmentation of volume would insure solid and durable work." In February, 1849, Mr. Charles Barry read a paper describing a system, patented by Mr. Beardmore, C.E. in which the same reliance was placed upon concrete, formed of Portland cement and shingle, for stiffening wrought iron, as in Messrs. Fox and Barrett's flooring, drain-pipes being in some cases introduced with the concrete for the purpose of lightness. For a span of 20 ft. iron plates, 12 in. deep, $\frac{1}{4}$ in. thick, and 2 ft. 6 in. apart, were used, a layer of concrete, 5 in. thick, being placed between them, on horizontal plates of iron, $\frac{1}{16}$ thick, secured by rivets to the sides of the upright bearers. The author thus described the use of the concrete. "The uniform pressure of the concrete against the surface of the web, and under the upper flanges of the beam, produces the effect of a continuous strut, and enables any sheet, however thin, to assume the true character of a beam or girder." For a span of 15 to 18 ft. the depth of floor would be $7\frac{1}{2}$ in.; from 16 to 20 ft. 12 in. Mr. Beardmore "considered his floors to be fire-proof from their mode of construction; not liable to disintegration when exposed to fierce flame, as brick arches are by their falling off in flakes, nor to be destroyed by sudden cooling when highly heated. The thinness of the floor, when contrasted with one of cast-iron, and the absence of all lateral pressure, and consequent necessity for tie-bolts, were further advantages; in addition to which the concrete was a necessary element of the floor itself, not a weight independent of it; and it rendered the whole, as it were, one continuous beam, thus making it nearly impossible to accumulate a great weight on any one spot."

Mr. H. H. Burnell read the following extracts from letters he had received from Paris, in reply to questions which he had forwarded since the first evening's discussion.

From M. Piot, sub-architect employed at the works of the Tuileries and Louvre:—

You ask me for some account of the iron floors we are now using in the new buildings of the Louvre. These floors are generally composed of girders and joists of the I form. The joists are so proportioned that the deflection of the floor under a load of 700 kilog. per superficial metre, or 143 lbs. per square foot, shall not exceed 20 centimetres (or $\frac{3}{4}$ in.), which may be thus explained: We suppose that four persons might stand in the space of a superficial metre (or $10\frac{3}{4}$ square feet), and that their joint weights might equal 300 kileg. or 661 lbs. We add as the weight of the interties, fantons, pottery, small wooden joists, and floors, 50 kilog. making 350 kilog. We double this load to make it equal to walking or dancing, and thus we arrive at the above-named 700 kilog. (1,544 lbs.). M. Piot gives the following table

of the spans, weights, and depths of the joists employed in the floors of the Louvre:—

Spans.		Weight of Joists per Yard run.	Depth of Joists.
Feet.	Inches.	lbs.	Inches.
6	7	18	4
9	10	22	4⅝
13	2	40	5½
16	5	50	6¼
18	1	54	7⅛
21	5	60	7⅞
25	0	76	8¾

We have adopted the above-mentioned spans, placing the joists 80 centimetres, or 2 ft. 7½ in. from centre to centre, the interties 1 metre, or 3 ft. 3⅜ in. apart; the fantons are placed 20 centimetres, or 7⅞ in. from each other, and serve to support the pottery in the usual way. The pottery is thoroughly bedded and plastered on both sides, rendering the floor as nearly as possible sound-proof, and infinitely superior in this respect to the ordinary methods. The strength may be judged of by the fact that some have been proved to 1,500 kilog. per superficial metre, or 307 lbs. per square foot, and the deflection did not exceed 3 centimetres, or 1 in. in the middle. In first-class buildings the filling-in is generally of pottery or hollow bricks, but in private houses they usually content themselves with plaster alone: it is considered inferior and less sound proof. In general the wrought-iron floors are found to be of the necessary strength, and may be regarded as a great improvement, but in France, and particularly in Paris, the spirit of speculation is prone to exact too much from the material it employs.

M. Charles Hittorff remarks that, for dwelling-houses, the weight on the entire floor should not exceed one-fourth or one-fifth of the breaking weight, or limits of deflection of the joists, and that it should bear the weight of four persons = 300 kilog. (661 lbs.) per superficial metre (66 lbs. per foot superficial). When these limits are surpassed, a disagreeable vibration and a disposition to transmit sound is the result. As yet, the floors well filled in with pottery, or hollow bricks, have developed no symptoms of failure, either with respect to vibration or transmission of sound; but they are considerably dearer than those of wood, though the manufacturers (quoting the first or cheapest system), pretend the contrary. This kind of economy is much to be regretted, as it may be the means of causing accidents, which would tend to create a prejudice against this mode of construction. The difficulties of rolling render the production of large joists very doubtful as regards the equality of texture, and in many instances those of from 22 ft. to 24 ft. long, and from 8½ in. to 10¼ in. deep, have broken on being proved; but nothing is to be feared from the employment of these methods for moderate spans.

M. Hittorff has never known that these iron floors have been filled in with concrete, which, in his opinion, would be to load the floor unnecessarily. The iron work is painted with a coat of litharge to prevent oxydation: sometimes this precaution is neglected, and without ill effects; for after all, the oxydation can only take place by the double action of the oxygen of the air and water. The iron embedded in plaster is at once covered with a coat of rust, but this action soon ceases when the plaster is of a sufficient thickness (say ¾ in.) to exclude the air. This fact is sufficiently proved by the fragments of iron we constantly find, while demolishing our old buildings, in a perfect state of preservation, though they have never been painted.

Lastly, a communication from M. Dumont: Of the two systems of wrought-iron floors that you mentioned, this one is almost exclusively employed here. Prudent builders never allow the depth of the joist to be less than $\frac{1}{20}$th part of the span. The filling in between the joists is generally of pottery or hollow bricks, bedded in plaster: when the builder is not too sparing of his plaster, and the spaces properly filled in, the necessary rigidity is obtained. We avoid the use of concrete, on account of its weight; we find nothing answer so well in every respect as the pottery. We paint our ironwork with one or two coats of litharge, according as the speculator may be disposed. As to the quality of the work, I may state that, up to the present time, the ceilings have not suffered from discoloration by the oxide of iron: I believe that, in the first instance, the paint is sufficient to protect the iron from the humidity and the corrosive qualities of the plaster, and at a later period, the plaster in its turn protects the iron from atmospheric influences. It must be acknowledged that experience, as yet, can say little on the matter. In twenty, fifty, or a hundred years, we shall be better able to judge of the systems, but at the present moment they are so much in favour with us, that we very rarely have recourse to the old methods. In four houses that we are now erecting in the Rue de Rivoli we have used these floors, three of them opposite the Tour de St. Jacques, and the other (which is the most important) between the Rue de Bourdomais and the Rue des Déchargeurs; we do not yet know the numbers.

Mr. Burnell then read the following remarks: From these communications we may briefly sum up the following facts:—That the *planchers en fer*, if properly carried out, succeed, but that they, in common with all other modes of construction, are capable of being executed badly. We learn that the floors of the Louvre, though upon the same principle, are stronger than those ordinarily used for dwelling-houses. That joists of the depth and weight indicated in the table furnished by M. Piot, if placed 2 ft. 7½ in. apart and properly filled in, will produce a floor whose deflection shall not exceed ¾ in. in the centre, under a load of 143 lbs. per superficial foot; and that there are others executed in the Louvre that have borne 307 lbs. per square foot, with only 1 in. deflection in the middle. That for the floors of dwelling-houses, the weight on the floor should not exceed one-fourth or one-fifth of the breaking weight of the joist, or that the depth of the joist should not be less than $\frac{1}{20}$th of the span, when placed about 2 ft. 6 or 3 ft. apart; and lastly, that no ill effects have at present been experienced from the contact of the iron with the plaster.

As I have before said, my object in drawing your attention to the matter in question was to induce a due appreciation of that which seemed successful, but not to extol it beyond its merits. I think we must all perceive that a valuable lesson is to be learned by the study of these French methods, when we consider their lightness, and the small space they occupy, when compared with the fire-proof floors we have been in the habit of executing. The introduction of interties between the joists must surely be important, when the filling-in is of a material that swells in the process of setting, to say nothing of their use as transverse ties. The ceiling appears to offer its advantages on the score of durability and convenient execution; for how much more easy must it be for the workman to adjust a flat centering beneath the joists, and form the ceiling by the simple operation of pouring a composition in upon it, than the tedious process involved in our own method of lathing, and applying the various coats of plaster, in a very inconvenient position, from the under side. This mode of grouting from above is not peculiar to iron floors, but it requires a material that sets with moderate rapidity, which with us is more costly than with the French.

I believe that the rare occurrence of serious conflagrations in France is mainly attributable to the use of solid plaster ceilings. All seem to agree that the frequent losses by fire, the discreditable condition of many new-built houses, the fall of others, and the threatening aspect of the many more which must inevitably share the same fate, were there not a special Providence over ignorance and knavery, are sufficient causes to justify any attempt to introduce improvement; and when we consider the rapid occupation of very desirable positions by endless piles of mud and bricks, exhibiting little but a disposition to speculate and low cunning, we must all regret that our already great metropolis should continue to extend itself under the guidance of parties so little capable or disposed to develope constructive or artistic talent.

Mr. Christopher, Fellow, felt called on to offer some remarks upon what had been called the English system, as the results of considerable experience. He had spoken warmly in favour of that system when it was first introduced, and still thought well of it, though it had not been so much improved as he had expected. With regard to the kind of finished flooring used upon the concrete, he observed that Portland cement in connection with elastic iron was objectionable from its rigidity and brittleness; and in many instances within his own knowledge it had cracked. The speaker then proceeded to make some observations in opposition to the opinions which had been given in favour of Fox and Barrett's system; but as these were severally replied to at a renewal of the discussion on a following evening, we postpone report for the present.

Mr. H. C. Smith, visitor, called the attention of the meeting to some specimens in illustration of the effect of plaster upon iron. In these specimens he had placed different materials in contact with the iron on the day after the last meeting (a fortnight ago), and the results were now evident. In one specimen plaster of Paris alone was used, in another plaster mixed with sand, and in another mortar, or lime and sand in equal proportions. In the latter not the slightest trace of rust was perceptible, although the interior of the mass was still in a very soft state, whilst in the other specimens, especially with the plaster of Paris, the iron was sensibly affected. Plaster of Paris decreased in hardness in proportion to its age. As an illustration of this, Mr. Smith stated that he was employed some years ago to remove from the residence of Mr. Prince Hoare, at Bath, to London, eight or ten large casts from the antique, which had been there 100 years, but he only succeeded in removing two of them safely, the rest having fallen entirely to pieces. Lime, on the contrary, increased in hardness with age, and iron in contact with it was not affected. As the specimens proved, plaster was most injurious. Paint would protect the iron, but if it became rubbed off, even in the smallest pin-hole, the plaster would communicate oxydation to the iron, to an extent almost beyond belief, and, in fact, would in time entirely destroy the iron.

Mr. Garling referred to some plaster floors which he had seen in Lincolnshire, in the vicinity of the quarries. These consisted of a body of coarse plaster, with about an eighth to a quarter of an inch of fine plaster as a surface, very finely and smoothly trowelled; and although these were from 100 to 150 years old, they were now as hard as marble. He had also occasion to take down the plastering of the walls of some rooms in the same neighbourhood, which was at least 300 years old; this was thirty or forty years ago, and, speaking from recollection, his impression was that the plaster in that case was quite as hard as in the floors.

Mr. G. R. Burnell referred to the work of Rondelet—"L'Art de Bâtir"—on the different nature of lime and plaster as to durability, in confirmation of Mr. Smith's remarks, and read some portion of a letter addressed by him to Mr. Nelson: "I would call your attention, and that of the members of the Institute, to a work I mentioned on the last evening; it is M. Eck's 'Traité de la Construction, Poteries, Fer, Fonte et Tôle,' in 2 vols. fol. Paris, 1841; in which will be found many very remarkable illustrations of the application of those various materials to purposes which rarely are thought of in England. It is an extremely valuable work, and if it had been better known here, probably much money might have been saved by preventing parties from taking out patents for systems already largely employed; and at any rate the study of M. Eck's book would have suggested many valuable hints to both architects and engineers. At the same time I would also beg to call the attention of the Institute to a note I published myself in the *Builder* of 1849, page 350, in which I gave a short description of the application of the H shaped rolled iron: I allude to this because I have reason to believe that the application of this kind of bar iron to flooring purposes has been patented subsequently to the publication of my note in the *Builder*. In Paris it was used, to my knowledge, in 1848." The nature and application of compound wrought iron beams with earthen pots for roofs were de-

scribed by Eck as known so long ago as 1780, in whose work an account was given of the church of San Vitale, at Ravenna, the dome of which is formed of oil jars, laid horizontally; a fact which would set at rest the question of the supposed novelty of this use of pottery.

Mr. Scoles, Hon. Sec. referred to the use of similar materials, in the Roman period, in Syracuse; and Mr. Donaldson added also that they were employed likewise in the Circus of Caracalla.

Mr. G. R. Burnell continued by laying before the meeting the formulæ given by General Morin; and went on to say: Mr. C. H. Smith's statement that lime protected iron from rust should be received with caution. All the wrought-iron bridges in France had been built upon the principle laid down by Vicat, that no oxydation could take place whilst iron was immersed in slacked lime; and accordingly the tying-down rods of these bridges were bedded in wells, with a paste of chalk lime carefully rammed in. Yet all those bridges had fallen; that at Angers at a time when 600 persons were upon it, more than 400 of whom were drowned. The explanation of this failure possibly was, that the action of the load upon the bridge set the chains in a state of vibration, which, though not perceptible to the eye, was yet sufficient to detach the rods from the lime in which they were embedded; upon which water could get in, and the oxydation would commence. Mr. Smith's principle was correct; but in a floor of any kind there must be some degree of vibration, which would tend to detach the joists or girders from a bed of lime in which they might be placed. He believed, in fact, that concrete or lime in any form was not better than plaster, which being more hygrometric than the mortar would rather protect the iron more securely. Practically, in a house, the plaster was a sufficient defence to the iron, and this was what the French architects meant when they said they had not noticed any rust in the use of this material.

PUBLIC HOUSES.

What strikes a foreigner on his first *abord* in London is the excessive number of licensed tippling houses, and the remarkable disparity, as compared with any city of the European continent, of their proportion to other trades: he concludes, as well he may, that we are the most besotted of nations.

Were our publicans, like the *traiteurs* of Paris, providers of well-cooked dinners and repasts at moderate prices, there might be some reason for their excessive numbers; but this is not the case, for only the workman or mechanic ever goes thither for refreshment, and then he carries in his chop and cooks it: as for the few sandwiches sold at the counter, they are not worth consideration. The habitudes of citizens in other capitals are widely different: the Parisian goes out for his luxuries, the Cockney enjoys them at home; and it is only the want of domestic comforts that fills our tap-rooms.

In the new portions of the metropolis, such as Portland, Camden, and Kentish towns, the number of licensed houses is truly remarkable: at every turn there is one; at most cross-ways two; and on the pastures lately set out for building you may see a double line of trenches with excavations on either side having heaps of burning clay at intervals; here and there a foundation rising up, and a tavern of imposing elevation standing alone and quite complete, waiting, at a distance of 200 paces, the approaching rows of houses. The propinquity of these palaces to each other in Camden and Kentish new towns is quite ridiculous: at an average of 200 paces in every direction they glitter in sham splendour. It is plain that the semi-genteel class of houses now being erected there is not that most likely to fill a tap-room; and equally so, that the demand for beer and spirits in such a neighbourhood can never sustain so many; but the object of erecting them is to obtain a larger sum than a builder can acquire for any other species of property, and this will continue to be the case so long as the present *licensing system* is maintained. In some instances one speculative builder, reserving all the angle plots, runs up half-a-dozen public houses: he obtains licenses for all that he can, and lets or sells such at incredible prices or enormous rentals: others he sells to adventuring publicans who try for the privilege, or, in case of failure, open as beer-shops, at war with the Bench; and will it be believed, that in such instances the landlord who first sold his privilege with the house has been known to have opposed his tenant purchaser and to fight him tooth and nail before the justices?

A trader must have a large capital to undertake such an enterprise: from 2,000*l.* to 3,000*l.* is an ordinary price, and for good standings 5,000*l.* to 8,000*l.* is not infrequent: it is true that the brewer often allows large sums to lie on mortgage: so much the worse for the vintner, who also pays an exorbitant rent; so large, that under both charges it is hard to conceive how by fair trade the adventure can pay. It is expected and much desired by the public at large that the trade will be thrown open: assuredly the beer could not be worse if it were, whereas competition would be most likely to improve the quality in order to have a preferential custom.

The great majority are agreed that the system is bad—that the beer is the worse for it, and those who have travelled know that in wine countries where brandy also is more easily attainable by the working classes, a drunkard is scarcely ever seen: if wine were admitted at 1s. a gallon duty, it would displace all the bad beer, improve the revenue, and make the people sober.

Quondam.

THE MANAGEMENT OF THE INSTITUTION OF CIVIL ENGINEERS.

We have received a long communication from a member of the Institution of Civil Engineers, complaining very loudly that certain remarks submitted by him, in answer to the paper read by Mr. Harrison, "On the Drainage of the Metropolitan District south of the Thames," were not brought before the members. It is clearly the right of the council to decide what papers shall be read, and what not, and we do not feel called upon in the present instance to inquire if that right was wisely exerted. In the latter part of his communication, however, our correspondent refers to the "authorised" reports of the discussions already commented on by us, and as we feel even more strongly than ever the grave objections which exist to the course pursued, we give a place to his remarks.

As your great prototype of the daily press is the universal corrector of general abuses, so your journal is looked upon to perform a like office for every branch of the constructive arts. The Institution of Civil Engineers, an institution which should be the bulwark of our joint professions, is now, I regret to say, becoming a medium for promulgating effete doctrines, instead of an arena for open discussion, and a universal storehouse for every hint or suggestion on all subjects recognised by our charter of incorporation, without fear or favour, to suit the views and opinions of any particular party. * * * If the above line of policy is to be adopted, I am convinced that the utility of the Institution will be very much diminished, and its stability ultimately impaired.

I will now proceed to say a few words on a point which has arisen incidentally from the present communication. I allude to the "authorised" versions of the discussions at the Institution, which occasionally appear in your own journal, as well as in some portion of the daily press. Those *versions*, I must admit, are very cleverly compiled; as they most faithfully record an abstract of *certain doctrines*, which are put forth *as the opinions of the Institution*; and are often, to my knowledge, quoted as such. They remind one of the ingenious apparatus at the Bank of England, which separates the light gold from those of full weight; casting each into the place assigned to it at the will of the operator. I should not be surprised if an adaptation of this machine exists at the Institution, knowing the ingenuity of our secretary, and his talent for mechanical pursuits. But seriously, sir, the Institution in *words* repudiates the responsibility of adopting the opinions of its members, while its *actions* are diametrically opposed to this wholesome doctrine. Instead of giving an abstract of the observations of each member, and allowing Mr. A. to advocate the advantage of using bricks, Mr. B. to contend for the adoption of pipes, and Mr. C. (perhaps), to recommend a medium course, and then allowing the public to weigh the arguments of each; instead, I say, of adopting this course,—all opinions which do not come up to the required *standard* are rejected, and *clipped*, as our unfortunate light sovereigns are served by the authorities in Threadneedle-street. This is not the way, sir, to promote science, or to maintain the character of the institution.

It is now impossible from the abstracts given for any member to recognise his own remarks: he cannot, therefore, correct any apparent error; for the names not being given, the remarks which may appear most like his own, although, perhaps, incorrectly given, may in reality be intended for those of some one else, who may have spoken during his absence, while his own observations are altogether omitted.

There is only one other point to which I would now allude, and I will do so with the utmost brevity:—When I see the annual volumes presented to our library by other societies, both home and foreign, I certainly do feel ashamed of our own meagre contributions into the lap of science. I am informed that this has arisen in a great measure from the want of funds. Surely this ought not to be allowed to continue as a drawback on the publication of the minutes; when I believe we number something like seven hundred members, paying a very high average subscription in proportion to the benefits hitherto derived. There must now be a large mass of valuable matter in manuscript belonging to the institution; and I have no hesitation in saying, that an equitable arrangement might easily be made with some respectable publisher to take the copyright, and supply the number of copies required by the Institution, and at a much less cost than is now entailed upon the society for printing; while the public, and ultimately the Institution, would derive a considerable benefit from the circulation of our proceedings.

As to Mr. Harrison's paper, I could not allow doctrines to which I cannot subscribe to remain among the muniments of the Institution, without entering my protest; but this has not been brought before the Institution, because my remarks do not appear to accord with the peculiar views of certain parties.

Samuel Castle Gant.

THE MEDALS OF THE INSTITUTE OF ARCHITECTS.

A NEW BYE-LAW.

At the special general meeting, held on Monday, the 13th of February, 1854, it was resolved, in conformity with the recommendation of the Council, submitted to the consideration of the meeting,—"That it be humbly submitted to her Majesty's gracious consideration, that the Royal Medal for the year 1853 be awarded to Philip Hardwick, Fellow, R.A."

The Report of the Council relative to the essays and drawings received in competition for the medals of the Institute, was read and confirmed, and the prizes were adjudged as follows:—

To Mr. Edward L. Tarbuck, for his essay—"An Historical Sketch of the past Development of Architecture, considered as a fine Art; with an Examination into the Principles of modern Practice, and the present State of the Profession."—A silver medal of the Institute.

To Mr. C. F. Hayward, for his essay "On the Pre-Gothic Age in Germany, or the Romanesque Development of the Rhine and Central Europe."—A medal of merit (with an honourable addition thereto).

To Mr. J. G. Elgood, for his essay "On Architecture, its Past, Present, and Future."—A medal of merit.

To Mr. T. A. Britton, Student, for his essay on Timber and Deals, with some remarks on Seasoning and Dry-rot.—A medal of merit.

To Mr. F. T. Gompertz, for his "Design for a Metropolitan Railway Station."—A prize of books.

The following addition to the Bye-Laws was then agreed to:—

"The Council may from time to time admit to the library and museum, and to the ordinary

general meetings, subject to such regulations as the Council may make, such persons as they shall think proper who are not professionally engaged in the practice of architecture, but who are qualified to concur with architects in the advancement of science and art. Such persons to pay an annual subscription of 2*l.* 2*s.* but to have no right to interfere in the affairs of the Institute."

[The regulations for this new class of members must be made with great care.]

ARCHITECTURAL SOCIETIES.

Oxford Architectural Society.—This Society held its first meeting this term on Wednesday, the 8th inst. Dr. Bloxam, president, in the chair. In the Report, the painted glass, erected in the east window of the chapel of St. John's College, was commended, although the heaviness of the upper portion of the window called forth some remark. The egregious character of the interior of the chapel was stated to be much improved, and the committee had learnt with satisfaction that the college intended to continue the munificent scheme of decoration. Mr. Freeman read a lecture, illustrated by drawings, on the churches visited by him during the last summer, in the counties of Sussex, Somerset, Gloucester, Monmouth, and Brecknock. St. Mary's Hospital, Chichester, was noticed as an instance of the arrangement in which the chapel, a very beautiful geometrical one, opened to the domestic building by an arch and screen just like a chancel.

Cambridge Architectural Society.—The first meeting of this Society for the present term was held also on Wednesday, the 8th instant. Some carefully executed drawings of the church of St. Mary Magdalene, recently discovered in pulling down the town-hall at Doncaster, were received from Mr. Gleadon; and after routine, the Hon. Arthur Gordon described the condition of some of the Spanish cathedrals and churches which he had lately visited. He also mentioned that steps had been taken, and a committee formed, to promote the erection of a monument to the late Dr. Mill, in Ely Cathedral. The Rev. H. M. Ingram, M.A. and Mr. L. M. Rate, B.A. of Jesus College, addressed the meeting on the subject of the restorations in progress at St. Andrew's Church, and urged members to be active in their endeavours to obtain the remaining sum (about 400*l.*) necessary for the completion of the work.

Architectural Institute of Scotland.—A meeting of the members of this Institute was held on Thursday night in last week, when Professor Blackie read a paper on "Mr. Ruskin and Greek Architecture," in which he, at considerable length, criticised the theories promulgated by Mr. Ruskin in reference to art, particularly as to the alleged superiority of the Gothic over the Grecian style of architecture. He held that the writer was quite wrong in the conclusion to which he had come in respect to this, and stated the opinions which he entertained as to what constituted the respective beauties of both styles. The one was gay, fanciful, and airy, the other massive, stable, and manly; but to depreciate the one at the expense of the other was not more absurd than it would be to ignore the beauty of the lily because the rose had also an existence.

PROVINCIAL NEWS.

Peterborough.—The cathedral is now thrown open to the public free of charge, from ten a.m. until four p.m. every day. A book is to be kept for the insertion of names of visitors.

Ashford.—The architect engaged on the restoration of Ashford Church (Mr. Clarke) wishes us to contradict the statement that he had suggested the pulling down of this fine Perpendicular cross church, which, with its noble tower, is a sight so well known to the travellers on the South-Eastern Railway. "It has been contemplated to do away with the galleries, and to lengthen the nave one more bay."

Colchester.—We learn from the *Chelmsford Chronicle*, that the contract of Mr. G. P. White, of London, has been taken for the main building of the intended new church of St. Michael, Myland, and that of Mr. Grimes, of Chelmsford, builder, for the timber work. The foundation stone, it is expected, will be laid with ceremony in about five weeks, by Earl de Grey, the patron of the living. The new church will not be erected on the site of the present structure, but in a more central part of the parish. In consideration of the Rev. E. A. Julius, the rector, not levying a church-rate to carry out the undertaking, the farmers of the parish have agreed to cart the principal portion of the building materials.——Mr. H. W. Hayward, the architect, according to the same paper, has contracted to carry out the alterations for converting the old Colchester county gaol, for the accommodation of the East Essex rifles, and for the new police station. The whole will be completed during the present year. The cost will be 1,500*l.*

Salisbury.—Workmen are now employed, says last week's *Hampshire Advertiser*, in fixing the memorial window of the late dean, at the east end of the cathedral, in the place of the window, or "transparency," introduced by Mr. Wyatt, about 1790, and painted by Eginton, of Birmingham, after a design by Sir Joshua Reynolds, the subject being the Ascension. The window is 23 feet in height. The new window fills the entire space occupied by the Reynolds, and is composed of many small religious subjects, adapted apparently as a companion to the old window at the west end of the cathedral. The principal part of the window, however, is at present covered up. The *Advertiser* calls for "more alterations, among them the destruction of the horrid window designed by Mortimer, and the removal of the organ and screen, so as to allow of the substitution of an elegant open screen in harmony with the architecture, and in accordance with the plans of Bishop Poore, who never contemplated separating one-half of his church from the other half by an ugly stone barricade."

Bristol.—The new school for the extensive district of Trinity, St. Philip's, has just been completed under the superintendence of Mr. E. W. Godwin, architect. It is to be called the Trinity Branch School. The style is that which prevailed during the close of the thirteenth century. Its internal dimensions are, 55 feet by 20 feet, and 23 feet from floor to ridge. It has an open collar beam roof, boarded on the top of the rafters, the woodwork throughout the school being stained and varnished. The entrance is shielded by a porch, which will also be used as a cloak-room. The contract for the building amounted to 300*l.* The ground, fittings, and boundary-wall will cost about 200*l.* more, making a total outlay of 500*l.* or thereabouts. The poverty of the parish is proverbial, and although everything has been done in the plainest and most economical manner, the committee will still require upwards of 200*l.* to cover all cost.

Birmingham.—The new church of St. John, Ladywood, which will be opened in March, has been erected from the designs of Mr. Teulon, by Mr. Hardwick, of Birmingham, and will provide accommodation for 1,068 persons, 551 free. The design, which is in the Decorated style, consists of tower, nave, side aisles, and chancel; the material used being a dark stone from Handsworth, with facings and quoins of Bath stone. The entire expense is estimated at about 5,000*l.* The nave is divided from the aisles by six arches, above which are clerestory windows. The roof is open, the woodwork being deal, stained of a dark colour. The chancel is lighted by a large east window, and smaller ones on either side. The whole of the internal fittings are of stained deal. The seats are low, and entirely devoid of ornament, and the use of pew-doors has been dispensed with. Adjacent to the church is a parsonage-house, of brick, in the Elizabethan style.

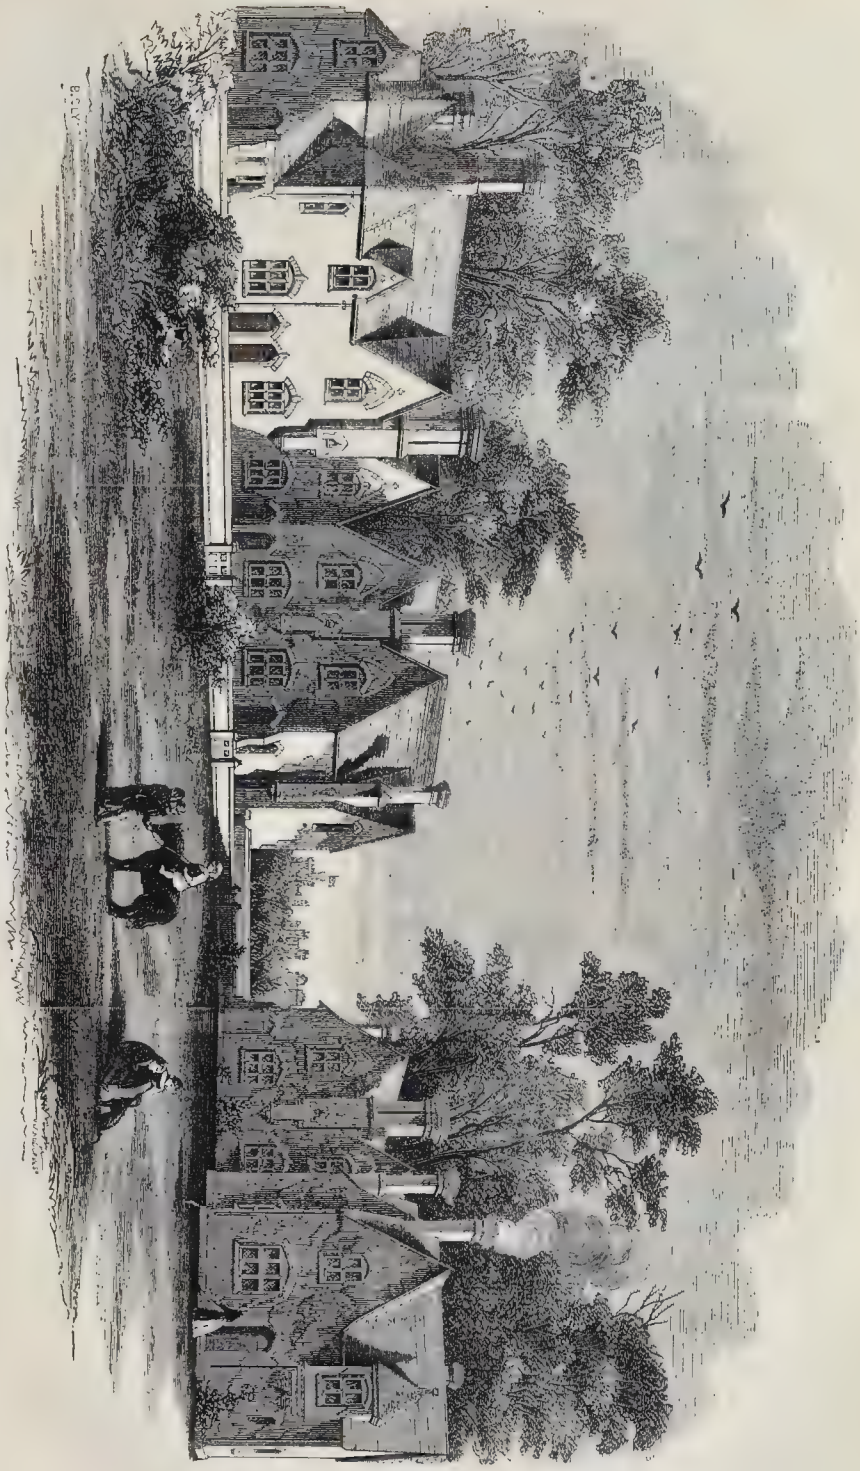
Liverpool.—The foundation-stone of another church at New Brighton was laid on Thursday in last week. The site adjoins George's-terrace. The plan comprises a nave 96 feet long by 16 feet wide; side aisles each 72 feet long by 12 feet wide; a chancel of 40 feet, terminating in an apse sanctuary; north and south transepts 22 feet wide each; south chapel, 19 feet 6 inches long by 12 feet in width. The tower is to be 22 feet square, terminating in a spire,—the whole to be 170 feet in height. The principal entrance is to be from the west, with entrances also from north and south porches. The style is to be Geometrical Decorated. There will be an open timber roof, the principal rafters being ornamented in suitable devices. The sittings will be open. The architect is Mr. Scott, and the builders are Messrs. Furness and Kilpin, and Mr. Yates; Mr. Alfred A. Walton, clerk of works.

Newcastle-upon-Tyne.—An obituary memorial of stained glass has recently been placed in the centre light of the north window, in the east end of St. Nicholas's church, by Mr. Edward Spoor, of this town, architect, in memory of his deceased parents. The design represents the resurrection of Christ. The top of the light is filled with a Gothic canopy of stained glass, the compartments at top being filled with angelic figures. The work is from the manufactory of Mr. W. Wailes.

Edinburgh.—Two specimens of stained glass, by Messrs. Ballantine and Allan, have been exhibited in the Music-hall, in George-street. They are in the Antique Italian style, representing figures of Michelangelo and Raphael, in niches, with richly ornamented pedestals, columns, pilasters, entablature, and background, covered with minute architectural detail, and flickering with a detail of rich colour. In the shaded portions the rough texture of the best ancient glass has been given, admitting light freely through the shadows, all heavy opacity having been carefully avoided. The figures of Michelangelo and Raphael, says the *Scotsman*, in describing the windows, are easy and characteristic. The tunic of Raphael is of pale blue with deep blue diaper, embroidered with fretted gold; the robe of Michelangelo of a deep brown red, also embroidered with gold, and the balance of colour is sustained by the backgrounds, which are alternated in the contrasting and corresponding colour. Michelangelo leans upon a bust, and Raphael has in his hand the original sketch of the Holy Family, which he is said to have outlined one day in a cooper's shop on the bottom of an oaken tub. Cupids in lunettes are introduced between the frieze and the cornice round the semicircular tops.

COTTAGES FOR CROWN LABOURERS, —WINDSOR GREAT PARK.

AT Layton's Gate, in Windsor Great Park, twelve cottages are being erected in two groups, one on each side of the road, for the Crown labourers, by direction of the Hon. C. A. Gore, the Commissioner of Woods who has the management of Windsor Forest and Parks. Although it is not so stated officially, it is understood that Prince Albert has considerably interested himself in this undertaking, for which his Royal Highness is entitled to the thanks of all who desire to see proper habitations provided for the labouring classes. We give a general view of the two groups, and the plan of one of them. Ten of the cottages have three bed-rooms each: two of them have one each. The walls are of brick, with stone dressings, and are constructed with bricks on edge, as shown in the diagram below the plan, so as to get a thickness of 12 inches, with hollows in it: rows of black bricks are introduced at intervals. It is proposed to erect a conduit to accord with the buildings in style (Gothic) in front of each group. Mr. S. S. Teulon is the architect. Messrs. Higgs and Cullingford are the builders.



There are eight other cottages in course of erection for the same object, namely, a pair of cottages in the Great Park; a group of four near Virginia Water; and a double cottage not far off. The amount of the contract for the twenty is 2,500*l.* which includes the stoves, grates, fittings, rain-water tank, pump, and front enclosures; also coppers and ovens.

THE ROADS.—SIR: In your merited castigation of the neglect of the mud and holes left in Parliament-street and Whitehall, produced by laying down the monster gas-pipes (p. 76), your correspondent lays the blame at the door of the "Chartered Gas Company." Pray place the saddle on the right horse. He should have said the "London" company. It is a special point with the Chartered Company to open the ground in short lengths, and to fill up as they proceed.

A CONSTANT READER.

PLAN OF COTTAGES, WINDSOR GREAT PARK.

COTTAGES FOR THE CROWN LABOURERS OF WINDSOR GREAT PARK.—Mr. S. S. Teulon, Architect.

COMPOSITE STREET-PAVING.

WE noticed in April last the metallic composite paving then represented as very successful in the United States, but which was previously patented in this country by one of our county magistrates, who, as a road commissioner, had noticed the defects of the various systems heretofore in use, and we observed that specimens were about to be laid down here in consequence of the success of this system amongst our Transatlantic brethren, who, though not claiming the merit of originality, have in this, as in many other instances, been more prompt in overcoming those scruples, on the ground of novelty and innovation, by which the inhabitants of more ancient states are frequently deterred from attempting to extricate themselves from the ordinary rut of routine, vested rights, and antiquated systems, however defective. We now find that one of the specimens we referred to has been laid down in Messrs. Colechild's coal and stone yard, at Greenwich, where it has been subjected, during the last summer and winter, to the daily traffic of coal-waggons of several tons burthen, and that another specimen has been for some months laid down in Threadneedle-street, City. The company about to be formed for its introduction on a large scale intend laying it down in Regent-street, and, without expressing any opinion upon it, we would draw attention to the advantages claimed for it by its promoters. The sufferings of horses from slippery pavements, in addition to the evils of mud, dust, and incessant noise, are too well known to require comment. In a sanitary point of view also, the evils of granite dust have been frequently pointed out in Parliamentary and other public documents. For instance, in a Report laid before both Houses by the Poor-law Commissioners, in 1842, it is stated, "that granite dust is much more prejudicial to health, in exciting and aggravating lung diseases than the public are aware of; that the injuries to the goods of shopkeepers and other inhabitants of this metropolis from it are very considerable, as notwithstanding the practice of watering the streets, such goods are frequently covered with dust more than once a day, so that writing on furniture with the finger becomes legible, and that in addition to its baneful influence on the eyes, the lungs and the air-tubes (with a moist lining to retain the dust) are constantly pumping the same insalubrious atmosphere."

With such reports before us, and our own experience, we cannot too strongly urge the necessity for endeavours to relieve us from the annoyance and evils which arise from the dust, mud, and incessant noise to which we are subjected in our streets.

METAL WORKING AND ORNAMENTATION.

AT the eleventh ordinary meeting of the Society of Arts, Mr. Henry Cole, C.B. in the chair, a paper was read on "Ancient and Modern Metal-working and Ornamentation, with some allusion to the newly-discovered Art of Nature-Printing," by Mr. W. C. Aitken, of Birmingham. After a few remarks on the subject of ornament on metal-work generally, and on the objections made to certain kinds of ornamentation, in which mechanism had taken the place of hand labour, a description was given of the method adopted for producing a large bronze statue, as well as for small castings, such as statuettes, &c. Reference was then made to the beaten work of the ancients and mediævalists, which was somewhat akin to the modern process of stamping, except that in the latter the falling blow of the stamp-hammer, on which the die was fastened, took the place of the hand-hammer. A short account was next given of the modern art of electro-metallurgy, which admitted alike of the creation of new and the reproduction of old works of art, at a comparatively small cost. Ornamentation by means of engraving was considered to be an expensive process, and, on this account, attempts had been made from time to time to supersede it, and also the cheaper substitute of chasing. Attention was then directed to a process which had been recently introduced, the practical application of which was due to Mr. R. T. Sturges, who held the patent jointly with Mr. R. W. Winfield. The fact of a soft material imprinting on a harder one an impress of its form had long been understood. In the early stages of this invention it was imagined that the harder the material out of which the design was made the better for the purpose. Keeping this then imagined requisite in view, the first ornament imprinted was made out of steel wire, formed into shape, and afterwards tempered; but the result was remarkably indefinite and unsatisfactory. Ordinary thread-lace was then suggested, and tried with success. It was found that it would sustain a pressure of not less than 10 tons, and come out from such a pressure comparatively uninjured, leaving its impress even on so soft a substance as Britannia metal. Subsequently, it was found that the same result was produced on copper, on the compound metal brass, on German silver, on iron and tin plate, and on what is generally believed to be the hardest metal, steel. It should be stated that the device, whatever that may be, either in perforated paper, thread-lace, or other media, is placed between two sheets of metal, and the whole is then passed through metal rollers.

The author then referred to the art of natural printing, for which the Austrians had preferred a claim, remarking, that the English patent for the ornamentation of metals, which was precisely similar in so far as the means employed, was taken out on the 24th of January, 1852. He explained, that some time back he had himself taken impressions of a leaf, a flower, a feather, in Britannia or other metal, from which he had printed direct, except that in some cases he had made a transfer to a lithographic stone, and had multiplied copies by the ordinary process of lithography.

FOREIGN ARTISTICAL INTELLIGENCE.

A new Work of M. Zwirner.—The architect for the restoration of Cologne Cathedral has made a design for the restoration of the church of Sinzing, on the Rhine, which will be begun in the course of the spring, and add another charm to the Rhinelands. The restoration, it is said, will be effected with all the splendour of the ancient design.

Munich.—Illustrations to Faust, &c.—The first volume of the sketches of M. Engelbert Seibertz to Goethe's "Faust" has now been, for some time, published; and of the second, the first plates are now being engraved. M. S. is improving as he advances, and his coloured sketches rank amongst the finest of the kind. Conjointly with these, M. Seibertz has painted a subject for the exhibition, representing the moment when Mephisto shows to Faust Helena, the ideal of Grecian beauty. The plastic works of M. Bragges, a young artist, attract also attention, as, for instance, the model of a statue of Gluck, for the Odeon Platz, at Munich, a colossal Caryatide, the statue of Franconia for the Bamberg terminus, &c.

Brussels.—Art-Exhibition, open to all Nations.—After the worthy precedent of the great London Exhibition, the latter epithet may now be said to appertain to all similar contentions of talent. The above art-exhibition will begin on the 1st of August next, and close on the 30th of September following. At the exhibition of 1851, 317 foreign (not Belgian) artists exhibited at Brussels.

Collection of Mediæval Architectural Ornaments.—This collection of the late modeller, M. Lenhart, at Cologne, is to be sold by public auction. It is systematically arranged, according to the different epochs of the middle ages, and is the more valuable as the moulds are all in good condition, from which numerous casts may be yet obtained.

A new Art-undertaking.—M. Ketelaars, at Malines, has formed the plan of publishing portraits and memoirs of the notabilities of Belgian cities and towns, entitled, "*Les Illustrations Belges.*" The number published contains the notable men of Malines in the sixteenth century.

The "Paramentic" of the Middle Ages.—Under this little-known appellation, M. Bork, Inspector of the Antiquarian Museum of Cologne, comprises the doctrine of the various vestiary ornaments used in the ceremonies of the Romish Church. It is obvious that they exhibit fine specimens of design, and of the perfection of textile fabrics in the Middle Ages. M. B. has already visited France and the west of Germany for the scope of similar investigation. His last occupation has been the arranging of the antiquities of the Dome of Halberstadt, which he considers the richest in vestments, especially of ornaments of bishops from the twelfth up to the sixteenth centuries. M. Bork intends to publish a collection of mediæval church vestiaries and other ecclesiastical ornaments as patterns for the modern artist and artificer.

Architecture in Melbourne.—The sense of art has fortunately taken so much hold of the present generation, that even in the above city, four years old, respectable buildings and an art exhibition have made their appearance. Amongst the places for public worship of all sects, the two Episcopalian churches, St. Peter, near the bridge, and St. James, the cathedral of Melbourne, attract notice. The latter building was erected at a great expense. The Post-office, the banks, hospitals, &c. as well as the market-square, are respectable, and bear comparison with those of any English town of second rank. The Prince's-bridge across the Yarra Yarra consists of a single span of 150 feet, and was built by a company, at an expense of 30,000*l.*

IMPROVED DWELLINGS FOR THE INDUSTRIOUS CLASSES.

THE Metropolitan Association for improving the Dwellings of the Industrious Classes, called a meeting of the merchants, bankers, and traders of the city of London, for the 18th inst. to consider the best method of extending their operations, and were very nobly met by those they appealed to. Mr. Thomas Baring, M.P. took the chair, and the following resolutions, advocated by Mr. Hubbard, Governor of Bank of England; Mr. Prescott, Mr. Cotton, Lord Stanley, Lord Ebrington, Mr. Tottie, Mr. Hankey, M.P. and others, were passed:—

"That very many of the sanitary and social evils which affect the condition of the labouring classes have been proved to be attributable to the insufficient and inferior accommodation afforded by the habitations at present within their command, and the removal of so serious an obstacle to the advancement of their moral and physical welfare is therefore an object of extreme importance.

That this object has been attained to a most remarkable degree by the operation of the metropolitan societies for improving the dwellings of the industrious classes, as shown by the results of sanitary improvement recently published by Dr. Southwood Smith, the average rate of mortality in the improved dwellings, erected by the Metropolitan Association, not being one-third that of the metropolis generally, while the rate of infant mortality in the same dwellings was little more than one-fifth.

That improved dwellings can only be extensively and permanently established on terms affording a fair remuneration to the capitalist, and that this object can be most readily effected through the instrumentality and extended operation of the Metropolitan Association for improving the Dwellings of the Industrious Classes, incorporated by royal charter, whereby the liability of the shareholders is limited to the amount of their shares."

Better still, those present showed the strength of their good opinion, by taking additional 25*l.* shares to the amount of 15,275*l.* The amount previously subscribed for, was 67,150*l.* For example, Mr. Baring, 1,000*l.*; Mr. Gurney, Jun. 500*l.*; Mr. Barclay, 750*l.*; Mr. H. E. Gurney, 1,000*l.*; Mr. A. W. Robarts, 1,000*l.*; Lord Overstone, 1,000*l.*; Mr. Joshua Bates, 1,000*l.*; Mr. Baring Young, 500*l.*; Mr. G. Carr Glynn, 500*l.*; Mr. A. Marshall, 500*l.* &c. &c. Lord John Russell wrote to have his name added to the list, and altogether the meeting was most successful.

Satisfied, as we have long been, that a sufficient provision of healthful habitations for the working classes can only be hoped for as the result of commercial speculation; and anxious as we have ever been, therefore, to show that capital may be advantageously invested in providing these, we are much interested in the

success of the Metropolitan Association. At first the dividend paid was small, necessarily, because, amongst other reasons, while the houses were building, of course there was no return from the capital expended: at the present moment, however, as we are glad to hear, all the buildings are paying about 5 per cent. "Once let it be proved," as Lord Carlisle said some time ago, "that the act of doing good, in however unpretending and commonplace a manner, to large masses of the struggling and impoverished, would pay its own way, and ensure its fair profit, and it would follow that benevolence, instead of being only an ethereal influence in the breasts of a few, fitful and confined in its operations, would become a settled, sober habit of the many; widening as it went, occasioning its own rebound, and adding all the calculations of prudence to all the impulses of generosity."

ATTACHED BUILDINGS UNDER METROPOLITAN BUILDINGS ACT.

It is not an uncommon thing now to find builders carrying up "additions" as large as the house itself, in order to evade the Act, and that, too, contemporaneously with the main structure. The following award will perhaps serve as a warning. Mr. Boys, of Bromley, built a house, containing two stories, at the corner of Grundy-street, Poplar, with walls of the thickness required for a fourth rate. The district surveyor, Mr. Good, jun. objected that the walls were not of sufficient thickness, and ultimately laid an information to that effect before the referees. To the main building in front a back building was added. At the hearing:—

"It appeared that the front portion of such building, being the portion lying northwards of the stairs shown on the said plan, is of the full area of four squares, and is enclosed with walls built of such thicknesses, and upon such footings, as are by the said Act first herein mentioned, prescribed for external walls and party-walls, and the footings thereof, of buildings of the fourth rate of the first or dwelling-house class only, and that no stairs had ever been formed in such portion; but that as soon as the roof of such portion had been covered in, the rear portion of such building had been built, and that such rear portion contains the stairs of the said building, and also a room in each of the two stories thereof, behind such stairs, and communicates in each of the two stories with the first-mentioned or front portion; and the said John Morris contended that such first-mentioned portion was a complete building of the fourth rate of the first class; and that such rear portion was an attached building or office to be distinctly rated, or was an addition to such alleged building of the fourth rate, and that therefore the external walls referred to in the said information were not contrary to the Act as alleged in such information."

The referees awarded "that the said rear portion of the said building is not an attached building or office, nor an addition within the meaning of the said Act first herein mentioned, but is an integral portion of the said building, and was built before the completion of such building, and is to be included in ascertaining the area of such building, and that such building including such rear portion, is a building of the third rate of the first or dwelling-house class."

TRINITY COLLEGE CHURCH, EDINBURGH.

ARCHITECTS' CHARGES.

The demolition and proposed reconstruction of this building has been fruitful of controversy. The last incident is a reply made by the architect, Mr. D. Bryce (in the *Scotsman*), to an insinuation on the part of the Lord Provost, that he had made an overcharge for his services. The architect says:—"When the estimates for rebuilding Trinity College Church were taken by me in 1848 from the tradesmen to whom I had submitted the plans, they varied from 11,076*l.* 8s. to 10,454*l.* 13s. 6d."

Some time after an estimate was obtained from Mr. Morrison, amounting in the aggregate to about 1,800*l.* 6s. less than the above sums; but on this being communicated to Provost Black, he was of opinion that the original estimate should be preferred, and in consequence Mr. Morrison's estimate was laid aside.

"My professional charge," continues the architect, "was fixed with reference to the lowest estimate which Mr. Black had thus adopted, and was settled upon that footing. I was paid at the rate of 3 per cent. and that upon the amount of the lowest estimates, giving the benefit to my employers of the diminished cost to them derived from the employment of the old materials of the building; the strict professional rule being that the payment should be made according to the cost, including new materials. That sum paid to me included my whole remuneration for trouble in negotiating with the railway company, for the purchase of the materials of the church, and for personally superintending its demolition, and so securing the power of re-erecting it—a matter which occupied a large portion of my time. These matters are not within the province of an architect's regular duties, and might have been separately charged for by me, had I wished to do so. It is obviously a very different matter for a professional man, whose time is of value, in one case to arrange in reference to such a demolition and contemplated reconstruction, and in another merely to describe the quarries from which new materials are to be brought. * * * * * *

If there be added the difference of cost between old and new materials, for which I might have charged according to professional rule, the result would have brought out a sum greater than that on which the 3 per cent. was actually calculated by several thousand pounds."

GAS.

The Bridgewater Gas Company have issued a circular to the consumers of their gas, announcing that they have resolved to raise the price of the article from 6s. to 7s. a thousand cubic feet, mainly in consequence of the recent rise in coal. And there would be some show of reason in such a resolve were it not that wherever coal is cheap—yea, even were it not more than an eighth part of the present price in many parts of the country—the urgeance of such a circumstance as a reason why gas should be cheap is uniformly met with the most supercilious assurance that to the cost of gas it matters little what the price of coal is, as the cheapness of cost depends on any thing else rather than on the *cheapness* of coal, that being a very minor element in the calculation. How can gas companies with any show of reason, therefore, raise the price of gas when coal rises since they uniformly refuse to lower it when the same material falls in price? Moreover, we fear that the expectation of increased profits from such a rise in price is a mistake. As we have often pointed out, the parliamentary returns of the gas companies themselves clearly prove the rule to be precisely the contrary, a rise in profits having always coincided *only* with a reduction in price, and for this simple reason, that in every town there is an extensive field of profit in private and other consumption which always *awaits reduction* of price, and which is never entered on till a very low minimum has in every case been reached, and for some little time continued. To revert to higher prices after having gradually lowered them, therefore, is about as rational as it would be to root up a fruitful and likely plant in the hope of making it thus yield a profit, because it will not bear fruit till its proper season has fully arrived. The Bridgewater Company, by reducing their prices from 15s. to 6s. were *on the way*, merely, from impracticable and unprofitable prices *towards* a rich harvest, to be reaped especially from the private consumption of their article of manufacture by or amongst no less than 11,000 inhabitants. Now, however, they have resolved to retrace their steps to prices which they admit and complain have heretofore been unprofitable, and from which they had consequently lowered them in the hope of *reaching* a profit; and they may depend on it they were then proceeding in the right direction, at least, towards the desired harvest, which is more than can now be said of them. As for the relative necessity of the retrograde step so taken, we understand that coals are procured cheaper at Bridgewater than anywhere on the line of rail between Bristol and Exeter, as this is the nearest port from the Welch collieries. Now how should it happen that at Taunton, twelve miles farther off, the price of gas should be only 4s. 6d. if coal be so ruling an element in price as to require 7s. for gas at Bridgewater? Mismanagement, we believe, is the real secret at the latter place, the company having had to lay down their mains no less than three several times, as they would not incur the proper outlay at first; and now they want the public to help them out of their difficulty, and in place of making advances towards the public to that end, they are much likelier to bow themselves out of public reach altogether by retrogressive steps such as that now resolved on.

The committee appointed by the City of London Sewers Commission to look into Mr. Leslie's patents, recommend that an investigation, by experiments under Dr. Letheby's superintendence, should be made, with a view to future proceedings towards the purification of the City gas, as to which Dr. Letheby has sent in another quarterly report, in which he states that since his appointment as chemical inspector the illuminating power of the Great Central Company's gas has been increased by about 11·7 per cent. and that it now exceeds the Parliamentary standard by an average of 25 per cent.; but that it is still nearly as impure as the other gases within the limits of the City. Dr. Letheby appears to agree with us in anticipating an immense expansion of the gas manufacture if it were only made fit for consumption in private dwellings. And why should it not be so in London as well as elsewhere? Some other controlling influence than that of an enlightened self-interest seems to be absolutely essential in this instance, just as it has been found to be in the case of smoke prevention; and it is to be hoped the investigation recommended to the Sewers Commission will speedily lead to compulsory measures.

Meantime the public dissatisfaction with the slow progress of gaslight towards a quite possible perfection, seems to be ever urging inventive minds onwards in new paths of improvement. The electric light is slowly working its way towards practicable adoption; and ever and anon some other new light flashes in upon us, at least for a moment, as if only for the purpose of stimulating gas companies into a resolution to shake off their slovenly mode of manufacture. The last of these new lights that we have lately heard of has appeared in Paris, where it is now occupying the attention of the scientific world. The gentleman who made this discovery very lately exhibited his light to a private party. "Into a glass which had been prepared to resist the action of heat," says a witness of his process, "he poured water to the extent of about two-thirds of the capacity of the vessel. He then added a small quantity of powder, and stirred up the mixture. He then added a few drops of liquid, and in a few seconds combustion took place. The flame, which was perfectly white, and 5 or 6 inches in height, illuminated the room, and continued so for four hours. The author of this discovery stated that the cost of the mixture was less than one sou, but that he considered the thing to be as yet in its infancy, and that, with a little time, every objection that can be made to this new light for practical use would be removed."

ROAD FROM BROMPTON TO KENSINGTON.

A second public meeting in support of the Bill now before Parliament to obtain a communication with the park, by simply forming an opening at the end of Brompton-square into Princes-terrace, was held on the 22nd, and was very fully attended, the Rev. Dr. Irons in the chair. On the motion of Mr. Digby Seymour, M.P. seconded by Mr. G. Godwin, a resolution affirming the importance of the measure, and determining on a petition to Parliament, was carried; as was also a resolution for raising a subscription to defray the expenses of the Bill, moved by Mr. E. Pollard, and seconded by Col. Carmichael; and a third resolution, appointing a committee to watch the Bill, moved by Mr. Edwin Price, and seconded by Mr. Maydwell. Nearly 200*l.* were subscribed in the room. It is understood that the Commissioners of Woods are anxious to see the measure carried. Indeed, it is impossible that any person with the map of London before him, especially if he recollect what is to be done on the fine estate purchased by the Commissioners of 1851, should entertain any other feeling. This is not merely a local matter, but one in which every inhabitant of the metropolis is interested; and it is to be hoped that all who have it in their power will give their assistance to the measure.

OLD ST. PANCRAS GOLGOTHA.

Your pages have often enabled me to read, and your occasional illustrations to judge, I had thought, of the enormities practised in Old St. Pancras churchyard; but there are things respecting which no adequate idea can be conveyed without ocular demonstration. I *thought* I had a tolerably correct notion of the goings on at the above-named feverstill (a word of your own coining); but the spectacle I witnessed last Sunday, in the afternoon (with feelings of pain and disgrace, equalled only by the indignation and abhorrence they gave rise to), in and about Old St. Pancras churchyard, carried more intense conviction of both the forbearance and the perfect truth of your statements, and the actual and existing state of things, than all the best journal-writing that ever was penned could have done in my lifetime. I could as little disbelieve what I saw then as I can doubt now what you have so often written. The *Builder* has been charged with exaggeration, I believe, in regard to its statements concerning this place. Let him who desires "the truth, the whole truth, and nothing but the truth," and is willing to judge for himself, but *once* pay a Sunday afternoon visit, and, as an admirer of the *Builder*, I need not wish it a more zealous convert to the principles it asserts, or a stancher advocate in its war against such violation of health, morality, and the higher feel-

ings of our nature, than that one will become. The practices going on at the churchyard, and their effect on the church, its attendants during the comparatively short hours of divine worship, and on the neighbourhood, you have often and well described; and the question naturally presents itself,—"With such transactions under sanction of the powers that be, and aided, as a matter of necessity, by the clergy, I trust not quietly or willingly, how can morality *exist*, I will not say *thrive*, in the same atmosphere? What chance of ameliorating the vices or humanizing the passions of every-day beholders, can be hoped for? Where is the respect due to the ashes of the dead? Your readers must answer this for themselves. I will in conclusion only observe, I was informed by a bystander that he had counted *eight* funeral processions within as many minutes that afternoon; some departing, others entering the ground, and others yet approaching! At the time we spoke a number of children, from a Sunday-school, I believe, were running boisterously about, in and amongst the *cortèges*, alike dead, apparently, to all respect for the day, the occasion, or the feelings—imagine them!—of the unhappy mourners. In addition to these children was an idle concourse of upwards of 200 persons, one of whom deliberately intercepted a coffin and its attendant mourners by passing through, *hands in pocket and pipe in mouth!* I felt, on seeing these things, that of "those who came to mock," few would there be who "remained to pray."

EXTRA MUROS.

Notices of Books.

Six Months in Italy. By GEORGE STILLMAN HILLARD. 2 vols. London: Murray. 1853.

THIS is one of the pleasantest books about Italy that we have read for a long time, full of graphic descriptions and intelligent comments. It will doubtless tend to increase the desire felt by all Americans to visit Italy. They believe with the writer of the work before us, and correctly too, that "No other country combines so many attractions, or speaks with so many different voices of invitation. Not to be drawn to Italy—not to be grateful for having seen it—not to remember it with vivid interest, is to be indifferent to everything that took place before we ourselves were born." The after-life takes a grace which but for the visit had been unknown to it.

As an example of the author's style, let us take his notice of *Santa Croce, in Florence*:—

"I went to the Church of Santa Croce in the expectation of seeing something externally imposing and beautiful. The Westminster Abbey of Florence I supposed would have something noble and majestic in its aspect, not unworthy of the illustrious dead who have been committed to its charge; but what was my disappointment when I saw a mere mountain of brick, with as little pretension to beauty or proportion as the gable of a barn—an ugly, unfinished façade, more suggestive of a cotton-factory than a church! The interior is venerable and imposing, dimly lighted by long and narrow Gothic windows of stained glass, and shrouded in the gloom which seems appropriate to a church, of which the chief interest is in its tombs and its monuments. Here repose the remains of Michelangelo, Machiavelli, Galileo, Leonardo Bruno, and Alfieri, and, though partially eclipsed by these greater names, the visitor should not overlook those of Lanzi, the historian of painting, and Filicaja, the lyric poet,—names not to be forgotten so long as modest learning and poetical genius are honoured among men.

Ungrateful Florence! Dante sleeps afar!"

The people of Ravenna very properly refused to surrender to the tardy justice of the Florentines the remains of the illustrious foreigner whose last sigh they had received; and Florence could only show her sensibility to the genius of her greatest writer by the empty honours of a cenotaph.

Of the monuments in the Church of Santa Croce, not one is in the highest style of art; and it is a little disconcerting to the stranger to find that the most magnificent of all is erected to the memory of a man of whom he probably never heard, the Chancellor Marsupini. Over all of them the genius of Allegory has breathed from her lips of ice. Painting, sculpture, and architecture appear as mourners around the urn of Michelangelo. Italy weeps over the dust of Alfieri. A figure which may serve either for Political Science or History crowns the monument of Machiavelli; and Poetry deplores the death of Dante. For a monument in a church, a mural tablet with an appropriate inscription, surmounted by a bust or a statue, is all that gratitude, sensibility, or good taste can require, and is always safe. The attempt to do more than this often leads to something tasteless and reprehensible; and when this danger is avoided, the value of a monument, as a memorial, is apt to be impaired by its positive excellence as a work of art."

Here are his impressions on viewing the Coliseum:—

"But under all aspects, in the blaze of noon, at sunset, by the light of the moon or stars—the Coliseum stands alone and unapproached. It is the monarch of ruins. It is a great tragedy in stone, and it softens and subdues the mind like a drama of Æschylus or Shakspeare. It is a colossal type of those struggles of humanity against an irresistible destiny, in which the tragic poet finds the elements of his art. The calamities which crushed the house of Atreus are symbolized in its broken arches and shattered walls. Built of indestructible materials, and seemingly for eternity—of a size, material, and form to defy the "strong hours," which conquer all,—it has bowed its head to their touch, and passed into the inevitable cycle of decay. "And this too shall pass away"—which the Eastern monarch engraved upon his signet-ring—is carved upon these Cyclopean blocks. The stones of Coliseum were once water; and they are now turning into dust. Such is ever the circle of nature. The solid is changing into the fluid, and the fluid into the solid; and that which is unseen is alone indestructible. He does not see the Coliseum aright, who carries away from it no other impressions than those of form, size, and hue. It speaks an intelligible language to the wiser mind. It rebukes the peevish and consoles the patient. It teaches us that there are misfortunes which are clothed with dignity, and sorrows that are crowned with grandeur. As the same blue sky smiles upon the ruin which smiled upon the perfect structure, so the same beneficent Providence bends over our shattered hopes and our answered prayers."

Mr. Hillard rightly appreciates the fact, that—

'Tis the taught already that profit by teaching,
And wisely urges his countrymen who intend to visit Italy (as we would urge ours), to prepare themselves for their visit. Every hour so spent brings its recompense of rich reward.

A History of the Holtes of Aston, with description of Aston Hall, Warwickshire. By A. DAVIDSON, with Illustrations by ALLEN E. EVERITT. Birmingham: Everitt. 1854.

THE illustrations which accompany the genealogical account of the Holtes, lithographed in colour by T. Underwood, of Birmingham, from Mr. Everitt's drawings, represent a very interesting specimen of Elizabethan, or rather Jacobian architecture, Aston Hall. It was commenced in 1618, and completed in 1635. It has a handsome staircase, not unlike that at Crewe, and some good ceilings.

"The name of the architect of this noble pile has not been preserved. Richardson, in his observations on old English mansions, observes that there is every reason to suppose that Dorfold Hall, Crewe Hall, and Aston Hall, were built in successive order by the same architect. Many of the ceilings, fire-places, staircases, &c. are nearly the same in all the houses. The early rudeness of the style is seen at Dorfold Hall, its purity in Crewe Hall, and the commencement of its deterioration in Aston Hall. Nash, in the description to his first series of 'The Mansions of England in the Olden Time,' states that Crewe is one of the finest examples of the mansions of King James's time, and was built from a design, it is said, by Inigo Jones. Sarsfield Taylor, in his 'Fine Arts in Great Britain and Ireland,' says Crewe was built by Jones, but that it is really surprising how little is known, with certainty, of the mansions he built. Aston may, therefore, be one of Jones's productions."

It is to be hoped that the building operations now going on in the Park, may not necessitate the destruction of the Hall.

The views recall to our memory a hot chase across the park, in harum-scarum days, when difficulty added a pleasure, pursued by a late owner of this fine house, who had adopted the enlightened motto of some of our authorities,—"No sketching allowed." A shilling and a soft word, had bribed the good woman at the gate, and obtained a little water for the operation, with intimation that if seen, it would be safer to bolt than to expostulate. We *were* seen, and *did* bolt, the owner after us. It was a roasting day in July, and the recollection is not yet effaced. Mr. Everitt has evidently made his sketches under happier auspices.

Miscellanea.

IMPROVED MANUFACTURE OF IRON.—Mr. Renton, of New York, has patented a new process for the reduction of the oxides of iron, and the production of the malleable metal, founded on the theory of deoxidising the ore in the absence of atmospheric air, and thus preventing the formation of new oxides, which engenders much waste by the usual process of manufacture. It is said that iron prepared by this process has peculiar advantages for the manufacture of steel.

STAINED GLASS WINDOW FOR ELVASTON.—Mr. Baillie has just finished a chancel window for the church of Elvaston, in Derbyshire, presented by the Earl of Harrington. The window, says the *Northampton Herald*, "is about 19 feet high by 7 wide, and is framed (so to speak) and ornamented in the stiff Mediæval style, the grotesqueness of design being redeemed by the brilliancy of the colouring. But in the subject of the centre picture, 'Christ and the Little Children,' after Overbeck, the artist flies boldly away from his masters, and paints the figures freely in the modern style of art." The faces are nearly all portraits of Lord Harrington's family. The window is to be set up over the tomb of the Countess of Harrington, to whose memory it is dedicated.

FRESCOES AND STATUES IN THE NEW HOUSES OF PARLIAMENT.—A return which has just been issued presents a short account of what has been done at the New Houses, and gives a list of the several statues and paintings completed or in progress, with a statement of their destination and expense. The estimate of their cost is as follows:—House of Lords, fresco paintings, 4,800*l.*; metal statues, 4,680*l.*; upper waiting-hall, fresco paintings, 3,500*l.*; St. Stephen's Hall, statues, 8,600*l.*; the Prince's chamber, statues, 3,835*l.*; bas-reliefs, 750*l.*; portrait of Henry VII. 50*l.*; the Queen's robing-room, 4,800*l.*; the Peers' robing-room, 9,000*l.*; the Peers' corridor, 3,650*l.*; the Commons' corridor, 3,650*l.*; sundry works, 220*l.*; and adding 5,800*l.* expended in premiums in the exhibitions of 1843 and 1847, and for the purchase of two cartoons exhibited in 1845, the total cost of what has been undertaken will amount to 53,335*l.* of which the sum of 29,660*l.* has been already paid. The remainder will only be required by degrees, for a large proportion of the works are not completed. The Peers' robing-room, for instance, is not yet built; but a sum of not less than 9,000*l.* is devoted to the nine fresco paintings which are to be placed in this apartment, and which the artist, Mr. J. R. Herbert, was to have nine years from April, 1851, to complete. They are to have Scripture subjects, the illustrations to "have reference to the idea of justice on earth, and its development in law and judgment." The eight paintings for the Peers' corridor are to indicate the heroic virtues displayed on both sides during the civil war, and the Commons' corridor is to continue and complete the subject.

EDUCATIONAL WORKS OF THE NATIONAL SOCIETY.—Various effective little books or tracts are being issued by the National Society from their depositary at the Sanctuary, Westminster. We have now before us one, of the simplest order, and most easily understandable by the untutored mind, on "The World, or General Geography," and sold at 1*s.* 4*d.* a dozen: another is a 6*d.* tract, on "Elementary Statics;" being the first part of a plain little treatise on mechanics for the use of schools, by the Rev. R. Fowler, B.A. vice-principal of the Diocesan Training-school at Chester: a third contains some choice selections of "School Poetry." All of these seem well adapted to the end in view, and they form but a specimen of a class of useful little works published by the society.

SALE OF TIMBER, WIMBLEDON.—Last week an auction was held at Wandsworth, by Messrs. Chinnock and Galsworthy, of timber, underwood, &c. growing upon the Wimbledon Park Estate, which called together a large attendance of timber-merchants and dealers. The sale comprised 130 lots. The prices realized were higher than those of former sales, owing to the great demand for timber for ship-building purposes. The small class oak, for which there was the greatest demand, realised 3*s.* 4*d.* per foot; the largest Wych elm, 2*s.* 4*d.* being the price of oak of former sales; and the best quality lime as much as 1*s.* 10*d.* per foot. The total result of the day's sale was nearly 2,200*l.*

THE LONDON NECROPOLIS AND MAUSOLEUM COMPANY has taken a fresh shape. Sir W. Cubitt is engineer, and Mr. Sydney Smirke architect. A report read at the first general meeting of the company, on the 7th inst. shows that the disbursements to the 31st January have been 21,860*l.* 12*s.* 1*d.* including 10,000*l.* in part payment for land. There are liabilities to the amount of 7,061*l.* 14*s.* 10*d.* irrespective of sums remaining unpaid for the land, &c. namely, 48,236*l.* The expenditure is startling; we might almost say discreditable. 9,219 shares of 10*l.* each are subscribed for.

The Decimal Calculator.—Under this title, Mr. Robert Mears, accountant, who, by the way, seems to have had a good deal of practical experience in calculations as to building and other constructive railway works, and had already published a series of Decimal Coinage Tables, has timeously issued a little work by means of which the public of all classes connected with trade may have the advantage of preparing themselves for the probable introduction of the simple decimal system, in weights, measures, and time, as well as in coinage, and may, even as it is, save themselves much trouble and time in ordinary calculations, while so preparing themselves for the contemplated change of system. Of course it will be understood that the little sixpenny aid to ready reckoning now issued is not based or dependant on any mere theoretical scheme of proposed coinage, but on the general system of decimals; and as what may be learnt from it therefore has no chance of requiring to be unlearned, and as much labour has evidently been expended in simplifying and explaining the system so as to be easily understood by all employed in trade calculations, this timely production ought to be widely diffused and well studied.

Steam Hammers.—Mr. R. Taylor, of Reading (U.S.), has patented an improved arrangement of valves, ports, and passages, for operating steam hammers, "so that the steam can be made to act with a variable force on either the up and down strokes of the piston, or on both, or prevented from acting on the down stroke, without interrupting the action of the hammer."

The Royal Scottish Academy.—The exhibition of this association is now open at Edinburgh. It is said to be very varied and interesting in its contents. Pictures by deceased artists have been strictly excluded from this year's exhibition. There are contributions by Macnee, Graham, Gilbert, the Landeers, Thomas and John Faed, Douglas, Gavin, Lees, Ross, Ritchie, Erskine Nicol, Noel Paton, M'Culloch, D. O. Hill, Crauford, J. C. Brown, Waller Paton, Tonge, Oakes, Hargitt, Fraser, &c. and also by Millais, W. B. Johnstone, Maclise, Roberts, E. W. Cooke, Horsley, Leslie, and many other English artists.

New Churches in the Diocese of London.—Her Majesty's Commissioners for Building New Churches have approved of the plans for a new church for the ecclesiastical district of St. Mark, in the parish of St. Margaret, Westminster. They have also made conditional grants towards the erection of churches at the following places:—The district of St. James's, Hatcham, in the parish of Deptford; at Blackheath, in the parish of Greenwich; at Forest-hill, in the parish of Lewisham; in the parish of Isleworth; in the parish of Hammersmith; in Oakley-square, Bedford New Town; in the district of St. Luke's, King's-cross; at Tollington-park, in the district parish of Upper Holloway; in the district parish of St. John, Notting-hill; in Nutford-place, in the district parish of St. Mary, Bryanstone-square; at Lorrimore-road, in the parish of St. Mary, Newington. Some of these churches have been commenced.

Railway Matters.—The half-yearly report of the London and North-Western Company shows the total receipts on revenue account for the half-year ending 31st December, to have been 1,468,304*l.* The disposable balance, after defraying working expenses, &c. is 632,035*l.* The proposed dividend, at the rate of 5 per cent. per annum for the half-year, amounts to 546,004*l.* leaving a balance of 86,031*l.* to next account.——The half-yearly accounts of the London and South-Western show a balance available for dividend of 174,465*l.* 4s. 7d. From this sum the directors recommend that a dividend for the half-year, at the rate of 5 per cent. per annum be declared, amounting, on 6,761,264*l.* 13s. 4d. to 169,031*l.* 12s. 4d. leaving to next half-year, 5,433*l.* 12s. 3d. ——The revenue account of the Great Western for the half-year shows that 620,972*l.* had been received from traffic and other sources, and that 242 362*l.* had been expended, including rates, taxes, and government duty, leaving a balance of 378,610*l.* Out of the disposable balance 184,689*l.* it is proposed to deduct 164,725*l.* for a dividend, at the rate of 2 per cent. for the half-year on the ordinary stock and shares of the company (8,236,276*l.*) leaving a balance of 19,964*l.*

The Builders' Benevolent Institution.—The anniversary ball in aid of the funds of this institution, founded in 1847, for giving, as most of our readers know, assistance to decayed members of the building profession, came off on Thursday, the 16th inst. at Willis's Rooms, King-street, St. James's, under the patronage of Lord Dudley Stuart, M.P. Sir Benjamin Hall, M.P. Mr. Peter Rolt, M.P. Mr. Lee, M.P. and others. The attendance equalled the gatherings on former occasions, and we trust the result will prove beneficial to the funds of the Institution. It has at the present time twenty-two pensioners upon its books, and three others are to be elected in the month of May next.

Drawing as a Branch of Ordinary Education.—This is an object, for the realization of which we have for many years laboured. It is gratifying, therefore, to find it at length adopted as a principle by the Government Council on Education, who, after making arrangements with the Department of Science and Art, have issued a circular to their inspectors, instructing them as to steps to be taken towards promoting the instruction of the students in training for schoolmasters and schoolmistresses under their inspection. Such students are to be allowed to attend the various Elementary Drawing Schools connected with the Department of Science and Art for half fees of 3d. instead of 6d. a week, and they are to have other subsequent advantages where their progress has been approved of, besides prizes graduated according to their advancement, and certificates fixing their rank as elementary teachers in respect to augmentation of salary by the Government.

The Tower of St. Mary's, Taunton. — The architects engaged for the restoration of this beautiful tower, have advised that its condition is so bad, it is necessary it should be taken down and rebuilt. The advice is not relished by some of the townsmen, and opinions have been privately sought in other quarters.

Exhibition of French Pictures.—An executive committee is now forming to make an exhibition of the French school of painting, in Pall-mall, at Mr. Griffith's gallery. The lease has been taken for twelve years, and it is proposed to open in April next. The patrons, we are told, include some of the highest names in France, and some noblemen and gentlemen in England known as amateurs.

Reading Board of Health.—At a meeting of the Reading Local Board of Health, on Tuesday last, it was determined to engage the services of Mr. T. E. Blackwell, C.E. of Bristol. We may expect that, under this gentleman's direction, the sanitary improvements will be judiciously designed, and efficiently and economically carried out. The Board have not been remarkable for their energy up to this time, but we are willing to give them credit a little longer.

The Lion Arcade, Huddersfield.—Respecting this structure, mentioned in our provincial news in January last, a correspondent forwards the following information:—The front of it, facing St George's-square, is 180 feet in length, and upwards of 40 feet high. The lion (by Seely, of London) on the centre of the coping, weighs seven tons. The sides fronting Northumberland-street and St. Peter-street are respectively 83 feet in length. The length of the arcade is 112 feet, its width, 43 feet; and from the middle of the iron roof to the floor the height is 50 feet. 120 gas jets run round the cornice next the roof. More than 6,000 feet of glass have been used in the roof, and 9,000 feet of the best plate-glass have been employed in the windows of the shops and warehouses. The area of the entire structure is 1,660 square yards. The design—Italian—was furnished by Mr. Pritchett, architect. The contractors are, for masonry, Messrs. Brook and Stead (the clerk of the works, Mr. William Stocks, had the direct management of this department); for ironwork, Messrs. Walker, of York; for glass, the London and Manchester Glass Company; for glaziery, Messrs. Hodgson, of York; slatework, Mr. Goodwin; for plastering, Mr. Tunnacliffe; for painting, Mr. Calvert; for carpenters' work, Messrs. William Fawcett and Sons. The cellars, boarded, and easily accessible, are used by the various shopkeepers as store-rooms, and by the warehouse-companies for packing woollen goods. To the right of the staircase a post-office box is to be placed; and under the stairs is a hose always ready in case of accident by fire. The whole of the shops and warehouses, with about two exceptions, are tenanted. This work was originated and is owned by Mr. Samuel Oldfield.

Fires from Defective Flues, and Timber running into Flues.—Your number for last week contains notices of two fires from defective flues; one in consequence of a timber plate actually running into the flue. Surely it would be worth the while of parties about to build to take care that flue-pipes were used to line all flues. They are inexpensive and entirely prevent the possibility of timber coming at all in contact with the inside of the flue. They also serve to make the flues compact and perfect, and thus prevent fires from defective flues.—G. O.

"Steam superseded."—Mr. George Goodlet, of Leith, has patented an invention for the substitution of "cold water in combination with air," in place of steam, as a working power. It must be some modification of the hydraulic engine, we presume. The era of hydraulic power is yet to come. We long since pointed out the many uses to which it might be put; but we do not think its importance is even yet appreciated as it ought to be. We know nothing, however, of Mr. Goodlet's project, further than what has just been stated.

Bristol Archæological Society.—The first meeting of this new association, adjourned from the 1st inst. was held under more favourable circumstances, in the theatre of the Park-street Institution, on Saturday before last, the mayor, as president, in the chair. After an appropriate introductory address by the chairman, Mr. D. W. Nash, one of the honorary secretaries, read a paper, illustrating the objects for which the society had been formed; and containing a rapid sketch of some of the archæological features of the vicinity of Bristol, at same time showing that there was ample scope in this locality for the labours of an archæological society; and that the prospects of its usefulness were such as to merit the approbation with which the project of its formation had been received. It was announced at the close of the proceedings that the next meeting of the society would be held in about two months.

Statue of "Liverpool."—Mr. Spence has just completed a colossal statue, in female form, emblematical of Liverpool, for the new palace at Sydenham, being one of a series now executing by different artists. The figure is in a standing posture, with classical drapery. In her right hand is a book, on which are engraved the arms of Liverpool: in her left she holds Mercury's caduceus, as a symbol of commerce. On one side is placed the Liver, emblematic of the town; on the other the Dolphin, as an emblem of the sea.

Fall of a "Peace" Pillar. — An Omen of War.—On Wednesday week, between five and six o'clock p.m. the inhabitants of Langfield, Lancashire, were startled by a loud rumbling noise resembling the falling of rocks or a large pile of buildings. It was found that the pillar, or monument, erected on the height of Stoodley Pike, about forty years since, in commemoration of peace, had fallen nearly to the bottom! This monument, which was about 40 yards high, had steps winding round it from bottom to top, whence might be seen the country round for forty or fifty miles. It was commenced in 1814, and finished next year. A few years since it was struck by lightning, which cracked the walls in several places.

Wages at Sydney.—The following, from a Sydney paper, the *Empire*, shows the rate of wages there in November last:—Stonemasons, last week 22s. this week 25s. per day; plasterers, 21s. per day; bricklayers, 20s. per day; quarry labourers, 10s. to 15s. per day; bricklayers' labourers, 14s. to 16s. per day; plasterers' labourers, 12s. per day; other labourers, 10s. per day; carters, 10s. per day.

Ilkley Hydropathic Establishment: Competition.—In the competition for this hotel and boarding-house, advertised in our pages, the shareholders have selected the design of Mr. Cuthbert Brodrick, of Leeds, and have adjudged the second premium of 20*l.* to Messrs. Perkin and Backhouse, of the same place. The directors have awarded an additional premium of 15*l.* to Messrs. Raffles Brown and Walter Blackett, of London.

Sympathies of Sounds.—It is owing to the sympathetic communication of vibrations that persons with clear and powerful voices have been able to break a large tumbler glass by singing close to its proper fundamental note. We have heard of a case where a person broke no fewer than twelve large glasses in succession. The sympathy of vibrations, or tendency of one vibrating body to throw another into the same state of vibration, shows itself remarkably in the case of the going of two clocks fixed to the same shelf or wall. It was known near a century ago that two clocks set going on the same shelf will affect each other. The pendulum of the clock which is stopped, after a certain time, will resume its vibrations, and in its turn stop that of the other clock. Mr. John Elliot, who first observed these effects, noticed that two clocks, which varied from each other ninety-six seconds a day, agreed to a second for several days when they were placed on the same rail. The slowest of these two clocks, which had a slower pendulum, set the other in motion in sixteen minutes and a half, and stopped itself in thirty-six minutes and a half. These effects are clearly produced by the small vibrations communicated from the one pendulum to the other through the shelf, or rail, or plank, on which they both rest. It has been found that two conflicting sounds produce silence, as two converging rays of light produce darkness.—*Herschel on Sound.*

LONDON ..... 126, Bishopsgate-street.

TO SECURE THE ADVANTAGE OF THIS YEAR'S ENTRY, PROPOSALS MUST BE LODGED AT THE HEAD OFFICE, OR AT ANY OF THE SOCIETY'S AGENCIES, ON OR BEFORE 1ST MARCH.

POLICIES EFFECTED ON OR BEFORE 1ST MARCH, 1854, WILL RECEIVE SIX YEARS' ADDITIONS AT THE ALLOCATION AT 1ST MARCH, 1859.

ROBT. CHRISTIE, Manager.
WM. FINLAY, Secretary.
WM. COOK, Agent.
126, Bishopsgate-street, Feb. 1, 1854.

INSTITUTED 1831.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY.—Incorporated by Royal Charters, and Special Act of Parliament.

Head Office—Edinburgh. 26, St. Andrew-square.

MANAGER—Robert Christie, Esq.

London.—126, Bishopsgate-street, Cornhill.
Glasgow.—163, St. Vincent-street.

The Scottish Equitable Life Assurance Society is an institution peculiarly adapted to afford Provision for Families. It was established in the year 1831, upon the principle of Mutual Contribution, the surplus or profit being wholly divisible among the members; and the additions which have been made to policies at the periodical investigations of the Society afford satisfactory evidence of the prosperity of the institution, and the great advantages derived by its members. The following examples exhibit the additions already made

A policy for 1,000l. opened in 1832, is now increased to	£1,508	9 4
A policy for 1,000l. opened in 1836, is now increased to	1,407	18 1
A policy for 1,000l. opened in 1840, is now increased to	1,297	15 7

The profits are ascertained and divided triennially amongst policies of more than five years' duration.

The annual revenue is upwards of 140,000l.

The amount of assurances in force is upwards of 4,000,000l. sterling.

The amount paid to the representatives of deceased members exceeds 500,000l. sterling.

The total amount of vested additions allocated to policies exceeds 600,000l.

The accumulated fund is upwards of 760,000l.

Loans granted to members to the extent of the Office value of their policies.

Copies of the annual report, forms of proposal, and all information may be had on application at any of the Society's Offices, in town or country. ROBERT CHRISTIE, Manager.
WILLIAM FINLAY, Secretary.
Dec. 1853. W. COOK, Agent.
126, Bishopsgate-street, London.

ALL POLICIES INDISPUTABLE.

SOVEREIGN LIFE ASSURANCE COMPANY, 40, St. James's-street, London.

No charge for policy stamps in future. Sums may be assured payable at ages attaining the age of 50, 55, or 60, or at death, should that event occur previously.

Advances made on real and on unexceptionable personal security, where the sureties are resident in London, or its immediate vicinity. H. D. DAVENPORT, Secretary.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom. THIRTY PER CENT CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Paper-hangings for the present season, which comprise every description of style and quality, from the most elaborate decoration to the cheapest paper that can be produced, and which they are prepared to offer at very low prices. J. A. and CO. also respectfully inform the trade that they have OPENED a WAREHOUSE at No. 500, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A and CO. are the sole vendors of this well-known remedy for Damp Walls.

115, Whitechapel, near the Obelisk, and 58a, Oxford-street.

WOOD ENGRAVINGS.—Illustrations for Books, Periodicals, Newspapers, &c. executed in a superior style, at reasonable prices, by GEORGE DORRINGTON, Designer and Engraver on Wood, 4, Ampton-street, Gray's-inn-road. Specimens and estimates post-free.

FASHIONABLE INDIAN-CARVED FURNITURE (as presented to her Majesty by the East-India Company), consisting of drawing-room, library, garden chairs, couches, settees, cabinets, flower-stands, tea and other tables, with Indian Paper-hangings, all of most elegant design and preservation, at moderate prices.—At ARROWSMITHS', Decorators and Upholsterers to her Majesty, 80, New Bond street. Parquet Flooring of any pattern.

DRAWINGS, of every description, executed with despatch, by Messrs. ROSSIGNOL and CROOK, Mechanical and Engineering Draughtsmen, 23, Chancery lane.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Painting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

TO CONTRACTORS.

TO BE SOLD, for less than half the cost price, THREE strong, well-built TIMBER CARRIAGES, Have been used at the Exhibition for carrying iron girders and columns, the contract being now complete. 16 inch wheels.—Standing at PERRY'S Brickfield, Queen's-road, Peckham.

THE REFORM FREEHOLD LAND and BUILDING SOCIETY, and BANK for DEPOSITS.—Enrolled under 6 & 7 Wm. IV. cap. 32. Freehold Land Shares, 30/ each. Subscriptions, 4s. per month, for 120 months. Building Society Shares, 10/. each. Subscriptions, 10s. per month, for twelve and a half years, or 2/6 per month for seven and a quarter years. No entrance fees. No quarterage. This Society disclaims all party objects, and all interference with the political opinions of its members.

TRUSTEES.

SECRETARY.—W. Gurley Smith, Esq. Deptford.
Offices—147, Cheapside.

SAVINGS-BANK DEPARTMENT.

The trustees being authorised by the rules to borrow money, a bank for deposits has been established for the purpose of extending its operations, by employing the united savings of servants, mechanics, and tradesmen, as a capital to give every facility for the acquisition of property among the industrious and middle classes. Deposits must be made in sums of not less than 1/. and may, at any time, be increased or withdrawn. Interest at the rate of 4 per cent. per annum, calculated monthly, will be paid.

The interest allowed by ordinary savings banks does not exceed 2l. 19s. 4d. per cent.

Members of the Society have the following important privileges:—

No entrance fees payable. No quarterage charged.

Interest at 5 per cent. and bonus allowed to members upon the completion of their building shares, with profits, and the same rate of interest charged to members upon advances made by the Society.

Interest at the rate of 4 per cent. and bonus, allowed on freehold land shares.

No preference given to members of the Committee in the allotment of estates. Every member has an equal chance.

There is no partnership liability, as in a Joint Stock Company, The whole of the profits belong exclusively to the members.

Members may obtain advances on houses or landed property already in their possession.

Members may withdraw the whole of their subscriptions with interest, on giving due notice to the secretary.

The property of the Society is vested in the trustees.

Disputes settled by arbitration.

In case of death payments may be made of a sum not exceeding 20l. without requiring probate of will or letters of administration. Females and minors may become members.

No extra payments required for management, postages, or for any other object.

Interest allowed on subscriptions in advance and on completed shares.

The management of the Society, and the appointment of directors and officers, are entirely under the control of the members.

From the above it will be observed that a most important new feature in this Society is the abolition of entrance fees and quarterage. The injustice of these fees has frequently been the subject of comment; and although their amount varies in different societies, it is believed that this is the only one existing which has had the courage entirely to abolish them. The only reason alleged for these charges being made is, that they are necessary to form a fund for defraying expenses of management. But it cannot assuredly be contended that the payment of an extravagant entrance fee, with a view to accumulate big savings, is to be construed for payment of expenses incurred in obtaining estates for the wealthier members of the Society. Yet such is the fact, and under these circumstances, this Society has abolished them altogether, and issues with perfect confidence upon the result.

Shares, entrance fees, and further information may be obtained at the Offices of the Society.

Money orders payable at the Chief Office, St. Martin's-le Grand

Country agents wanted.

Be order, W. GURLEY SMITH, Secretary.

London, 147, Cheapside.—Entrance in Foster-lane.

£5 8s. 4d. per cent. to investors in the Home Counties and Metropolitan Freehold Land Society, with the best security and no risk. The following particulars in the Annual Report, showing the success and safety of the society, are worth notice: The estates purchased being first-class building land, have realized a profit to the society, sufficient to give investors a bonus of 5/. 8s. 4d. per cent on the past year's subscriptions, leaving still a considerable balance in hand. 2. All allotments offered to members have been eagerly taken up, and numerous high premiums on the best prize, showing the policy of the directors in distributing any land adapted for building purposes. 3. Another first class estate has been secured, and will shortly be allotted which promises results, at 5l. 5s. 4d. per cent. per annum in all future subscriptions. A Public Meeting will be held at Radley's Hotel, on WEDNESDAY EVENING, 29th MARCH, when Forty shares will be drawn in the ballot. For report and prospectus apply at the office, 15, Chatham-place, Blackfriars. HENRY KNIGHT, secretary.

FINSBURY and GENERAL FREEHOLD LAND SOCIETY.

Established 1850.

The Witcham and Merton Estates will be balloted for shortly. All shares issued previously, on which one month's subscription has been paid, will be eligible for the ballot. Monthly subscription, 4s.; entrance and rules, 1s. 6d.

46, Bedford-row. R. A. MARCH, Secretary.

ENGLISHMAN FREEHOLD LAND SOCIETY.—TENDERS for ROADS, &c.—Selhurst Estate, Croydon. The Directors have determined to receive separate TENDERS for ROADS and DRAINAGE on this estate, and have extended the period to the 6th instant. Amended plans and specifications will be at the Offices of the society on and after the 24th instant. The Tenders are to be delivered at the offices before FIVE o'clock on TUESDAY, the 28th instant, marked "Tenders for Roads, Selhurst Estate."—By order of the Board.

G. ASKE, Secretary.

61, Coleman-street, London, Feb. 21, 1854.

SIX PER CENT. BONUS and PAYMENT of INTEREST. THE CONSERVATIVE LAND SOCIETY To the holders of nine-completed shares are informed that the bonus of six per cent. placed to their credit in the books of the society will be duly posted in the pass books. The holders of completed shares not yet exercised who have not yet received the bonus of three per cent. in addition to the guaranteed three per cent. interest up to the 29th of September last, are requested to apply at the Offices, or to the secretary, who will forward the amount and form of receipt. From the 29th of September the interest allowed on completed shares and on payments of a year's subscription and upwards will be five per cent.

CHARLES LEWIS GRUNEISEN, Secretary.

Offices, 33, Norfolk-street.

TO PLUMBERS, DECORATORS, GAS-FITTERS, &c.

TO BE DISPOSED OF, an excellent old-established BUSINESS, in a flourishing town, with house, suited for a person of first respectability. For particulars apply to Messrs. JAMES GUY and CO 6, Laurence Pountney-hill, Cannon-street, London.

TO HYDRAULIC ENGINEERS, PLUMBERS, &c.

To be immediately DISPOSED OF, by PRIVATE CONTRACT, a valuable BUSINESS as a Hydraulic Engineer and General Building Plumber, &c. in one of the best towns in the East of England: the present proprietor wishes to retire from increasing ill health, and will be inclined to make reasonable arrangements for the good will. The premises on which the business is conducted, are of considerable extent, in the centre of the town, and comprise a good dwelling-house attached, a large yard, and extensive shops and sheds, with a garden, and six cottage houses at the end of the garden suitable for workmen. These premises would have to be rented at a price to be fixed upon, or they would be sold for a life tenure on which they are held. The whole Trade, which is not a heavy one, to be taken at a fair valuation. For particulars apply to G. ATWELL, Esq. Architect, Hemingford terrace East, Islington

TO CARPENTERS AND BUILDERS.

THE LEASE of an old-established BUSINESS, in the City, TO BE SOLD, rent, twenty guineas per annum, together with the remaining stock and implements in Trade.—For particulars, apply to Mr. LEE, 1, Devonshire square, Bishopsgate.

TO BUILDERS AND OTHERS

JEWIN-STREET and JEWIN-CRESCENT, Aldersgate-street. TO BE DISPOSED OF by PRIVATE CONTRACT, the BUSINESS of a BUILDER carried on by the late Mr. James Ward and his family at Jewin-street and Jewin-crescent aforesaid for upwards of fifty years; to which is attached the excellent Business of a Dealer in Building Materials, Bath Bricks, Hearthstones, and Paving. The fixtures are to be taken at a valuation, and if desired the stock in trade, at any part thereof—For particulars apply on the premises, or to Messrs. FISHER and SON, Solicitors, 103, Aldersgate street.

TO ARCHITECTS, HOUSE AGENTS, &c.

WOOD and COMPANY, PAINTERS, GLAZIERS, and PAPER-HANGERS, HOUSE DECORATORS, &c. 20, Paget street, Burton-crescent, St. Pancras. Ground, Embossed, and Flock Distempers, and General Ornamental Window Glass Manufacturers.

Country orders received and executed.—Estimates given.

PATENT VULCANIZED INDIA-RUBBER TUBING, for Gas Fittings, Chemical Purposes, Fire Engines, Manure Pumps, &c. JAMES LYNE HANCOCK, Sole Manufacturer, Goswell-mews, Goswell-road, London, begs to invite the attention of Architects, Builders, Engineers, and the trade generally, to the Vulcanized India-Rubber Tubing, which is now manufactured from 1 inch bore and upwards, in lengths from 5 to 100 feet, and of various strengths, suitable for the purposes for which it is applied. VULCANIZED HOSE for FIRE ENGINES, LIQUID MANURE, and for conveying HOT WATER to BATHS in DWELLING-HOUSES and BREWERIES, manufactured to resist great pressure of any length and size to order.

*** Testimonials may be had on application at the Manufactory.

N.B. VULCANIZED WASHERS and SHEET RUBBER or Steam and Hot Water Pipes, and Packings for Pistons and Gland-Boxes of Steam Engines, cut any size to order.

HEAL and SON'S ILLUSTRATED CATALOGUE of BEDSTEADS, sent free by post. It contains designs and prices of upwards of ONE HUNDRED different bedsteads, also of every description of bedding, blankets, and quilts. And their new warerooms contain an extensive assortment of bedroom furniture, furniture chintzes, damasks, and muslins, so as to render their establishment complete for the general furnishing of bed rooms.

HEAL and SON, Bedstead and Bedding Manufacturers, 196, Tottenham-court-road.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Manjeers and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 114, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c copied, lithographed, or printed.

PLANS, ELEVATIONS, DRAWINGS of MACHINERY, &c. lithographed or engraved.

BUILDERS' and CONTRACTORS' ACCOUNT BOOKS, DRAWING PAPERS; ditto, mounted and continuous; TRACING PAPER and CLOTH; ditto in lengths.

GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS, at the lowest current rates.

WATERLOW and SONS, 65 to 68, London-wall; and 49, Parliament-street, London.

Contracts for the supply of large establishments.

BILLS of QUANTITIES, &c. Lithographed with the greatest celerity, and on the lowest scale of charges. Maps, Plans, Sections, and Enlarged Architectural Engineering, and Mechanical Drawings executed in the most superior manner. Plans or drafted lithographically. FIRE and DANGER-GUILD, 16, Bedford-street, Covent-garden, London.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.

For preparing Guinea on for Surveyors, Architects, Engineers, Builders, Draughtsmen, Masters, Valuers, &c. and for giving EVENING INSTRUCTION in Architectural, Civil Engineering and Mechanical Drawing, Colouring, &c. by the respective Mechanics Specialations, Taking out Quantities, Preparing Estimates &c. &c. Terms very moderate. For prospectuses, &c. apply at the Offices, 24, Guilford-street, Russell square.

SURVEYING, LEVELLING, ARCHITECTURAL and ENGINEERING DRAWING, and LITHOGRAPHY; maps and plans reduced or enlarged; diagrams and maps for committees on private bills; drawings for patents, &c.—H. COURTNEY, Lincoln's-inn-fields Chambers, corner of Portsmouth street. A Pupil wanted.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.

1-inch Yellow, 17s. per square.		½-inch White, 16s. per square.	
1-inch " 18s.	"	¾-inch " 17s.	"
1-inch " 22s.	"	1-inch " 21s.	"

Dantzic Timber, 8os. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest price of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

MUIR'S PATENT PLANING MACHINE.

SAW MILLS, GILLINGHAM-STREET, PIMLICO.

TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principle; floards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks, and carted home free of charge. Address to HENRY SOUTHAM,

Saw Mills, Gillingham-street, Pimlico.

N.B. Estimates given for Sawing and Planing.

A LARGE ASSORTMENT of WELL-SEASONED, DRY, PREPARED WHITE and YELLOW BATTEN FLOORING, also a large quantity of SCAFFOLD POLES, FOR SALE, at a low price, at DIXON'S, No. 2 Wharf, Queen's-road West, Chelsea. Bricks, Lime, Cement, Sand, Plaster, Slates, and Slate Slab, Tiles, &c. on Sale at the lowest remunerative Prices. Goods landed and carted. Ladders for sale. Apply to H. P. DIXON and CO as above. Great facilities for the prompt execution of country orders.

FOREIGN TIMBER and DEALS of every description, at the lowest prices, for cash; and also Prepared Floors at the following prices, for the present month:—

1-in.	1½.	1¼.	1½.
17s. 6d.	18s. 6d.	21s.	26s. Yellow, per square.
16s. 6d.	17s. 6d.	19s. 6d.	24s. White, do.

Battens, 2s. 5d.; Deals, 4s. 6d.; and Plank, from 5s. 3d. per 12 feet. Dantzic Timber, 8os. per load, and every kind of English and Foreign Wood direct from the docks.—Apply to Mr. MAY, 90, Londenhall-street.

DRY MAHOGANY, OAK, &c.—S. J. CROSS begs to inform the trade that he has on hand a good assortment of the above at the lowest possible prices. Oak sills and flooring in any quantity.—11, FEATHERSTONE-STREET, FINSBURY.

DRY PINE PLANKS, TIMBER, and DEALS.—Builders and other consumers may effect a considerable saving by purchasing of Mr. GEORGE WALLEN, Timber Merchant, of Adelaide chambers, 89, Gracechurch-street, City, who has a large well selected stock in the docks, which he is determined to sell at the lowest remunerative prices for cash.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCHED LINING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth. The General Wood-cutting Company beg leave to inform their customers that, in consequence of the temporary additional charge of 20 per cent. on their moulding (as advertised on the 24th of November last) is removed, from this date, consequently, the prices will be those inserted in their Guiding List, as heretofore.

1st January, 1854.

By her Majesty's Letters Patent.

TO BUILDERS, &c.

FOR SALE, at REDUCED PRICES, No. 27, WHARF ROAD, CITY BASIN, the Proprietor retiring from the Timber Trade, a Large Quantity of PREPARED FLOORING, in Boards and Battens, from 1 to 1¼ inch, and seasoned by the patent desiccating process, also Match boards, Pine and Deals, Wainscot, Mahogany, and Hornbeam. The Premises to let, and immediate possession given.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Irongate Wharf, Praed street, Edgware-road, near the Great and Regent's Canals, affording the advantage of railway and water carriage

GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. H. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well seasoned stock of Flooring Boards, Matched Boarding, and Mouldings of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.

GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate forwarding on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.

G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

WANTED to PURCHASE, a good SECOND-HAND CIRCULAR SAW BENCH complete. Communications, with full particulars, number, and depth of saws, lowest price, &c. &c. to be addressed to A. B. *Chronicle* Office, Oxford.

TO SAW-MILL PROPRIETORS, BUILDERS, &c.

ON SALE, TWO first-rate PLANING MACHINES, just built, with 18-inch rollers, and the latest improvements. These machines will plane, joint, and groove boards at the rate of 30 feet per minute, up to 4 inches thick by 12 inches wide. For many sawing and planing.—Apply to JNO. H. WALKER, Sawing and Planing Mills, Huddersfield.

DECORATIVE ARTISTIC PAINTING.—Mr. F. SANG, from the Royal Academy at Munich, whose works may be seen in the leading public and private buildings in the metropolis and the country, draws the attention of his patrons to his new and improved STYLES of ARTISTIC EMBELLISHMENTS of INTERIORS, in the modern and ancient styles.—Address, Mr. SANG, 53, Pall-mall, London.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and be acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no caustic qualities, but may be used as stone in new shops, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the proportion of pigments is evidenced, not alone by the coarse grating appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—
HUBBUCK—LONDON —PATENT.
not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that may be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of reduction, or by mixture with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents In London, Messrs CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court Road-st., and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company. In Belfast and undertake painting ships, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-house. Dry OXIDES and PAINTS, in Kegs of 1 to 5 cwt. each, and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and only one-eighth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 1½. and 10s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 12s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 2s. per gallon.

PATENTINDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS.—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finished in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

PERMANENT ZINC COLOURS and WHITE.—Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc, at prices which render them an advantageous substitute to the Lead, Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and never change by exposure to any Gases, Salt Water, &c For Ships and Machinery, also for all kinds of House Painting, no other but Zinc Colours ought to be used to insure durability and economy. For Prices, apply to the Patentees, Messrs. GEO. H. GEYELIN and CO. White Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park-basin, London.

DAMP WALLS! DAMP WALLS!—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of long experience, it is unfailing in its application. Entire houses have been prepared in a short time after the last coat of plaster has been put on. As for the price of old houses its value is great. A moderate room can be prepared for 2s. 6d.—Prepared only by Mr. J. STENT, Surveyor, Warminster. May be purchased of all respectable Druggists or Paper-dealers for 3s. per quart, or 10s. per gallon.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not congeal in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength, of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured. Orders received at Great Scotland yard, and at the Works

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs ASPDIN, ORD, and CO have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN, much improved the quality of its cement with little increase in price.

Engineers and architects are respectfully requested to specify "Aspdin's Patent," as there are many imitations of this Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO beg to call attention to their SPECIAL QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, is thereby enabled to execute orders for Cement supplied with any quantity at any required, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which preeminent merits, the properties stamp it at once as the best cement of the day for work where all the above qualities are required. It is manufactured on the only principle Portland cement can be and contrary to the statements set forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stucco are dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Zinc Elms, London

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLAIR, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it clearer per for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, having scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is the best recommendation

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire-tools.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SLOPES, PATTERN STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington

ROMAN and OTHER CEMENTS. Manufactured by J. M. BLASHFIELD, successor to the Patentees, PARKER and WYATT, who, in 1796, first introduced PARKER'S ROMAN CEMENT; also Tarras and Pozzolano Cements, English and French Plaster, Terra Cotta Chimney Pots, Trusses, &c.

Manufactory, Mill Wall, Poplar; Depôts, Commercial-road, Lambeth; and Paddington-basin

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Chalk, Stone, Sand exclusively by Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portolano

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no Grinding.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster. To Railway Directors and Engineers. The increased traffic of all kinds upon Railways, which has led to the adoption of very heavy engines, together with the high speeds demanded by the public, has caused great wear and tear of the Permanent Way, and in most instances the construction of the road remains the same as when at first designed for far lighter traffic. However safe the road may have been for the work at first anticipated, it is manifest, from frequent accidents, that more security for the public is required.

THE PERMANENT WAY COMPANY possess many valuable patents relating to the permanent way of railways, including inventions by the following Engineers:—

Adams, W. B	Hoby, J. W
Barlow, P. W.	Macneill, Sir John
Barlow, W. H.	Mast, Charles
Bruff, P. S.	Richardson, Robert
Gardner, John	Samuel, James
Grainger, L. B. B.	Wild, Charles H.
Gouraud, C. F.	&c. &c

The Company submit the attention of Boards of Directors and Engineers to the advantages offered, not only by the patent improvements applicable to old lines, but also to several equally valuable inventions, applicable to the construction of new railways.

For the purpose of improving existing lines of railway the Company draw especial attention to their patent improved FISH-JOINTS and FISH-CHAIRS, by which the following advantages are secured:—

1st. Almost perfect security against the trains running off the line, the rails being practically converted into a continuous bar of iron.

2nd. Increased comfort to travellers, from a great reduction in the oscillatory movement of the carriages, and the absence of the disagreeable noise occasioned by the wheels striking the uneven ends of the rails.

3rd. The road being smoother, there results a proportionate saving in the power required for traction; and the wear and tear both of the rolling stock and the permanent way, is much reduced.

4th. Hence the rails last much longer, and this may be safely estimated at from a fourth to one-third.

5th. A large reduction in the labour of maintenance of way.

On the Canada Line of the Eastern Counties Railway, where no longitudinals exist, but which is now ballasted with the Patent Joints and Fish chairs, the engineer in the ballasted of way has been fully fifty per cent. of the amount formerly paid for labour; and an extensive contract for a term of years recently undertaken for one of the Trunk lines in England, attests the fact that one and three-quarter miles of way laid down under this Company's patent, can be maintained for the same cost as one mile of way of the ordinary construction.

For New Lines the Company recommend their PATENT WROUGHT IRON PERMANENT WAY, which has been most successfully and extensively adopted on several Lines in England, and is also being introduced upon upwards of Three Hundred Miles in Europe and the more distant parts of the world, involves no increase in the original cost of construction, and secures SIMPLICITY and SAFETY combined with great ECONOMY in the cost of repair and maintenance.

The Company possess also important patented improvements in the various descriptions of Cast Iron Sleepers, which have been already successfully introduced on several Hundred Miles of Railway, both at home and abroad, and most satisfactory reports of their economy and efficiency have been received.

The following is a list of the various Lines, in which one or other (and in some instances several) of the PERMANENT WAY COMPANY'S PATENTS have been already adopted:

Belfast and Ulster	Maryport and Carlisle
Bordeaux and Cette	Midland
Dublin and Belfast	Minorca in Spain
Eastern Counties	Morayshire
East Indian	Midland Great Western, Ireland
Edinburgh and Glasgow	Newmarket
East Lancashire	Newport, Hereford, and Abergavenny
Egyptian	Oporto
Glasgow and South Western	North and South Western Junction
Great Western	Northern Railway of France
Hereford, Ross, and Gloucester	Northern Railway of Canada
London, Brighton, and South Coast, & Crystal Palace Line	Portsmouth and Versailles
London and North Western	South Wales
Londonderry and Enniskillen	Sydney and Goulburn, Australia
Londonderry and Coleraine	Waterford and Limerick
Manchester, Sheffield, and Lincolnshire	West Cornwall
	York and North Midland
	York, Newcastle, and Berwick.

Some of the most important Lines of Railway have found it to their interest to compound for the licenses due for all the PERMANENT WAY COMPANY'S PATENTS by one payment. This arrangement has the advantage of enabling them to use the Patents in a COMBINED FORM without paying a separate royalty on each, and includes the free use of any future improvements in the Patents belonging to the Company.

After a series of careful trials of the system upon the LONDON and NORTH WESTERN and MIDLAND RAILWAYS, these two Companies, with a view to the adoption of the best plans for SECURITY to PASSENGERS and ECONOMY in working, have arranged with the Permanent Way Company for the use of their Patents on upwards of a Thousand Miles of Railway.

Testimonials from the most eminent Engineers may be inspected at the office of the Company, and every information as to the cost and best mode of proceeding be obtained by application to Mr. CHARLES MAY, Civil Engineer (the Manager of the Permanent Way Company), or to Mr. WILLIAM HOWDEN, the Secretary, No. 26, Great George-street, Westminster.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
18, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

PRIZE MEDAL CLASS 22.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 330 feet; their efficiency and durability is experience established

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 18s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and marketplaces, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and all wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 19in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT

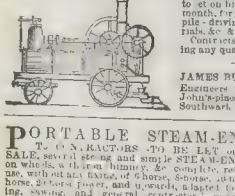
CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS

Patent Pump £1 15 0

Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing 3 0 0

Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.



May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET,
LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade. An Illustrated Book sent on application post free.

CENTRIFUGAL PUMPS.

Contractors, Builders, engineers, Paper makers, Brewers, Manufacturers, and all who may have water, or other liquids to draw or to raise, will find in these Pumps a most economical, efficient, simple, and powerful machine. Pumps for Mines, Quarries, Drainage, Irrigation, Sewage, Gas Works, Steam Vessels, &c. &c. EFFICIENCY SIMPLICITY DURABILITY, & POWER, Have been proved. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten horse, power always ready to set on fire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES.—

TO CONTRACTORS TO BE LET on HIRE, or for SALE, several strong and simple STEAM-ENGINES mounted on wheels, of three, nine, &c. complete, ready for immediate use, with out-ass fixed, of 8 horse, 8 horse, 10 horse, 12 horse, 16 horse, 20 horse power, and upwards, adapted for pumping, winding, sawing, and general contractors' purposes. Apply to MEDWIN and HALL, Engineers and Patentees Engine-makers, 92, Blackfriars-road.

STEAM-ENGINES,

of various sizes, from two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality, single and double-purchase cranes also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery made to order by ANDREW McLAREN and CO. Windsor Iron Works, Windsor-terrace, Old-road, and 174, Upper Thames-street.

CAUTION.—BEART'S PATENT

PERFORATED BRICKS.—Mr. ROBERT BEART, the patentee, to prevent complaints of proceedings being taken to stop the making of Perforated or Hollow Bricks with a series of holes, without his leave, hereby declares his intention to proceed against all parties infringing his patent without further notice.—Applications for licenses to be made to, and information obtained of W. J. and G. BOULTON, Solicitors, Northampton-square, London.

PAN and PLAIN TILES,

Stocks, Dutch Clinkers, &c. WARD and CO. Rotherhithe Wharf, Bankside, have the pleasure to announce to Builders and the Trade, that they have now an excellent stock of the above goods and also Firebricks, Tiles, Lumps, &c. which they are enabled to offer at such prices as will receive a continuance of their favours.

MINTON and CO.'S ENCAUSTIC and

other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambre Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths. Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No 21 WHARF, Nicole-road, Lower North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES" page 281, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.

MAW and CO send free, per post, their NEW BOOK OF DESIGNS,

with prices, adapting this most durable, economical, and decorative production of medieval art to entrance halls, passages, conservatories, vestibules, and every description of modern and ancient building.

BENTHALL WORKS, near Broseley, Shropshire.

Specimens at 11, Aldersgate-street.

BRICKS from COWLEY and KENT.

Also WHITE, YELLOW, and RED FACING BRICKS.

BLUE VITRIFIED BRICKS;

Fire Bricks, Lumps, and Tiles.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

BRICKS.—Malm Cutters, Yellow and Pale

Seconds, Paviors and Paviours, of good and sound quality constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand, of approved quality, constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand

BRICKS.—A large quantity on sale, for

immediate delivery alongside per barges; best sound grey Stocks, Mar Pavors Stippers Bright Forets, and Place Apply to Mr. W. ALLAWAY, 3 Catherine-court, Tower-hill

200,000 PLACE BRICKS for Sale. Price

25s. Delivered alongside any Wharf—Thames or Regent's Canal.—Apply to Mr. PORCAS, 13, Rowland-row, Stepney-green.

TO BRICKMAKERS, CONTRACTORS, AND OTHERS.

WANTED, 50,000 good, sound, grey STOCK

BRICKS, to be delivered near Bromley, Kent. Cash on delivery.—For further particulars inquire of W. D. No. 6, Little St. James's street, St. James's, London.

BRICKS! BRICKS! BRICKS!—PARK

ESTATE BRICKFIELDS, near the Royal Arsenal, Woolwich. Price for the present Month, and until further notice:—Stocks, 33s.; Place, 26s. per thousand. Ready money on the field.

February 20, 1851. L. DAVIS, Proprietor.

BRICK EARTH.—TO BE LET, BRICK

EARTH of superior quality and of considerable depth, contiguous to the Station at Langley, on the Great Western Railway, sixteen miles from town, and two and a half miles from the Grand. For particulars, apply to Messrs. DUNN and GIBBS, Auctioneers and Estate Agents, 7, Great Tower-street, City.

BRICK RUBBISH, GRAVEL, &c.—

Persons in want of good hard material for road-making, foundations, or concrete, may have a large quantity on application to Mr ALLEN, No 28, Piccadilly.

SLOUGH.—TO BRICKMAKERS,

BUILDERS, and OTHERS.—TO BE LET, a LEASE of TWO excellent BRICKFIELDS, in full work, close to the Slough station on the Great Western Railway, with a good local trade, and well situated for the London markets. These brickfields will be let separate, if required, with a siding from the Great Western Railway, and convenience to make in both fields from 6 to 8 to 8,000 000 per year. There is about 9 feet of earth, of feet of very superior malm dirte. For further particulars, apply to Mr R LITTLE, Coal Merchant Windsor.

TO BRICKMAKERS.

J. LEACH, BRICK-MOULD MAKER and

MILLWRIGHT, 26, Critchill-place, New North-road, Hoxton, London. Improved Brick moulds, Iron Steel-faced Stocks, with regulating screw-plates instead of stock-pegs; Brick-mill Work, Brick Bowls, Pumps, &c. &c. Cinder-crushing Machines

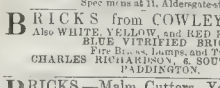
CLAYTON'S PATENT BRICK-MAKING,

or PRESSING, CLAY SCREENING, TILE and PIPE MACHINERY.

INJUNCTION. } The action which was tried
See Times, 12th February, 1851, against Mr. W. C. S. Percy, of the Albert Works, Trafford street, Manchester, the maker of the CHAMPION BRICK-PRESSING MACHINES, for infringing Clay and's patent, having established the patent on every point, an injunction having been granted to restrain Mr Percy from making, or selling, by himself, his servants, or agents, the said machines, or any others made in imitation of the inventions described in the specification of Clayton's patent, and requiring him to account for all the profits made by the manufacture, or sale, of his Champion Brick-Pressing Machine.—Notice is given, that persons making, vending, or using the said machines, or Clayton's screening apparatus for cleansing the clay in the tile, brick or pottery manufactures, or any other portion of Clayton's patent without his License in writing, will be proceeded against as the law directs.

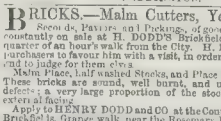
Dated this 4th day of February, 1851

WILSON and BRISTOW, 1, Copthall-buildings,
Solicitors for Mr. Henry Clayton, of the Atlas Works, Upper Park-place, Dorset-square, London.



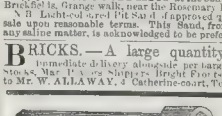
ASHES and BREEZE for SALE, in large or

small quantities, by the undersigned.—POUND and HUDSON, 3, W. Middlesex.

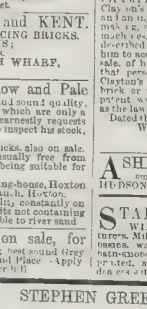


STAFFORDSHIRE POTTERY.—

WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill-wall, Poplar Closet-basins, urinals, bi-pet-pans, plug-cocks, &c. lead traps for machine handles, closet handles, basin-knobs, &c. toilet ware, fancy jugs, pastepots, &c. wade, painted, and decorated, delivered carriage-free to wholesale dealers within two miles of London



STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.



Syphon or Oval Stoneware Pipes Bends, Junctions Traps, &c. Hopper and other Pans, with best White Stoneware

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flush de Basin, the most effective Syphon trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth

IMPORTANT TESTIMONIALS

Watercloset Pan with Syphon Trap connected, price 7s. 6d. each.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

JENNINGS'S URINALS.

NOTHING IS UNWORTHY CONSIDERATION THAT TENDS TO PROMOTE HEALTH AND COMFORT.

IN the construction of Urinals a great mistake has hitherto been made (see any of our Railway Stations or places of public resort). All of them (WITHOUT ANY EXCEPTION) are formed with a large resting surface, on which the ammonia becomes fixed, and evaporation leaves a key to hold more firmly future contributions; they cannot be approached without contamination, and are every way offensive.

GEORGE JENNINGS invented and patented the annexed arrangement in 1839, and the immense orders received prove that such a thing was needed. Sir J. Benson was the first to adopt them, and had forty-three fixed in the Great Industrial Exhibition, Dublin. This led to the introduction to the Stations of the Drogheda and other railways, and most of the Offices in Dublin, Cork, Waterford, &c. They are also in use at the Breweries of Messrs. Reid and Co. and Messrs. Gilbert, Watney, and Co.; the Distilleries of Messrs. Hodges and Co.; the establishments of Messrs. Pawson and Co.; Messrs. Bradbury and Evans; the extensive Offices of Messrs. Dawson and Co. Cannon-street; the Screw Steam Company's Offices; the Hitchin and Peterborough Stations on the Great Northern Railway; and many City Offices.

The annexed illustration requires but little description. The Urinal is made in Iron Stoneware, beautifully Enamelled (plain white or marble). In the upper part is a shell, which, with the perforated front, distributes the water (when in action) over the entire surface on the ground line, level with the floor, and immediately in front of the Urinal is an iron box, covered by a corrugated galvanized iron plate, 18 inches square; under this plate works a small balance-cock and two small weighted levers, equal to the weight of the iron plate. When the Urinal is approached, the plate sinks a quarter of an inch, and the water immediately flows over the whole surface, and carries away, through the channel-gutter which is fixed between the plate and wall, all offensive matter.

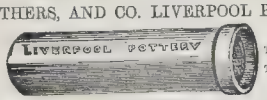
The Patentee would here observe, that when these Urinals are fixed in slate backs, varnished over, the contrast between the white marble Urinal and the slate back and sides is very pleasing.

GEORGE JENNINGS respectfully invites ARCHITECTS, ENGINEERS, and other OTHER PERSONS INTERESTED in SANITARY PROGRESS, to VISIT HIS MANUFACTORY, where may be seen

Jennings's Imperishable Waterclosets; Street Gully Traps; Sink, Area, and Stable Traps; Lavatories, angular or square; Sluice-Valves; Fire-Valves; High-Pressure, Ball, and every other kind of Cock; Joints for Connecting Lead Pipes without Solder; Shoes for Preserving the Corners of Shop Shutters, and Securing them without the unsightly and destructive shutter-bar; also, Jennings's Patent Supply-Valve for Closets, which combines the waste and service in one, and renders the ball lever and wires unnecessary; and many other things necessary to Health and Comfort.

A BOOK containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES can be had free on application, or by post if two stamps are sent to

GEORGE JENNINGS,



ENGINEER AND PLUMBERS' BRASSFOUNDER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

Local Boards of Health ordering Jennings's Imperishable Waterclosets in numbers of 500 *and upwards will be treated most liberally.*

STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c. OF EVERY DESCRIPTION. Drawings, with prices, &c., will be forwarded free on application as above.

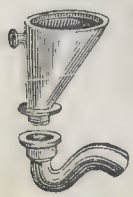
JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

N.B. These are made without the discharge-hole being turned downwards.



May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER, 3, South Wharf, Praed-street, Paddington; and at COLWILL, Brothers, 32, Brydges-street, Covent Garden.
Drawings and List of Prices will be forwarded free, on application.

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

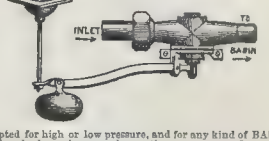
They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.



W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size both of pipes and sockets, the dressing of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Mill bank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street. W. Peters's, North Wharf, Paddington.—C. Richardson's, South Wharf, Bitts. G. Frith's, Cambridge Heath Wharf, Hackney. Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbett's Depôt, Britten-street, Chelsea; and at the Pottery.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 300 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

LATHS of best quality ready for delivery at J. EASTWOOD and SONS', Wellington Wharf, Belvidere-road, Lambeth.

SALES BY AUCTION.

TO SHIPBUILDERS, TIMBER MERCHANTS, RAILWAY CONTRACTORS, AND OTHERS.—Important and very extensive Fall of valuable Oak Timber, near the Trent Valley Railway

MR. LEIFCHILD, is instructed to SELL by AUCTION, at the NEWDEGATE ARMS HOTEL, Nuneaton, on TUESDAY, MARCH 14, at TWELVE for ONE, in suitable lots, 8,000 cubical feet OAK TIMBER TREES, with their top, lop, and bark, of excellent quality; and about 6,000 large oak, ash, and elm fellers now standing and growing in the well-known Weldington Wood, on the Watling-street road, about 3 miles from the railway stations at Nuneaton and Atherstone, and within a short distance of the Ashby canal. The timber and fellers will be carefully marked, numbered, and lotted, and will be sold to be grubbed up by the purchasers. Full descriptive particulars, with lithographic plans showing the situation of each lot, will be issued ten full days prior to the sale, and may be had at the principal inns in Leicester, Brant gham Coventry and Atherstone, of the place of sale; and at Messrs. Lee's Lunham Timber Offices, 62, Wharnate street, London. Proper persons will attend at the keeper's cottage, fourteen days prior to the sale, for the purpose of pointing out the various lots.

SURREY.—Admirable Building Land of first-rate quality well situated for Villas of a superior class.

MR. W. BUTCHER has received instructions to SELL by AUCTION, at the MART on FRIDAY, MARCH 17, at TWELVE, in thirteen lots, about Forty-five Acres of truly valuable FREEHOLD LAND, the whole free from tithes, and lately tenanted, situate between the towns of Epsom and Ewell, in a much-admired part of the county, within ten minutes' walk of the Epsom Railway Station, from which point a train reach London in thirty-five minutes, in a neighbourhood where houses are in great request, at rentals from £50 to £1 per annum. The locality is proverbially salubrious, and the surrounding country distinguished for its delightful scenery. Also a Farm Residence, with farm, stabling and numerous buildings, situate in the Weststreet, at Ewell, with an extensive front age to the same. Particulars, with plans attached, in due course of preparation, and will be ready for delivery fourteen days previous to the sale, and may be obtained at the Old Ship Hotel, Brighton; Mount Ephraim Hotel, Tunbridge Wells; Artichoke, Newington-causeway; at the Auction Mart; of T. B. Cartwright, Esq. Solicitor, 4, Lothbury, London; of W. H. Carter, Esq. Solicitor, 71, Brewer-street, Woolwich; and of Mr W. Butcher, Estate Agent, Epsom.

Valuable Building Materials in the City of London.

MESSRS. EVERSFIELD and HORNE have the honour to announce that they are instructed by the Directors of the London Docks and Bank, to SELL by AUCTION, on the PREMISES, St. Andrew's-court, Pottery, on MONDAY, FEBRUARY 27, at TEN for ELEVEN the very valuable MATERIALS and FITTINGS of FIVE HOUSES, comprising a large quantity of very sound timber in roofs, joists, girders, and floor-boards; panelled and glazed partitioning, doors, sashes, marble chimney pieces, stoves and ranges, several tons of lead in rolls, ridges, flushings, cisterns, and pipes; the capital stock in brick-work, stone paving, slate roofs, fire-irons, and other effects. May be viewed on Saturday previous and morning of sale, and catalogues had on the Premises, and of the Auctioneers, 40, Parliament-street, or Coal Exchange.

1,000,000 New Bricks (Shoot's) for sale.

MESSRS. EVERSFIELD and HORNE have to announce that they will SELL by AUCTION, on TUESDAY, MARCH 7, at TWELVE for ONE, at the Rickfield, Underdown-hill, near Shepherd's-bush, about ONE MILLION of capital and STOCK BRICKS and a few thousand place bricks, which will be arranged in lots, to suit the assets of whom are made known on the day of approval. Lots will be granted.—Also, a powerful Cart-Horse, Brick-cart, and 4-wheel Truck.—May be viewed till the sale, and catalogues had on the Premises; also at the printers' Inns at Hammersmith and Brentford; and of the Auctioneers, 40, Parliament-street, Westminster, and Coal Exchange.

HAMPSHIRE.—Naval Oak Timber of superb dimensions, now standing in Hursley Park, Woods, Hedgerows, and Coppices, within the Manors of Merdin and Compton, close to one of the finest portions of the largest and especially those of the Queen's own, which will be sold by Auction.

MR. A. FLETCHER, at the KING'S HEAD INN, HURSLEY, on TUESDAY, the 28th inst. at THREE o'clock in the afternoon precisely, in such lots as may be found most convenient for the purchasers, and in the course of the day previous. Catalogues may be had on application to Mr. FOWLIE, Medhouse, Winchester; of the Auctioneer, Millbrook, Southampton; and at the Place of Sale.—Hursley, February 4, 1854.

FARRINGDON STREET EXTENSION.—Building Materials of Twenty Houses

PULLEN and SON respectfully announce that they will SELL by AUCTION, on the PREMISES, on TUESDAY, FEBRUARY 28, at TWELVE, in lots, by order of the Improvements Committee of the Corporation of the City of London, and the valuable BUILDING MATERIALS of about twenty Houses, Shops, and Premises, in Farringdon-street, Fetter-street, Bell-street, Cattle-street, and Bridge-street, Blackfriars, comprising about 1000 good sound Bricks, several tons of lead, plain and moulded oak and deal doors, sash-doors, and sashes, stone-paving, stoves, counters, drawers, gas-fittings, and numerous trade fixtures, &c.—May be viewed the day previous. Catalogues had at the Architect's office, Guildhall, and of PULLEN and SON, 89, Fore-street, Cripplegate.

LONG ACRE.—Building Materials of Four Houses and large Package.

PULLEN and SON are favoured with instructions from the Worshipful Company of Mercers, to SELL by AUCTION, on the PREMISES, on TUESDAY, MARCH 7, at TWELVE, all the valuable BUILDING MATERIALS of FOUR HOUSES and a large COACH FACTORY, situate in Long-acre, Hanover-street, and Castle-street, comprising good sound timber, plain and moulded doors, sashes, and frames, stout roofs and floors, glazed sashes, doors, floor-boards, shop-fronts, weather boarding, coping and sills, lead gutters, cisterns, and pipes, and various useful fittings.—May be viewed the day previous. Catalogues had of G. Inow Smith, Esq. Mercers' Hall; and of PULLEN and SON, 89, Fore-street, Cripplegate.

WARD'S PERIODICAL TIMBER SALES.—The next SALE by AUCTION, at the TIMBER YARD, No. 8, Oxford-street, near Tottenham-court-road, on THURSDAY, MARCH 2, 1854, at the WEEK'S o'clock precisely:—

50,347 feet of Spanish and Honduras mahogany, in logs, planks, and slabs.
47,2— feet of Mahogany, Rosewood, Maple, and Italian Walnut Veneers, of superior quality and figure.
1,15— feet of Fancy Rock Wood Veneer the finest specimen of wood ever imported.
15,1— feet of British Walnut, in trees and planks.
2,5— feet of Dry American Ash Board
Dry Pine Planks cut into various thicknesses. Pine Planks, White and Yellow Deals and Battens. English, Oak, Ash, Beech, Limetree, &c. May be viewed two days prior and morning of sale. Catalogues had on the Premises.—ROBERT WARD, Timber Auctioneer, No. 8, Oxford-street.

Beech, Chestnut and Sycamore Trees, Blickling-park, Norfolk.—TO BE SOLD BY AUCTION, in lots, by

W. KENDLE and SON, at the BUCKINGHAM ARMS, in Blickling, on THURSDAY, the 2nd MARCH next, at TWELVE precisely the following Beech Trees, 100 CHESTNUT Trees, and Fifteen SYCAMORE Trees, now standing in the pleasure-grounds at Blickling and on land adjoining, called the "Shortings" (see). The greater part of the beech and chestnut trees are very fine timber, and many of them of large dimensions. The trees are numbered with white paint, and will be shown on application to Mr. Ellis, the farming bailiff, at the Blickling Estate Office. Two Brothers, Public-house, near Aylsham, from whence there is a ready access to the part of the Estate to be sold. For further particulars apply to Mr. P. PEMPTER, Solicitor, Aylsham.

SALES BY AUCTION.

BROMPTON ROW, BROMPTON.—To Builders and Others.

MR. W. R. GLASIER will SELL by AUCTION, at the REAR of the PREMISES, No. 56, Brompton-row, on WEDNESDAY, MARCH 1 at TWELVE for ONE, by order of the Executors of the late Mr H T Adams, a very useful Brick Shed, Pens, Trucks, Barrows, about 170 capital deal Poles, 200 Boards, 200 Pulleys, 40 dozen Cords, long Ladders, Blocks and Falls, Screens, &c. and a quantity of useful Building Materials. May be viewed the day prior and morning of sale; and catalogues had on the Premises; of Mr. D Bacon, 2, Brompton-place, Brompton; and at the Auctioneer's Offices, 41, Charing-cross.

7,500 pieces of Paperhangings and Vein Marble Chimney Pieces ready for fixing.

MR. BRAY, Jun. will SELL, at his ROOMS, 276, High Holborn, on WEDNESDAY, MARCH 1, at TWELVE, in quarts of 7,500 pieces of PAPERHANGINGS, including rich flocks, golds, bouquets, and other stout satins, suited for the drawing and dining rooms, parlours, and general rooms, scrolls, stripes, chintzes, &c. for secondary apartments; hand marbles, oaks, grain tes, for the hall and staircase. May be viewed, and catalogues had at the rooms as above.

TO PLUMBERS, ENGINEERS, HOUSE PAINTERS, AND BUILDERS.—Capital Freehold Business Premises and Dwelling-house, at Kingston-upon-Thames, Surrey.

MR. JOHN DAWSON is instructed to SELL by AUCTION, at the MART, on WEDNESDAY, 22nd MARCH, at TWELVE o'clock, a valuable FREEHOLD ESTATE, consisting of a capital Residence with domestic offices, a shop fronting the street, and a spacious yard, in which are all the requisite working, assembling, & required for a retail trade now carried on with the utmost success, derived from the fact that for hundreds of years on this spot, and for many years up the present premises, a large, well-conducted trade in every article in connection with the business has been established. No intimation proceeds to this announcement (having been given at the request of the intending purchaser) that he is about to invest his capital and energies in another direction, for the present occupation will fall unimpaired to the benefit of the purchaser.—To be viewed. Detailed particulars may be had of the Auctioneer; of Charles Edward Jeffreys, Esq. Solicitor, Kingston; and at Mr. John Dawson's Auction and Land Offices, Kingston; and Marlborough Chambers, 4, Pall Mall.

TO CONTRACTORS, BUILDERS, CARPENTERS, PACKING-CASE MAKERS, AND OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, at the PREMISES, No. 3, MORLEY-STREET, CHELSEA, (which is by Mr. Thomas Pye's large gate), on WEDNESDAY, MARCH 15th, at ELEVEN for TWELVE o'clock precisely, the dry and well-selected Stock consisting of about

50 Yellow Deals, Planks, and Boards.
150 Pine Planks.
80 Fir-quality Pine Deals.
60 White Christiania Deals.
185 White Battens.
120 Yellow ditto.
250 Square feet of White and Yellow Flooring; and useful miscellaneous articles.

The above Premises are situate within 200 yards of a Free Dock on the Thames, and offer every facility for removal either by land or water. Approved Bills at four months date from purchasers of 20£ and upwards. The stock may be viewed two days prior to the sale, and catalogues obtained on the Premises, and at Mr. Marsh's offices, 2, Charlotte-row, Mansion-house, of will be forwarded on application.

WHITE HORSE CROYDON

MESSRS. BLAKE will SELL by AUCTION, on the PREMISES, Other's, Water lane, about midway between Croydon and Norwood, and within one mile and a half of the Crystal Palace on TUESDAY, MARCH 7, at ONE for TWO o'clock precisely, by order of Mr G H Hill (he who is relinquishing the brickmaking business), 500 BRICKS, ornamental pavement tiles, and other effects, now on view.—May be viewed and catalogues had on the Premises; at the Thatched House Tavern, Croydon; the Artichoke Inn, Newington Causeway; at Germans', Bell, and Dragon, Norwood; and of Messrs. Blake and Son, Brick-field, upon which there is sufficient earth dug to make a million of bricks, to be let for two years.

TO COAL AND IRON MASTERS.

TO BE LET, the WYKEN COLLIERY, situate within three miles of the Town of Coventry. The UNWORKED PORTIONS of the MINES of COAL, IRONSTONE, and FIRE CLAY, at the COLLIERY, extending over several Hundred Acres, are now TO BE LET. The Mines consist of Two Seams of Coal, the Upper Coal, 8ft Coal, Slate Coal, and seven-foot Coal, and several Seams of most valuable Ironstone and Fire-clay, the whole of which is yet untouched under upwards of 400 acres. A most favourable opportunity is therefore offered for capitalists at once to embark in the trade the principal difficulty in starting collieries being already overcome, as the Pumping Engines are still at work, and the Colliery free from water. An arrangement may be made with the present occupiers to purchase the Stock, the working of which, at the first sale may commence immediately, and a comparatively small outlay will open the Coal Mines in a most effective manner. The works are most advantageously situated for conveying the produce (the Mines of the market. The Oxford Canal runs through the estate, and a railway is about to be made to connect them with the Coventry and Nuneaton Branch of the London and North-Western Railway. Every facility will be afforded for the erection of Blast Furnaces for smelting the Ironstone, Powder Houses, Forges, Cottages, and Agents' Houses; and parties desiring to work can be accommodated with a large extent of Land for Farming purposes, if required.—For further particulars application must be made to Mr. JOHN THOMAS WOODHOUSE, Overseer, Wyken Fear Ashes.—Be in Touch.

TO BE LET, for a TERM, SPACIOUS WHARF and APPENDAGES, in one of the most preferable situations on the SURREY SIDE of the RIVER THAMES, close to the Metropolis, and well adapted for carrying on any Trade or Commercial Concern requiring room, having the advantage of nearly a clear frontage to the river, with ample depth, and well secured by a substantial wharf wall.—For further particulars apply to Messrs CRAWTER, Surveyors, &c. No 5, Bedford row, Gray's-inn.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL.—TO BE LET, on Building Lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, including that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 5 acres in extent. The roads, sewers, and drains are being formed. Advances will be made to responsible parties. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

BUILDING LAND TO LET, at very low ground-rents for ninety nine years, close to Regent's-park, and on the foot of Primrose-hill, a few minutes' walk from the Eyre-station. For third rate detached rooms houses, for which there is a great demand in that locality, a few will ready for letting or sale. There are one or two sites suitable for shops, and others for private houses; also some with great depth, behind, where work-shops or public establishments might be erected.—For plans and particulars apply to F. ELLIOTT, 9, Harrington square.

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND TO LET; term, Islington and Turnham green, 200 years.—Apply to view to Mr. GREEN, Gravenhurst, Upper Holloway; HARRIS, opposite Lee Arms, Brownlow-road, Queen's-road, or Cranbourne Public-house, Dalston; PHILLIPS, Country House, near Acton lane, High-road, Turnham-green; or Mr. D HUGHES, 13, Gresham-street.—N.B. Populated localities; roads and sewers made.

BUILDING GROUND, PUTNEY, adjoining the railway station for private houses, two shops, and railway tavern. TO BE LET, for long terms, at moderate groundrents. Land tax redeemed.—For particulars apply to Mr. LEADER, on the Ground; or to Mr. T. H. CLARKE, Surveyor, 11, Dalby-terrace, City-road.

TO BUILDERS AND OTHERS.

TO BE LET, on a building lease, in Longacre, a PLOT of FREEHOLD LAND, now covered by an old house.—Particulars of Mr GEORGE SMITH, Surveyor, &c 3, Philpot-lane, City.

BAYSWATER.—TO BE LET for Building, a FREEHOLD PIECE of LAND, 80 feet frontage, on a main road, by 150 feet deep; affording an unusually eligible site for an hotel or first-class public-house, large corn chandlers and stables as in the rear. The roads and sewers are made in front, and the land is surrounded by first class finished and let property. This is an opportunity seldom to be met with.—Apply, at see plan and for particulars, to Messrs. MAY and SWEETLAND, Solicitors, 12, Queen-square, Bloomsbury.

TO BUILDERS.

TO BE SOLD or LET, on advantageous terms, with railway privileges, a PAIR of SEMI-DETACHED CARCASES, situate in a park, in a very genteel neighbourhood, seven miles from London, and only five minutes' walk from a railway station. Also a convenient Wharf on the banks of the Thames, with good Workshops and Stable. Also, Wharf land and Building Land, in various places, to be Let.—Apply to Mr WM DREW, Morden Wharf, East Greenwich.

CRYSTAL PALACE.—TO BUILDERS and OTHERS.—BUILDING GROUND TO BE LET on Lease, on the road from the Crystal Palace Station to the Crystal Palace, and opposite the ornamental grounds of the above building. The property consists of upwards of thirty acres, with a beautifully undulated surface, and luckily wooded, commanding extensive views in Surrey and Kent; it is accessible by several public and private ways, is within five minutes' walk of the Anerley station, and one minute's walk of the grounds of the proposed Crystal Palace and West-end Railway. There is good brick-earth over the whole of the ground, and permission to make bricks would be granted to any one taking a considerable portion of the property.—Plans may be seen, and further particulars obtained, at the Offices of Messrs. WEBNERT and ASHDOWN, Architects, 12, Charing-cross.

CRYSTAL PALACE.—BUILDING LAND TO BE LET, for the erection of villas, directly opposite and close to the Crystal Palace, and facing the principal approach. Plans and particulars, apply to M. ARTHUR TAYLOR, Architect and Surveyor, 18A, Basinghall-street.

FREEHOLD BUILDING SITES TO BE LET or SOLD (bricks and sand included) in the ground rent, adjoining the railway station at Battle, Sussex. Several Plots for Villas (detached and semi-detached), to command a view from the Battle Station on the Tunbridge Wells and Hastings Railway, within fifteen minutes of the rapidly increasing watering place of Hastings and St Leonard's, and to several of which will be given immediate pleasure grounds already formed and will command splendid views of Battle Abbey, the Park, Church, and extensive and delightful scenery. Will be numbered 1 to 12, are secured and detached. Also a frontage of about 150 feet by 70 feet in depth, for a row of smaller houses or shops. Brick-earth and stone on the ground, and if whatever extent may be necessary, will be priced at per Perch for any quantity, with advantageous terms. Leases to contain power of purchase the freehold or the freehold will be sold at once, and the amount may be secured on mortgage, and, in addition, money will be advanced for building.—For particulars and terms apply to F. ELLMAN, Esq. Battle, Sussex.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Building Land, with a frontage of 100 feet to the intended building at 9 s per thousand. For particulars apply to Mr. C HAMBRIDGE, Architect, 74, Coleman-street, City.

A FORTUNE to a MAN of BUSINESS.—About 34 ACRES of BUILDING LAND, a portion on one of the most surprising railway stations round London, with a frontage to the turnpike road of 400 feet twenty shops and an hotel and will be LET, a respectable old lease of 2041 for a term. Part of the land and the general frontage let at 5£ per each house, renders this an excellent speculation.—Apply to Mr. R. HOWARD, Surveyor, Office of Daniel Smith and Son, Waterloo-place.

ELIGIBLE BUILDING LAND TO BE LET, at a nominal rent, at Sutton. The situation is very healthy and dry, commanding beautiful views, upon a chalk subsoil, and close to the railway station; a train to London-bridge in thirty-five minutes. Also, adjoining to the same premises, several plots of FREEHOLD LAND, in a choice locality, suitable for villas, with or without immediate possession. For particulars, apply to Mr. ARTHUR TAYLOR, Architect and Surveyor, 18A, Basinghall-street.

BUILDING LAND to LET at HORNSEY, QUEEN ANNE'S PARK, commanding extensive and beautiful prospects. The roads and sewers being now nearly finished, the Queen Anne House erected, the proprietor is now ready to treat with Builders, or others wishing to build villa residences. Omnibuses to London every five minutes.—For particulars apply to Mr. ARTHUR TAYLOR, Architect and Surveyor, 18A, Basinghall-street.

TO LANDOWNERS, ESTATE AGENTS, AND OTHERS.

FREEHOLD LAND.—Wanted to PURCHASE from FIVE to TWENTY ACRES, within five miles of London; if near a railway station or from the Metropolis communication will be preferred. Particulars, with lowest price, to be sent to G CLARKSON, Estate Agent, 43, Penton-street, Pentonville.

CANONBURY or HIGHBURY.—WANTED to PURCHASE, a few apartments, high VILLA, containing six or seven rooms, with good garden and convenient possession to be given immediately, or in the course of a month or two. Full particulars to K. T. Mr. Burough's, 65, Lamb's Conduit-street.

ETON CHAPEL-OF-EASE.—TO BE SOLD, by TENDER, the VALUABLE MATERIALS of the above Building, comprising excellent Brickwork, Slating, and several Thousand feet of Timber with the Interior Fittings, consisting of Pews Free-seats, &c. The whole to be taken down in the presence of the architect of a larger Chapel-of-Ease for the town of Eton. The Materials to be cleared away within such time, between the 3rd of APRIL and 1st of MAY, as shall be determined by the Committee and the purchaser. Tenders, sealed and endorsed "Tenders for Eton Chapel-of-Ease," to be sent to Mr. HARRISON, Surveyor to Eton, on or before MARCH 18, 1854. The Committee will not bind themselves to accept any Tender below the amount which they consider fair and reasonable.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brothers) and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of Saint Paul, Covent Garden, all in the County of Middlesex.—Saturday, February 25, 1854.

ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-square.—NOTICE TO ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 3rd, or TUESDAY, the 4th of APRIL next after which time no work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES. All Pictures and Drawings must be in Gilt Frames. Oil Paintings under glass, and Drawings with wide margins, are inadmissible. Excessive breadth in frames, as well as projecting mouldings, may prevent Pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

Every possible care will be taken of Works sent for Exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The Prices of Works to be disposed of may be communicated to the Secretary.

MECHANICAL DRAWING.—A PUBLIC INTRODUCTORY LECTURE will be delivered in the THEATRE of the DEPARTMENT of SCIENCE and ART, at MARLBOROUGH HOUSE, PALL-MALL, on MONDAY evening, the 6th day of MARCH, 1854, at SEVEN p.m. by Mr. WM. BINNS, on the Subject of Orthographic Projection, as applied to Model, Mechanical, and Engineering Drawing, and the mode of teaching the same. Admittance free

Bay Tree Tavern, St. Swithin's-lane, March 2, 1854.

SURVEYING, LEVELLING, ARCHITECTURAL and ENGINEERING DRAWING, and LITHOGRAPHY.—Maps and plans reduced or enlarged, & drawn ready for transfer to stone; working drawings for patterns, &c.—H. COURTNEY, Lincoln's-inn-fields Chambers, corner of Portsmouth-street.—A Pupil wanted.

COMPETITIONS.

TO ARCHITECTS.

NEW INDEPENDENT CHAPEL, Haslingden, Lancashire.—Architects desirous of submitting PLANS and SPECIFICATIONS for the immediate erection of the above building may obtain particulars on application to the Rev. G. W. CLAPHAM, Haslingden, Hon. Sec. to the Building Committee. 10*l.* will be given for the second best set of drawings. The plans to be delivered by the 31st MARCH next.

NOTICE.—The LOCAL BOARD of HEALTH of the PARISH of FAREHAM, HANTS, offer a PREMIUM of FIFTY GUINEAS for the best SCHEME for DRAINING the TOWN of FAREHAM, either with or without a supply of water; such scheme to be accompanied by plans, specifications, and estimates, and to describe particularly how the sewage matter is intended to be disposed of. The town contains about 620 houses. A map, on a scale of 44 feet to an inch, showing the levels of every street and property therein, is deposited at the office of the Local Board, and may be inspected or copied by any person desirous of competing for the premium. The Local Board will make their own selection of the scheme, and will submit it to the General Board of Health for their approbation. Competitors to send in their schemes, with a motto thereon, addressed to me, at the Office of the Board, on or before the 20th MAY next, and to forward at the same time their addresses, with a copy of the motto, under cover, to RICHARD PORTER, Esq. Chairman of the Local Board of Health, Fareham.

Fareham, Feb 16, 1854. JAMES TAYLER, Clerk.

NEW SENATE-HOUSE for the CITY of HAMBURG.—The Commission appointed by the Senate of Hamburg for erecting a New Senate-house, hereby invite Architects and Artists to prepare and present to them DESIGNS for the CONSTRUCTION of the NEW BUILDINGS. The specification (accompanied with plans and other details) is published at Hamburg by Mr. MEISSNER, the printer to the Senate, and sold at one mark currency, for the benefit of the Church Building Fund, and may be ordered of Messrs. WILLIAMS and NORGATE, 14, Henrietta-street, Covent-garden. Three premiums are set apart for the best plans, one of 350 Frederiks d'or, and two of 250 Frederiks d'or each.

Hamburg, the 15th of February, 1854

The COMMISSION for the ERECTION of the NEW SENATE-HOUSE.

TO ARCHITECTS.

GREAT YARMOUTH HOSPITAL.—The Committee of the Great Yarmouth Hospital being about to alter and add to the present Building, offer a PREMIUM of TEN GUINEAS for the best PLAN of the intended new Works, and which are to comprise in the Ground Floor, an Accident Ward, capable of holding six Beds, a Waiting Room for out-door patients, and a Bath Room; and on the Upper Floor, two Wards, each capable of holding six Beds, a Nurse's Room, and a Watercloset. The expenditure in the new works must not exceed 3000*l.*, and each gentleman is requested to send an estimate of the cost, with his plans. It will be desirable to retain as much as possible of the present Recreation Ground, and a plan will be preferred which keeps in view a future extension of the building. The Committee do not pledge themselves to employ professionally the successful competitor. Gentlemen are requested not to put their names upon the plans, but a device or motto, and send enclosed and sealed in a small packet marked "Private," the corresponding device or motto with their names, which packets will not be opened until the selected plan is determined on. The ground plan of the present building may be inspected at the Hospital any time between 11 and 4 o'clock. The new plans are requested to be sent to the Hospital, addressed to the Committee, on or before TWELVE o'clock at noon of WEDNESDAY, the 29th of MARCH, 1854. Plans not approved will be immediately returned.

EDWARD STEELE, Hon. Sec.

Great Yarmouth, February, 1854.

TO ARCHITECTS

NEW BANK in BRISTOL.—The Directors of the West of England and South Wales District Bank are desirous of receiving DESIGNS for their intended NEW BANK, and invite Architects to submit drawings in competition, according to terms and particulars, which will be sent to all Architects applying for the same. A premium of 50*l.* 30*l.* and 20*l.* will be awarded for the first, second, and third best designs. The designs must be sent in on or before the 1st of MAY next.

JOHN BATES, General Manager.

West of England and South Wales District Bank,
Bristol, March 1, 1854.

CONTRACTS.

STOKE-UPON-TRENT, STAFFORDSHIRE.—TO BUILDERS.—The Trustees of Stoke Market are prepared to receive TENDERS for the COMPLETION of the SOUTH WING of the TOWN-HALL, in Glebe-street, Stoke-upon-Trent, and for the ERECTION of ADDITIONAL MARKET BUILDINGS (both partly and separately), according to plans and specifications, which may be seen at the Offices of Messrs. WARD and SON, Architects, Hanley Staffordshire Potteries. The Tenders to be forwarded to me on or before the 21st of MARCH next. The Trustees do not bind themselves to accept the lowest or any Tender.—By order,

WM. KEARY, Clerk to the Trustees.

Brook-street, Stoke-upon-Trent, February 23, 1854.

TO BUILDERS.

PARTIES desirous of TENDERING for the ERECTION of a CONGREGATIONAL CHAPEL at Seaton, with cottage-dwelling, &c. on the plans and specifications at the office of R. Smith, 3, Hampton-pl ce, Surbiton, on or after the 24th inst. Tenders to be delivered at his residence endorsed "Tender for Congregational Chapel," on or before the 16th of MARCH. The lowest Tender will not necessarily be accepted.—WILSON and FULLER, Architects, 38, Parliament-street, Westminster, and 1, Belmont, Bath.

February 21st, 1854.

CONTRACTS.

NOTICE.—TO BUILDERS and OTHERS.

ORDNANCE CONTRACTS.

The Honourable Board of Ordnance being about to enter into CONTRACTS for the following descriptions of Artificers' Work, in the Woolwich district, from the 1st of APRIL, 1854, to the 31st of MARCH, 1856, viz.:—

AT WOOLWICH:

for carpenters, bricklayers, masons, slaters, plumbers, painters, glaziers, and paperhangers, pavi ers, smiths, and iron mongers, and upholsterers' work.

AT WALTHAM ABBEY AND ENFIELD LOCK:

for the same trades as for Woolwich, with the addition of plasterers and millwrights.

The Commanding Royal Engineer at Woolwich hereby gives notice, that such persons as may wish to TENDER for the same, may obtain schedules, between the hours of TEN and FOUR, from the 20th FEBRUARY to the 6th MARCH, 1854 (Sundays excepted), by personal application to the Clerk of Works, at the Royal Engineer-office Royal Arsenal, Woolwich, for the Woolwich Contracts; and to the Clerk of Works, Royal Engineer-office, Waltham Abbey, for the Contracts for Waltham Abbey and Enfield-lock.—No schedule will be issued after the 6th MARCH.

Tenders will be received for each trade separately, or for all the trades in one contract, for each station; the parties tendering for such contract to state the rate either above or below the schedule prices, at which they will perform the work specified in each schedule.

Tenders, of both descriptions, to be delivered, prepaid, at the Ordnance-office, Pall-mall, London, on the 7th MARCH, 1854, addressed to "The Secretary to the Board of Ordnance," and marked "Tenders for Work at ——."

The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Woolwich, February 13, 1854.

CARLISLE LOCAL BOARD of HEALTH.

SEWERAGE WORKS.

TO CONTRACTORS, IRON FOUNDERS, EARTHENWARE SEWER AND DRAIN PIPE MAKERS, BRICK-MAKERS, AND OTHERS.

The Local Board hereby give notice that they are prepared to receive TENDERS from parties who may be willing to undertake either of the following contracts:—

CONTRACT No. 1.—For the supply of EARTHENWARE SEWER and DRAIN PIPES, &c.

CONTRACT No. 2.—For the supply of about 50 tons of CAST-IRON SEWER PIPES and OTHER CASTINGS.

CONTRACTS Nos. 3 and 4.—For EXCAVATIONS, and the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES and other WORKS, including the supply of Bricks, and for EXCAVATING, LAYING, and JOINTING CAST-IRON SEWER PIPES, FIXING SEWER CASTINGS, &c.

CONTRACT No. 5.—For the supply of about Three Millions of SQUARE and RADIATED, SOLID, and HOLLOW BRICKS.

The drawings may be examined on and after the 14th inst. and copies of the specifications, schedules, bills of quantities, and forms of Tenders may be obtained, together with any further information required, on application at the Office of the Local Board, Carlisle, or at the Offices of ROBERT RAWLINSON, C.E. 31, Parliament-street, Westminster.

The charge for specifications, bills of quantities, &c. will be five shillings for each Contract.

Sealed Tenders to be delivered at the Office of the Local Board of Health, Carlisle, before TWELVE o'clock on WEDNESDAY, the 15th day of MARCH, endorsed "Tender for Contract No. 1, 2, 3, 4, or 5," as the case may be.

ISAAC CARTMELL,
Committee Clerk to the Local Board.

Carlisle, 1st March, 1854.

DOVER LOCAL BOARD of HEALTH.—IMPROVEMENT WORKS.—CONTRACT for the COMPLETION of DRAINAGE and WATERWORKS.—The Board hereby give notice, that they are prepared to receive TENDERS from persons who may be willing to CONTRACT for completing the execution of certain BRICK SEWERS, having Stoneware Drain-pipes, Cast-iron Drain-pipes and Cast-iron Water-pipes, building Two Engine and Boiler Houses, a Cooling Pond, a covered Reservoir, and a Cottage, Sinking Pump, Wells, and other Works. The Contract Drawings, specifications, and Form of Contract, may be examined on and after the 7th day of MARCH next, at the Old Town-hall, Dover, where also copies of the quantities and forms of Tender may be obtained, on payment of 5*s.* for each copy. Further particulars will be given at the Offices of T. W. RAMMELL, Esq. Engineer to the Local Board, 3, Trafalgar-square, London. Tenders must be sent in before the 22nd day of MARCH next. No Tender will be entertained unless it be made upon the printed forms. By order,

THOMAS BAKER BASS, Town Clerk.

Dover, February 25, 1854.

TO BUILDERS.

TENDERS are required for the ERECTION of THREE HOUSES, at Tunbridge Wells. The quantities have been prepared by Mr. C. BALAM, 10, Buckingham-street, Strand, London, where copies may be obtained, and plans inspected on and after the 6th day of MARCH. Tenders to be delivered on SATURDAY, the 11th of MARCH, at Mr. BALAM'S Office, before TWO p.m. The lowest Tender will not necessarily be accepted. Mr. J. LEES, Architect, Lancaster, Surrey.

GUILDHALL, Feb. 27, 1854.

THE COMMITTEE for letting the City's Land, will meet at Guildhall, on WEDNESDAY, the 8th day of MARCH next, at ONE o'clock precisely, to receive TENDERS for LETTINGS, on lease for 99 years (less three days), from LADY-DAY, 1854, in One Lot, TEN HOUSES, Nos. 22, 23, 24, and 25, Hill-street, and Nos. 1 to 6 inclusive, New-court, Hill-street, Finsbury.—Further particulars and plans may be seen, and forms of Tender obtained, at Architect's Office, Guildhall.

CHARLES PEARSON, Committee pro tem.

[For remainder of Contracts see next page.

CONTRACTS.

TO CONTRACTORS, IRONFOUNDERS, AND OTHERS.

ROCHESTER BRIDGE.—The Wardens and Assistants of Rochester bridge are prepared to receive TENDERS for supplying and erecting a NEW CAST-IRON ARCH in the REMAINING PORTION of the above BRIDGE in accordance with the plans, sections, and specifications of Thomas Telford, C.E.

The cast-iron arch is to be of Coalbrookdale Arch of 150 feet span and 15 feet rise in 5 segments, together with the whole of the masonry, arches, &c., required in the approaches from the arches, the bank, and the piers, and abutments being already built to that level.

The estimated weight of cast-iron is about 3,500 tons, more or less.

Plans, drawings and specification of the intended work may be seen at the Office of Mr JOHN WRIGHT, the Assistant Engineer, at whose office only Tenders will be received, on the 22nd day of MARCH, 1854 between the hours of TEN and FOUR, where all requisite particulars may be ascertained.

Sealed Tenders for the above works, on a scale list of prices, are to be delivered at the Bridge-house Chambers, Rochester, and marked on the outside "Tender for Superstructure of Rochester Bridge," on MONDAY, the 27th day of MARCH, 1854, at or before TWELVE o'clock at noon, after which hour no Tender will be received, accompanied by a letter from two persons or firms to become jointly and severally bound with the party Tendering for the due performance of the contract.

The Wardens and Assistants will not feel themselves bound to accept the lowest Tender.

ESSELL and HAYWARD.

Rochester, February 24, 1854.

TO BUILDERS.

PARTIES desirous of TENDERING for the REBUILDING of SHREWTON CHURCH, in the county of Wilts, are hereby informed that the plans, &c., upon the same may be seen on application to the Rev. F. BLANKLEY, Shrewton, on or after MONDAY the 6th inst. The Tenders to be delivered at Shrewton, or before the 20th inst. Each Tender must be accompanied with a sealed letter, containing the names and address of the proposed sureties, sealed up, and addressed to the Commissioners, and endorsed "Tender for Waterlay," must be delivered at the office of the Clerk, as under, by FIVE o'clock in the afternoon of WEDNESDAY, the 15th inst. The Commissioners do not pledge themselves to accept the lowest or any Tender. Each party tendering must be in attendance at the Court-house, Hungerford, Southwark, AT HALF PAST SIX on WEDNESDAY, the 15th inst aforesaid, when and where the said Commissioners will meet to open and consider such Tenders. The contractor will have to pay for the stamps of his contract and deed. The draft contract and bond may be put in speci-, and a form of Tender obtained, at the Clerk's Office. Dated this 2nd day of MARCH, 1854.—By order of the Commissioners,

GEORGE HOLMER, Clerk

26, Bridge-street, Southwark.

NEWARK-UPON-TRENT WATER WORKS.—The Directors of the Newark-upon-Trent Waterworks are desirous of receiving TENDERS for the construction of the following WORKS, viz:

CONTRACT No. 1.—Erection of Engine house, Boiler-house, Chimney, Pitter Tunnel, Shaft, Service Reservoir, Cottage Pieces, and other buildings.

CONTRACT No. 2.—Ten miles of horsework, of Iron Main Pipe and Service Pipes.

CONTRACT No. 3.—Pipes laying, &c.

CONTRACT No. 4.—Engine, Pumps, and other Apparatus.

Specifications and drawings may be seen, and quantities of Contract No. 1 obtained, at the Office of Mr. C. BAILY, Architect and Surveyor, Newark-upon-Trent, on and after Monday, the 13th instant.

The Company do not pledge themselves to accept the lowest or any Tender.

Tenders are to be delivered to me at or before SIX o'clock p.m. on SATURDAY, MARCH 25th instant, endorsed according to the number I am to contract for.

Any further information may be obtained upon application to the Engineer, T. HAWKESLEY, Esq., C.E., 30, Great George-street, Westminster; Mr. C. BAILY, or

WILLIAM NEWTON, Secretary to the Company.

Newark-upon-Trent, Notts, March 1, 1854.

GREAT WESTERN, OXFORD, WORCESTER, and WOLVERHAMPTON, and SHREWSBURY and BIRMINGHAM RAILWAYS.—WOLVERHAMPTON JOINT STATION.—The Committee of the Wolverhampton Joint Station are desirous of receiving TENDERS for the ERECTION of STATION BUILDINGS, at Wolverhampton. RECENT TESTIMONIALS

of the pre-ineal worth and efficient security of CHUBB'S LOCKS AND STRONG-ROOM DOORS.

CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:—

Ineffectual Attempt upon the Strong Room of the London and North-Western Railway, Liverpool.

"London and North-Western Railway Company,
Liverpool, 17th May, 1851.

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the Strong Room at this station, and which completely baffled the efforts of one or more burglars to get at the money chest in the night of Thursday last, although it is evident that considerable force was used to break open the door.

"I am, Gentlemen, your obedient servant.

"Messrs Chubb and Son." "GEO PALMER.

From Mr. Otway, Superintendent of Police C Division.

"Gentlemen,—I have the pleasure to inform you, that having one of your Locks on the street-door of my house presented my being attacked last night. The thief failed to open both succeeding, has so daunted that I have sent it to you for inspection, and shall feel glad if you will have it repaired.

"I am, gentlemen, your obedient servant.

C OTWAY, Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S Locks with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms, all fitted with the new Locks. Other Illustrated Lists, with Prices and Sizes, will be sent on application

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton

HOBBS' PATENT LOCKS.

HOBBS, ASHLEY, and FORTESCUE

HOBBS & CO. 97, Cheapside, London. Manufactory 33, Lawrence-lane.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Ironmongery Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two-light) to 16l. 16s.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS (all communicating), exclusive of the shop, devoted to the stock of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated and japanned wares), iron and brass bedsteads, so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent (per post) free. The mone returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); Nos. 1 and 2, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

JAMES LAURIE and CO. Warehouse, Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Tie, Bars, Columns, Girders, Sockets Pipes, Rain-water Pipes, Gutters, Railing and Palisading Bars, and all kinds of Iron Castings. Also, Henderson's Patent Derrick Cranes.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the LOWEST BIRMINGHAM PRICES, a complete LIST of which will be forwarded upon application.
FREDERICK HILDY,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.

F. P. M'CARTHY, 7, Beech-street, Barbican, begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GASWORK—pendants, brackets, chandeliers, &c.; compo. tin, and iron gas piping, and fittings in general; sheet zinc, galvanised iron, tin plates, iron wire, &c.; best lacquer, 1s. per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp.—Observe, 7, Beech-street, Barbican.

THOMAS EDINGTON, IRON MERCHANT AND CONTRACTOR, Inspector of Railway Bars and Castings, 17, GORDON-STREET, GLASGOW.

TO TOOL DEALERS, IRONMONGERS, &c

WILLIAM BAKER, BRADAWL MANUFACTURER.—Manufactory, No. 14, Allen-street, Clerkenwell, London. Established twenty-five years.

PLUMBING.—T. STANWAY, 10, Dorset-street, Portman-square, begs to inform the building trade generally, that he executes every description of Plumbing at the lowest prices; baths, closets, and every description of hydraulic apparatus fixed, and action warranted. Estimates for any quantity, in town or country.

POWERFUL CRUSHING-MILLS.—FOR SALE, several POWERFUL CRUSHING-MILLS, or EDGE RUNNERS, suitable for crushing gold, quartz, flint, granite, emery, clay, colour, &c. Also a good 3 HORSE STEAM BOILER, can be seen—Apply to C. T. CHRISTIE, Millwright and Engineer, 19, Broad-street, Lambeth; 113, Vauxhall-walk. March 2, 1854.

HIGGS and GEORGE, Wholesale and Export Ironmongers, Agents for the sale of the Patent Wrought Nails, Cannon-street and Collegehill, London. (Removed from 179, Borough.) HIGGS and GEORGE beg to acquaint their friends and the public that they have removed to the above central and extensive premises, where they keep an ample stock of Nails, general Ironmongery, and the Patent Wrought Nails, for the supply both of the home and export demand.

WANTED, about FIVE TONS of good SECOND-HAND CONTRACTORS' RAILS and Chairs, weighing about 25 to 30 lbs. to the yard.—Apply by letter, stating lowest price, to COLES, SHADBOLT, and CO. Cement Works, St. James's Wharf, Caledonian-road.

A MACHINE for RAISING HORSES, CATTLE, or other heavy weights, to an upper floor by an imperceptible motion. TO BE SOLD.—Apply to Mr. MORRIS, 79, Park-street, Grosvenor-square.

TO BE SOLD, a bargain, a nearly new 6-horse power high-pressure TABLE ENGINE, with boiler, large fly wheel, pump, &c.—May be seen on application to Mr. GILES, Windmill-street, Gravesend.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers, to their Patent Rails, Sleepers, Fish Joints, and other important improvements now in use on upwards of 300 miles of railway. Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager, or to Mr. WILLIAM HOWDEN, the Secretary, 36, Great George-street, Westminster.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing.—Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building. Price from 8s. 6d. each, according to size.

CASE-IRON KITCHEN SINKS, with overflow-pipe, 8s. 6d. each.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O.G. Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, castle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London, near Blackfriars-bridge.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,
LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects—Portraits direct from Life on Stone, or from Paintings, Drawings, or Daguerreotypes—Medical and Scientific subjects, executed in a superior style peculiar to this establishment. Cartotypes copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.
FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to Solicitors, Engineers and Surveyors, Stationers and Printers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan received by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon
LITHOGRAPHY FOR COMMERCIAL PURPOSES,
Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing, Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of lithography in any part of the kingdom should apply to Messrs. DAY and SON for estimates, and it will be found, owing to the extent of the Establishment, that its manifest advantages, viz. superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect realization of a painting in colours. "The Blue Lights" after Turner, executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN," and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The last-named, consisting of 160 plates, issued in fortnightly Parts of four plates, proves the possibility of adapting Chromo-lithography to Pictorial Works—to Book Plates requiring long numbers cheaply and quickly—and to Geological or other Coloured Maps.

Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,
LITHOGRAPHERS TO THE QUEEN,
17, Gate-street, Lincoln's-inn Fields, London.

LITHOGRAPHY.—C. MOODY executes every description of Lithography for professional persons or the trade. Portraits, Landscapes, &c. sketched and lithographed, or copied from the roughest drawings; Engineering and Mechanical Drawings correctly detailed by experienced hands. Presses, Stones, Chalks, &c. supplied. Specimens of every class of work for inspection. Estimates given. Instructions afforded.—Lithographic Offices, 237, High Holborn.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.

¾-inch Yellow, 17s. per square.		¾-inch White, 16s. per square.	
1-inch	19s.	1-inch	17s.
1¼-inch	23s.	1¼-inch	21s.

Dantzic Timber, 30s. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

MUIR'S PATENT PLANING MACHINE.

SAW MILLS, GILLINGHAM-STREET, PIMLICO

TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principle; Boards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks, and carted home free of charge.

Address to HENRY SOUTHAM,
Saw Mills, Gillingham-street, Pimlico.

N.B. Estimates given for Sawing and Planing.

DRY MAHOGANY, OAK, &c.—S. J. CROSS begs to inform the trade that he has on hand a good assortment of the above at the lowest possible prices. Oak-sills and fencing in any quantity.—11, FEATHERSTONE-STREET, FINSBURY.

REDUCED PRICES.—EDWARD SIMMS (late William Cleaver), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleaver's) Flooring Manufactory, Wilton-road, Pimlico Basin.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

By her Majesty's Letters Patent.

TO BUILDERS, &c.

FOR SALE, at REDUCED PRICES, No. 27, WHARF-ROAD, CITY BASIN, the Proprietor retiring from the Timber Trade, a Large Quantity of PREPARED FLOORING, in Boards and Battens, from 1 to 1¼ inch, and seasoned by the patent desiccating process. Also Match-boards, Pine and Deals, Wainscot, Mahogany, and Hornbeam. The Premises to Let, an immediate possession given.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff, Sleeping Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

TO BARGE BUILDERS, BUILDERS, AND OTHERS.

FOR SALE, a quantity of good OAK TREES, PLANK, &c. now lying at Mr. J. BASHAM'S, John street, Holywell-mount, Curtain-road, Shoreditch.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for WAYLOR'S Stains may be had at the Factory, 44, and 56, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Irongate Wharf, Praed street, Edgware-road near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.

GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. R. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well-seasoned stock of Flooring Boards, Matched Boarding, and Mouldings, of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.

GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate conversion on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.

G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

TO SAW-MILL PROPRIETORS, BUILDERS, &c.

ON SALE, TWO first-rate PLANING MACHINES, just built, with 12-inch rollers, and the latest improvements. These machines will plane thickness and groove deals at the rate of 360 feet per minute, up to 4 inches thick and 13 inches wide. One may be seen working.—Apply to JNO. H. WALKER, Sawing and Planing Mills, Hudder field.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the public generally, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is best proved by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.
136, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

LADDERS, BARROWS, &c. for SALE or HIRE. G. ELL invites the attention of builders, decorators, and the trade generally, to the largest stock of ladders, excavatory, brickmakers', and other Barrows; Painters' Machines, Trestles, steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

M. AND N. HANHART, LITHOGRAPHERS,
64, CHARLOTTE-STREET, RATHBONE-PLACE, LONDON,

Beg to announce that they continue to execute orders in every branch connected with their Art, and being in daily intercourse with the most eminent Artists in London, any Drawings entrusted to them will meet with that careful attention which is necessary for success.

PORTRAITS FROM LIFE TAKEN UPON STONE, OR COPIED FROM OIL, WATER-COLOUR, AND OTHER DRAWINGS.

Copies from Daguerreotypes, and all other Photographic Productions, executed upon Stone the size of the Originals, or enlarged.

OIL PAINTINGS AND WATER-COLOUR DRAWINGS ACCURATELY IMITATED.

Now ready, Parts I. to III. and Nos. 1 *to* 10, *of*

14a, Great March-row, Leicester-square, March 2, 1854.

KELLY'S PRACTICAL BUILDERS' PRICE BOOK; or, Safe Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and Corrected by New Calculations upon the present Value of Materials and Labour. Arranged by an Architect of eminence, assisted by several experienced Measuring Surveyors. Illustrated and exemplified by Steel Engravings and numerous Woodcuts. Royal 8vo price 8s. neatly bound.
London; published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.
Of whom may be had, New Editions, in Quarto, of the following Practical Architectural Works—

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen, founded on Geometrical and Mechanical Principles. Ten Parts at 3s. or in boards, 38s.; containing upwards of 120 Steel Plates, and numerous Woodcut Diagrams.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING revised by TREDGOLD), both plain and ornamental; containing a new and complete System of Lines for Stone Cutting, for the use of Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Mural Tablets, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 3s. or in boards, 30s.; containing upwards of Ninety Steel Plates and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE; containing plain and ample Rules for Drawing and Executing them in the purest style; including an historical Description of Gothic Architecture. Illustrated by upwards of One Hundred Steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s., or in boards, 38s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details, for the Erection of Cottages and Villas. By S. H. Brooks, Architect. Beautifully engraved on steel, with Direction for Building, and the estimated Cost of each Edifice. Twelve parts at 3s.; or in boards, 39s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other buildings for public purposes. By S. H. Brooks, Architect. Beautifully engraved on steel. Ten Parts at 3s. or 30s. boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE; containing a series of Designs for Decorating Apartments with tints, and suited to the various styles of Architecture. By H. W. and A. Arrowsmith, House Decorators to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining, and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, Oils, Varnishes, &c. By W. M. Higgins, Esq. Accompanied by actual specimens of Hand-brush Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every description of Manufacture of the British Empire. Illustrated by upwards of 2,000 Wood Engravings. By Luke Hebert, C.E. Engineer, &c. The Enquiries of Mechanical Science has developed many of the important facts since the first publication, in 1835, of the Encyclopædia. The Inventions and Discoveries recently made have been carefully sought out by the Editor; and, as the value of each was tested by experiment, a description was accordingly prepared. By the selection of new articles, and care in the revision of old ones, this edition has now become a systematic calculation, so that it may be received as fully and faithfully expressing the existing state of Engineering and Mechanism, adapted to the wants of "Practical Men." In two large 8vo. volumes, cloth, lettered, price 30s.

PAPER-HANGINGS.—The CHEAPEST HOUSE in LONDON for every description of PAPER-HANGINGS is JOSEPH'S WHOLESALE WAREHOUSE, 22, GREAT MARLBOROUGH-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE assortment in the Kingdom, THIRTY PER CENT CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Paper Hangings for the present season which comprise every description of elegant quality, from the most elaborate decoration of the richest paper that can be produced, and which they have pleasure to offer at very low prices. J. A. and CO. also respectfully inform the trade that they have OPENED a WAREHOUSE at No. 500, OXFORD-STREET, where all goods will be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO. are the sole vendors of this well-known remedy for Damp Walls.
115, Whitechapel, near the Obelisk, and 500, Oxford-street.

ROYAL GALLERY of ILLUSTRATION, 14, Regent-street.—SEBASTOPOL, CONSTANTINOPLE, and ST. PETERSBURG, the NORTH-WEST PASSAGE, from drawings by Captain Inglefield, R.N.; and the DIORAMA of the OCEAN MAIL, which will finish the series of STEAMERS. March 15th. Exhibited daily at THREE and EIGHT o'clock. Admission to the whole, One Shilling; Stalls, Two Shillings; Reserved seats, Three Shillings. Children under Ten Years of age, Half-price.

ROYAL POLYTECHNIC INSTITUTION. Patron, H.R.H. Prince Albert. During Lent a Popular Lecture on Astronomy, splendidly illustrated, by Dr. Bachhoffner, on WEDNESDAY and FRIDAY Evenings, at Eight o'clock. Magnified Photographic Pictures, and a new series of Dissolving Views—Lecture by J. H. Pepper, Esq. on Paper Staining and its Imitations with Colours. Lecture by Dr. Bachhoffner on Williams's New Patent Universal Electric Telegraph—Description of Kirk's Patent Tubular Pianoforte, and of Trotman's Patent Method of Tuning Stringed Vessels. Open Mornings and Evenings. Admission 1s. Schools and Children under Ten Years of age, Half-price.

DRAWINGS, of every description, executed with despatch, by Messrs. ROSSIGNOL and CROOK, Mechanical and Engineering Stationers, Bunch, Cloisters, Lancaster-place.

TO ARCHITECTS.
COMPETITION and other DRAWINGS.—Mr. THOMAS S. HOSS, Member of the New Society of Painters in Water-Colours, and Author of "The Private Residences of Paris, Ghent, Rouen," &c. and of "London as it is," offers a series of Tinted Backgrounds, Landscape Perspectives, Views, Interiors, &c. From the long experience he has had in such subjects, he can fully answer all the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. HOSS, 39, Albany-street, Regent's-park.

The Builder.

SATURDAY, MARCH 4, 1854.

WE resume our consideration of the architect's responsibilities and duties. We have shown that it would be politic for the public to review the question of remuneration: but at present an employer might rightly enough say,—if such work cannot be performed for the stated rate, it is for you, the architect, to decline the engagement. Here, however, we should be led to speak of the propriety of some movement in the general profession, and of the position of the societies representing it,—all which would require a distinct article.

Pursuing the question of the architect's proper position under existing circumstances—and which it is important to have a right apprehension of—we fall in with the comparison often made, with the duties of the general of an army,—lately revived at the Institute of Architects by Mr. Inman, on the occasion of the presentation of a book by the Earl de Grey, on the character of the Duke of Wellington.

In the case of the army, we suppose that knowledge of special branches of the service is possessed by heads of the departments, rather than by the commander. We can comprehend the necessity which there may be, for a general to collect opinions as to the effective use of each arm of the service; and we suppose all questions such as the siege and defence of fortified places, the passage of rivers, the range of artillery, and the supply of provisions, are entirely subject to the opinion as well as immediate control of the respective heads of departments. Yet, the general of an army appears to possess a certain wide knowledge, or a capability of judging from general principles,—a power of combining and reasoning upon the opinions of others, and an energy in action—which together are better calculated to bring about fortunate results than the knowledge possessed by any of the subordinates. This faculty of the mind is often misconstrued: the possessor of it is called superficial, and even ignorant, yet not rightly so. The faculty is one that might well demand further examination. As regards the business of an architect it might have a special value. Whatever the fear of such imputations as we have alluded to (and we shall not be thought to modify anything we have ever uttered as to the value of particular knowledge), perhaps the most valuable of all qualifications is the power rightly to use and direct the knowledge of others. Of course, as we say, this power cannot be possessed except by one himself having a large store of varied acquirements.

Now, were the practical architect in the *ideal* position in which some would seem to regard him, the parallel would be complete. But, unfortunately, the architect cannot readily consult subordinates. These are, too often, men narrow minded, and ignorant of the most ordinary matters beyond their special calling, and even of the principles and the best modes of practice in their own departments. Asking the opinion of such men is interpreted into general ignorance: an idea of little consequence, were it not suggestive to them of attempts at fraud, all of which are not necessarily discovered. To some contractors, the work from the first presents itself as a thing to be got through with the least possible trouble and expense; and the scheming from the date of the first brick laid, as to enumeration of extras, puts in a position of antagonism those who should cordially work together for the general result. We fear few builders sufficiently appreciate the proper professional regard for their interests, where it exists. As we have said, in other words, the standards of morals and artist-feeling are alike low, where self-interest would seem concerned. Practically, the world excuses much that, under different externals, would be swindling or robbery. The maxim still is, "*Rem, si possis recte; si non, quocunque modo, rem.*"

What, then, is the architect to do? At the present moment, as we have held, he stands legally and morally accountable to the full extent; that is, legally so, wherever, by commission or omission, his untrammelled designs or directions have been concerned; morally so, during every hour that he allows the prevalence of an opinion as to his performance of duties which he either cannot, or is not prepared to undertake. Meanwhile, such moral responsibility is absolute: it must rest with the individual to know what is possible. To show that the employer never would compensate for that responsibility might be easy. Thus:—Are an architect's travelling expenses defrayed in the full extent necessary in *many* cases? Would the architect of a palace of the Legislature be allowed a clerk of works in every court of the vast pile of buildings; or must a Visconti, or a Wren, charged with the rebuilding of a whole city, be responsible for the leakage of every water-pipe and tap therein. In short, where absolute dependence cannot be placed upon integrity and fair dealing in contractors, is there any step short of a clerk of works over each workman? The architect is not employed as a tradesman to take risk, the chance of which can be moneyed out in an estimate: he *is* employed because his entire disconnection from ordinary commercial dealings—in a word, his professional character—is supposed to place him above every consideration that might interfere with the design and selection of the best means of carrying out the objects—in accordance with the principles of his art and science. Without the proprietor is prepared to accord confidence that the architect will do his best—not holding him in the position of an insurer; without he recognise that no architect of principle and knowledge will incur unnecessary risk, he had better seek those whose business it is to consider such chances when estimating. That there would be some of the public who would hastily pursue this reasoning to the conclusion, that nothing is gained by separating the functions of the architect and the builder, we apprehended at the threshold of the inquiry. Those who are not convinced of the existence of the high professional principle, would no doubt do so: those who do recognise it, would hold it a sufficient safeguard, and also that no other position could the architect assume with justice to himself.

We have, indeed, nothing but the strongest condemnation to make of what is too common, namely, want of definite explanation on the part of the architect. Much less should be left to verbal direction, or to be furnished *during the progress of the works*, than is generally the case. The difficulty, however, is as to the *necessary* later directions, which, as in old buildings, could hardly be otherwise than numerous and understood from the first to be necessary. There is no course in these circumstances, but the association, with the architect, of a builder who can apprehend principles as well as direct practice, and to leave to him, as in France, the *onus* of refusing to execute what he might be unable to carry out; and that this is the equitable principle appears from the fact, that accident may arise after every properly recognised duty of the architect has been performed. Any reasoning as to the office of the builder not involving knowledge of principles, or more than manual skill, would thus fall to the ground.

Some years ago we were enabled to lay before our readers, a copy of a letter which an architect had drawn up, and which he had addressed to his clients in some cases, with a view of defining the architect's position. One of its stipulations was to this effect:—"Fourth: The architect is *not* employed as an operative builder or clerk of the works. It must be clearly understood that his *occasional* visits and *working drawings* can only have reference to architectural accuracy, and the liberal fulfilment of the leading articles of the specification, as affecting *construction* generally. If the builder, his foreman, or operatives be careless, and a competent clerk of the works be not engaged, roofs may leak, plumbing may partially fail, plastering may crack or become discoloured, drains may yield offensive odours, joinery may shrink, chimneys may return their smoke—indeed, the latter nuisance may occur in spite of all precaution—and many other evils may show themselves, without necessarily impugning the character of the architect, or in the least affecting the general stability of the structure. The most trying annoyances may originate in the most trifling defects of workmanship, and nothing short of a vigilant clerk of the works, exclusively employed without intermission, can insure perfection in matters of constructive detail. The architect will see to the *remedy* of defect in workmanship or material, but he is not blameable for the appearance of such defect." When we printed the document in which this occurred, we received several communications quite dissenting from the view taken by Mr. Wightwick, and showing the loss to which the profession would at once be subjected by such a protest being made general. We have already admitted the difficulty in which the profession would be placed, until more accurate views were prevalent as to the mode in which the architect can best serve the public. The only fault, however, that we have to find with the wording of the paragraph is, that it may, perhaps, leave doubtful whether the architect would not be *indifferent* to certain important matters. Indeed, it will be seen that to have the force intended, it should go somewhat further; for who, after the case of Ivimey *v.* Elliott, would give a pledge as to infallible remedy for a defect, under the disadvantages we alluded to; or who, in the case of a large building, would hold himself *necessarily* chargeable with expense arising from defects, even where there had been a vigilant clerk of the works? From an unprincipled person determined to cheat, practically there is *no complete* safeguard. Therefore, the necessity, universally, of some such course as that referred to here, seems to be established.

We have still a few words to say about the liability to the public. But first let us inquire into the special question of shoring. We cannot altogether agree with those who consider the architect is not concerned with this. Shoring can hardly be regarded as of the nature of a tool or mechanical contrivance, in the same light as *common* scaffolding, or tackle, or horse and cart. It clearly requires design. No general assertion as to its being always out of the field of an architect's business can be admitted, and for certain simple reasons: for example, it may be *the* work—the whole work which the architect was consulted about. When a house requires shoring up as a preliminary measure, is the architect to say,—Shoring is what I do not attend to, and know nothing about; go to a builder, and come to me afterwards? He would be simply refusing to exercise his knowledge, and protect his proposing client. Again—and still keeping away from the case of adjoining buildings—shoring may be incidental to the building itself under the architect's care. Where an ordinary shop-front had to be inserted, the fabric might be permanently injured by

sadly-designed shoring. As just now said, shoring is necessarily one of the things requiring special design. Can an ordinary house-scaffold be really, on mature consideration, placed in the same class? Even in the case of an existing party-wall to be retained, one of our correspondents, who says that an architect should look after everything that he receives a per-centage upon, would have reason were he to argue that the building owner's property therein would make it the architect's duty to see to the preservation, by properly designing and superintending the shoring. Even where the adjoining building had not the party-wall, but its own external wall, and in which case we might suppose an argument that the adjoining owner was in strict justice, if not in ordinary law, bound to maintain his premises without liability to others from the shallowness of his own foundations; and where if so, neither the architect nor his employer might have deemed it right to go out of their way to seek liabilities; the case as to the duty of the architect would practically have to be reasoned out in the same way. The building owner could not invariably act on the clause which is recommended by "R. K." and which we know is generally adopted in specifications, and leave the builder liable, and unadvised as to the maintenance of adjoining buildings. For, in effect we said, that experience of shoring operations in London, and the skill of the builders in that description of work, blinds us to the fact of the almost entire absence of such skill in the country. It is not many months since the principal builder in one of the largest towns in the kingdom, placed the head of a raking shore to a sinking wall, in a hole cut in the brickwork, instead of against an interposed plank needled thereto. We have ourselves seen the foot of the shore cut at an oblique angle to the raking line, and that by clever country carpenters. Therefore those who say that an architect is *always* guilty of an "impertinence" when he looks after shoring, should not view the country practice with the light of learned disquisition as to this mode or that, by the witnesses at the inquest after the accident in the Strand. It might be said that in such cases as we have referred to, all objects would be obtained were the architect to point out the right mode merely as a matter of courtesy,—that is, that he might be able to disclaim the legal liability. Yet, on the other hand, it might be to the employer's interest to prevent any disinclination to tender for the work, or delay in execution from whatever cause, or the possibility of an action against himself even unjustly brought. In all such cases, then, is the proprietor's professional adviser to say, "Shoring is not my business: it would be an 'impertinence' for any one but a builder to interfere with it?"

The argument that the architect is paid a per-centage upon the cost of shoring is not that which weighs with us. He is paid, in fact, a per-centage upon the cost of cords and buckets (and carting at least is a very large item): is he to make a show of performing some sort of work in connection with such matters? He has to protect the interests of his employer in all things which are reasonable: his remuneration is upon the general cost of the works; and into the refinements of reasoning which suggest themselves to some, from the existence of a system to which we have admitted there are objections, we are not now prepared to enter. The difference of per-centage by a mere change of materials, as from deal to oak, would equally show the inconsistencies of the system.

We believe the architect is not called upon, and that he has even no right, to interfere with the mode in which a ladder is fixed, or in which a block of stone is run up with a pulley, supposing these operations are not obviously injurious to the building. Nay, if "R. K." had alluded to the "scaffold-pole," "insecurely wedged or tied" (we quote the words of "A.B."), we suppose that his *admission* of a duty on the part of the architect to point this out, would not have been exactly as apprehended by "A. B." The *architect* could have no professional duty in such a matter, and could "insist" on nothing in relation to it; but he would have a duty as a good citizen, and as a man, and this is what we think must have been intended by "R. K."

The idea that an architect may be held liable, from the fact of his possession of power of dismissing the builder, or stopping the progress of the works,—that consequently it is his *duty* to foresee all accidents, seems to be answered by saying that nothing of sufficient importance would probably have occurred to forewarn him. The provision is of too much importance to the employer to be given up.

The conclusion then to which we come is, that the architect should hold himself responsible to his client, both legally and morally, in all matters in the *design* and specification, and that he should give such directions and inspection as may allow of the full performance of the contract; but that he should at the outset disclaim the responsibility for accidents and defects in the mere execution of his designs. As Hook used to say,—"Wrong never comes right;" and it would be better to suffer some immediate loss of professional employment, than to accept those serious responsibilities which the public will now attach to the architect, in the absence of a disclaimer of duties which no mind can compass without the danger which has followed in some melancholy instances. Certain we are, that the interests both of society and of architects, would gain by the course we have tried to suggest. As it is, the labours of the artist can be but half achieved, and in the department of interior decoration and "practical art,"—essential objects in the building are quite omitted. Surely the Institute, on the hint which has been supplied, could devise some statement or form of letter, which would put the matter on a right footing. There would be obvious advantage in the individual's presenting what had been decided upon by the general body of architects.

The question of responsibility to the public for accidents, *could* not, we suppose, be thrown upon the builder, should the evidence show that the design, or the directions of the architect were clearly the cause of the disaster. In the course of the execution, so much, however, depends immediately upon the builder—so many disasters may arise in spite of the most precise directions,—that we hold the clause suggested—as to the contractor's taking "all risk of injury to life or limb, arising out of his performance of the work"—as perfectly fair, and the requisite and only true safeguard for the proper parties. With such a clause, we agree with our correspondent, that there would be no fear that juries would do otherwise than "put the saddle on the right horse." In a new construction, accident would generally be traceable to some defect in the design: where old works were largely concerned, it would without much greater chance of mistake be laid to the charge of the builder. Evidence to convict may not be forthcoming in some cases, or may be contradictory: but to punish the innocent man rather than none, is surely neither the principle of English law, nor true justice. The reasonings of certain organs of public opinion, is like that of the debilitated cousin in "Bleak House:"—"Hasn't a doubt—zample—far better hang wrong fler, than no fler."

But that the interests of adjoining owners and of the public each require independent representation is conceded, and the Legislature has endeavoured to provide for this. But we shall not ascribe to any district surveyor neglect of duty, where the cause of accident is rather to be found in the inadequate provisions and indefinite wording of the Buildings' Act. That two different opinions may be supported as to the intention of the words "shore up and underpin with brickwork," was apparent from the correspondence in the *Times*. How is the district surveyor to be present during every excavation, if the Act allows the builder to defer notice till the time of laying bricks? Clearly, notice should be required to be sent at each commencement, and at each resumption of work. Can the district surveyor look down from the level of Asmodeus in his flight, and test the sufficiency of perished setting of every chimney-pot? But with the experience which there has been as to the Act, a form of words might be adopted better calculated to protect the public. The hands of the district surveyors require strengthening, and readier means must be given for enforcing awards.

As regards the accident in the Strand, that "*nobody*" was "in fault" there, *we* never asserted. But who in such cases can authoritatively say at what exact point "reasonable precautions" end, and unjustifiable expenditure would begin? It is before all things, and immensely, the duty of the architect to consider possible injury to life and limb; but there *is* a duty also to the proprietor. If in adjacent excavations all that is requisite be "to keep the wall in *equilibrio*," the architect is not necessarily to go to further expense, involving serious inconvenience and loss to the "adjoining" as well as to the "building owner." The question as to "reasonable precautions" is one of opinion founded on experience.

Even as the law stands, it seems from a legal opinion now before us, that contractors in the position of the builders in the Strand would be liable for the acts of their workmen, unless able most distinctly to show that the acts which occasioned the injury, were done by the workmen "under the directions and by the positive order of the architect, and that such workmen were, therefore, *quoad these wrongful acts, the servants* of the architect or his employers," and *not* of the builders. In Mr. Abraham's case, the "opinion" was that evidence collected would abundantly prove that nothing had been done to take away the responsibility of the builder, and that the accident was plainly attributable to things done by the builder's men without the knowledge, or in this case even against the directions, of the architect. This opinion the proceedings at the trial fully corroborated.

The entire question—even with this lengthy article—has not been exhausted. There is a distinct question suggested by the accident, namely, as to the responsibilities of architects acting also as surveyors on behalf of a ground landlord. There is also a question as to the liability, under certain circumstances, for the cost of extra works which an architect may have ordered. In reference to this, a case was tried in the Common Pleas, and decided against Mr. Martyr, the architect, as reported in our sixth volume. We then doubted the legality of such a decision against one in the capacity of agent. But there would seem to be no harm in inserting in a specification a disclaimer of that sort of liability as well as the other.

With these remarks we may leave the further consideration of architects' responsibilities to the fresh occasion which in the ordinary course of events will probably present itself. It is a very difficult question, and we do not pretend that we have settled it.

THE CONDITION OF LONDON.

WE have been urged from several quarters to republish in a cheap form for distribution the papers on the Homes of the Poor which appeared in our last volume. Fearing that a return of the cholera must be looked for, and

that little has really been done to lessen the risk, and believing it to be of the utmost importance that the actual condition of our great towns should be widely known in order to induce attempts at amelioration, we have determined on complying with the request to a certain extent. We propose, therefore, to issue an octavo of about ninety pages, with numerous illustrations, for *One Shilling*, under the title of "London Shadows," and we solicit the kindly co-operation of all who may feel disposed to aid in circulating it.

ROYAL INSTITUTE OF BRITISH ARCHITECTS.

At a meeting held on Monday, the 20th ult. Mr. W. S. Inman, V.P. in the chair, Mr. Charles Barry was elected as Fellow, and Mr. T. M. Rickman as Associate. Various donations were announced.

The discussion "On the French and other Methods of constructing Iron Floors," was resumed, and brought to a conclusion.

On Monday evening next, the 6th, Earl de Grey, president, will take the chair to present the royal gold medal to Mr. Hardwick, and the other medals and premiums in books, in accordance with the award of a special general meeting held on the 13th ult. Mr. Donaldson will read "A Brief Account of the Palaces of the Louvre and Tuileries, Paris, from their first erection to the present time; with a general description of various projects for their completion and junction, particularly the one now in course of execution, according to the designs of the late Monsieur Visconti, Honorary and Corresponding Member.

LAND SOCIETIES.

To such an extent have these societies increased over universal England, that men have become alarmed at the changes apprehended in the structure of our community: some anticipate an overwhelming transfusion of the democratic principle, by the too general extension of the elective franchise; others that more is promised by their prospectuses than can be realised in practice, and that, like Fergus O'Connor's scheme, the shareholders generally may be disappointed. The truth is, that both are wrong.

The plans and principles which have been lately enunciated by the head of the Government go very far in multiplying votes for representatives in Parliament. Land and building associations will add very considerably to the numbers, but the effect will not be, as foretold by cautious wiseacres, that the spouter of a beer-shop, or the delegate of a strike, or the hero of a vestry, will be returned; but that generally the identical men now in the House will hereafter be elected,—with the simple difference that, instead of polling 10,000, they will float in, triumphant, on the acclaim of 20,000 voices.

When entrusted with a vote, those invested with the privilege first think seriously of its due exercise: admitted within the pale of freemen, they think as freemen with whom they consort and consult, and no longer as malcontents, who are recalcitrant against institutions in which they have no share; taking also the bias of political opinion preached by popular spouters hostile to every system and every person not of an extreme or revolutionary character. The possession of the franchise makes him a member of the state, identifies his interests with those of his country, and makes the man who never meditated but on opposition studious of the common weal.

In the fellowship of land associations, this is more especially the case, for, becoming proprietor of his own tenement, however small, the stake of his acquired interest fastens him, as it were, to the native soil, and attaches him more firmly to the cause of order. So much refers only to the political influence that flows from the instant progress of the new associations: the realities of the change, how great, how momentous are they!

A man who never thought of saving 1*l.* from his year's earnings is induced to invest, monthly or fortnightly, a small amount which he can spare from his earnings; he perhaps stints his libations at the "public," or, to secure certitude in his payments, discontinues his weekly holiday, Saint Monday: the necessity begets habit, not only of industry, but of frugality; and, at the end of the year, he finds himself not only a richer, but a healthier and steadier man.

It would be idle to conclude that, if any individual could have the systematic resolution to lay by 1s. a fortnight out of his pay, he could not equally accumulate 5*l.* 4s. in one year; but he could not on so small an amount also accumulate compound interest: besides, there are few who, without the incentive of a fixed cumulative investment, would not at some juncture be induced to indulge some want or caprice at the expense of the hoarded fund. Not so in the building societies: the object is the nearer of attainment the longer the payment has been kept up; and the fines act as a stimulant to regularity. These, too, increase the general fund; and although cases of hardship may be instanced, the rules of good societies provide against forfeiture by reasonable mulcts. Moreover, in circumstances of incapacity to continue payments, the value received is returned, after fair deductions in favour of the association; so that in no case is the money lost, but rather increased.

That a fixed property acquired through habits of frugality and industry must elevate the moral character of a poor man, can be doubted by none. To himself the possession when attained brings feelings of independence and self-respect. To others, his fellows and compeers, it conveys a salutary lesson, which cannot fail to be beneficent. But to his wife or children, if he have them, what a change is wrought! To them some hope has sprung up of a foothold and a stay, however small, to meet the season of sickness or adversity.

To assert that in every instance contributors to such institutions must be benefited, would be too much; but if one-fourth succeed, how extensive must be the good wrought out by them. Nevertheless, the system is now reduced to a certainty, for the success of the Leeds and Manchester and other societies has been established. There are some slight differences in the rules and rates of payment; but of these it may be said, as of the laws of various states, that "that which is best administered is best." In nearly all, the calculations are based upon a theory as sound as the insurance offices; and it is laid down as an axiom, that by paying a small sum, every fortnight amounting to the value, at the end of the year, of one year's rack-rent, at the end of ten years the subscriber may become proprietor, or *his own landlord!*

It is most true that in these schemes, particularly in the country, where larger allotments are given, the most grotesque, if not ridiculous examples of architecture have been perpetrated. From some of them *Punch* might sketch a vignette, with great effect, of a house divided against itself, and of others at jars each with other; of bee-hives, dog-houses, huts, hovels, four-story clock-cases, and squat cash-boxes, in close phalanx of inextricable confusion. But system and superintending taste might moderate these vagaries of amateur (or rather *immature*) architecture run wild. In suburban tenements, where there is some limit to place and elevation, no such monstrosities can arise; the theory is reduced to practice, and as example multiplies, universal taste improves.

QUONDAM.

LIGHT IN ROME.

Gas-lighting and railways are two of the great features of modern civilization. What may we not therefore expect when Rome, so long plunged in a state of intellectual torpor, at length awakes to adorn her streets with gas-lamps; and the railroad to Nascali is again the theme of conversation. The English traveller walks along the Corso as brilliantly illuminated as the paved ways of our northern metropolis. Gas in Rome is another instance added to the already numerous examples of an improvement obstructed and waged war upon in its first beginnings; but finally, overcoming prejudice, and hailed with applause on all sides. The Romans, after opposing the progress of light in their city with that obstinate pertinacity characteristic of ignorance, are now vying with each other to patronise and further it. On Tuesday, the 14th of February, a *fête* took place at the Doria Palace, which may be considered as a crowning triumph for Mr. Shepherd, the able engineer having the direction of the gasworks here. The immediate object was to raise a sum of money for the relief of the poor in the present distressed state of the lower classes in Rome.

The riding-school of the Doria Palace was for this purpose converted into a ball-room, and fitted up as a winter garden. Plants of all descriptions were brought from Civita Vecchia, and even from Genoa, to aid in the decoration; whilst from amidst this mass of flowering-shrubs and foliage not less than 2,000 gaslights burst forth, encircling baskets, bouquets, and chandeliers. Statues of Tritons reclining upon fountains, held in their hands olive-branches, the leaves of which were formed of jets of gas. The ball-room was thronged by a crowd of all that was most distinguished in Rome. Princes and nobles of every nation, ladies glittering in jewels and the gayest attire, formed a picture of living flowers, and presented a magical appearance in the midst of a summer-like verdure.

The following day the Pope visited in person the establishment of Mr. Shepherd, examining everything with great interest and attention, and paying to that gentleman the compliments he so justly deserved for the truly English energy and perseverance with which he has now for years battled with difficulties and discouragements of every description.

Shortly after his visit to the works, the Pope sent by the hand of one of his grand chamberlains, Monsignore de Merole, the gold medal of the first class to Mr. Shepherd, and the silver medal to Mr. Shepherd, jun. who had conducted his Holiness over the works, and explained the operations. The medals were sent with every kind of compliment that could be expressed.

On the 16th of February the ball-room was again opened to the public at a reduced price, for three hours in the evening, and was again filled with admiring crowds.

We heartily wish success to this, for Rome, really great and important undertaking, which may justly be regarded as the first step towards placing the Eternal City again in the rank of moving nations.

PRACTICE OF THE STANDING ORDERS OF PARLIAMENT—ROADS, &c.

There are two kinds of non-compliance which may be proved before the Examiners of Petitions for Private Bills in the House of Commons, namely,—first, those which are patent on the face of the plans, sections, and books of reference; and, secondly, those which relate to errors or misdescriptions of particular properties, and which therefore are not in the nature of public objections.

The first kind of non-compliance embraces discrepancies between the plan and book of reference, and discrepancies between the plan and section: errors in the levels, obvious omissions in the plan or section, errors as to mode of treating public roads, errors in the cross sections, &c. will all rank under the first class, and may be objected to by any person who chooses to memorialize the examiner of petitions. On the other hand, misdescriptions of owners, lessees, or occupiers, errors in the notices, errors in the book of reference affecting individuals, and where such errors are not patent on the face of the document, require the signature to the memorial of the person affected by such errors, and an objection of this nature cannot be taken by one of the public indifferently.

In examining into the allegations of memorials, the examiners are very strict in requiring the non-compliance to be clearly and specifically stated, in order that the promoters may clearly understand that which is complained of; and unless the allegation describes a distinct breach of some Standing Order, the examiner will not inquire into it at all.

In the case of objections in reference to public roads it is necessary to allege the non-compliance in the very words of the Order: for instance, if the allegation be that a certain

public road crossed by the railway is not shown on the section, and that no cross section is given. such an allegation is bad, because there is no Standing Order relative to *public* roads: the words should be, *public carriage roads*, with reference to which the Standing Orders contain certain important requirements.

It is the practice with most engineers to describe parish roads on sections simply as "public roads." Also the book of reference commonly contains only "road," "public highway," or "parish road;" so that there is nothing on the face of the deposited documents to show that a road is a *public carriage-road*. Hence any allegation with reference to public carriage-roads will fail equally with one which has reference to "*public roads*," unless it can be shown by local or other evidence that the road is a carriage-road as well as a public road.

In a recent case before one of the examiners, where it was alleged that forty-three cross sections of public carriage-roads were defective and erroneous, the allegation entirely failed, and was not allowed to be gone into, because the memorialists were not prepared to prove that the roads were *public carriage-roads*, the deposited documents merely describing them as public roads. The examiner, in deciding this question, observed that the deposited section ought, in accordance with the model section appended to the Standing Orders, to have described the parish roads as *public carriage-roads*, instead of public roads. As this breach, however, had not been alleged, he could not entertain it. The hint may serve as a warning to engineers in future, who would do well to follow the wording of the model section in describing the roads.

It may be observed, however, that neither the model section nor plan is perfectly immaculate, there being several errors in each of these documents. For instance, in the model section there is one instance of a road simply called "public road," which is treated in all respects according to the requirements for public carriage-roads. All the other roads on the model section, not being turnpike-roads, are described as public carriage-roads—a point requiring attention in the preparation of Parliamentary sections. A very palpable breach of the Standing Orders, however, occurs in the model section, where a gradient about three-quarters of a mile in length is shown rising 5 feet, and yet is called horizontal on the section; and there are several other errors not less serious.

It appears to be the present practice of the examiners, whenever any allegation whatever is made about a public carriage-road, which is simply called public road in the documents deposited, to require proof from the memorialists of the road being a carriage road as well as a public road. This renders it necessary for the memorialists in all such cases either to bring up the surveyor of highways, or some other person, who can prove that he has seen carriages (any wheel carriage?) passing along the road.

An important point with reference to the narrowing of navigable rivers has just been decided by one of the examiners. The 17th Standing Order for the present session is in these words:—"If it be intended to divert, widen, or narrow any turnpike road, public carriage road, navigable river, canal, or railway, the course of such diversion, and the extent of such widening or narrowing, shall be marked upon the plan." In a recent case, it was objected that a railway encroached at several points on a navigable river, and would cut off part of it, and thus narrow the channel; and it was objected that nothing was shown beyond the centre line to denote the extent of narrowing intended. It was contended, on the other side, that the limit of deviation was sufficient, and that the promoters were bound by this limit not to narrow the river beyond that line. It was also contended that the railway might be constructed on piles, in which case no narrowing would be effected.

The examiners decided against the first of these defences, on the ground that a limit of deviation was required throughout the line; and the 17th Standing Order clearly directed something further to be done in the case of navigable rivers. It required the promoters to show, in fact, whether they intended to take powers to narrow to the full extent of the usual limit, or to what extent short of that limit. On the second point, the examiners decided that the supposition of making the railway on piles must be excluded, as the section showed no such intention, which it must have done in order to comply with the 56th Standing Order. The examiners, therefore, held, that the extent of narrowing must be marked on the plan, and this decision will practically render it necessary to show in future by a line on the plan the new bank or margin to be formed for the river, the words "Line showing extent of narrowing" being added by way of explanation.

THE ROMAN PAVEMENT IN BROAD-STREET, CITY.

The Roman pavement discovered under the foundations of the old Excise Office in Broad-street, or more strictly speaking, under those of old Gresham House, has been completely cleared and exposed preparatory to its removal. It is 28 feet square, made up of circles and squares, artistically combined to produce an ingenious whole. In the centre there is a female figure seated on an animal, probably Ariadne, vigorously drawn. The pattern of the border which terminates the pavement is somewhat coarse in design. Although not perfect, the whole design of the pavement is traceable, and the parts remaining are in a good state: the colours are black, red, and white. Repairs with coarser tesseræ are observable here and there. It is 13 feet below the level of Bishopsgate-street; 2 feet below the bottom of the foundations of Gresham House. On one part of it there is an ancient wall of chalk, apparently medieval work: the plaster on this wall has been painted. *Above* the pavement a coin of Hadrian was found, which would give it an age of, at all events, 1700 years! Hadrian visited Britain, and died A.D. 138.

It may interest our readers to know that the buildings now going up with great rapidity on the site of the Excise Office are for chambers. These are being erected under the superintendence of Mr. Tite and Mr E. N. Clifton, by Messrs. Piper. They will all be fire-proof. A small steam-engine has been set to work to mix the mortar and to grind the mortar and rubbish of the old brickwork to make the new mortar. The site is about one acre and a quarter, and was bought by ten gentlemen, who are erecting the buildings in question for 108,200*l*. The buildings themselves will cost, perhaps, another 100,000*l*.

THE HEALTH FUND—DEPUTATION TO LORD PALMERSTON.

A number of influential persons have for some few weeks been considering what could be done, if a sufficient sum were raised by private subscription, towards putting some of the worst districts of London, or portions of them, into a state of defence against the cholera. It was soon found that a great deal might be effected by a properly organised staff, impelled and directed by a well-chosen committee of management, to stimulate, supplement, and assist, not only private individuals, but also public authorities, of whom they would be wholly independent.

But the promoters of the "Health Fund for London" were soon met by the objection, that this which they were about to attempt, or much of it, was, in truth, the proper work of the Government. The promoters therefore felt it their duty to inquire how far Government was prepared to act in putting London into a better state of defence than it had hitherto been.

For this purpose an interview with the Home Secretary was solicited, in a letter setting forth the general views of the promoters of the Health Fund.

The deputation was joined by some others not promoters of the original scheme, who were desirous of ascertaining the intentions of Government, or of bringing forward their own views of the subject, and included Lords Harrowby, Ebrington, and Goderich, Mr. T. S. Cocks, M.P., Mr. Granville Harcourt, M.P., Sir J. Clark, Admiral Smyth, Mr. R. Cocks, Mr. Helps, and many other influential persons. Lord Palmerston, in reply, said Sir W. Molesworth, as President of the Board of Health, intended to bring in an amended Act to enlarge the powers which the present law gave to the Board. For himself, he should feel greatly obliged if any member of the deputation would furnish him in writing with the heads of improvements which any measure of the sort ought to contain, and he would be happy to communicate with Sir W. Molesworth on the subject. Lord Ebrington stated the difficulty experienced by the Board of Health, in consequence of the little power they possessed in carrying out the provisions of the Public Health Act. Mr Helps having made some observations, Lord Palmerston again invited the deputation to make any suggestion they considered important. Several details were then entered into by different members of the deputation, and Mr. Ward went into the proposed remedies for the present evils of defective drainage and supply of water, and, after some further discussion on the points submitted, Lord Palmerston again expressed his willingness to receive any communication in writing from the deputation.

RESIGNATION OF THE METROPOLITAN COMMISSIONERS OF SEWERS.

On Monday, the 27th February, a special meeting of the Metropolitan Commissioners of Sewers was held for the purpose of "receiving, considering, and determining upon the report of Messrs Bazalgette and Haywood, upon the sewage intereception and main drainage of the districts north of the Thames."

The report having been read,—

Mr. Hawes moved—"That the reports be received and circulated amongst the members of the Commission."

Colonel Dawson seconded the motion, and in doing so, he remarked that they were summoned there that day for the purpose of receiving, considering, and determining upon the reports which had then been read, relative to the sewage intereception and main drainage of the districts north of the Thames. They were honoured with the presence of the Lord Mayor, and also of the other City Commissioners. Before they proceeded further, however, he wished to propose that a communication received from the Secretary of State for the Home Department should be read, for the information of the commissioners present.

The following is a copy of the correspondence:—

"Whitehall, Feb. 18, 1854.

"Gentlemen,—I am directed by Viscount Palmerston to transmit to you the inclosed copy of a letter from Mr. F. O. Ward, relative to the comparative advantage of the systems of drainage advocated by the Commissioners of Sewers and the Board of Health respectively; and I am to state that in his lordship's opinion, the system of drainage recommended by the Board of Health is that which ought to be adopted, as combining the greatest degree of efficiency with the greatest degree of economy.

"I am, Sir, your obedient servant,

(Signed) "Henry Fitzroy.

"To the Commissioners of Sewers."

Colonel Dawson then said,—After this expression of a deliberate judgment by the Secretary of State for the Home Department, in opposition to the principle and practice of this Commission, sanctioned by the highest engineering authorities of the day, it is not consistent with our reputation, or with the best interests of the public, that we should continue longer in office than until this board can be reconstructed, and our successors are appointed. I move, therefore, that this Court be adjourned *sine die*.

Mr. Hawkshaw seconded the proposition, saying,—I am of opinion that while the drainage of this vast city is a sanitary measure, and, therefore, may demand the attention of the Home Secretary, and properly be advocated by every enlightened man, yet, as to the modes of construction, i. is strictly an engineering question. Now this Commission have availed themselves of the highest engineering authorities of the day. Besides the services of Mr. Bazalgette, the engineer to this Commission, and of Mr. Haywood, the engineer of the City Commission, they have appointed, and have so far acted under the authority and by the advice of Sir Wm. Cubitt and Mr. Robert Stephenson, the consulting engineers of the Commission. It is not too much to say, therefore, that we have set about discharging the duties devolving upon us in a mode that I think will commend itself to the approval of every practical mind. At length, and with much labour, the Commissioners have arrived at a definite conclusion as to the necessary measures for accomplishing the great objects for which they were appointed; and then comes this—what I must call extraordinary—letter, stating that

the Secretary of State has come to the conclusion that a system in which this Commission cannot concur, is the one that ought to be adopted. Under these circumstances, I think there is but one course for the Commissioners to pursue, which is to decline any longer to fill a position which, under such circumstances, must necessarily fail to secure any useful result. I therefore beg to second Colonel Dawson's motion.

The motion was passed unanimously without comment, and the Commissioners then instantly retired.

We need scarcely inform our readers, before whom the whole question has been so often mooted, that the Board of Health are in favour of self-scouring sewers as against sewers of deposit, and of combined works of back drainage as against separate drains running beneath each house to the front.

The Commissioners remain in office for discharge of the ordinary business. We shall of course return to the question.

SCHOOL OF ART AND DESIGN,

IN CONNECTION WITH THE NATIONAL SCHOOLS OF ST. MARTIN'S-IN-THE-FIELDS.

ON Monday, the 27th ult. a school of art and design, as a branch of the National Schools of St. Martin's-in-the-Fields, was happily inaugurated; a spacious apartment having been erected for the purpose over the day-schools in Castle-street, Long-acre, at an expense of 500*l.*

The Duke of Argyll addressed the assembly, and having made a few remarks upon the general subject of education, proceeded to congratulate his brother parishioners upon the opening of this school of industrial education, designed for a branch of instruction which he classed with the teaching of "common things," and which he felt sure would tend to fit the children for taking advantage of their opportunities in life. He remarked that a very large proportion of the works of art preparing for the Crystal Palace are being executed almost entirely by foreign artists, and that our manufacturers also have been obliged to send abroad for designs; and, as he was convinced that there was no natural disqualification in our population for such work, he trusted that the defect would be remedied by the adoption of a more complete system of education.

Mr. Redgrave, of the Government Department of Practical Art, also addressed the meeting, and explained that, while the original purpose of the School of Design, now located at Marlborough-house, was to educate the designer and the artist workman, it had been found that the plan must be extended, if they were to have a people of good taste for their appreciators, and that the children of the poorer classes ought to have imparted to them a knowledge of the elementary principles of form and of colour, which would be, in fact, teaching them to see more exactly. He stated that it was intended also to use the school in the evening for giving to adults—workmen—a high class of instruction, such as even the middle classes were formerly unable to procure. At a "breakfast" which followed, Mr. Cardwell, Lord Goderich, and Lord Haddo, with other gentlemen, addressed the assembly.

The exertions of the Rev. Henry Mackenzie, the vicar, were very properly acknowledged, and Mr. Cardwell congratulated the parish (as we take leave also to do) on setting an example (though not quite the first), which ought to be widely followed.

THE SCULPTORS' INSTITUTE, AND THE MANCHESTER WELLINGTON MEMORIAL.

THERE has been a long correspondence between the Sculptors' Institute and the Committee of the Manchester Wellington Memorial. The Institute have arraigned the committee for their decision in the recent competition (concerning which we have already expressed an opinion), on the following grounds,—

"First.—That thirty-seven models were exhibited in competition, constituting a cost of from 3,000*l.* to 4,000*l.*, and that (with the exception of one member) the sub-committee of judges were in the room in which they were exhibited for the space only of twenty minutes, and saw them only on that occasion.

"Secondly.—That of the thirty-seven models, thirty-one were of equestrian and six only of pedestrian statues, three of which were contributed by the successful competitor, and that there is a strong presumption that the equestrian models were not at all taken into consideration for the purpose of selection; whereas the terms of the second condition naturally import that models of equestrian statues would be preferred, and all public proceedings in connection with the memorial had distinctly pointed to an equestrian statue as the most appropriate.

"Thirdly.—That the successful competitor enjoyed an undue advantage in having *three* models in competition, whereas the other competitors, by complying with the conditions, were restricted to two."

In their closing letter they say:—

That "as in this country the art of sculptor is dependent mainly on national and public undertakings, so long as open competitions are the medium by which it is determined what the works shall be, the art will progress or retrograde, flourish or decay, teach its humanising lesson in works of beauty, or hold up to the public eye mere imaginings of bad taste realized in bronze or marble, according as such competitions are conducted in a spirit of impartiality and fairness, with deliberation, the requisite knowledge of art, and an earnest desire that the work which is to be dedicated to the uses of future ages may worthily represent the art of the present. And it is only because the Sculptors' Institute desire that our public monuments may be made worthy the genius of a great and powerful nation, and of those they are meant to commemorate, that they feel it their duty to step forward where a competition, by the manner in which it is conducted, is rendered merely illusory."

They have not succeeded in obtaining a reconsideration of the decision, but their interference will doubtless have a good effect on competitions to come.

PROVINCIAL NEWS.

Spalding.—The site of the proposed new market-house has been now conveyed to the Local Improvement Commissioners, and inspected by the architect, Mr. Bellamy; and the old buildings will shortly be sold and cleared away. Most of the stone and some of the woodwork of the old town-hall, according to the *Lincolnshire Chronicle*, will be used in the new building.——The foundations for another Primitive Methodist Chapel have been dug at Westonhills.

Harston.—The chancel of the church of Harston has been recently rebuilt. The style is Perpendicular.

Market Rasen.—A company was formed here some time since for the erection of a Corn-exchange, but, unfortunately, a division took place in the committee on the question of site, two sites being offered, one in a narrow part of Queen-street, the other (the most eligible) fronting the market-place and King-street. The site in Queen-street was purchased, and plans, &c. prepared by Mr. H. Goddard, of Lincoln, architect. The following tenders were sent in:—

Bricklayer, Mason, &c.

Hewitt, Rasen	£775	0	0
Huddlestone, Lincoln	740	19	0
Sanderson, Rasen	728	0	0

Joiner, &c.

Dean and Son, Rasen	682	0	0
Walliss and Son, Rasen	644	11	0
Lewiss, Rasen	585	0	0

The two lowest tenders were accepted. We understand the portion of the committee who were in favour of the market-place site, with a majority of the tradesmen and farmers in the neighbourhood, have engaged the services of Messrs. Bellamy and Hardy, of Lincoln, architects, who have prepared plans, &c. for a Corn-exchange and two rows of shops, one fronting King-street, the other the market-place, which are to be commenced forthwith, tenders being first called for by advertisement.

Ascot Heath.—The following tenders have been lodged for the erection of a new race-stand on the heath; Mr. John F. Clark, of Newmarket, architect:—

Sitcomb, Clewa	£1,312	0	0
Mills, Egham	799	0	0
Oaks and Son, Egham	623	0	0

The architect's estimate was 600*l.*

Higham-on-the-Hill.—The following tenders for the enlargement of the parish church of Higham-on-the-Hill were lodged:—

Mr. William Hawley	£847	0	0
Messrs. J. and G. Lilley	841	10	0
Messrs. Potter, Meridith, and Spencer	804	0	0
Messrs. W. G. and J. Fox (accepted)	798	10	0
Mr. Thomas Harrold	739	4	9
Messrs. Clifton, Hind, Lindley, Fern, and Morton	732	18	0

The lowest tender was *not* accepted, and some of the tenderers declare it to be complete waste of both time and money tendering in such circumstances. In cases where there is not a fair intention to abide by the general rule, it is certainly unfair not to warn the trade that the rule may not be observed. This could easily be done. True it might prevent many respectable tradesmen from tendering: but an argument such as this implies a predetermination to deceive or betray them, under false pretences, into giving their time and money free from the usual and implied restrictive understanding; and this is not as it ought to be,—more especially in church building.

Winchester.—In Saint John's Church the roofs have been retiled (not rebuilt, as stated in a Hampshire paper), the old whitewashed ceiling removed, and the fine old oak timbers of the roofs exposed to view: the walls have been restuccoed, the whole of the unsightly pewing has been removed, and other seats substituted. The organ has been removed from the position which it occupied over the rood screen, where it blocked up the east window to the west end: the windows have been repaired, and several ancient pieces of stained glass brought to light. The east window has been filled with stained glass, the subject being a full-length figure of St. John the Baptist, by Mr. Evans, of Shrewsbury. The ancient rood-screens and parcloses have had the paint cleaned off, and been stained and varnished, the ancient pulpit restored, and removed from the *west* end to an appropriate place at the east end, and the old font has been cleaned and a water drain added. On removing the floor, some broken pieces of stone were discovered, which proved to be portions of the bowl of an earlier font, carved in a rude manner in a very coarse stone. The outlay for the above works was about 600*l.* The contractors were Messrs. Gover; and the architect, Mr. John Colson. Since the church has been out of the architect's hands, a vestry and porch have been added, built of flint and red bricks, with a red chimney-pot on the vestry, and a row of hat-pegs has been carried round the church: hat-pegs have been fixed to the columns, which, with other works, brings the amount of expenditure to 755*l.* to meet which there is only 617*l.* leaving a deficiency of 138*l.*

Bristol.—The new chapel in connection with the Diocesan Training Institution for Schoolmistresses at Fishponds, near Bristol, was consecrated on Thursday in last week. The new chapel is a very small structure, affording accommodation for only 140 persons.

Bath.—The foundation stone of a new district church was laid in the parish of Langley Burrill on Tuesday in last week, by Mr. Neeld, M.P. who has contributed 200*l.* towards the new edifice, which will be in the early English style, and designed to accommodate 800 persons. It will be dedicated to St. Paul. The architect is Mr. Scott, and the contract for the building has been taken by Mr. Jones, of Bradford, for something less than 3,500*l.* It is expected that the edifice will be ready for consecration in the early part of next year.

Merthyr.—From a report made at the last meeting of the Local Board of Health, it appears that nearly 5,000*l.* have been spent in this town since the establishment of the Local Board, in levelling, channelling, and flagging the streets, and otherwise improving the sanitary state of the town. Much yet remains to be done, but

most of all, proper accommodations, draining, and baths and wash-houses; all of which it is hoped will be ultimately accomplished, since they have made so good a beginning.

Cardiff.—The "beginning" which the Local Board of Cardiff appears to be making, does not merit in all respects just such unqualified approval. This board has very properly resolved in the outset to come to an explicit understanding with their "surveyor" and "assistant surveyor," in respect to their respective and much more onerous than odorous duties; or rather, they have laid down the law as to these duties, in a series of resolutions, ranging from 6 o'clock a.m. to 7 o'clock p.m. and with exemplary clearness certainly, such as any truant schoolboy could not fail to understand, however much he might be inclined to shirk their observance. With the main bulk or body of these regulations we do not mean to quarrel: we shall restrict our remarks to the "head and *tail* of their offending." First and foremost, then,—in "summer, 6 to 7, winter, 7 to 8,—the surveyor shall daily, at 7 o'clock a.m., from October to March inclusive, and at six o'clock during all other months, proceed to"—where, do you think, good reader? rummage Cardiff right and left, through all the surveyor's "six days a-week," and his thirteen hours a-day, guessing all the way, and at last you *must* "give it up,"—the surveyor shall in fact "proceed to the stables, see that the horses have their daily allowance of corn, &c., and are sent out in due time to their several works!" In short, the "surveyor, from 6 to 7 a.m." is "master of the horse." But where is the "assistant surveyor" all this time? Deponent knoweth not, but would diffidently suggest that, probably, he is rubbing down the horses! We may be doing gross injustice to the dignity of the "assistant surveyor's" office, however, in saying so; for although, in the tail-piece of this regulative curiosity, the duties of the assistant surveyor are laid down, *he* seems to have "nothing so low" to do as even to see that the horses get their grub: indeed it is even the poor surveyor who must "survey," not only the horses and their "&c." but every &c. in the shape of "nuisances" which he may be able to sniff out, anywhere throughout the town of Cardiff and its precincts, by help of a sharp olfactory organ. [Surely the "board" would see to *that* essential qualification ere they appointed their "surveyor."] In fine, and to be serious,—we again protest, as we have done before, against that gross abuse of words by means of which local boards of health convert "inspectors of nuisances" and men-of-all-work into "surveyors," who are members of a respectable profession as little meriting such a degradation as would local boards of health themselves the certainly at least accordant title of "boards of nuisance."

Bilston.—The half-yearly statement of accounts of the Bilston Baths Company shows, since the opening of the baths, a profit of 27*l.* 4s. 10d. upon the trade account of the establishment, notwithstanding that hitherto the washhouse branch has been all but unused, in consequence of the quality of the water supplied not being suitable for washing purposes. For several weeks the baths also have been entirely deprived of their water supply. The directors have decided on purchasing and erecting an engine of their own.

Liverpool.—The new battery at the north shore for the defence of the Mersey is constructed on a parallelogram 360 feet long by 170 feet deep. The three land sides are formed on the bastion trace, with embrasure windows and loopholes for musketry fire—the river front (360 feet) being the battery for ten embrasure guns, and a tower at each end, armed with one gun in casement below and one at the top. Fourteen guns in all will thus be mounted on dwarf traversing platforms, and it is intended that these guns shall be 68-pounders. In the interior of the fort there will be barracks for the accommodation of 150 men, and suitable apartments for twelve officers. All those accommodations intended for the comfort of the soldier will be provided on a liberal scale, and in accordance with the latest improvements. There will be two tanks for water, with filterers, 40 feet long, 15 feet wide, and 10 feet deep. The mess-rooms, hospital, and other details of the soldiers' requirements will be furnished on a suitable scale. A bomb-proof magazine will be constructed, with provision for artillery and ordnance stores equal to the necessity of the battery. The roofs throughout the building will be flat, with brick arches on iron girders cemented with asphalte, and will, from the parapets, afford the holders of the fort a musketry fire on every side. The entrance to the fortification will be in the centre of the east (or land-side) curtain, and this will be protected by a ditch and drawbridge.

Salford.—The committee of the Salford Royal Museum and Library have determined to establish a free lending library. Sir John Potter has sent a donation of 50*l.* with a suggestion that it should be expended in the purchase of books.

Thornton.—The Thornton Free Schools are just opened for the admission of poor children of the parishes of Burton and Thornton, in Lonsdale. This edifice has been built and endowed at the sole expense of Mr. Richard Thornton, a London merchant, and at a cost of 15,000*l.* to commemorate the place of his nativity—an instance of charitable munificence well worthy the example of other of our merchant princes.

Blackburn.—The corporation have purchased from Joseph Feilden, fifty acres of land for a public park, in the most eligible situation in Blackburn—namely, at the commencement of Preston New-road. The site of the park comprises a pleasant spot called Pemberton Clough. The park will have four entrances—one in Preston New-road, the second in Duke's-brow, the third in Revidge, and the fourth in Shire-brow. The appearance of the park will be enlivened by villa residences, the whole of the land around it having been laid out for first-class dwellings, which will no doubt give an impetus to the building trade of Blackburn, and supply a class of dwellings which has long been wanted for the respectable tradesmen and other inhabitants. The land cost 65*l.* an acre.

Stockton.—To provide accommodation for the butchers, the erection of a general slaughter-house in the outskirts of the town has for some time past been in contemplation by the municipal authorities of Stockton. This matter, so essential to cleanliness and health, is now in a fair way of being carried out.

Sheffield.—A canal at Sheffield burst on Thursday week, and flooded the ground floors of several steel mills, completely stopping the progress of the works. The damage is estimated at 3,000*l.* Connection with an old colliery driftway is supposed to have been the cause of the disaster.

Rotherham.—The superintendent of police here complains sadly of the want of decent lodging-houses in this town.

Bradford.—The first step in the way of a great public improvement in Market-street, says the local *Observer*, has been taken. The property of the ladies of the manor in that street, has been let on lease for a term of ninety-nine years, at a rental of about 1,000*l.* a year, with covenants to expend something like 20,000*l.* in improvements within a specified period. This property has long been a discredit to the town, and a barrier in the way of a really valuable street improvement. The thoroughfare at the back of it, leading from Market-street to Hustlergate, is in a filthy state. "It would make an admirable situation for a town-hall," adds the *Observer*, "though rather an expensive one; or for a new exchange, post-office, &c.; or perhaps for the whole of these combined. Failing this, first-class shops may be erected, equal to some of the most attractive in London, Liverpool, or Glasgow. Whatever may be done with the site, we assume that Market-street will be widened. Nothing worthy of the name of 'improvement' can take place without this forming part of the plan."

Edinburgh.—Alarm was excited among the dense population of the old town of Edinburgh on Wednesday in last week, by the sudden and unexpected fall of a large portion of the old wall of the city, burying in its ruins several children and, it was feared, several other persons passing at the time. Gangs of labourers were engaged in clearing away the enormous pile; and, after some hours' continuous exertion, the bodies of three children had been recovered.——The author of a fly-leaf, entitled "Suggestions for a navigable river from Leith to Edinburgh," states that from Leith Saw-mill to Leith Heads Mill, a distance of about 14 miles, in a straight direction, the number of mills and other public works is as follows:—Flour, corn, and barley-mills, 24; paper-mills, 7; snuff-mills, 5; washing and walk-mills, 2; saw-mills, 1; coffee-mills, 1; spinning-mills, 1; skinners, 6; tanners, 4; distilleries, 2; glue-works, 1; total number, 54.

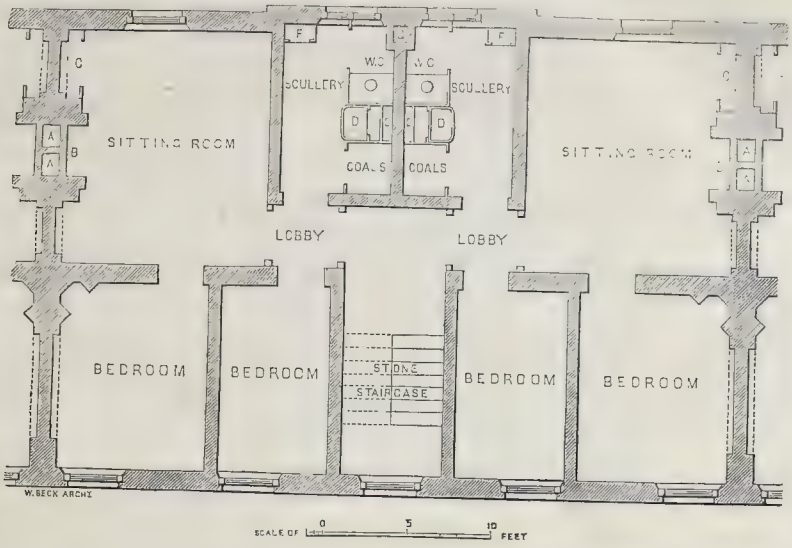
Leith.—The Dock Commission have approved of Mr. Rendell's plan of a graving dock, the estimated cost of which is 30,000*l.* and they have resolved to make arrangements for providing funds for its formation. The subject of harbour defences is at present exciting a good deal of interest, and the Martello tower ahead of the pier is being put in order and planted with cannon.

Kirkaldy.—The Harbour Commissioners at a recent meeting resolved to erect a large breakwater at the end of the east pier, to extend 550 feet, so as to form a part of the west pier; the cost to be from 800*l.* to 1,000*l.* The proposal was favourably received by the town council, and may soon be put into operation.

Greenock.—A proposal has been made here to have a great pile, or cairn, as it were, of stones, put together as a monument to James Watt, and to afford to the whole world an opportunity of contributing to the testimonial, by inviting every admirer of Watt to furnish a portion of the materials of which the monument would be composed—whether, freestone, granite, or marble. Some of the proprietors of Renfrewshire quarries have already offered contributions to the work, but till a considerable mass of materials is laid down, it seems to be resolved not to decide what particular form it shall assume.

Isle of Arran.—The Duke of Hamilton is about to build a spacious hotel in the opening of Glen Croy, one of the most romantic spots on this isle. The duchess, likewise, will build and endow a school at Brodick, which will be in connection with the chapel of ease for the parish of Lamlash.

SAINT PAUL'S CHURCHYARD IMPROVEMENTS.



IT has been suggested by several correspondents that it is a great pity that the fine view of the whole of the south front of Saint Paul's cathedral, now obtained by pulling down the houses opposite to Cook and Co.'s giant warehouse, should be destroyed so far as the east end of the cathedral will be hidden when new houses shall be built on the north side of the street (New Cannon-street) where it joins Saint Paul's Churchyard. The pavement is laid round a triangular piece of now vacant ground at the angle of the new street, as if this piece were to be built on, as doubtless is the intention. We hope the authorities will re-consider this point. Although the plot would doubtless produce a large sum, they might perhaps be persuaded to make a more noble opening into Cannon-street, and erect some public testimonial in the centre of the crossings.

THE COST OF DIRT AND IGNORANCE.

DURING the sitting of the Government commission, held at Newcastle-on-Tyne, to inquire into the cause of the fearful ravages of cholera in that town, Mr. J. B. Hume, the chief commissioner, from evidence that had been laid down before him, made a calculation that the epidemic had cost the town 3,800*l.* for medicines and burials alone, and would cost it 50*l.* a week for eight years to support the widows and destitute—nearly 30,000*l.*! In addition to this sum, he said, some thousands of pounds had been collected and distributed by the vicar. There are also 200 benefit societies in the town, and taking the average loss at 500*l.* each, this made 10,000*l.* more.

A wise expenditure at the proper time would have saved much of the money, and all the misery. Will other towns and parishes and individuals profit by the costly experience of Newcastle?

PLAN OF TWO DWELLINGS, FOR FAMILIES, ON FIRST-FLOOR OF "METROPOLITAN BUILDINGS."

VENTILATION.—THE METROPOLITAN BUILDINGS—MILE-END NEW TOWN.

THE accompanying Plan of two dwellings, for families, on the first-floor of the "Metropolitan Buildings," Albert-street, Mile-end New Town, erected by the Metropolitan Association for improving the dwellings of the industrious classes, shows the arrangement for ventilation adopted by the architect, Mr. Beck:—

AA, are Flues for Vitiated Air.
BB, Ranges, with Boiler and Oven.
CC, Closets.
DD, Sinks supplied with water from a cistern over the coal closets.
EE, Spaces for Soil, Gas and Water Pipes.
FF, Meat Safes.
G, Dust Shaft.

These flues have been found to act very efficiently, are simple of construction, and may be applied to almost any description of building; they are similar to the smoke flues, and are constructed at the *back* of but entirely distinct from them, being made to communicate with the sitting room near the ceiling by means of an earthenware pipe, 3 inches in diameter, passed through the brick-work. The heat from the fires, or even from three or four out of twelve (the same being built back to back), is amply sufficient to rarify the air in these flues to such a temperature as to draw off the vitiated air from the twelve sets of rooms with which they communicate.

THE MOSQUE OF SANTA SOPHIA.

AT a recent meeting of the Society of Antiquaries of Scotland, Mr. Alexander Christie, Fellow, read a paper "On the Mosaic Work used in the Decoration of the Early Christian Basilicas," in which he gave the following particulars of the Mosque of Santa Sophia, at Constantinople:—

Santa Sophia is the largest and most magnificent church ever built by the Greeks of the Lower Empire. In the twentieth year of his reign, Constantine founded at Constantinople a basilica which he dedicated "to the wisdom of God:" it was partly rebuilt and a nave added by the Emperor Constantius, but in this state it only remained some seventy-four years, for, under the reign of Arcadius in 404, it was partly burnt by the Arians in a riot about St. John Chrysostom. Theodosius caused it to be repaired and covered in by a hemispherical vault, but inevitable ruin seemed to be its doom, for it was again burnt during the famous sedition which took place among the factions of the circus, in the course of which 35,000 men perished. Immediately after that terrible event, Justinian determined to rebuild this basilica, and his desire was that it should be "*the most magnificent monument raised since the creation.*" He wrote to the Satraps of Asia and to the governors of provinces to make careful search for marble for columns and for sculptures of every kind, which in their judgment might prove useful in the new building. Art was at a low ebb, they had lost the art of design, they were obliged to steal their brooms ready made; and soon the spoil of temples, baths, and porticos, which ornamented the Asian and European continents, and every island in the sea, poured into Byzantium. Marcia sent him on rafts from Rome eight columns which had been taken from the Temple of the Sun at Baalbec, built by Aurelian. Constantine, the prætor of Ephesus, sent him other eight of black and green marble, doubtless the spoil of the famous Temple of Diana.

Justinian collected workmen, as he did materials, from every quarter, and confided the direction of the works to two Greek architects, Anthemius of Trallis and Isidore of Miletus. They were publicly charged with the sole execution of the orders of the emperor, to whom an angel, it was declared, had given the plans of the edifice; and indeed the eagerness and solicitude with which Justinian pressed on the works gave countenance at least to his belief in the vision. The church not being far from the imperial palace, he caused a gallery to be thrown across from the one to the other, so that he might overlook his workmen at any time without being observed, and there he took his stand, dressed in a coarse linen tunic, his head wrapped in a napkin, and a baton in his hand, he took care to reward the more zealous workmen. The architects had under their charge 100 master masons, each superintending 100 workmen. 5,000 labourers were distributed on the right side, and 5,000 on the left. They were paid for every stone they placed.

When the foundation was cleared, and the first stone ready to be lowered, the patriarch invoked the blessing of the Deity on the immense work, and the emperor, trowel in hand, threw the first mortar on the stones; this mortar had been made with barley-water. Concrete was used for the foundation, to the thickness of 20 feet, and on this firm bed the foundations of the piers rest. The walls are of brick, but the piers are of large freestone blocks, bound by cramps of iron, which were also used for the marble slabs with which the interior is decorated.

When the dome came to be constructed, the emperor sent to Rhodes his three confidants, Troilses, Bazilius, and Coloquintus, to superintend the preparation of the bricks that were to be used in their difficult work. These bricks were of an earth so light that twelve of them only weighed an ordinary brick, and they bore the inscription:—"It is founded by God. God will give help." They were disposed in regular layers, and between every twelfth layer reliques were placed, and the priests offered up prayers for the structure and its stability. It is easy to conceive that minute precautions were required to be taken in the construction of the dome, which is really a wonderful achievement in architecture.

The walls and roof reared, it was determined to decorate them with every magnificence. Gold and mosaics were lavished on every surface, the sides of the walls were covered with precious marbles, the capitals and cornices were gilt, the vaults of the aisles were painted in encaustic, the cupola set off by a mosaic in gold and colours. In general all the paintings were on gold grounds. This is one of the characteristics of the polychromatic architecture of the Byzantines — characteristics which are everywhere to be found in the churches of the eleventh and twelfth centuries, especially in Sicily and Italy. There was besides at Santa Sophia an enormous profusion of precious vases and candelabra, and all the sacred utensils for the grand *fêtes*, such as patina, chalice, and ciborium, were of the purest gold. There were reckoned twenty-four evangiles, each of which weighed two quintals on account of the ornaments with which they were enriched; and we must not omit to mention six thousand candelabra of fine gold, besides two of more massive make and more elaborate ornamentation, each weighing one hundred pounds; indeed, Paulus Silentiarius says, there were in the church so many lamps hanging by brazen chains, and so many candelabra, that the lamps seemed to swim in a sea of fire. The seats of the clergy, the altar, and the pulpit, were not less precious.

It is certain that to bring this vast and costly

work to a satisfactory end, the emperor disbursed enormous sums—in fact, he used up the tribute of provinces and the spoil of barbarians, but all would not do—imposts were increased—emoluments withheld from public officers—the leaden pipes of the city fountains were melted up and replaced by pipes of earthenware, so that *tile drainage* is no modern invention. To give an idea of the expense, Justinian had paid out 152 quintals of gold (200,000*l.*), by the time the walls were a yard above the ground, and the cost of the whole building was, at the lowest estimate, above one million sterling.

At length, sixteen years after its commencement, the Basilica of Santa Sophia was finished. The emperor, desirous that the dedication of so stupendous a monument should be made with all solemnity, mounted a car drawn by four horses, and held his way to the Hippodrome, where 2,000 oxen, 10,000 sheep, 600 deer, 1,000 pigs, 10,000 hens, and 10,000 chickens, were, with 30,000 measures of wheat, distributed among the people. This done, accompanied by the Patriarch Eutychtes, he marched towards the temple. The gates were thrown open, he rushed to the pulpit, and, full of admiration at his own work, he exclaimed "Glory to God who has thought me worthy of this work—I have conquered them, O Solomon." The church was blessed, and the Master Strategius poured on the pavement three quintals of gold, which were scrambled for by the people. The prayers, holocausis, public festivities, and distributions of money lasted fourteen days.

The church, which stands east and west, is built in the shape of a Greek cross. In front of it are, first a cloister, called the *garsonostasion*, or court of the boys (*garçons*), and then two lobbies, the exonarthex and the esonarthex, the latter of which has two side entrances. In the first of these the faithful took off and deposited their shoes. Its walls are of bare brick, and are totally destitute of ornament. It communicates with the esonarthex or inner lobby by means of five gates, closed with bronze screens ornamented with crosses. This second gallery is vaulted, and has a pavement of green marble. The vault was ornamented with mosaics, and one of the paintings represented the Archangel Michael keeping guard, sword in hand. One of the two gates which leads to the street is of bronze, with an inscription inscribed in silver letters, and decorated with meanders, or frets and vine leaves.

The Church Proper was entered by nine gates: these were inlaid with ivory, electrum, and silver, and it was said that the cedar of which they were made was part of the remains of Noah's Ark.

The pavement of the nave is of green proconesian marble, so cut and adjusted that its ribbon-like undulations represent the flowing of four rivers to the sea. In the centre of the cupola is the figure of the Eternal in colossal proportions: on the four pendentions were four cherubim all in Mosaic.

The cornice surrounding the dome is of white marble, and its profile is very simple. The cupola is pierced by twenty-four circular windows, and is covered with plates of lead, which at first were gilt.

Forty large columns separate the nave on the south and north from the aisles, a number which Von Hammer says the Orientals regard as mysterious (for example, the forty thieves). These pillars support circular arches of which the archivolts are decorated with foliage. Their cubical and bulged capitals belong to no order whatever, and present either a hash of foliage or interlaced, or what our antiquaries used to call Runic knots. The abacus is thick, covered with mouldings, crosses, and inscriptions. Above the naves is the gallery or gynæceum for the women and the catechumens: the windows of the nave are of glass framed in stucco, those of the gynæceum are larger, the lower part filled with lapis specularis, and the upper part with glass. At the end of the aisles are the places for the emperors on the left and the empresses on the right.

The pulpit was placed at the commencement of the upper nave. It was of precious marble, covered with gilt pillars and precious stones, and surmounted by a dome-shaped dais or tabernacle, finished by a cross of gold enriched with fine pearls. The space between the aisles and the sanctuary was called solea, and was the place for the readers. The sanctuary or *bema* was closed by a screen of cedar, decorated with twelve coupled columns covered with silver and with medallions representing the Virgin, the Apostles, the Prophets, and the Saviour; above all shone conspicuous the monogram of Justinian and his infamous wife St. Theodora; it had three gates, the centre higher than the others, and all shut by splendid veils.

The apse vaulted above was pierced by three windows looking to the east (it is said that Justinian wished one window, then changed his mind and wished two, when an angel appeared to the architects dressed in the imperial purple and with red slippers, and ordered them to make three windows, one for the Father, one for the Son, and one for the Holy Ghost). In the midst was placed the holy table or altar. As it was the emperor's wish that this table should be more precious than gold, a mixture was made of pearls and diamonds, of gold and silver, of iron and of copper, all of which were melted together. Cedrenus says the altar was made of gold and silver and every sort of precious stone, of wood, of metal—in fact, of everything that could be produced by land and sea, and every material that the universe could furnish. The ground on which it rested was laid with plates of gold, and the table itself was supported by four golden columns: above it rose, in the form of a tower, the ciborium.

LOCKS AND THEIR MAKERS.

INSTITUTION OF CIVIL ENGINEERS.

At the discussion of Mr. Hobbs' paper "On the Principles and Construction of Locks," February 21, a succinct description was given of the various recent modifications generally introduced by makers of locks, and it was argued, that most of them were simply alterations of form, without materially adding to the security. An exception might, perhaps, be made in favour of Mr. Denison's lock; which was so constructed that the bolt was shot by turning a handle, without the intervention of a key, which in fact was only used for placing the tumblers in a proper position, to allow the bolt to be withdrawn, or unlocked, by the handle, the key hole being kept closed during the passage of the bolt; the key might, therefore, be always retained in the possession of one person, whilst the lock could be closed by any subordinate; this was important in banks and other similar establishments. The principle of the bolts being shot by a handle was not new, but the other arrangements were admitted to possess novelty.

Mr. Whishaw's electro-magnetic lock, now exhibiting at the Polytechnic Institution, was explained.

The principle of Mr. Cotterill's "patent climax detector lock" was then examined, and it was asserted to be entirely based upon the Bramah lock, but was less secure in its arrangement, inasmuch as the form of the key admitted of so little variation in the depth of the grooves, for moving the slides,—that a lock, having six slides, might be opened by the end pressure of a piece of soft wood,—and that any lock, on that principle, with any number of slides, could be easily picked by the pressure system.

It was explained, that the American permutating lock, which had been fully described in the paper, was not intended for ordinary domestic purposes, but for banks and establishments requiring extreme precautions for security, and that the chief object in the introduction of Hobbs' moveable stump, or protector lock, was to supply a secure lock at a moderate price.

In the course of manufacturing, the weak points of this lock had not escaped detection, and it was soon discovered that, although the principle was correct, as long as the stump remained moveable, if, by any means, the stump could be held fast, the lock became one of the ordinary tumbler locks, and was as easily picked as the others. For instance, in a till or drawer lock, where the key-hole was parallel to the bolt, it was easy, by the insertion of a piece of watch spring beneath the lock, to catch and hold the stump, and to open the lock. This, however, was prevented [it was said] by the insertion of a tongue in the back plate, fitting into a corresponding groove in the back of the bolt, thus cutting off all access to the moveable piece under the bolt; and further, to preclude access to the stump itself, a piece of steel was riveted into the front plate, reaching through the tumblers into a groove in the bolt, thus placing an effectual barrier between the key-hole and the stump. With these slight additions, which were now introduced, it was contended, that locks constructed on the principle of the moveable stump might be considered secure.

It was shown that Mr. Goater, who was connected with the establishment of Mr. Chubb, had succeeded very ingeniously in picking three of Hobbs' till locks, by the means which had been described, those locks, however, not having the additions for security which had been alluded to. This opening of these locks was admitted to be perfectly legitimate.

[Since this discussion, a series of smart advertisements have appeared from Mr. Goater and Mr. Hobbs, the latter challenging Goater to pick one of his "unpickables" for 200 guineas; and Mr. G. simply replying, "catch a weasel asleep."]

THE LATE JOHN MARTIN.

The majority of our readers have doubtless heard, and with regret, of the death of Mr. John Martin, the painter, which occurred on the 17th ult. at the house of a friend in the Isle of Man, where he was on a visit. Mr. Martin was born on the 19th of July, 1789, and was therefore in his 65th year when he died. Abroad as well as at home his works are too well known to need recapitulation: abroad, indeed, they are better known than those of any other English artist, engravings of them, pirated from those published by himself, having been issued far and wide.

Mr. Martin had devoted much time and money to projects for the improvement of London, the embankment of the Thames, the provision of pure water, and various inventions connected with sanitary objects. We may use his own words to give some idea of these endeavours on his part. "My attention," he says, "was first occupied in endeavouring to procure an improved supply of pure water to London, diverting the sewage from the river, and rendering it available as manure; and in 1827 and 1828 I published plans for the purpose. In 1829 I published further plans for accomplishing the same objects by different means, namely, a weir across the Thames, and for draining the marshy lands, &c. In 1832, 1834, 1836, 1838, 1842, 1843, 1845, and 1847, I published and republished additional particulars—being so bent upon my object that I was determined never to abandon it; and though I have reaped no other advantage, I have at least the satisfaction of knowing that the agitation thus kept up constantly, solely by myself, has resulted in a vast alteration in the quantity and quality of the water supplied by the companies, and in the establishment of a Board of Health, which will, in all probability, eventually carry out most of the objects I have been so long urging. Amongst the other proposals which I have advanced is my railway connecting the river and docks with all the railways that diverge from London, and apparently approved by the Railway Termini Commissioners as the line they intimate coincides with that submitted by me, and published in their report—the principle of rail adopted by the Great Western line—the lighthouse for the sands appropriated by Mr Walker in his Maplin sand lighthouse—the flat anchor and wire cable—mode of ventilating coal-mines—floating harbour and pier—iron ship, and various other inventions of comparatively minor importance but all conducing to the great ends of improving the health of the country, increasing the produce of the land, and furnishing employment for the people in remunerative works."

As the painter of "Belshazzar's Feast," and the "Fall of Babylon," posterity will preserve the memory of John Martin.

THE LODGER HIS OWN LANDLORD.

"COTTAGES for Crown Labourers in Windsor Great Park." This, indeed, is a cheering picture which appears in the last *Builder*; while in the same number is an account of various large contributions in aid of the funds of the Metropolitan Association for Improving the Dwellings of the Industrious Classes. Nor is this all, or nearly all, such information of a kindred character as the readers of the *Builder* are being continually furnished with; for, in the preceding number, we were informed that the "model lodging-house agitation is daily gaining ground in Dublin;" while, in the number before that, different bits of intelligence of a like character are given. Then going still, but regularly back, we next find what the Rev. R. Burgess has been achieving at Chelsea, and Mr. W. B. Denison, at Leeds, in respect to such improved family dwellings and lodgings; and thus on, until I come to the number dated January 14, where I find insertion given to the communication of one "W. C." who, as it seems, although he had evidently heard something about these various very praiseworthy endeavours, yet writes in ignorance, complaining that there are no "decent lodgings to be found for respectable young men engaged in the City."

And what at that time was the reply of the *Builder*? Why this: "If we mistake not, the Albert Buildings, Spitalfields, offer the accommodation required;" and now, Sir, allow me (though doubtlessly rather late in doing so) to say, as one who is at present an inmate of this lodging-house, that, in giving such answer, you were perfectly justified. But, then, is not the locality — *Spitalfields*, or, at least, in close proximity to the quarter so named,—a circumstance, probably, quite sufficient to keep many of "W. C.'s" *over-nice* class at a distance, though to pay, perhaps, almost double, for, in no sense, superior accommodation, in the more "respectable" neighbourhoods, either of the City, or in the suburbs?

And are there not likewise many very poor labouring men in this house,—some of the fifteen, twelve, or ten-shilling-a-week drudges at the different docks east of the Tower, and other parties equally as constrained in means? And all such, probably, may be objectionable company to certain of these "young men of the City." Wherefore, then, the remedy?

Why, in this way: That these said "young men"—numbering, as they do, so very many thousands, clerks, warehousemen, shop-assistants, &c.—should call together a meeting of their own peculiar interests—explain their own wants to each other—debate the best means of a change for the better—subscribe their own money—and, next, purchase or rent their own piece of ground, choose their own architect, and have erected, in such place, and of such construction as shall, in like way, meet their approval, the exact sort of building suitable to their special tastes and circumstances; and so to do for themselves that which "W. C." would fain have others to effect for him and his co-complainers, —"respectable young men engaged in the City."

Nor, in such a city as London is, with its immense crowding of comfortably-salaried single, young, middle-aged, or yet older men, would this be an extravagant attempt; for something of the like character has already been achieved —been achieved by the like interests, the clerks and shop-assistants of Dublin,—as, when I went over to that city as a visitor to its industrial exhibition of last year, I found was the case; a noble clump of house-accommodation, in one of the most agreeable situations, contiguous to the river Liffey and the suburb Custom-house, being then in the possession of those kindred classes of whom "W. C." writes about; these "respectable young men" of that Irish capital, having so bestirred themselves to secure a greater share of the *home-like* for their evenings and their Sundays, than otherwise was to be obtained.

Now, would not a similar endeavour and its accomplishment be worthy of the London "young men," as well as those of Dublin?—of those really powerful sections of the general community who have already created their "Whittington Club"—their "Crosby Hall" educational classes—their society for "Early Closing;"—and who, besides all this, make up the preponderating influence in what are usually named as Mechanics' Institutes. But then arises the very natural reflection, that these "*young* men," as they are, although now "single," and therefore abiding in lodgings, are certainly not always to remain in this state of isolated independence, but that, some time or other, the *tender* passion may become the stronger one, and when such place of abode will be no longer required. Well, and even so, would it not still be a consideration of prudence, to have the power of selling out any such share so possessed, even if it were for no other purpose than to realise the more abundant money-means towards furnishing their now family home? Or, not being so constrained, might not the investment be still continued, and the profit arising therefrom be consolingly looked upon as a most needful addition, for the future, to their accustomed salary—no matter how paid, quarterly, or by the week?

Indeed, be but the thing properly considered, and there can be no question whatever as to the practicability of even the Lodger advancing himself, in tl is manner, into the position of the Landlord. Self-exertion—the faith that such self-exertion would be certain to create in the so-named "wealthy classes," and probably among the majority of the employers of these very clerks, warehousemen, and shop-assistants, would be the fulcrum to do it all; the employed adequately, themselves, subscribing in the first place, and, next, the more affluent conferring their help, either by way of donations or as loans; for what worthier assistance could be given, than that of enabling the now so generally much inconvenienced "single men"—clerks or shop-assistants—to live at the least possible cost, in combination with the greatest amount of comfort?

Offering, then, the suggestion embodied in these remarks to the serious attention of "W. C." and others in a like situation, and having the like desires, I may perhaps return to another phase of the same principle, as applicable to those very important interests which go under the name of Trades' Unions.

J. D. D.

FOREIGN ARTISTICAL INTELLIGENCE.

The real Birth-place and Lineage of Rubens.—A Dutch man of letters, M. Bakhuizen Von den Brink, occupied with researches in the Netherland archives, has of late published a work on William of Orange, and his wife, Anne of Saxony, to which personages the great Flemish painter stands in some relation. The father of Peter Paul Rubens, Johann Rubens, or rather Ruebens, was born in 1520 at Antwerp, of an opulent family. He visited Italy, and became a doctor of both laws. Having espoused the cause of Protestantism, he still succeeded in being elected six times an alderman of his native place; until, in the year 1568, he had to flee from Antwerp to Cologne. It was here that Johann Rubens became acquainted with J. Betz, a councillor of Malines; and when William of Orange waged war in the Netherlands, his wife, Anne of Saxony, came also to Cologne. As Betz was one of the advisers of Anne, Rubens was introduced to her, when the former had gone to Vienna on some business of the princess. This led to an intimacy, of which the birth of a child was the consequence, which brought much unpleasantness on the princess, while Johann Rubens himself was imprisoned at Siegen, by order of the Duke of Nassau, in 1571. Here the magnanimity of the mother of Peter Paul Rubens, Maria Pepeling, whom he always revered so much, shone forth most brightly, as she did not cease to interfere for her unhappy husband. Johann was only released in 1573, when he obtained permission to leave on parole in Siegen, and there they yet resided in the year 1577, which has been universally received as the birth-year of the great painter. It was not until 1578 that Johann obtained his full liberty, by a compromise with William of Orange, Princess Anne having died some time previous. In 1587 the father of Rubens died also, and his magnanimous widow erected to him an epitaph, *hiding*, by a *pious fraud*, from posterity, his faults and misfortunes. On it was written, amongst others, "*Seque Coloniam Agrippinam omni cum familia recepit, in eaque* 19 *annos transegit.*" This was the reason why Cologne had been constantly assigned as the birthplace of Rubens. One of the extant letters also of the great painter, in which he says, "I have a great predilection for Cologne, because I have been educated there up to my tenth year," coincides with this assumption, as if *born* there, he would have differently expressed himself.

German Pictures of American Subjects.—The death of *Mr. Hassenclever*, one of the *chief artists* of the Düsseldorf school, has afforded the Academy an opportunity for exhibiting, conjointly with the paintings of that master, works of other stars of that school. Amongst the pictures exhibited, that of *Emanuel Leutze*, "Washington at Monmouth," is the most important. If in the former tableau of Leutze "Washington at the Delaware," the moral courage of that great man is vividly portrayed, the present production is a representation of the physical difficulties he had to cope with. This huge picture (13ft. by 21ft.) is also interesting on account of the beautiful grouping of the American army, composed as it then was of such motley and different elements.

Rome.—Art Festivals.—For celebrating the presence of Prince Frederick of Prussia, Cardinal Antonelli exhibited before H. R. H. his rare collection of miniatures of all the art-epochs of the middle ages. An unusual sight, moreover, was prepared for the Prince, by the Pope ordering that all the compartments of the Vatican Museum of Ancient Sculptures should be lighted up. The Prince perambulated with the other guests the Braccio nuovo, the Cortile, in which are placed the Laocoon and the Apollo of Belvedere, the Sala Rotonda, that of the Muses, of the Candelabrum; which all appeared doubly enchanting under this mystic and unusual illumination.

Rome.—Chennevières, Ph. Dr. "Archives de l'Art Francais" (Archives of French Art), Paris, 1853. 2 vols. 8vo. It is a felicitous idea of M. C. to have collected documents scattered in the various libraries and archives of France, for affording us a somewhat greater knowledge of their great men in art. The greatest portion of the work contains autograph letters. Poussin, that great star of olden French art, opens the collection of documents, in which we find him first called (in 1609) Nicollas *Pouchin*. His death certificate made at Rome 29th November, 1665, corrects the date hitherto assigned to his demise. In his letters Poussin is at times formally incorrect, but always great.(!) In one he says, "I have only nourished myself by great works; I seem to swim when I work at them, and the marbled canvas shines before me, however huge it be." Amongst other interesting documents is also a careful list, made by Dussien, of all pictures and drawings of Lisueur, with indications of the collections where they are to be found; also, an elaborate essay on the *Liber veritatis* by Claude Lorraine. At his death in Rome in 1682 he left to his nephew this collection of 200 drawings, which he called his "book of inventions or book of truth." When first sold the price was 200 écus, 5s. a piece; they now are a chief ornament of the collection at Chatsworth.

EVILS OF CONTRACT WORK.

IT is now about twenty-two years since I first took any part in building operations, and at that time we could have any number of real good workmen in my town at 1*l.* per week, men who prided themselves on the quality of their work, and could turn off a very fair quantity of it. *Now*, in the same district, it is impossible to obtain a decent hand at 24s. per week. This I attribute to the degenerating system of contracts, of which I have had very convincing proofs, for the same men who, ten or twelve years back, were excellent hands, are now slovenly and indifferent, having been employed on cutting contracts, where quantity and not quality has been the chief consideration. This of course has a still worse effect on apprentices, for having such bad examples, it is not to be expected they will attain to even moderate skill: it is really dreadful to see the work produced by young men just out of their time. I

have set on numbers of them with the hope of finding one moderately good workman out of the lot, but am sorry to say it has been both a loss and a failure. My remarks more generally apply to bricklayers and joiners. The improper manner in which many are admitted into the trade ought to be discountenanced. I have known several bricklayers' labourers after serving in that capacity for a year or two, take up the trowel and obtain employment under a *contractor*. There is one in my neighbourhood now, who a few years ago was in my employ as a knight of the hod, and who is now a general contractor himself. I leave you to guess what kind of work he produces: horizontal and perpendicular lines seem to form a very small part of his study. I have no hesitation in affirming, that although one of the most populous parts of the kingdom, not one in twenty of our building operatives approaches even mediocrity.

JACK-PLANE.

AN IRON CUSTOM-HOUSE FOR PAYTA, IN PERU.

GREAT progress has of late years been made in this country, in the construction of iron buildings. They have been adapted to domestic, commercial, and even religious purposes, and exported chiefly, but not exclusively, to our colonies. Dwelling-houses, stores, and churches, have all found their way from this land, to be planted on distant sites, where labour is either less skilled or more costly. Messrs. E. T. Bellhouse and Co. of Manchester, are now constructing a custom-house, intended for Payta, in Peru, and an extensive warehouse, or store, having the same destination. The *Manchester Examiner* gives the following particulars of the custom-house:—The structure is a quadrangle, of 70 feet square, and consists of two principal stories, but is by no means limited to this in height, for there rises from the centre a circular tower, standing on a platform 22½ feet square; and above this, a second round tower, surmounted by a cupola, pierced by a flagstaff, from which floats a union jack, the height from the top of the flagstaff to the ground being 100 feet. The erection is now put together in a temporary manner, so as to give assurance of its being perfect in all its parts. When placed on its intended distant site, it will rest upon several courses of brickwork, with stone blocks beneath the main supports. A cast-iron moulded base runs round the foot of the entire building. The first, or ground story, is 12 feet high, having on each of its four sides six strong iron pilasters, in addition to the one at each angle. The space between the pilasters is filled with corrugated galvanised iron, of the thickness known as No. 16 of the Birmingham wire gauge. The corrugations are vertically arranged, and each 5 inches broad. The front entrance is through a door 6 feet wide, having a window immediately on each side of it, giving access and light to a spacious passage through the building, 13 feet in breadth, there being a similar door and pair of windows at the other extremity of the passage. In addition to the windows lighting the passage, there are four other windows in front, two on each side the entrance, whose height is 8 feet, and breadth 4 feet. The casements open inwards, and have guards of iron rods externally. A cast metal moulded string-course finishes the top of the first story, immediately over which is a balcony, projecting 6 feet 6 inches from the face of the building on each of its four sides. The outer edge of this continuous promenade is protected by a wrought-iron railing, having a casting of the arms of Peru in the centre of each separate piece. On entering the broad passage, there are four rooms branch from it, on each side, thus furnishing eight apartments, besides a transverse passage, 6 feet wide, from which rises a metal staircase. On reaching the second story, the passages are of the same dimensions as those beneath, but the rooms are divided into offices half the size, so there are eight on each side the principal avenue—in all sixteen; and each set has a direct internal communication the one with the other, without coming into the passage. The outer windows are the same in the upper as in the lower story, and the pilasters are also continued from the ground to the top of the second story. There are also neat folding-doors leading to the surrounding balcony. The roof, which is also of corrugated iron, stretches over the walls (if we may so call them) to the extent of 7 feet, forming a verandah above the balcony, so as to shelter it from sun and rain. The verandah is supported by open metal cantilevers, and near its under edge it is strengthened by a cast-iron ornamental drop. On ascending the third staircase, we reach a floor in the roof. From the level of this floor to the springing of the roof, there is a distance of about 5 feet; and the roof, instead of finishing in a ridge or apex, terminates in a platform, 22½ feet square, and this platform is 14 feet above the floor beneath it. The platform is supported by eight strong metal columns, which are square to the top of the second story, but circular in the roof, where they are attached to wooden beams, which constitute the framework of the platform. A moulding of cast-iron forms the boundary of the platform, with ornamental railing; and from the central part rises a round tower, also of corrugated metal, 15 feet in height, and 15 feet diameter. It is strengthened vertically by four upright T irons, and rests on a moulded base, firmly attached to the platform, and to secure it still more firmly, there are four tie-rods within, attached transversely. It is lighted by four windows, and has one door leading to the outer platform, which forms a second balcony, and will be covered with lead. From this tower a large clock-dial will be visible, the works being by Mr. J. Bailey, and it is in course of being put into operation. On the top of this tower is a strong flooring, from which rises a smaller tower, 8 feet 6 inches in diameter, and 9 feet high, terminating with a cupola, surmounted by a cast-iron ornament, having an aperture in its centre, through which is placed a flag-staff, from which waves a union jack. Around the upper tower, which is pierced with four windows, there is also a gallery, protected by hand-railing. The entire height of the building is a little over 77 feet. The partitions between the various rooms and offices are constructed, in the first place, of a timber skeleton; this is covered on each side with boards; then pasted over with paper—on this is a coating of felt; and lastly hung with paper. We understand it is built to the order of Messrs. Gibbs, Bright, and Co. London. These buildings have been executed by Messrs. Edward T. Bellhouse and Co. under the superintendence of Mr. Edward Woods, C.E. The architectural details have been arranged by Mr. Edward Salomons, architect, of Manchester.

IMPORTANT TO BUILDING SOCIETIES.

A BANKRUPT of the name of Barrell, who had acted as treasurer to the Barnstaple Benefit Building Society, and at the time of his bankruptcy was indebted to the society in the sum of 777*l.* came up for judgment on the 18th ult. An application had been made to the Court of Bankruptcy, under the 167th section of the Consolidation Act, by the trustees of the society, praying that a sum of 413*l.* now in the hands of the official assignee, might be paid to them in part payment of the sum withheld from the society by the treasurer bankrupt. The affidavit in support of the application, set forth that the society was duly enrolled under 6 & 7 Wm. 4, and the rules certified by Tidd Pratt; that the bankrupt was duly appointed treasurer in 1847, and acted as such up to September, 1851. That in virtue of such office, he received 820*l.* of which he had failed to pay 777*l.* in to the society's bankers, in the names of the trustees, as was his duty to do.

Counsel for the trustees urged that the money in the hands of the Court, was *de facto* and *de jure* the property of the trustees, and that the bankrupt's other creditors had no right to share it.

The Commissioner, Goulburn, said the section under which the application was made, provided "That if any person appointed in any office under the Friendly Societies Act, should become bankrupt, the Court were empowered to deliver any moneys or securities proved to belong to such society, in the hands of the officers of the Court, to the trustees of the society."

This section, if taken in its widest possible sense, would include a great many cases which the Legislature could hardly have intended, and would divert the whole of the bankrupt's estate and effects from the rest of the creditors.

This provision was originally introduced in the Act of 4 & 5 Wm. 4, cap. 40, but was then confined to societies for charitable purposes: it was subsequently extended to building societies by 6 & 7 Wm. 4, cap. 32. An important provision still unrepealed, and applying to all these societies, was found in the 10 Geo. 4, c. 56, s. 11, which enacted that the treasurer should enter into a bond if required so to do by the rules of the society, with two sufficient sureties for repayment.

Counsel for the trustees said, that by the rules of this society it was optional with the Board to require security or not. The 8th rule provided—"That the manager or any other officer filling a situation of trust shall, if required by the board, give such security, pursuant to the Act, 10 Geo. 4, c. 56, s. 11, as they may deem proper for such of the society's property as may be intrusted to his or their charge."

The Commissioner said, in this case the security had not been required by the board, and that was part of the omission and neglect of duty of which the officers of the society had been guilty. The officers had neglected another important rule, which would have saved them the loss of their money. There had clearly been great neglect, not only in demanding security of the treasurer, but in allowing the money to remain in his hands. He thought the reasonable construction of this Act of Parliament was, that though the money might have been originally received by the bankrupt as an officer of the society, it did not continue to be money in his hands as such officer if he dealt with it not only not precisely as the Act directed but in a way directly contrary to it. An opposite construction would conflict with the first principles. It would enable the trustees to take advantage of their own wrong. They would be permitted to lie by—would almost be induced to do so. The trustees had never thought of this application until they had tried every other mode of compelling the bankrupt to pay. This was altogether beside the first point, on which the Court principally relied, that societies of this description, however meritorious, must not be permitted to do what no other persons could do, viz. to take advantage of their own wrong. Under these circumstances, and considering that the trustees had not chosen to be satisfied with their simple claim as creditors to come in *pari passu* with the others, he should refuse the motion with costs to be paid by them to the assignees.

This decision precludes the trustees sharing in the assets, and will, no doubt, tend to make building societies cautious for the future.

IMPROVEMENTS IN THE CONSTRUCTION OF RAILWAYS.

THE variety of modes adopted for securing the iron rails to the sleepers by cast-iron chairs of many forms with wood wedges, have hitherto proved dangerous for travelling and injurious to the rolling stock. "Fishing" the joints of rails, although an improvement on the old mode, is still defective, as these "fished" joints are placed between the sleepers, and consequently have no under bearing to support the deflection made by the ponderous locomotive. To supersede the cast-iron chairs which are so liable to break, and the wood wedges which are so liable to become loose, as well as to remedy the defects of the "fished" joints, a patent has been obtained by Mr. A. Doull, C.E. for a wrought-iron chair suitable for wood, stone, iron, or other sleepers, as it binds together, it is asserted, the rails, chairs, and sleepers, by screw bolts, without the expense of constant watching and replacing the cast-iron chairs and wood wedges of the present defective permanent way arrangements.

HOUSES IN THE BROAD SANCTUARY, WESTMINSTER.

OUR engraving represents the block of eight houses in the Mediæval style, which has been built under the direction of Mr. Scott, architect, in the Broad Sanctuary, closely adjoining the west end of Westminster Abbey. The opening in the centre is the entrance to Dean's-yard.

The whole frontage is 137 feet 6 inches. There are six floors in the houses, including the basement. The internal fittings will be in the same style; and the whole cost will probably exceed 20,000*l.* Bath stone is used, from the Box quarries. Mr. Myers is the contractor; Hannum the clerk of the works.

The same architect and builder have commenced a district church for St. Margaret's, Westminster, close by, to accommodate 1,102 persons, including children, at a cost of 7,000*l.* There is to be no tower, but a turret at the junction of the nave and chancel. The aisles of the nave show five gables on each side, externally. The style is the Geometrical.

Some very large houses are being proceeded with in Victoria-street. When completed, this will be one of the extraordinary parts of the metropolis.

HOUSES, BROAD SANCTUARY, WESTMINSTER.—Mr. G. G. Scott, Architect.

THE CRYSTAL PALACE AT SYDENHAM.

From the report presented to the meeting of the shareholders on Tuesday last, called for the purpose of issuing fresh shares for a quarter of a million, we learn that "the present amount of share capital is 750,000*l.* of which 700,150*l.* has been received. The amount expended up to the present time is 679,720*l.* the details of which are given in the following statement:—

Land—Total amount paid...	£105,728*	
Deduct amount received for resales.....	55,488	
		£50,240
Purchase and removal of the materials of the original building.....		95,000
Construction of the main building of the Crystal Palace.....		135,050
Tunnel, heating apparatus, &c.....		24,536
Wings of the Crystal Palace, water towers, &c.		34,090
Hydraulic works, fountains, cascades, lakes, basins, artesian well, reservoirs, &c.		93,670
Park, terraces, gardens, walls, balustrades, decorations, &c.....		98,214
New roads and approaches, fencing, &c.		4,350
Interior of building, plants, garden works, fountains inside the palace, &c.		6,450
Natural history illustrations, including geographical islands, preparation of extinct animals, zoological and ethnological collections, raw produce, and agriculture		11,176
Fine Art Courts—Pompeian, Alhambra, Assyrian, Greek, Roman, Egyptian, Mediæval, Renaissance, Italian, and Byzantine		52,500
Collection of sculpture, foreign and national, portrait gallery of busts, pedestals, &c.		32,060
Sundry fittings, boardings, gas-fittings, &c. throughout the building.....		7,000
General expenses, including engineering staff, superintendence, officers' salaries, law and parliamentary expenses, surveying, rent and taxes, and miscellaneous disbursements ...		35,384
		£679,720."

The directors have taken a lease of Dulwich-wood, immediately opposite the building, for eighty-four years, at a rental of 3,000*l.* per annum. They have no doubt that the building will be opened to the public at the latter end of May next; although it cannot be complete in all its details.

THE STATUE OF RICHARD CŒUR DE LION.

There is but one opinion upon the present site chosen for this statue—that it is bad—that it will not do. It is said to be temporarily placed there, merely to see the effect, &c.; but since the "temporary" elevation of Wellington upon the arch at Hyde-park-corner, I always tremble when I hear that any other statue is to be "temporarily" placed in a particular spot. Wellington has become a fixture, and what is worse, a monstrosity. Let not this fine work of art meet with a similar fate.

It seems to be desired that a locality in the neighbourhood of the Houses of Parliament should be chosen. What objection is there to the open space in front of the Treasury? There is ample "room and verge enough," and a situation where all the "lines" of the artist could be well appreciated. With his face looking up Charing-cross, and his back to the houses forming the end of Parliament and King streets, I venture to predict the situation would be most desirable, and the effect good. As the position now chosen is decidedly *bad*, might not the statue be "temporarily" placed where I have indicated?

If this statue is too large for the situation I have named, there is a small statue in the neighbourhood which deserves a better fate than it now meets with; I mean the statue of James II. by Grinling Gibbons, at the back of Whitehall, and which not one in a thousand people either see or know anything of. Bring this out of its hiding-place, and set it up there, instead of allowing it to remain now, I may say, unknown. London is not so rich in its statues, that it can afford to bury them under a bushel.

Pedestrian.

* Amount to be paid for land..... £65,000
Ditto to be received for land sold 62,500
Balance to be paid £2,500

SEWER ACCIDENT AT CHELSEA.

A frightful accident, attended with loss of life, occurred last week at Wilderness-row, Cheyne-walk, Chelsea, by the falling in of a sewer. It appears that Mr. Eldridge has the contract to make a new sewer, and that he adopted the plan of driving or tunnelling, after a trench was sunk, thus saving the cost of excavating a trench the whole length of the sewer. Whilst at this tunnelling work, a bricklayer and a labourer became buried alive at a depth of 24 feet, and it was eight hours before the poor fellows could be got out, they were of course dead. An inquest was held upon their bodies, and the jury somewhat reluctantly found a verdict of accidental death. Our reporter says, being upon the spot shortly after the occurrence, it may do no harm to observe, that the excavators at work attributed the accident to the contractors being too sparing of supplying timber, and this opinion would seem strengthened by the fact of the sewer again falling in on Sunday, endangering the houses on its brink, the inhabitants of which were compelled to quit for fear of their lives. Mr. Eldridge had the poor fellows decently buried on Monday.

THE MANUFACTURE OF GLASS.

In the course of a lecture on glass at Sunderland, before alluded to, Mr. Hartley referred at some length to a "considerable social revolution" which arose through the abandonment of kelp and frit in producing the metal. Along the northern shores of Scotland and west of Ireland, a considerable population was employed in producing the article, one-half of which was kelp, and the other earthy matter, consisting of lime and charcoal. Till within the last twenty-five years this was employed, and the produce of glass was limited by the quantity of the article which was produced in the districts referred to. In those days its cost would be somewhere about 10*l.* per ton, but so great has been the change effected by the later improvements in producing the metal, that he had purchased a quantity of it a few months ago at only 3*l.* a ton. Mr. H. then noticed some of the ingredients which had been substituted for this article, and observed that iodine and soluble salts were now the more important components of the kelp. A great outcry, he said, had been raised against the proprietors in those distant quarters of the country, and they were charged with allowing the people on their estates to starve. If, however, people were fully to investigate the cause, and exercise a little charity (and philanthropists themselves might be fairly included in this advice) instead of condemning the proprietors of those districts for their tyranny, it would be seen that the progress of science—over which the proprietors had no control—had been the cause of much of the distress that prevailed; and if the efforts of the public had been employed to transfer the people to places where their labour would have been more valuable, a much better idea of the position of the parties would be obtained. As much as 150,000*l.* a year had been withdrawn from those districts, and the whole process superseded by a new description of alkali. This introduction was of so modern a date that the whole change had taken place since his connexion with the glass trade, and in the application of the new material he had taken an active part. Mr. H. then described the production which had taken the place of the natural alkali, and the various processes through which it passed. In explaining the model of the pot which stood on the platform, it was stated that the pots in use held one ton of material, and that in twenty hours their contents were converted from the raw mixture which had been originally put in, to a piece of plain transparent glass. Referring to the heat which was applied to the furnace, Mr. H. said that fully eighty per cent. of it was wasted; and with regard to the feasibility of the plans proposed for the consumption of smoke from glasshouses, he expressed considerable doubts as to the amount of saving which would accrue from the best of them. To reconcile the inhabitants of the borough to what he called the "black flag," which daily waved over them, Mr. Hartley said that while the town was a customer of his to the extent of 500*l.* per annum, he paid for labour alone the sum of 25,000*l.* a year, the whole of which might be said to be spent in the High-street of Sunderland, while this was independent of the expenditure in the town for coal, timber, &c.

ART IN MANCHESTER.

On Monday evening a lecture was delivered on the above subject, at the Mechanics' Institution, by Mr. Hammersley, principal of the Manchester School of Design. Mr. Hammersley commenced his lecture by giving a popular definition of the term "art." Art was generally understood to be something that was connected only with the wealthier classes, who could expend their money in ornamental pictures, statues, rich furniture, and other things of that kind. Another view was, that art could only be understood by wealthy people, and that it did not at all belong to the other classes. Art, however, was a very different thing. He could not help considering that it belonged to all classes of the people. It consisted of a feeling for beautiful things—for those things that were harmonious in colour and rich in appearance. All persons had a craving for something in addition to what was merely useful; and all men and women came into the world with a taste for what was beautiful. There was an instinct in the human mind towards the poetical and the beautiful—towards that which is more than what we wanted to serve our daily wants. If this, then, was a right notion of art, there was an education wanted to make us understand what art really was. This education was the power of seeing—of forming the eye to make an analysis of objects. Two persons would walk in the country, one of whom would be vividly impressed with the beauties of creation, but the other would pay not the least attention to them. Now in this there was something wanting—the want of a power of observation. It was an education that had nothing to do with academies and schools, but was a social, or home education. It had more to do in enabling us to see beautiful things and take impressions of them than all that could be done in schools of art. Then there was the education to be obtained at academies, and he regretted that, in Manchester, there were not half-a-dozen more than at present existed. There was also the education of picture-galleries—the print-shops and the windows of Manchester. The education to be obtained from picture-galleries was great indeed. The exhibitions of Manchester were complete schools, if properly viewed. But in most instances they were improperly viewed, because people generally went to these exhibitions not to take in impressions, but to enjoy the quiet which they afforded. In conclusion, Mr. Hammersley showed that these galleries might be made educational, by endeavouring to find in the pictures a truthfulness of expression.

THE MICROSCOPE.

The importance of the microscope in numerous investigations is becoming more and more felt: its use has already done much to enlarge the boundaries of science, and, unless we are deceived, will yet do more.

"The accuracy and facility with which the appearances of ordinary microscopic objects may be observed, and the interest which attaches to such observation, from the sense of penetrating into the hidden and obscure recesses of nature, have further rendered the microscope a favourite means of recreation with many whose inclination and disposable leisure do not permit them to become professed cultivators of any one branch of science, but who gladly avail themselves of any means by which they can readily make a better acquaintance with the objects of their favourite study."

We observe with pleasure, therefore, the announcement of a guide to the examination and investigation of the structure and nature of microscopic objects, by Dr. J. W. Griffith and Mr. Arthur Henfrey, F.R.S. to be entitled the "Micrographic Dictionary." The subjects to which this dictionary will be devoted may be briefly summed up as follow:—

1. Instruction in the selection and use of microscopes and the various essential pieces of apparatus connected with them, with a description of the methods of ascertaining the structure of objects which can only be studied by their aid.

2. The characters, structure, and, as far as possible, the natural history of the genera and species of British animals and plants of microscopic dimensions,

together with a description of the microscopic organs and appendages of animals and vegetables generally.

3. An account of the elementary tissues of the two great kingdoms of organized beings, with full information on the methods to be pursued in investigations in this department. And

4. The distinguishing characters of the inorganic matters occurring in animal and vegetable fluids.

If long experience of the use of the instrument in the most varied fields of research, close application to the study, and full knowledge of what others have done before them, be the right preparation for a work of this kind, as we believe it to be, we may safely augur that the book announced by Dr. Griffith will prove a very valuable contribution to science.

Notices of Books.

The Colonist's and Emigrant's Handbook of the Mechanical Arts. By ROBERT SCOTT BURN, Engineer. Blackwood, Edinburgh and London, 1854.

WE do not hesitate to say that this is one of the most valuable and important condensations of practical and useful knowledge for emigrants and colonists that has been written,—and not for these alone but for small householders, farmers, tradesmen, and mechanics themselves, at home as well as in the colonies, though in the latter, of course, where skill and labour is so costly, and so often not to be had at any price, such a work must be doubly useful. The author has himself sojourned amongst colonists, and being also a practical mechanician, he has known what was wanted, and how to bring his practical knowledge to bear on what was most wanted. Much of the book is doubtless, as the author modestly admits it to be, compilation, but compilation which he has turned to excellent account for behoof of those professionally ignorant of the various branches of mechanical handicrafts, and at the same time too much occupied to be able to study large works on each separate subject, even did they possess them. The whole book extends to only 130 pages, large octavo, and is profusely illustrated with wood engravings; yet the variety of its contents is very great, as may be gathered to some extent from a cursory enumeration of the general sections into which it is divided, namely,—house arrangement and conveniences, with much information as to chimneys, fireplaces, stoves, cisterns, water and filters, ventilation, cottage planning, &c.—house construction, including what is requisite or advisable as to foundations, framework, walls, drains, materials, &c. &c.—house carpentry and joinery, in all their branches,—smithwork,—brickmaking,—exterior and interior finishings, plastering, painting, &c.—mortars, concretes, cements,—enclosure of lands, fences, —road-making,—well-sinking,—farm and agricultural buildings.

Mr. Burn may be remembered as a contributor to our own columns, so that we need not present any quotation as a mere example of his style of writing; but in order to give our miscellaneous readers some more detailed idea of the nature of the information to be gathered from this mechanical *vade mecum*, we shall quote a passage, exceedingly useful to many in itself, from what is said as to interior house finishing:—

"Plastered walls may be *painted* in distemper,—that is, by colours worked up with size instead of oil. The size is formed of a solution of glue. A good substitute for this size can be made by preparing potato-starch, adding some of it to a mixture of whiting and water. This colour has no smell, and makes a beautiful white colouring-wash for ceilings. Where whiting cannot be procured, chalk may be pounded very fine, and washed with pure water. In mixing up whiting and size for this kind of painting, any desired tint may be given by adding the colour finely ground. It must be borne in mind, however, that the colour will dry on the walls of a lighter tint than when mixed up ready to be used. The proper tint can be easily decided on by painting a piece of paper, and allowing it to dry. Two coats must be given in painting distemper. Where old plastered walls become stained, and it is desired to have them painted in distemper, the surface of the wall should be cleaned, and one coat of white lead in oil, with a little turpentine, given to it: after it is dry, the water-colour will be taken on smoothly.

PAINTING IN OIL.—The basis generally used in preparing colours is *white lead*. The oil used for mixing the colours is *linseed*—the dilution being effected by *spirits of turpentine*. Litharge, sugar of lead, &c. are added to facilitate the drying. The following recipe is for white paint, used for exterior woodwork:—seventy-eight parts of white lead, ground in oil, nine parts of boiled oil, nine parts of raw oil, and four parts of spirit of turpentine. For a stone colour for the exterior of buildings, wood and door facings, &c. white, lamp-black, and a little Venetian red, ground in oil, and mixed with white lead and boiled linseed-oil. For a fawn colour—white, yellow-ochre, and Spanish brown. For a drab—white, Venetian red, burnt amber, and a little black.

In painting in oil, 'when bright colours, as white and grey, are ground and diluted in oil, it is advisable to make use of the oil of walnuts; but if the colours be dark, such as chestnut, or olive, or brown, you must make use of a pure linseed-oil.'

In painting wood-work, it is necessary to kill the knots which, in pine especially, are frequently met with. This is effected by covering them with fresh-slaked lime—this being rubbed off after twenty-four hours, and painted over with white or red lead. The knots will also be prepared to take on the colour properly by first giving them a coat of oil mixed with the litharge. The priming coat of white or red lead, well diluted in oil, is next to be put on, previously filling up the nail and other holes with putty, composed of whiting and linseed-oil. The first coat of white is next to be laid on, which, after it is dried, is to be rubbed down with a pumice stone, to prepare it for the next coat. If the final colour is not to be white, the second coat should have some of the intended colour mixed up with it. The third coat is of the requisite colour. A green paint, useful for outside doors, &c. is made with 1lb. of verdigris, and 2lb. of white lead, ground and diluted in common linseed-oil—the wood being first painted with white and the green in two coats.

In painting plastered walls, it is absolutely necessary that they should be dry: in no case will the work be satisfactory if this is not attended to. As plaster will take eighteen months or two years to dry, according to circumstances, it will be as well to paint them in distemper first, washing this off whenever the walls are judged sufficiently dry. In painting with oils, the walls must be first primed: this is done by giving two or three coats, to harden the plaster; thereafter lay on two coats of ochre, ground and diluted in linseed-oil; finish with the paint of the desired colour, one or two coats as may be considered desirable. A paint which dries quicker than oil-paint, and has no smell, may be made of milk and lime, as follows: 'Take of skim-milk nearly 2 quarts, of fresh-slaked lime about 6 ounces, of linseed-oil 4 ounces, and of whiting 3lb.; put the lime in a stone vessel, and pour upon it a sufficient quantity of milk to form a mixture resembling thin cream; then add the oil, a little at a time, stirring it with a small spatula; the remaining milk is then to be added, and lastly the whiting. The milk must on no account be sour. Slake the lime by dipping the pieces in water, out of which it is to be immediately taken, and left to slack in the air. For fine white paint the oil of carraway is the best, because colourless; but with ochres, the commonest oils may be used. The oil, when mixed with the oil and lime, entirely disappears, and is totally dissolved by the lime forming a calcareous soap. The whiting or ochre is to be gently crumbed on the surface of the fluid, which it gradually imbibes, and at last sinks: at this period it must be well stirred in. This paint may be coloured like distemper or size-colour, with levigated charcoal, yellow ochre, &c. and used in the same manner. The quantity here prescribed is sufficient to cover 20 square yards with the first coat, and will cost three-half pence a yard. The same paint will do for outdoor work, by the addition of 2 ounces of slaked lime, 2 ounces of linseed-oil, and 2 ounces of white Burgundy pitch—the pitch to be melted in a gentle heat with the oil, and then added to the smooth mixture of the milk and lime. In cold weather it must be mixed warm, to facilitate its co-operation with the milk.'—(Smith's Art of House-Painting.) The following is a very durable paint—more so than the ordinary oil—recommended by Mr. Downing for cottage-work -its hardness increasing by time: 'Take freshly-burned unslaked lime, and reduce it to powder. To 1 peck or bushel of this add the same quantity of fine white sand, or fine coal ashes, and twice as much fresh wood-ashes, all these being sifted through a fine sieve. They should then be thoroughly mixed, when dry. Afterwards mix them with as much common linseed-oil as will make the whole thin enough to work freely with a painter's brush. This will make a paint of a light grey stone-colour, nearly white. To make it fawn or drab, add yellow ochre and Indian red; if drab is desired, add burnt amber, Indian red, and a little black; if dark stone-colour, add lamp-black; or if brown stone, then and Spanish brown. All these colours should of course be mixed in oil, and then added. This paint is very much cheaper than common oil-paint. It is equally well suited to wood, brick, or stone. It is better to apply it in two coats—the first thin, the second thick.'

The interior wood-work of cottages may be beautifully stained to resemble oak and walnut, by washing the cleaned surface with diluted sulphuric acid (1 ounce of sulphuric acid to a pint of warm water); this to be washed, when warm, evenly on the surface of the wood to be stained. The next operation is washing over the surface so prepared with a tobacco stain, made by boiling a quantity of tobacco with as much water as will cover it, allowing this to get dissolved to the consistence of a syrup by gentle boiling—this being strained before using. The stain is laid on with a sponge. When the wood is thoroughly dry, it is to be brushed over with 8 ounces of bees'-wax, ½ pint of linseed-oil, and double the quantity of boiled linseed-oil. A varnish for finally covering the surface of the wood thus stained is prepared by dissolving in a pint of spirits of wine a ½lb. of seed-lac. Outside work may be stained by adopting Mr. Wheeler's mode. 'Take best rosin tar, or pitch—in the proportion of 1 gallon to every 4 gallons of the following—turpentine 1½ gallon, seed-lac dissolved in alcohol (in the proportion of 1lb. to 1 quart) 2 quarts, cold linseed-oil ½ gallon, boiled oil ½ gallon, bees'-wax 6lb. or gall 1lb.; mix all these together, and add the rosin tar first named. Lay it on with a large flat brush.' We would recommend the emigrant to provide himself with a quantity of Stephens's dyes for staining wood: they stain the wood beautifully. The oak, mahogany, and satin-wood colours are 8s. per lb. and are simply dissolved in water: this quantity will make a gallon of stain. Being in powder, they are easily carried. Address —Mr. Stephens, 54 Stamford Street, Blackfriars, London. Varnishes had better be procured ready-made. We have already given a recipe which will be generally useful."

Miscellanea.

THE PROPOSED NEW TOWN-HALL FOR PRESTON.—At the last quarterly meeting of the Town Council, the proceedings of the Building Committee were read, stating that for the plans sent in, the first prize of 100 guineas was awarded to Mr. Wm. Hill, of Leeds, and the second prize of fifty guineas to Mr. W. B. Gingell; and the town clerk, in reply to a question, stated that the estimated cost of Mr. Hill's designs was 29,520*l.*; of Mr. Gingell's 30,000*l.*; that Mr. Gingell estimated that if erected according to his designs, the buildings would produce 1,400*l.* per year. The council then resolved to appoint a committee to inquire into the expediency of proceeding with or postponing the Preston New Town-hall buildings, and the propriety of removing or re-letting the present buildings, or part of them; the committee to consist of the Building Committee. The plans, it was said, were not exactly what was wanted, and some delay would therefore take place in adapting them to the locality; and meanwhile the old buildings might be repaired so as to stand another year, and yield a rent. A resolution was also passed, authorising the treasurer to pay over to the successful competitors the sums offered for the best and second-best designs.

THE IRON TRADE.—Prices remain unaltered, and are quoted by the trade papers, at 10*l.* a ton for rods and bars, long weight at the works, 10*l.* 10s. to 11*l.* for hoops, and 11*l.* to 12*l.* for sheets: Scottish pig iron is quoted at 76s. a ton for mixed nos.; Staffordshire pig of good quality, 4*l.* 10s. to 5*l.* 15s. according to make. The scarcity of coal and of iron-stone still continues, and the working classes employed in the trade are by no means contented, on account of the high prices of domestic necessaries. Mr. H. Leachman, of Islington, has patented an invention, which consists in treating iron by means of certain materials for producing a more plastic and malleable iron than heretofore. Common brickdust, salt, black oxide of manganese, and pig-iron, are employed. The first three are mixed in the following proportions:—Brickdust, 120 lbs.: salt (pounded fine), 600 lbs.: manganese, 280 lbs. = 1,000 lbs. These three are thoroughly intermingled, reduced to powder, and used in boiling the pig-iron. Calcined clay may be used instead of brickdust. The patentee claims the treating of iron by or with a compound of materials, as above described.

METROPOLITAN COMMISSION OF SEWERS.—At a special court held on Monday (before the occurrence elsewhere mentioned), upon the recommendation of the general committee, it was agreed that a loan of 200,000*l.* from the Rock Life Assurance Company be accepted, on the conditions mentioned in a deed of agreement between the said company and the Metropolitan Commissioners of Sewers, viz. at the rate of 4½ per cent.

LIABILITY OF SUB-CONTRACTORS.—At Marylebone, on 23rd ult. William Page, a carpenter, lately a sub-contractor under Mr. Ramsay, a builder, who has been erecting numerous houses on the Kensington Park Estate, appeared before Mr. Paynter to answer the complaints of seven other carpenters, who sued him for various sums, being wages for work and labour done. The defendant admitted the liability, and added that he had never refused to pay the men. He was only a sub-contractor under Mr. Ramsay, and directly that gentleman had paid him, he always settled with the men under him. Mr. Ramsay had stopped payment, and he had no money. Mr. Ramsay was a bankrupt, and his name had appeared in the *Gazette*. Mr. Paynter said the defendant was answerable for the payment of the men's wages, and if he chose to place himself in a false position, he must put up with the consequences. The defendant, who was a man of straw, had contracted with a speculative builder, and when the time came for payment, and there was no money forthcoming, the loss would fall upon the defendant, while the right man, who ought to be punished, escaped from his liability by an order of the Bankruptcy Court. The result of the defendant's conduct would be, that he would have to pay each of the complainants the wages due, and 5s. extra each as costs. If he did not pay, he would have twelve days' imprisonment upon each case. Mr. Paynter pointed out to the plaintiffs the necessity in future of engaging themselves with the principal, and not with a middle man, who was worth nothing, as in the case of the defendant. Other cases of a like order were similarly decided, and one sub-contractor was locked up.

THE METROPOLITAN BRIDGES.—On the 23rd ult. in the House of Commons, Mr. Oliveira moved for a select committee to inquire into the state of the bridges, to report whether they are adequate to the traffic; whether it be desirable to construct one or more bridges over the river; and if so, at what point or points; whether it be desirable to provide, out of local funds, the means of throwing open to the public the present toll-paying bridges, and if so, upon what terms such bridges could be thrown open. The government having assented to the appointment of this committee, he would reserve his facts and details for the committee upstairs.—Sir W. Molesworth said he did not see any objection to the appointment of this committee. As regarded tolls, he objected to having them bought up by public money out of the Consolidated Fund. He thought means ought to be provided out of the local funds of the metropolis for that purpose.—Sir J. Shelley said it was well worthy of consideration whether, by opening all the bridges free of toll, it would not be possible to relieve the streets of London of the enormous amount of traffic which now encumbered them. If he were appointed on the committee, he certainly should not agree to throw the expense on the local rates, especially so long as the coal-tax was continued. He hoped before long the report of the City Commission would be made, and that the tax would be got rid of altogether. But if it were to be retained, and if the inhabitants of the district twenty miles round London were to be taxed for the benefit of the metropolis, he thought there could not be a better application of the produce of the tax than to the purpose of relieving the crowded state of the streets.—Mr. Goulburn suggested that, with a view to this object, the Thames Tunnel should be included in the inquiry.—Mr. Laing urged the danger of the present state of things.—The motion was agreed to.

BUILDERS' PRICE BOOKS.—Out of the great number of publications issued, very few are in any degree applicable to country practice; they are filled with Building and Paving Acts, and other matters in which we have no concern. Should it be the intention of any person to bring out a work of this kind, I would suggest for his consideration the following:—In brickwork, the standard to be a cube yard, and in giving quantities of mortar, let it be by the cubic foot, the price of which can be ascertained in any district, let the quality of the lime, or the custom in regard to measure, be what it may; the labour to be given at a certain rate per day, without any per centage for profit. A similar plan is requisite in carpenters' work, say—

Timber, including waste	0	0
Framed in trusses, at per day	0	0
Nails.....	0	0
	0	0

For joiners' work, correct prices of labour to be given at a certain rate of wages, a separate column for nails, and for the materials an extension of an excellent work published by Mr. Browning, of Stamford. The discrepancy between the different price-books is so great, that they may be truly called blind guides; and a good work generally applicable, undertaken by a competent person, would do much in removing the evil of blind contracts. Z.

LIVERPOOL ARCHITECTURAL AND ARCHÆOLOGICAL SOCIETY.—At a meeting, held at the Royal Institution, last week, Mr. Boult, the secretary, read the report of the delegates on the proposed amalgamation of the societies of Liverpool, recommending that the Architectural Society should remain a distinct and separate body. A vote of thanks to the delegates for their labours was agreed to. It was announced that on the 8th of March Mr. Picton would read the third part of his Architectural History of Liverpool, and agreed that the members of the Historic Society should be invited to attend. Papers on Christian Architecture, from Mr. Gibbs, of Longsight, Manchester, and on the Round Towers of Ireland, by Mr. M. F. M'Carthy, representing them to be of Pagan origin, were read.

ALUMINIUM FROM CLAY A MALLEABLE AND SILVERY METAL.—For a good many years now, it has been known that clay or alumine, like other earths and alkalis, was the oxide of a base: but while soda and potash yielded integral metallic bases, clay and flint, or alumine and silex, though also both oxides, produced only powdery substances as their bases,—silicon being a sort of brownish red powder, and aluminum a silvery white one. Whether these were still oxidated, or sub-oxides rather than pure metallic bases, remains, perhaps, yet to be ascertained, if indeed silicon, at least, be not one of those brownish or reddish coloured results which fluorine produces with metallic bases, such as gold itself, and which results, doubtless, like the chlorides and other haloids, would be capable of also at same time uniting with oxygen, so as to form oxyhaloids, such, for instance, as the new body colour composed of the oxychloride of lead. At all events, it has now been discovered that the white silvery powder got by deoxidizing clay is not the only form of aluminium, M. St. Clair Deville having announced to the Academy of Sciences at Paris that he has obtained a perfect metal, not only malleable brilliant and white as silver, but even less tarnishable, inasmuch as sulphuretted hydrogen has no effect on it, while it also resists the corrosive effects of both nitric and sulphuric acid, far less of air, or water, or even boiling water, its veritable dissolvent being chlorohydric acid, or spirit of salt It is fusible, ductile, and tenacious, and presents the singular (yet to be expected) lightness of glass. It even seems to be obtainable without much difficulty, and quite independent now of galvanic decomposition, from its chloride or chloruret, by help of some other "common metal," which in strong heat deprives it, "with remarkable facility," of the chlorine, and leaves the pure aluminium in the form of fused globules. If there be no mistake in all this, the result is not only extraordinary, but likely to lead to results still more extraordinary in relation to art products, the value of silver, and indeed the uses of all the metals. Even zinc, the youngest of the family, may have "its nose put out of joint" by "the interesting little stranger."

THE COVENTRY SCHOOL OF ART.—The tenth annual meeting of the friends and subscribers to the local fund of the Coventry School of Art was held on Tuesday in last week, at St. Mary's Hall. There was a very large attendance, and the hall was decorated wtth the works of the pupils. The report stated, that during the past year the committee had more than doubled the fees to pupils, and that the numbers attending the school had nevertheless not diminished, which they regarded as a clear proof that the value and importance of the instruction imparted was year by year more fully appreciated. The drawings of the pupils were now sent twice in the year to the exhibition of drawings from all the schools of art opened to the public at Gore House. At the exhibition in June last, four medals were awarded to the Coventry school; and at that in December, five medals were given for successful drawings. Four public schools, numbering in the whole about 250 pupils, now receive instruction in connection with the Coventry School of Art, and the committee regard this as a very gratifying circumstance. The report then proceeded to show how the government grant of 300*l.* a year, and the subscriptions (111*l.* odd.), fees (99*l.* odd), &c. were expended. Various appropriate resolutions were then passed, and the medals and other prizes distributed.

RAILWAY CONSTRUCTION.—Mr. G. K. Douglas, of Chester, has patented some improvements in the permanent way of railways. In this invention, the chair is made with two pairs of jaws, which are cast together in the usual manner, and are sufficiently wide apart at the top to admit the rail. Between the jaws and the body of the rail is a plate, enlarged, between the jaws, in order to strengthen it, and another plate is held in contact with the other side of the rails by vertical wedges. These plates and wedges the inventor prefers to make of cast iron, but they may be made of wood. When the wedge is of wood, it is requisite to have a hole in the chair through which the wedge can be forced when the rail has to be removed.

METROPOLITAN IMPROVEMENTS.—The Commissioners of City Improvements have obtained possession of the last portion of the buildings in St. Paul's Churchyard, Carter-lane, Doctors-commons, and Old Change, required for the formation of the new street from King William-street, London-bridge, to St. Paul's Churchyard, and the demolition of these houses will forthwith commence. According to the newspapers, it is intended to open this important line of street for public traffic about the 15th of March. Considerable progress has been made in the extension of Farringdon-street for the opening to Islington, and a vast number of houses in Clerkenwell, Saffron-hill, Brook-hill, &c. have been demolished, and this new street is expected to be opened for traffic as far as Clerkenwell-green during the ensuing summer. On the Surrey side of the Thames, a new street, extending from the end of Stamford-street, Blackfriars-road, through the borough of Southwark to High-street, near the London-bridge railway terminus, is contemplated.

BOSTON CHURCH RESTORATION MEETING.—A public meeting of the subscribers to the restoration of Boston parish church, was held in the Assembly-rooms, Boston, on Thursday week, for the purpose of receiving the final report of the committee, and organising a special subscription to meet the deficiency in the funds. Though by no means numerous in point of attendance, the meeting was of an influential character. The liabilities still remaining, amount to 2,326*l.* 17*s.* 6*d.* Extras, the chairman said, had caused the cost to mount up to an extent of which the committee had no conception till the winding up: but they could not regret an outlay which had so completely restored their prized church. A communication from the Architectural Society of the diocese of Lincoln, congratulating the committee on the spirited and successful way in which the restorations had been carried out, and enclosing 10*l.* towards payment of the balance, was read to the meeting. The mayor headed a subscription list with 100*l.* and was followed by the vicar and other gentlemen. The total amount subscribed in the room was 871*l.* The vicar also intimated that several parties were anxious to afford pecuniary assistance to the committee, if waited upon privately.

THE CONSERVATIVE LAND SOCIETY.—MEETING AT READING.—A meeting of the inhabitants of Reading was held at the Town-hall, last week, to receive a deputation from the Conservative Land Society, consisting of Viscount Ranelagh, Colonel Knox, M.P. Mr. H. Pownall, the Rev. Dr. Worthington, Mr. C. E. Lewis, Mr. Gruneisen, &c. There was a large attendance, much interest being taken in the proceedings in consequence of the approaching allotment of the Downshire-square estate on the 1st March next. Viscount Ranelagh presided. Colonel Knox, M.P. gave a statement of the progress of the society, an l dwelt on the character of the estate purchased for the society in that locality. Mr. Lewis described the working of the society, and gave some particulars with respect to the estate on the Castle-hill. It has been laid out in lots, varying in price from 50*l.* to 325*l.*

BRICK-MAKING.—We are often asked if parties can be prevented from making bricks in certain localities, and it may be useful, therefore, to mention that in the Vice-Chancellor's Court recently, in the case of Kekwich *v.* Hoyle, Mr. Rolt, Q.C. and Mr. Nicholls moved for an injunction to restrain the defendant from firing, or causing to be fired, a clamp of bricks for the purpose of burning the same, on his field, on the northern side of the plaintiff's dwelling-house and grounds, near Rotherham. Mr. Daniel, Q.C. and Mr. Bazalgette appeared for the defendant, and opposed the motion, on the ground that the noxious effects of the effluvia arising from brick-burning, and on which the plaintiff's motion was principally founded, were purely imaginary, and that the process was one which was perfectly innocuous in every respect. Several conflicting affidavits upon this point were read to the court, and an order was ultimately made in the terms of the notice of motion, leave being given to the plaintiff to bring such action as he might be advised.

ARCHITECTS' BENEVOLENT SOCIETY.—The annual general meeting of this society will be held in the rooms of the Royal Institute of British Architects, on Wednesday, the 8th instant, to receive the report from the council, and to elect officers and council for the year.

CAUTION TO AUCTIONEERS.—A case was recently decided by Mr. Sheriff Bell, at the Small Debt Court, Glasgow, where an auctioneer summoned an ironmongery firm in Glasgow for payment of a lot of goods bought by them a few weeks since at an auction,—the defenders refusing payment on the ground that the party interested in the sale of the goods was present at the sale, bidding several times for almost every lot put up. The sheriff, on hearing the evidence, immediately assoilzied the defenders.

THE HEALTH OF TOWNS ACT.—Mr. Collier, the other night, asked the right hon. baronet the First Commissioner of Works whether the Government intended to propose any alteration in the Health of Towns Act, and also whether they meant to make any change in the constitution of the Board of Health? Sir W. Molesworth said that the constitution of the Board of Health would expire at the end of the present session. He should, therefore, feel it necessary to bring in a Bill in the course of the session to re-constitute that Board; and he had to add that he would at the same time propose various amendments in the Health of Towns Act.

ART IN STAINED GLASS.—Amongst the many fine art productions of Birmingham, says the local *Journal*, the old one of glass staining, which, under the hands of Eggington, was brought to a height it had never reached in this country before, is by no means the least important. We have recently had repeated occasion to allude to commissions executed here for various parts of the country; and this week we had an opportunity of inspecting another specimen of this art at the well known establishment of Messrs. Pemberton, Newhall-hill. It is a memorial window intended for the family of the late Rev. P. Leigh, of Lyme, near Warrington, and is to be erected in the church there. It is in three lights, terminating in a rose, with quatrefoils. The centre light is occupied by the Virgin, that on the left by St. John, the other on the right by St Peter All are on pedestals with canopies. An inscription, indicative of the purposes for which the window was erected, in old English, runs beneath the whole extent of the work.

SOMERSET ARCHÆOLOGICAL SOCIETY.—The fourth *conversazione* of this society for the season was held on Monday in week before last. Two papers were read,—one by Dr. Metford, and the other by Mr. W. Walter on "Electricity." Mr. W. Crotch exhibited some sketches made during a tour in Switzerland.

THE LITERARY AND PHILOSOPHICAL SOCIETY OF NEWCASTLE-UPON-TYNE has an excellent library, but the building containing it entailed a heavy debt, which though reduced from time to time, still amounts to 6,200*l*. At a recent meeting of the committee, it was announced that Mr. Robert Stephenson, grateful for the advantages he had himself derived from this library when a young man, had offered to pay off one-half of the debt, provided means are taken to pay the other half before the next anniversary. Such an offer it will surely be made a point of honour to respond to as required.

SIR R. PEEL'S STATUE.—The committee for erecting the statue of Sir Robert Peel met by adjournment in Saddlers' Hall, Cheapside, in order to examine the site proposed at the west end of that thoroughfare, near Paternoster row. The number of gentlemen who attended was very considerable. After having viewed the pedestal and statue, the commissioners returned to the hall, and Sir Peter Laurie took the chair. It was then moved by Mr. Deputy Holt, seconded by Mr. Dillon, and unanimously resolved, "That the statue should be erected at the west end of Cheapside, the exact position to be decided by the judgment of Mr. Tite and Mr. Haywood."

STEAM PUT TO A NEW USE.—At a Manchester mill, according to the local *Courier*, pipes have been so laid in connection with the engine boiler, that jets of steam can be directed on those portions of the premises most liable to take fire, and already a fire has been extinguished by means of clouds of steam.

BATH GRAPHIC SOCIETY.—The third *conversazione* of this society took place on Tuesday in last week. The rooms occupied on this occasion, the octagon and card room, were again filled with a large collection of examples of the fine arts, paintings of the old masters, and the varied productions of modern times, contributed by artists and connoisseurs. The most prominent feature in the card-room was a portrait of the late Sir Charles Napier. During the evening notices were circulated informing the subscribers that a fourth meeting would not take place, in consequence of the lessee declining to make the same arrangements with the committee as on former occasions.

ROAD-MAKERS' TENDERS.—The following tenders were delivered for road-making and drainage, on the Leyton estate, at Lea-bridge-road:—

John Widdecombe	£363	16	0
Thomas Dyer	353	10	5
John Prier	330	0	0
Pound and Hudson	313	15	0
J. and C. Rigby	313	0	0
J. Sinnott	310	0	0
J. Parsons	305	0	0
M. Barrett	305	0	0
R. T. Carlisle	300	0	0
B. Green	294	16	0
H. Hebert	287	0	0
G. H. Lovegrove	286	10	0
Lewis and Dodson, Ewell (accepted)	247	14	6

HAUNTS OF CELEBRATED MEN IN LEICESTER-SQUARE, PALL-MALL, AND THE STRAND.—Leicester-square was more patrician to my eye, because it had been familiar with the presence, as residents, of Reynolds, Hogarth, Burke, Newton, John Hunter, and Kosciusko—representatives of the whole circle of science, art, humour, statesmanship, and patriotism. Steele used to look out of "The Garter" in St. James's-street, and it seemed more fruitful of humanity; and the coffee-house of the same name I would fain have explored, since Goldsmith's "Retaliation" was therein suggested. Crabbe, Moore, Swift, and Scott, I called up in Bury-street, where they used to lodge. The book-store of Evans was in Pall-mall, and left a charm behind, since it was a favourite haunt of Akenside, Pope, and Walpole. Penn lived at the south-west corner of Norfolk-street, which, in the twilight, methought wore a Quaker solemnity.—*A Month in England.*

DRAINAGE OF CARDIFF.—The tenders for the Cardiff sewers were received on the 24th ult. (as per advertisement in *Builder*), and were examined by the Board of Health on the 26th ult. The result is as follows:—

Mullet (Bristol)	£28,241
R. Coslett	27,000
James and Price	26,438
J. Coslett	26,000
Rennie and Co.	24,900
N. and D. Jones (accepted)	23,998
R. and W. Barnes	23,072
Burgess	22,400

TENDERS

For the erection of a Villa, Coach-house, Fences, &c. &c. for Mr. Alex. Kay, at Wimbledon Park. Mr. A. D. Gough, architect.

Messrs. Carter and Ellis	£5,299
Messrs. Dove and Brothers	5,190
Messrs. Watson and Co.	5,070
Messrs. J. and J. Crouch, Wimbledon (accepted)	4,850

TO CORRESPONDENTS.

"B. L." (verdict not sent). "J. D. D" (yes). "J. O." "Constant Subscriber." "Capt. W." (will appear). "H. C." (already mentioned). "C. C. N." "J. D." "F. I." "E. T. B" (out of town). "J. G." "H. T." (Mr Daukes). "J. N." "Gargrave" (W. J. Adams, Fleet-street). "W. A." "C. J. T." "W. M. S." "Messrs. R." "H. T." "T. B. L." "C. A. W."

"Books and Addresses." We have not time to point out books or find addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

A CLERK WANTED in the Office of a Builder. He must be a good and expeditious writer, and accustomed to builders' accounts. Address, stating age and salary required, to J. O. Office of "The Builder."

TO SURVEYORS AND BUILDERS' CLERKS.

A CLERK WANTED in the Office of a BUILDER in London accustomed to take out quantities, prepare estimates, and measure up extra works. Address, stating salary required, and how last employed, to J. W. Office of "The Builder."

A VICE-PRINCIPAL is required in the TRAINING COLLEGE at CHELTENHAM. An unmarried clergyman with a knowledge of "Applied Mathematics" will be preferred. Address the Rev. ARTHUR RIGG, Chester.

TO BRICKMAKERS

A PERSON, well acquainted with Brick-making, is desirous of obtaining an ENGAGEMENT as CLERK and FIELD FOREMAN. Has been in the present situation seven years. Best of reference. Address, W. P. E. Post-office, Stopford's-bridge, Hammersmith.

TO ARCHITECTS

A GENTLEMAN is desirous of a RE-ENGAGEMENT as ARCHITECTURAL ASSISTANT. Apply, by letter, to W. P., Hoskyns's-pers., 28, Parliament-street, Westminster.

GAS WORKS.—SUPERINTENDENT WANTED, fully competent to undertake the management of the Gas Works of a populous and thriving town. Salary commencing at 200*l* per annum. No party (although he may be now already employed) need apply unless prepared to give satisfactory references as to character and ability. Application to be made by letter, addressed to H. HUDSON, Clerk to the Gas Committee, to H. H. M. I. Isaacson, Esq. Solicitor, Norfolk-street, Strand.

THE Advertiser, aged 24, a fair Bench Hand in hard wood, or otherwise, wishes for an ENGAGEMENT in town or country. Place where he would have an insight into the official part of the business would be a consideration as regards remuneration, being quick at accounts, writes a good hand, and has some knowledge of drawing, and has been three years with his last employer in town. Address, A. F. Office of "The Builder."

THE TOWN of BURTON-ON-TRENT ACT, 1854.—GASWORKS SUPERINTENDENT.—WANTED, by the Commissioners under the above Act, an experienced PERSON, to manage the Gasworks at Burton-on-Trent; he must be competent to undertake the entire management of the works, to inspect the mains throughout the town, to superintend the laying down of mains and service pipes, to take the necessary meters, to attend to the sale of coke, tar, and lime, and to collect all accounts for the gas supplied. Salary, 150*l* per annum. Approved candidates to be invited to attend the Commissioners. Applications, in the handwriting of candidates, accompanied by recent testimonials of their character and competency, to be forwarded to me, endorsed "Application for Office of Gas Manager," on or before the 25th day of MARCH next. The manager will be required to enter upon the duties on the 25th day of MARCH next. Canvassing the Commissioners will be deemed a disqualification. By order of the Commissioners. WILLIAM COXON, Clerk.
Commissioners' Office, Burton-on-Trent, Feb 15, 1854.

TO ARCHITECTS AND SURVEYORS

THE Advertiser, who has been three years in the office of an Architect and Surveyor, in the City, wishes to meet with an ENGAGEMENT.—Address, A. Y., 3, Holborn-hill, London.

TO GAS ENGINEERS.

WANTED, immediately, a RESIDENT WORKING SUPERINTENDENT for the BOSTON GAS WORKS. He will be required to attend to the manufacture of gas and all general details of the works, to inspect and keep in order the mains and service pipes throughout the town, to check and regulate the meters, and to superintend the cleaning and lighting of the lamps, under the direction of the Surveyor of the Company. A salary of about 100*l* a year, together with a house attached to the works, free from rent, rates, and taxes, with firing, gas light, and a large garden, will be allowed to an efficient person. The Superintendent will be required to devote the whole of his time and attention to the service of the Company, and particularly to control and direct the workmen at the works; his engagement will be determinable on one calendar months notice by either party. The most satisfactory testimonials will be required that the person to undertake these duties is honest, sober, and industrious, and has been accustomed to work large brick retorts (not iron), and that he is practically understands the general management of gas works, and is capable of making out the quarterly accounts and balances on the other parts of the works if required. Applications, enclosing testimonials, to be sent by letter (postage paid), to MESSRS. WILLIAM and CALEBS P. SOLLEY, Solicitors, Boston, before TUESDAY, the 4th day of MARCH next. No answers will be given to any applicants, excepting those selected by the Committee of Management. Boston, Lincolnshire, 28th February, 1854.

WANTED, a respectable YOUTH, in an Architect's office at the West End. He will be expected to make himself generally useful, and there will be an excellent opportunity for his obtaining a knowledge of the profession. A small salary given. Apply, by letter, in writing, to A. Z. Mr. Kent's, Stationer, Conduit street, Hyde-park.

WANTED, ACTIVE AGENTS for the AMAZON LIFE ASSURANCE and LOAN COMPANY, and SICK BENEFIT SOCIETY. A liberal commission and procuration fees allowed. Applications to be made to ROBERT GEORGE WEAD, Esq. 1, Ironmonger-lane, London. Manager and Actuary. Loans on personal security.

WANTED, a MANAGING MAN, of good experience, for an Excavation and Brickwork Job of some extent. Must have been engaged in such works before. Liberal pay will be given. For particulars, apply before Ten o'clock a.m. until Wednesday morning, at 86, Rahere-st., Goswell-road.

TO CONTRACTORS' SUPERINTENDENTS.

WANTED, a thoroughly experienced Person, to superintend the ERECTION of extensive Engineering Works. Address, stating particulars, where last engaged, and salary required, to ZETA, Office of "The Builder."

TO BUILDERS' FOREMEN.

WANTED, an experienced active Man, as FOREMAN of Bricklayers, used to the superintendence of extensive works. Address, stating age, particulars, and salary required, to M. M. office of "The Builder."

OFFICE LAD WANTED.

WANTED, a respectable LAD, about sixteen years of age. He must write a good hand. Address, stating salary, W. A. Office of "The Builder."

TO ARCHITECTS' ASSISTANTS.

WANTED, an ASSISTANT in an Architect's Office, competent to make finished and detail drawings in the different styles of architecture, possessing some knowledge of construction, and can write a good business hand. Salary must be moderate. Address, with full particulars, references, and terms, to M. N. No. 1, Berner-street, Oxford-street.

WOOD ENGRAVING.—A Pupil Wanted. Apply to MR. DE WILDE, 4, Seymour-place, Euston-square.

TO SASHMAKERS

WANTED, a middle-aged experienced Man, as FOREMAN, to take the management of a Piece-work Shop. To one thoroughly competent, a liberal engagement and liberal wages will be given.—Apply, by letter, or personally, on the premises, No. 6, Macclesfield-street North, City-road.

TO CLERKS OF THE WORKS.

WANTED, a CLERK of the WORKS, competent to attend to building business, also of taking and drawing up Applicants for the appointment are requested to attend with testimonials at the Office, 26, Craven-pass, on Monday, the 6th of March, between the hours of Ten and Four. WEBSTER and ASHDOWN, Architects.

WANTED, an APPRENTICE, in an old-established business, as a CARPENTER, &c. where he would have an opportunity of obtaining a knowledge of the business in all its branches.—Apply, by letter or personally, stamp, to P. J. ALSTON, Carpenter and Builder, 5, Queen-street, Pitfield-street, Hoxton.

WANTED, a Steady Young Man, who thoroughly understands Plumbing, Painting, and Glazing.—Apply at 74, Cornhill, Canterbury.

WANTED, a CLERK of the WORKS, to superintend the erection of a Parsonage House in the Midland Counties.—Apply, stating age, salary, experience, references, and salary required, to be addressed to A. B. care of Mr. Kaye, Bookseller, High-street, Newcastle-under-Lyne.

TO BUILDERS, HOUSE AGENTS, &c.

WANTED, by a Young Man, a permanent SITUATION as PLUMBER, PAINTER, and GLAZIER. Also understands accounts.—Address, Direct to W. G. No. 14, Queen Charlotte-row, New-road, Marylebone.

TO BUILDERS AND OTHERS

WANTED to APPRENTICE (aged 15), the SON of a respectable tradesman.—Apply by letter, prepaid, to T. B. 82, Lower Thames-street, City, London.

WANTED, by a Young Man, respectably connected, a SITUATION, as CONFIDENTIAL CLERK; he is capable of taking the management of a set of books in an engineer's or ironfounder's office. Good reference will be given.—Apply, by letter, to M. W. T. 5, New Gloucester-street, Hoxton

TO WINDOW GLASS CUTTERS, BUILDERS, & OTHERS.

WANTED, by a Young Man, who thoroughly understands his business, a SITUATION as Cutter, or Cutter and Glazier—Address to R. R. 14, Garlick-hill, Upper Thames-street.

TO MASTER POTTERS.

WANTED, by a respectable Man a SITUATION as FOREMAN, to superintend a Stone, Brick, Tile, or Pipe Manufactory: has had practical experience in the above business upwards of twenty years.—Wages 45s. per week.—Address W. H. Z. at Mr. Coe's, No. 8, Prospect-row, Walworth-road.

WANTED, a SITUATION as CLERK of WORKS. Is well experienced in all the branches of building can get up plans, working drawings, and has unexceptionable references from previous engagements. Address C. D. N. 6, Little St. James's-street, Pall-mall.

TO RAILWAY CARRIAGE BUILDERS.

WANTED, for a Colonial Manufactory, as an ASSISTANT, a practical and clever WORKMAN, qualified to work with and overlook others. Address, H. B. care of C. S. Burbige, 2A, Grove-terrace, Westbourne grove.

TO ARCHITECTS.

AN Architect, in small practice, in the neighbourhood of London, would be glad to undertake every description of Office work connected with the profession, on very moderate terms.—Address, E. D. F. Office of "The Builder."

TO ARCHITECTS, &c.

A GENTLEMAN is desirous of a RE-ENGAGEMENT in an Architect's Office. He is a good draught-man, and competent to prepare for working, perspective, and coloured drawings. Town preferred.—Address, A. B. Post-office, Ormsburgh-street, Regent's park.

TO NOBLEMEN AND GENTLEMEN OWNING LANDED ESTATES, or otherwise interested in the improvement of the Dwellings of the Country Poor.

AN Architect, aged 30, who is anxious to devote himself to improving the dwellings of the labouring classes in the country would be glad to meet with EMPLOYMENT of that kind in any part of the United Kingdom. Views as to remuneration very moderate.—Address, O. P. Q. Office of "The Builder."

A BUILDER'S CLERK, 22 years of age, accustomed to measure off works, bookkeeping, and the routine of office duties, is desirous of a RE-ENGAGEMENT. Town or Country.—Address M. W. A. Office of "The Builder."

A GENTLEMAN who has been several years in the profession, OFFERS his SERVICES to ARCHITECTS, temporarily or otherwise, in London or the country on moderate terms. Apply, A. B. 13, Featherstone-buildings, Holborn, London.

A RESPECTABLE BUSINESS PERSON is open to an ENGAGEMENT as CLERK of WORKS, General Foreman, or Office Clerk; is a thorough practical man, efficient in estimating, preparing specifications, and taking out quantities, a fair draughtsman, and good bookkeeper. Has had the management of several extensive jobs. A five years' reference to present employer. Salary moderate.—Address, S. H. Mr. Stevens, 33, Goswell-road, Clerkenwell

TO BUILDERS.

A YOUNG MAN, of respectable connections, is desirous of obtaining a general practical knowledge of building, of which he has some knowledge; to obtain which he would, for the consideration of his board and lodging with the family, give his services for a term to be agreed on. Can keep accounts. &c.—Address, H. I. 339, Strand.

AN IN-DOOR APPRENTICE WANTED in the Plumbing, Painting, and Glazing business, in the country. A small premium required. References given and required.—For particulars, apply at 22, Patterson-street, Stepney

TO LANDLORDS, HOUSE AGENTS, AND OTHERS.

A YOUNG MAN, fully competent to undertake repairs to house property in all its branches, is in want of a SITUATION. He would not object to make himself useful in any capacity, collect rents, &c.—Most satisfactory references can be given. Wages moderate.—Address, Z. A. 107, Murray-street, New North-road, Hoxton.

A FULLY-QUALIFIED CLERK of WORKS will be happy to meet with an ENGAGEMENT. Undoubted testimonials as to ability, &c. will be produced.—Address, A. Z. Byron-villa, Battersea.

A YOUNG MAN, who is a neat and careful DRAUGHTSMAN, and understands the profession practically, wishes for a RE-ENGAGEMENT in the Office of a Builder or Architect in town.—Apply to M. G. 30, Moreton-place, Belgrave road, Pimlico

TO GENTLEMEN, BUILDERS, AND OTHERS.

TWO YOUNG MEN, having a thorough practical knowledge of Carpentry and Joinery, are willing to take any quantity of work (labour only).—Address, Y. Z. 30, York-road, Lambeth, Surrey.

TO ARCHITECTS.

THE Advertiser, who has been accustomed to prepare fair and working details, plans, elevations, sections, &c. is desirous of a RE-ENGAGEMENT.—Address, A. B. Mr. Brown, Engraver, Michael's-grove, Brompton,

TO BUILDERS, TIMBER MERCHANTS, AND OTHERS.

THE Advertiser is desirous of obtaining a SITUATION as CLERK, TIME CLERK, or YARD FOREMAN; age 35, is a first-rate salesman, quick at accounts; he is willing to take any situation where activity is required; holds good testimonials. Has no objection to the country or to travel. Direct, A. B. C. 29, Eversholt-street, Camden-town.

PARTNER.—WANTED, in a Building Business of very long standing, in London, a PARTNER the senior member of the present firm being about to retire from business. There is an excellent private connection, as well as Government and other public works. The in-coming partner must be qualified to take an active part in the management of the business, and have at command from 4,000l. to 5,000l. Apply to Messrs. J. and G. BALNARD, Solicitors, 14, York-road, Lambeth.

BUILDING LAND, ISLEWORTH.—TO BE LET, on BUILDING LEASES for ninety-nine years, TEN ACRES of LAND, very eligibly situate for the erection of first-class villa residences, having a double frontage to the high road from London to Twickenham and the Great Western road, and within ten minutes' walk of the Isleworth and Brentford Stations on the loop line of the South Western Railway.—For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, HESTON.—TO BE LET, on Building Leases, for ninety nine years, in 3r 9p. of LAND, in lots of 50 feet frontage, and great depths, eligibly situate for the erection of villa residences of from 25l. to 40l. per annum, on the Great Western road, in the immediate vicinity of the Spring Grove Estate, in the parish of Heston, and within five minutes' walk of the Isleworth Station, with depths varying from 133 feet to 273 feet. It is very eligibly situate for the erection of villa residences of from 40 to 50 per annum. Adjoining Twickenham park and the St. Margaret's estate, and within ten minutes' walk of the Twickenham and Richmond Stations.—For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth. If the above be taken as a whole by any respectable man, it will be let at 25 per cent. less than if let in lots separately

BUILDING LAND, with BRICK-EARTH, TO BE LET, TWICKENHAM, MIDDLESEX, TO BE LET, on Building Leases, a valuable SITE, facing the high-road leading from Richmond to Isleworth, to Twickenham, with extensive frontages to the existing high-roads and proposed new roads of 2,200 feet, or thereabouts, together with the privilege of making bricks from brick-earth on the property. For particulars apply to Messrs. PALMER and NETTLESHIP, Solicitors, 4, Trafalgar-square; or Mr. ATWOOD, Surveyor, Mortlake, Surrey.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. Parties about to erect, or desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Rent has been fixed, delivered on the site of the intended building, at 4s. per the rood.—For particulars apply to Mr C. HAMBRIDGE, Architect, 73, Coleman-street, City.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL TO BE LET, on Building Leases, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been reserved for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 5 acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

TO COAL AND IRON MASTERS.

TO BE LET, the WYKEN COLLIERY, situate within three miles of the Town of Coventry. The UNWORKED THOROUGH and MINES of COAL, IRONSTONE and FIRE CLAY, at the COLLIERY extending over several Hundred Acres, are now TO BE LET. The Mines consist of Two-yard Coal, Ryder Coal, Bill Coal, Slate Coal, and Seven foot Coal, and several Seams of most valuable Ironstone and Fire clay, the whole of which is yet untouched under upwards of 400 acres. A most favourable opportunity is here presented for capitalists at once to embark in the trade the principal drift only remaining to be sunk. Every necessary, including the Pumping Engines are still at work, and the Colliery free from water. Any arrangements may be made with the present occupiers to purchase the Stock, the workings in the Pits would be resumed immediately, and a comparatively small outlay will open the Coal Mines in a most effective manner. The works are most admirably situated for conveying the produce to the Mines to the market. The Oxford Canal runs through the estate, and a railway is about to be made to connect them with the Coventry and Nuneaton Branch of the London and North Western Railway. Every facility will be afforded for the erection of Blast Furnaces for smelting the Ironstone, Foundries, Forges, Cottages, and Agents' Houses; and particulars taking the workings and premises, with from 50 to 200 acres of Land for Farming purposes, if required.—For further particulars communication may be made to Mr JOHN THOMAS WOODHOUSE, Overseal, near Ashby-de-la-Zouch.

CRYSTAL PALACE.—TO BUILDERS and OTHERS. BUILDING GROUND TO BE LET on Lease, on the road from the Anerley-station to the Crystal Palace, and opposite the ornamental ground of the above building. The property consists of upwards of thirty acres, with a beautifully undulated surface, and thickly wooded, commanding most extensive views in Surrey and Kent; it is accessible by good roads and railway, being within five minutes' walk of the Anerley station, and one minute's walk of the station in the proposed Crystal Palace and West end Railway. There is good brick earth over the whole of the ground, and permission to make bricks would be granted to any one taking a considerable plot of the property. Plans may be seen, and further particulars obtained, at the offices of Messrs. WEBNERT and ANDOWN, Arch reets 42, Charing cross.

TO BE LET, for a TERM, SPACIOUS WHARF and APPENDAGES, in one of the most preferable situations on the SURREY SIDE of the RIVER THAMES, close to the Metropolis, and adapted for carrying on any Trade or Commercial Concern requiring room, having the advantage of nearly 550 feet frontage to the river, with ample depth, and well secured by a substantial wharf wall.—For further particulars apply to Messrs CRAWTER, Surveyors, &c. No 5, Bedford row, Gray's-inn.

BUILDING LAND TO LET, at very low ground-rents, for ninety nine years, close to Regent's-park, and on the foot of Primrose-hill, a few minutes' walk from the city station, for the erection of semi-detached houses for which there is a great demand in that locality and will readily let or sell. There are some frontages suitable for shops and others for private houses; also some with great depth, behind, where work-shops or public establishments might be erected. For plans and particulars apply to F. ELLIOTT, 9, Harrington square

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND TO LET; Islington and Turnham green, 300 years. Apply to view to Mr GREEN, Grove-road, Upper Holloway; HARRIS opposite Lee Arms, Brownlow-road, Queen's-road, adjoining Hellinchum's Distillery, Dalston; PHILLIPS' Cumin house near Acton lane, Highroad, Turnham-green; or Mr. D. HUGHES, 13, Gresham-street.—N.B. Populated localities; roads and sewers made.

NORTH WOOLWICH.—TO BE LET, Three Plots of BUILDING LAND, with capital frontages, situate in the rapidly increasing neighbourhood near to the Pavilion, Gardens, at North Woolwich.—For terms apply to Messrs. PRICKETT and SON Surveyors and Valuers, No 34, Southampton-buildings, Chancery-lane.

TO BUILDERS.

TO BE LET on LEASE, most eligible BUILDING PLOTS, for small houses; ground-rent moderate; roads and sewers made; money advanced if required.—Apply to Mr. F. W. DURRANT, Holland-place, Kensington.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES, part of a bold crescent, TO BE LET on building lease, at moderate ground-rent. Two-thirds of the amount will be advanced on mortgage.—Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

HORNSEY, at the foot of Muswell-hill.—TO BE LET, on a Building Lease, for Ninety years, a valuable PLOT OF LAND, most desirably situate, being within a few minutes' walk of the Hornsey Railway Station, containing a frontage of 300 feet upon the road from Hornsey to Muswell-hill, by a depth of 204 feet, admirably adapted for the erection of detached residences, for which there is a great demand in this delightful neighbourhood.—For terms apply to Messrs PRICKETT and SON, Surveyors and Valuers, No. 34, Southampton-buildings, Chancery-lane; and Highgate, Middlesex

WIMBLEDON-PARK.—TO BE LET, on a Building Lease for Ninety-nine Years, a PLOT of LAND 150 feet frontage, and 150 feet in depth, suitable for the erection of a detached villa. The ground is close to the turnpike-road from Wimbledon to Putney.—For particulars apply to Mr. GEORGE LOW, Architect, 1, Church-court, Clement's-lane, City.

LAND TO BE LET for BUILDING, in eligible situations, at Forest-hill and Dartford, Kent; Old Ford, Mid Hants; Camberwell, Wimbledon-park, and Anerley, Surrey; Stratford, Essex; also several Sites of Land at Wandsworth, adjacent to the river Wandle, suitable for the erection of factories.—For further particulars apply to Mr. GEORGE LOW, Architect, 1, Church-court, Clement's-lane, City.

BUILDING LAND at PUTNEY, within three minutes' walk of the Putney Railway Station, TO BE LET for the term of ninety-nine years, suitable for villa or other residences. Advances made if required.—For further particulars apply at Mr. HOOKS's Offices, Land Agent and Surveyor, 13a, Great George street, Westminster, where plans of the estate may be seen.

FULHAM.—BUILDING LAND TO BE LET, for the term of ninety nine years; upwards of 1,000 feet of eligible frontage for small houses or shops. Advances made if required.—For further particulars, apply to Mr. A. C. HOOK, Land Agent and Surveyor, 13a, Great George-street, Westminster, where plans of the ground may be seen.

BUILDING GROUND TO BE LET for the erection of semi-detached villas, in a dry and healthy situation, near the Clapham road, 165 feet in depth. Sewers and roads all made. Land tax redeemed. 35s per foot frontage.—For further particulars inquire of Mr. W. GLASIER, Surveyor, 41, Charing-cross.

FREEHOLD BUILDING LAND at TWICKENHAM—8 acres, situate near the Church and Railway Station, with 1,56 0 feet frontage to Kingston New-road, and with private access to the river Thames at Cross Deep. The land is thoroughly drained, is capable of being easily constructed, and will be LET or SOLD in parcels, to suit the convenience of buyers. Apply, for plan of the ground and further particulars, to JAMES CLARK, 21, Bedford-street, Bedford, N.B. About three acres of the ground consist of a productive well-stocked walled garden, with a large range of substantial forcing-houses.

FREEHOLD BUILDING LAND.—TO BE LET or SOLD, eleven acres of FREEHOLD LAND, within 200 yards of the Carshalton station on the Epsom Railway. Soil chalk. Terms to suit from London in half an hour. For plan and particulars, address Mr. R. C. BAYTER, 34, Clifton-road, St. John's-wood, London.

FOR BUILDING PURPOSES, to BE LET, a PIECE of eligible GROUND, in the immediate vicinity of the projected Wellington Docks, situate in the Lower-road, Rotherhithe, and corner of a new street in the course of formation.—For particulars apply to Messrs. JAMES and PHILLIPS, Solicitors, 12, Clements-lane, City; or of Mr. F. WARSKITT, Builder and House Agent, 18, Cannon-street-road, Commercial-road East.

ON THE COAST of HAMPSHIRE.—TO BE LET on BUILDING LEASES, LAND on the shores of the Solent, opposite Cowes and near to the intervening uninterrupted views of the Channel from Spithead to the Needle Rocks. Excellent harbour for yachts, and good bathing. The proposed site forms part of the sea-coast boundary to the Osborne estate, and in the parish of Fawley.—Apply to Mr. WM. ROSS, Steward of the Estate the Grange, Alresford, Hants.

FREEHOLD LAND, at 17l. per Acre, at BAGSHOT.—Mr. WOOD is commissioned to SELL 307 ACRES of good GROUND, suitable for a land company or cemetery, on an extensive scale, tithe free, and laudably redeemed; two railways close by, and a third coming still nearer. Also, Fifteen Acres at Walthamstow. For particulars, and to view plans, apply to the Auctioneer at his Auction and Estate Office, 24, Acton-place, King-land-road

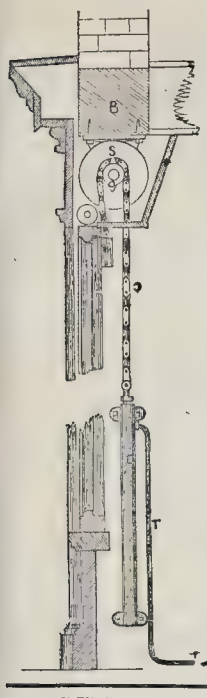
FREEHOLD BUILDING LAND for SALE, at 18l. per Plot; 40 feet frontage, by about 40 feet deep, in a good main road, where houses are much in request. It is thirty-four miles from London, two railway stations within about three-quarters of a mile; gravel soil, pure water within six feet. The title being simple, the cost of conveyance will be trifling. Plots, 80 feet frontage by 150 feet deep, within half a mile of the station, price 36l. Larger Plots for sale at a less price, in proportion. Any part may be had on building lease.—Apply to Mr. GEORGE HUGGETT, No 4, Beaufort-buildings, Strand.

FREEHOLD LAND FOR SALE, price 15l. enough for a house and good garden, at Ash, six miles beyond Guildford.—Apply to E. HANNAM, Ash, near Farnham, Surrey. Good title

TO BUILDING SOCIETIES, CAPITALISTS AND OTHERS.

TO BE SOLD, in a delightful Situation 7 miles from London, about 15 acres of FREEHOLD LAND, with good roads made; being the remaining part of an estate, the rest of which has been sold in building lots, and is already partly covered.—Part of the purchase-money may remain on mortgage if required. For further particulars, apply to Mr EDMESTON, 3, Crown-court, Old Broad street, City.

SCAFFOLD POLES.—A quantity of good SCAFFOLD POLES for SALE.—Apply to Mr. DAVID BROWN, E Warehouse, St. Katharine Docks.



LATHS.—A large stock of PETERSBURGH LATHS of best quality ready for delivery at J. EASTWOOD and SONS', Well Wharf, Belvedere-road, Lambeth

TERRA COTTA.—Vases, Figures, Capitals, Coats of Arms, Friezes, Consoles, Chimney Shafts, Flower-trays, &c. &c. manufactured by J. M. BLASHFIELD, Mill Wall, Isle of Dogs (near the West India Docks), and sold at No 1, Praed-street, Edgware road, Paddington.

DOBBIN CARTS WANTED

WANTED, about Twenty or Thirty DOBBIN CARTS, in good condition.—Address, stating price, &c. to X. Office of "The Builder."

ELECTRIC POWER LIGHT & COLOUR COMPANY.—The Electric Colour Company are now able, by the completion of their works at Fromore creek, Waudsworth, which are at present in full operation to SUPPLY any quantity of their DRY ELECTRIC COLOURS, which, from their brilliancy, durability, body, purity, and price, cannot fail to obtain a preference by the trade generally over those made by the ordinary process. The colours consist of scarlets, reds, yellows, greens, and blues, of all shades and varieties. For price and all other particulars, all applications must be made, and all communications addressed, to the Commercial Manager, at the Works.

PATENTS DATED 9TH DAY OF OCTOBER, 1852, AND 12TH DAY OF OCTOBER, 1853.

CLARK & CO.'S

NEW PATENT SELF-ACTING HYDRAULIC APPARATUS,

FOR

OPENING AND CLOSING

THEIR

PATENT RECTILINEAR REVOLVING SHUTTERS,

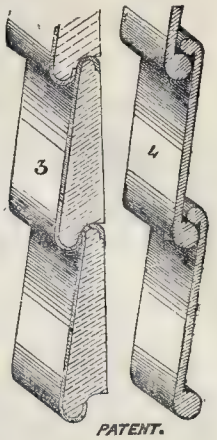
AND

PATENT COMBINED IRON AND WOOD REVOLVING SHUTTERS.

THE advantages of the Hydraulic Apparatus are,—great facility of application; a saving of seventy-five per cent. of friction in the working parts over the old plan of worm and wheel; cannot get out of repair, and it is impossible for the shutter to run down; are more easily opened; require no labour whatever to close them; the cost is reduced; and does not affect the architectural or other arrangement of the building, as the pump can be placed at any distance from the shutter, and in any position. One Pump is sufficient for any number of shutters.

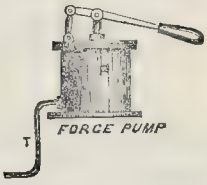
The annexed cuts show the arrangement: fig. 4 is a section of the rectilinear, and fig. 3 a section of combined iron and wood revolving shutters.

SELF-ACTING APPARATUS. Where water can be obtained from the Water Companies' main, or from a small cistern at the summit of the building, the pump is dispensed with by applying the cylinder E of rather larger dimensions: the pressure is sufficient to raise the heaviest shutter. By opening a stop-cock the water is admitted into the cylinder and raises the shutter, and by allowing it to escape the shutter descends with its own gravity, without trouble or labour. The amount of water required to work the largest shutter is only six gallons per day. Any number of shops or windows can be supplied by one cistern.



This apparatus is so simple that derangement is impossible.

HYDRAULIC LIFTS FOR WAREHOUSES, BANKS, WINE MERCHANTS, &c.



PROSPECTUSES, ENGRAVINGS, AND DESCRIPTIONS FORWARDED.

A full-size HYDRAULIC SHUTTER can be seen in constant operation at the Works, where Architects and Builders are requested to inspect and judge for themselves, and not attend to the false reports and unmeaning insinuations of others.

CAUTION.—Any person applying Water, Atmospheric, Steam, or other Fluid Pressure, for raising or lowering Revolving Shutters, will be liable to an action for infringing this Patent.

PATENT.

FORCE PUMP

CLARK AND CO.

15, GATE-STREET, LINCOLN'S-INN-FIELDS, LONDON.

CHARLES WM. WATERLOW AND CO.

MANUFACTURING JOINERS,

121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

N.B.—ORDERS RECEIVED AT THE COUNTING-HOUSE, 121, BUNHILL-ROW, ONLY.

SANDS AND EMERY,

CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

BUNNETT AND CO.

ENGINEERS, FOUNDERS, AND MACHINISTS,

No. 26, LOMBARD-STREET, LONDON, AND DEPTFORD, KENT,

ORIGINAL PATENTEES OF REVOLVING IRON SHUTTERS,

AND OF THE

NEW PATENT CURVILINEAR REVOLVING IRON SHUTTER,

Which obtained the PRIZE MEDAL in the Great Exhibition of 1851.

The greatly increased demand, with additions to and improvements in their extensive plant and machinery, command of the best markets for material, and employment of experienced workmen, enable B. and Co. to supply this very superior Shutter at a price that effectually supersedes any of the crude and imperfect expedients its extensive adoption has called forth.

REVOLVING WOOD SHUTTERS, of a superior description, fitted with Metallic Hinges, and adapted to work in any required direction.

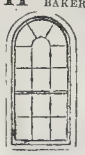
BUNNETT AND CO.

ARE ALSO THE ORIGINAL PATENTEES AND MANUFACTURERS OF

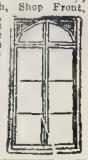
METALLIC SASH BARS AND MOULDINGS FOR SHOP-FRONTS, SKYLIGHTS, &c.

All works are guaranteed of the very best description, and architects may depend on their designs being faithfully carried out. They are respectfully requested, when intending to adopt any of BUNNETT and CO.'S works, to see that the name is properly inserted in the specification, much inconvenience having occasionally occurred from the omission.

Estimates, with all necessary information, and explanatory and detail drawings promptly furnished.



WINDOW-HOLLAND WAREHOUSE, 302, Wigmore-street, London—H. and J. DOVE, Proprietors. Window-hollands every width, from 30 to 108 inches; sun-blind ticks every width and colour, green tammis, from 27 to 70 inches wide; weis lines, tassels, &c. in every variety. H. and J. DOVE having purchased very largely before the advance, are enabled this season to offer great advantages in price.



WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining Hanover-square and 4, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner: Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 3s. 6d.; outside blinds of striped cloth, 3s. 6d. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOWELL, Patentee, 98, Regent-street, and at his steam works, 125, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are all therewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Blackfr... Sash-frames, Blinds, Staircases, &c. Well seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a post-age-stamp, a full list of prices will be returned.

HENRY PASK (late Johnson and Pask), BAKER-STREET, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

FIRST-CLASS WINDOW BLINDS.—No Extra Charges for Fixing within ten miles.—Country orders carriage free.—HADLEY and CO. confidently invite attention to their scale of charges. Their system is to supply only the best articles, for which ther prices will be found unprecedented:—Inside Venetian blinds, per square foot, 7d.; outside Venetian blinds, in cases, 1s. 6d.; outside blue striped cloth blinds, in cases, 1s. 6d.; best holland spring roller blinds, 7d.; best holland roller blinds, mounted with brass ends, 5d.; gauze wire blinds in mahogany or walnuset French polished frames, 1s. 9d. Estimates promptly furnished. HADLEY and CO. Window Blind Manufacturers, 150, Sloane-street, Chelsea.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852. —In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years: we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours &c C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.

At ARROWSMITH'S, Decorators and Upholsterers to her Majesty, 86, New Bond street. Parquet Flooring of any pattern.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For farther information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

HAREWOOD GRINDSTONES.—S. THICKETT begs to inform Engineers, Machinists, Gunbarrel makers, Cutlers, &c. &c. that he can supply, direct to order, of any size or thickness, the above very superior Grindstones, the cementing particles of which, being very tenacious, they are suitable for steam-power. Sample Grindstones sent to order.—Address, Victoria Wharf, Isle of Dogs, where a Stock will be kept.

"Cute like a Harewood stone."—*Old Proverb.*

Grindstones for exportation Westwood, Bramley Fall, and Pottenearn Green to order.

WESTWOOD BRAMLEY FALL QUARRIES and POTTERNEWTON QUARRIES.—ANN HUSLER, administratrix of the late John Husler, begs to inform her friends and the building public that she is carrying on the Stone Trade in all its branches, that she has appointed SAMUEL THICKETT, 3, VICTORIA-STONE WHARF, ISLE OF DOGS, her sole Agent for London, who will furnish samples and price on application. Estimates given for the supply of large contracts, docks, bridges, or buildings.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used in the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Palace Wharf Model Prisons, Penitentiaries, and other Public Buildings, Flooring in Bedford Dairies, Herefordshire Breweries, the Rifle Stand at Brussels, Pavement in Barracks, and the largest Stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marble the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the Chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions which are in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests the nobility and gentry who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as he can guarantee AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear.

N.B. The Tariff for 1854 is now ready

Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

BANGOR SLATES.
J. EASTWOOD AND SONS,
KENT ROAD BRIDGE.

CHEAP AND DURABLE ROOFING.
By Her Majesty's Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of
THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.
Patronized by
HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,
And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and steam. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION as THE ONLY WORKS in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

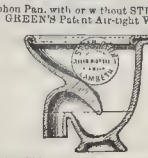
SEYSSEL ASPHALTE COMPANY,
STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the
GENUINE SEYSSEL ASPHALTE
is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.
J. FARRELL, Secretary.
N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications
"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"
and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gastar, and other worthless and offensive compositions have been introduced.
1853.

GENUINE SEYSSEL ASPHALTE.
ORSI AND ARMANI.
THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)
DIRECT FROM THE MINES.
REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.
AND THE
WORK GUARANTEED FOR THREE YEARS.
Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

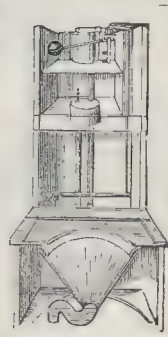
PATENT METALLIC LAVA.
A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of
ORSI AND ARMANI.
THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER
THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.
OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.
Offices, No. 6, Guildhall Chambers, Basinghall-street, City.



ANCIENT HOUSE FURNITURE

In order to supply the deficiency which has hitherto existed in Furniture suitable for the many Mansions that have been erected or re-toned in the MEDIÆVAL STYLES, Messrs. CRACE have directed their particular attention to this subject, in addition to their other works, and have prepared appropriate specimens in the various branches of Furnishing.
STUFFS for HANGINGS, in simple Worsted Damask, in Silk; also in Tapestry of Bauderkin.
CARPETS, plain or in rich Velvet pile, with appropriate Borders.
PAPER-HANGINGS of various kinds.
OAK CABINETS, Buffets, Octagon Library and Occasional Tables, Benches, Chairs, and other useful and appropriate Furniture
The whole of the above-mentioned Furniture, &c. is designed by the late Mr. A. W. PUGIN, Architect.
To render this Furniture generally available, a considerable portion has been arranged in the simplest manner, consistent with it ancient character.
14, Wigmore-street, January, 1853

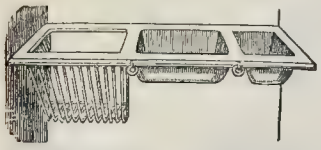
Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.



This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1848.
GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

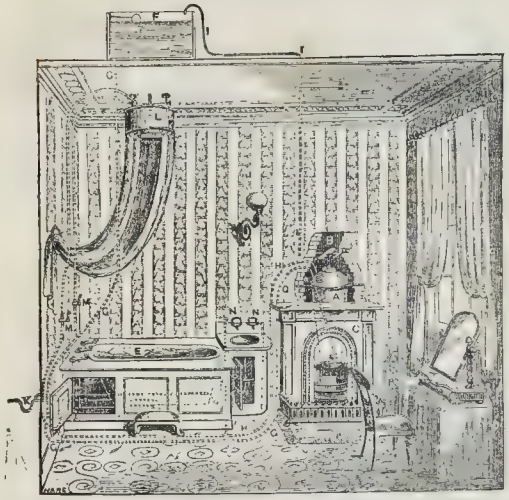
COTTAM & HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

ENAMELLED MANGERS AND STABLE FITMENTS, Registered. Economy, durability, appearance, cleanliness, comfort to the horse when feeding, and being rendered impervious to any infection by enamel, are some of the improvements of these fitments.

THE ROYAL EXHIBITION PRIZE MEDAL
WAS AWARDED TO
COTTAM AND HALLEN,
FOR
ORNAMENTAL IRON GATES;
ALSO FOR THEIR REGISTERED
ENAMELLED MANGERS.

ORNAMENTAL WROUGHT AND CAST IRON WORK OF EVERY DESCRIPTION—STAIRCASES, RAILINGS, &c.

ESTIMATES UPON APPLICATION.



TO ARCHITECTS, BUILDERS, AND THE TRADE.

SASHES,
SKYLIGHTS, AND CONSERVATORIES,
MADE IN WROUGHT IRON AND BY MACHINERY.

Which has not only improved the workmanship, but greatly REDUCED THE COST.

EVERY DESCRIPTION OF SASH IN WROUGHT AND CAST IRON, PLAIN OR GALVANIZED.

J. TYLOR AND SON'S BATH APPARATUS.

To fix a Bath, the apparatus for heating which can be fixed in the same room, and the luxury of an Open Fire retained.

A. Copper Boiler of sufficient capacity to make a warm bath, clasped by an iron band to support it, and fixed in the breast-work of a chimney. A flue is carried all round, and the draught is regulated by a revolving damper, *B*, which covers the opening into chimney. When set, the Boiler is entirely concealed from view.

This Boiler can be adapted for any chimney, by making it of an oval or elongated form.

A soot-door is fixed just underneath the damper for the convenience of cleaning, which, however, is rarely required, on account of the great draught round the boiler preventing any deposit of soot.

C. An ordinary stove front with sliding blower for the additional regulation of he draft.

E. Copper or tinned iron Bath, enamelled white marble inside, having three copper pipes, for the hot, cold, and waste water, which are indicated by the engraved levers on the cocks. The overflow is carried into waste-pipe *K*.

F. Cistern for cold water, say 100 gallons, which can be made of tinned iron, or any suitable material, either fitted into a recess or made of a cylindrical shape to stand on the floor of any room above the bath. The overflow can be carried into the waste or other convenient outlet.

G. Inch pipe from cistern to the pipe which goes to the bottom of boiler to fill it with water. A branch from this pipe also supplies the bath with cold water.

H. Inch pipe from the top pipe of boiler, to deliver the hot water into bath.

I. Half-inch pipe taken from the hot pipe *H*, and turned over the top of cistern to relieve the boiler.

K. Inch or 1¼-inch pipe to take away waste water from bath into soil-pipe or drain, as may be most convenient, and must be well trapped before entering.

L. Round copper or tinned iron Shower Bath, suspended from ceiling, and filled with hot or cold water by branches from the pipes *G* and *H*, the supply being regulated by the two cocks *M M*, which are let in the wall, and have levers fixed on them, engraved, "hot and cold shower."

A thermometer can be fixed in the shower-bath to regulate the temperature.

N N. Wash-hand basin supplied with hot and cold water, by branches from the pipes *G* and *H*, the waste being carried into the overflow of bath.

By this simple arrangement, the boiler is always kept full of water, and cannot, by any means, be emptied by the action of the fire. The draught is so regulated by the blower and damper, that a bath can be made in twenty minutes, or an open fire kept continually alight.

WARWICK-LANE, NEWGATE-STREET, LONDON.

PORTABLE HOUSES—ADAPTED TO ALL CLIMATES.

SOLE MANUFACTORY, CLIFT-HOUSE, BRISTOL.

SAMUEL HEMMING'S PATENT IMPROVED PORTABLE BUILDINGS.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,
BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glass, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Cock-head, Bermondsey, Danver's Wharf, foot of Battersea-bridge, Chelsea, Pratt Wharf, King's-road, Camden New Town. TURNER, 2, South Wharf, Praed-street, Paddington; and at COLWILL, Brothers, 32, Brydges-street Covent Garden.
Drawings and List of Prices will be forwarded free, on application.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.
PRICE 7s. 6d. each,
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

STAFFORDSHIRE POTTERY.—WILCOX, BARNARD, and CO. Earthenware Manufacturers, Mill-wall, Poplar.—Closet-basins, urinals, bidet-pans, plug-basins, washhand tables, beer-machine handles, cloak-handles, bath-knobs, &c. toilet ware, fancy jugs, pan-de-pots, &c. white, printed, and decorated, delivered carriage-free to wholesale dealers within five miles of London.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

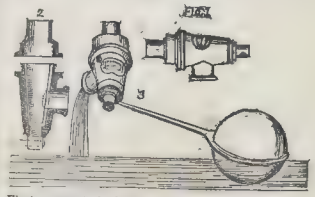
Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Or hard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.
A DESIDERATUM in SLUICE-VALVES,
FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 9 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks (as used by her Majesty's Commissioners of Sewers), White Fire Clay, Facing Bricks, &c. &c. Agents, CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

GREAT SIMPLIFICATION and Economy in FIXING CLOSETS.

By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a bib-cock, and yet ensuring a perfect flush of water.
The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Jennings's Closets fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.
CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford-passage, Clerken well.



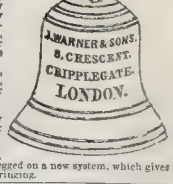


Fig. 1. represents the Cylinder Ball-valve in elevation.
Fig 2. is a Section of the Interior, showing the uninterrupted course of the Fluid.
Fig 3. shows the Cylinder Ball-valve in Action.
This Valve is peculiarly suited to High pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more effectually prevents waste.
Manufactured solely by
DEVEY and DALE, 8 and 9, Shoe-lane,
and may be had of respectable Plumbers.

TO DRAIN-PIPE MANUFACTURERS AND OTHERS.
WANTED to PURCHASE, for cash, 400 ft. run of 9 in. GLAZED STONEWARE DRAIN-PIPES, to be delivered near Victoria-park.—Particulars, with lowest price, to be sent to Mr. G. CLARKSON, Estate Agent, 48, Penton-street, Pentonville.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.
TUNED BY MACHINERY.
Blocked and wheels ready for fixing. Old Bells recast or taken in exchange.
MUSICAL HAND BELLS tuned to the Chromatic Scale, with improved Clappers and pegged on a new system, which gives a superior tone and facility for ringing.

HEAL and SON'S ILLUSTRATED CATALOGUE of BEDSTEADS, sent free by post, contains designs and prices of upwards of ONE HUNDRED different bedsteads; also of every description of bedding, mattresses, and quilts. And their new warerooms contain an extensive assortment of bedroom furniture, furniture chintzes, damasks, and draperies, so as to render them establishment complete for the general furnishing of bedrooms.
HEAL and SON, Bedstead and Bedding Manufacturers,
196, Tottenham-court-road.

SALES BY AUCTION.

WHITE HORSE, CROYDON.

MESSRS. BLAKE will SELL by AUCTION, on the PREMISES, Collier's, Water-lane, about midway between Croydon and Norwood, and within one mile and a half of the Crystal Palace, on TUESDAY, MARCH 7, at ONE for TWO o'clock, by order of Mr. G. H. Holl-dge, who is relinquishing the brick-making business, 47,000 BRICKS, consisting of 250,000 stocks, 200,000 place, and 50,000 others, various. May be viewed and catalogues had on the Premises; at the Inns in the neighbourhood; the Artichoke Inn, Newington Causeway; at Garraway's; and of Messrs BLAKE, Croydon.—N.B. The Brick-field (upon which there is sufficient earth dug to make a million of bricks), to be Let for two years.

LONG-ACRE.—Building Materials of Four Houses and large Factory.

PULLEN and SON are favoured with instructions from the Worshipful Company of Mercers, to SELL, by AUCTION, on the PREMISES, on TUESDAY, MARCH 7, at TWELVE, all the valuable BUILDING MATERIALS of FOUR HOUSES and a large C-ACH FACTORY, situate in Long-acre, Hanover-street, and Castle-street, comprising good sound brickwork, plain and panelled, oak and fir timber in stout roofs and floors, glazed sashes, doors, floor-boards, shop-fronts, weather boarding, copings and chimney-pots, cisterns, and pipes, and various useful fittings-up. May be viewed the day previous. Catalogues had of Gregge Swift Esq. Mercers' Hall; and of PULLEN and Son, 80, Fore street, Cripplegate

TO CONTRACTORS, BUILDERS, CARPENTERS, PACKING-CASE MAKERS, AND OTHERS.

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, Manor-street, Chelsea, on WEDNESDAY, MARCH 8, at ELEVEN for TWELVE o'clock punctually, the dry and well-selected STOCK, consisting of about 3,000 yellow deals, planks, and boards; 500 pine planks, several first quality pine deals, some white Christiania deals, 7,350 white battens, 1,800 yellow ditto, 620 squares of white and yellow flooring, framed door grounds, panel doors, sash doors, sashes and frames, about 500 feet moulded fir cornice lengths, and useful miscellaneous articles. The above premises are situate within 200 yards of a free dock on the Thames, and offer every facility for removal either by land or water. Approved bills at four months' date from purchasers of 30*l* and upwards. The stock may be viewed two days prior to the day of sale, and catalogues obtained on the Premises; and at Mr. Marsh's Offices, 2, Charlotte-row, Mansion-house, or will be forwarded on application.

HACKNEY. Valuable Freehold Building Land

MESSRS. PRICKETT and SON will SELL by AUCTION, at the MART, in the Bank of England, City, on WEDNESDAY, APRIL 12, at TWELVE o'clock, in one lot, THREE ACRES and a HALF of FREEHOLD BUILDING LAND, most desirably situate near to Mare-street, Hackney, having a frontage of 280 feet upon King Edward's road, and with a 40-feet roadway, leading opposite the Hackney entrance to Victoria-park; estimated to produce about 300*l* per annum in ground rents; admirably adapted for a Freehold Land Society, or a building speculation, there being a considerable depth of brick-earth and gravel. Particulars, with plans, may be obtained in due time, on application to H. B. CLARKE, Esq. Solicitor, 14, Serjeant's-inn, Fleet-street, and to Messrs. PRICKETT and SON, Land and Timber Valuers, 34, Southampton buildings, Chancery lane

Building Materials of a Mansion.—Croydon, Surrey

MESSRS. PRICKETT and SON will SELL by AUCTION, on THURSDAY, the 16th of APRIL, at ELEVEN, in numerous Lots, on the PREMISES, High street, South-end, Croydon, the whole of the excellent MATERIALS of the Residence, Stabling, and Buildings. They consist of good sound stock bricks, joists, rafters, floor-boards, marble chimney-pieces, about 5 tons of lead, and other materials. Catalogues may be obtained on due time on application to Mr. WALTER, Timber Merchant, South-end, Croydon; and to Messrs. PRICKETT and Son, Surveyors and Valuers, 34, Southampton buildings Chancery lane, and Highgate, Middlesex.

TO PLUMBERS, ENGINEERS, HOUSE PAINTERS, AND BUILDERS. Capital Freehold Business Premises and Dwelling-house, at Kings on-on-Thames, Surrey. N B An artesian spring (producing 1,000 gallons per hour) is a great object to the attention of dyers, distillers, or any trade requiring a supply of pure and soft water.

MR. JOHN DAWSON is instructed to SELL by AUCTION, at the MART, on FRIDAY, 24th of MARCH, at TWELVE, a valuable FREEHOLD ESTATE, consisting of a comfortable residence, with domestic offices, a shop fronting the street, and extensive premises, with all the erections, workshops, stabling, &c. required for a first-rate business, with all its advantages herinafter from the fact that for more than 20 years no time has been lost by the present owner, who is the vendor, a large, well-conducted, and in every sense respectable plumbing and engineering trade has been established. An intimation proves to this statement having been given out by the vendor's intention to invest his capital and energies in another direction. The business, which is in full activity, will fall unimpaired to the benefit of the purchaser. To be viewed. Detailed particulars may be had at the Mart, of CHARLES EDWARD JENNITT Esq. Solicitor, Kingston, and at Mr. JOHN DAWSON'S Auction and Land Offices, Kingston; and Marlborough-chambers, 49, Pall-mall.

Valuable Building Ground, Slough, Bucks, about 24 miles from Windsor and Eton and within half an hour's time of London

MESSRS. NOCKOLDS and KING have received instructions to offer, by PUBLIC AUCTION, at the GROVE HOTEL, SLOUGH, on the 28th of APRIL next, in one lot, or more, as may be determined upon at the time of sale, and unless previously disposed of by private contract, all that plot of land known as "GREAT ARBOR HILL FIELD," containing 4a. 2r. 29p. most eligibly situate, having an extensive frontage to the high road leading from Slough to Windsor, near the district church of Upton-cum-Chalvey, and the residences of the late Sir J. Herschel; offering to capitalists a most desirable opportunity for investment, being in a highly respectable and rapidly-improving neighbourhood. The situation is healthy and elevated, embracing extensive and picturesque views of the Castle of Windsor, Eton College, &c. &c. The property is freehold, tithe-free, and land tax redeemed. Further particulars to be obtained upon application to Messrs. NOCKOLDS and KING, Land Agents, &c. Saffron Walden, Essex.

SUFFOLK.—Newmarket and Bury Extension Railway. Important Sale. In consequence of the near completion of these Works.

MESSRS. ISAACSON & TATTERSALL have been instructed by Mr Thomas Jackson, the contractor, to SELL by AUCTION, without the least reserve, on TUESDAY, MARCH 21, 1854, at the Railway Works, Newmarket, TEN CART-HORSES, Harness, Carts, Timber Carriages, large quantity of Earth Wagons, Trollies, Blocks Chain and Hemp Falls, Capital Mortar Mill, Crabs, Jacks, Pumps, and other Tools, Barrows Wheeling Planks, Cutting, Lagging, Temporary Rails, Scrap and Cast Iron, large quantity of White Brick, Stone, and Timber, and a general assortment of Contractor's Plant; also 50 pairs of Hemp Sheets, 38 Coverlids, quantity of Bed Ticking, &c. —the whole of which will be fully spoiled on a day notice had a week prior to the sale, at the Railway Works, of the Auctioneers, at their Offices, Clare and Newmarket, Suffolk; and of Messrs TATTERSALL, Hyde-park Corner, London. Order.—These to commence punctually at ELEVEN o'clock with the Timber, Waggons, Horses, Harness, & Bricks, Stone, in Lots and Sets.

TO BUILDERS CARPENTERS, AND OTHERS

MR. LEREW will SELL by AUCTION, on the PREMISES, No 84, Kingsland-road, High street St Marylebone, on MONDAY, MARCH 6, at TWELVE, the useful STOCK of a BUILDER, comprising small poles, boards, and cords; pulleys, ladders, trestles, screens, slates, tiles, bricks, stone, boards, doors, planks, deals, battens, and old stuff, truck, dray, and cart, and other useful articles.—Auction Offices, Cardington-street, Hampstead-road, near the Euston Station.

SALES BY AUCTION.

A Freehold Brickfield to be Sold, a short distance from London, on the Great Western Railway

MR. EDWIN FOX is instructed to SELL a valuable BRICKFIELD, in full work, capable of working ten moulds, on the earth in fee deep. There are 18 acres undisturbed; a siding on the railway, turn-table, &c. &c. The plant is of the most approved principle, and in thorough repair. A couple of bricks can be seen by applying at Mr. EDWIN FOX'S Offices, 41, Coleman-street, Bank

1,000,000 New Bricks.—Shepherd's-bush.

MESSRS. EVERSFIELD and HORNE beg to announce that they will SELL by AUCTION, on TUESDAY, MARCH 7, at TWELVE for ONE, at the Brickfield, Uxbridge-road, near Shepherd's-bush, about ONE MILLION of capital sound STOCK BRICKS, and a few thousand place ditto, which will be arranged in lots, to suit purchasers, to whom accommodation in the way of approved bills will be granted.—Also, a powerful Cart Horse, Brick-cart, and a wheel Truck. May be viewed till the sale, and catalogues had on the Premises; also at the principal Inns at Hammersmith and Bradford; and of the Auctioneers, 43, Parliament-street, Westminster, and Coal Exchange.

The Gwydir Slate and Slab Works, near Llestiniog, North Wales

MR. LEIFCHILD is instructed by the Proprietor to OFFER for PUBLIC SALE, at GARRAWAY'S, on WEDNESDAY, MARCH 8, at TWELVE for ONE, the above well known, important, and highly valuable MINERAL PROPERTY, which offers a finer and more certain investment for capital than many parts in the joint stock line. The quarry is advantageously situate, by the side of the excellent road from Pffestiniog to Dolgarrog, in the parish of Dolwyddelan, in the county of Carnarvon, and the mill and tramway on the level of the road, in the south-eastern face of the mountain, into which they extend in a north-westerly direction, the vein increasing rapidly in height and width as the workings proceed. The present working out is about 150 feet long by 57 feet wide, and the height of the metal from the road is 63 feet. The depth "from grass" is inconsiderable. The slate is smooth to the touch, and of undoubted first rate quality, lies well for working, as the joints (which are of great length, are at right angles with the clearage planes. The buildings are all new, and are most substantially built; there is a large manufactory, containing fourteen sawing and planing tables with tramways from the quarry to the tail levels and to the dressing-mills and back, the whole being worked by a powerful water-wheel, 36 feet in diameter, with 3 feet 6 inches breast, for which the supply of water is ample and constant. The slate rock has been traced continuously beyond the limits of this quarry, and the best test of the quality of the slates and slabs is the fact that they are readily sold as fast as they are manufactured, at the best Bangor prices. The whole concern is in fit state for working orders, and the present mine capability for making 50 tons per week, with a monthly increase of 10 or 15 tons more. The slates, when made, are carried to Trefriew Quarry, at a cost of 5s. 6d. per ton, which will be much lessened by the construction of one or two lines of railway, which are now before Parliament. The quarry is held from Lord Willoughby d'Eresby, of Gwydir Castle, on a long lease, at a nominal rent. The unprecedented and daily increasing demand for slates and slabs, both at home and for the colonies, renders this property a most safe and profitable investment of capital, more especially as no outlay is required except for the actual getting and making of the slates.—Particulars and conditions of sale, with a plan of the works, and also a report from mineral surveyors, may be had of Mr. LEIFCHILD, who is fully authorized to treat for the property by private contract. London, 63, Moorgate street, January 19.

Important Sale of Timber in Bark. Wychwood Forest, Oxfordshire, and Whittlewood and Salcey Forests, Northamptonshire.

By order of the Right Hon. T. F. Kennedy, the Commissioner in charge of her Majesty's Woods and Forests.—TO BE SOLD by AUCTION, by

MR. LONG, at the CHURCHILL ARMS INN, ASCOT, near Wychwood, on TUESDAY, the 21st MARCH, 1854, in Wychwood Forest about NINETY TONS of BARK, the produce of 1853, and 203 TONS of the produce of 1851; about 10 OAK TIMBER TREES, of good dimensions, in a round hewn, and sided state; a large quantity of slabs off oak timber, taken from the Navy; sundry lots of top-pieces, &c.

In Whittlewood Forest, Northamptonshire, about Thirty-eight Tons of Pittern Bark, the produce of 1852, on Salcey Forest, Northamptonshire, also about 200 Tons of Pittern Bark, the produce of 1853.

The Bark and Timber in Wychwood Forest is contiguous to good roads, and the whole is within about three miles of three stations (viz. Charlbury, Ascot, and Shipton), on the Oxford, Worcester, and Wolverhampton Railway, thus affording easy communication to all parts of the kingdom

The Bark in Whittlewood Forest is on a good turnpike road, within about six miles of the London and North-Western Railway, and the Grand Junction Canal. That in Salcey Forest is on a good road, about three miles from the London and North-Western Railway, and the Grand Junction Canal.

For further particulars apply to Mr. T. LINNELL, Salcey Forest, near Northampton.

Catalogues, with conditions of sale, may be had at the Office of Her Majesty's Woods and Forests, 2, Whitehall-place, London; of Mr. T. Linnell, Salcey Forest, Northampton; of Mr. R. Morris, Ascot, near Wychwood; at the place of sale; and of the Auctioneer, Witney, Oxon.

Mr. R. Morris, jun. will show the lots of Bark and Timber in Wychwood Forest; Mr. Linnell, the Bark in Salcey Forest; and Mr. T. Gulliver, of Hazleborough Lodge, the Bark in Whittlewood Forest

Important Sale of valuable and improving Freehold Property, which will be SOLD by AUCTION, by

MR. W. MELVIN, at GARRAWAY'S COFFEE HOUSE, Change-alley, Cornhill, on WEDNESDAY, MARCH 15, 1854, at TWELVE for ONE o'clock, by order of the Joint Trustees of the late Henry Collins, in Lots, comprising a very eligible FREEHOLD RESIDENCE, situate No 39, Parliament-street, Westminster, on the east side, and in close proximity to the New Houses of Parliament, let on lease eleven years and a half unexpired, at a rent of 210*l* per annum, but underlet at 300*l* per annum. Also, a most desirable HOUSE, with double front, let on lease at 20*l* per annum, No 1, Charing-cross, let on lease ten years unexpired, at 23*l* 13*s* per annum. Particulars and conditions of sale may be had on and after the 1st of MARCH, of Messrs. LAWRENCE, Solicitors, 3, Upper Wellington-street, Covent-garden; at Garraway's; and of Mr. W. MELVIN, Auctioneer and Estate Agent, 54, Southampton-row, Russell-square.

FINCHLEY.—250,000 Bricks, Carts, Horse, &c. TO BE SOLD BY AUCTION, by

MR. RICHARDS, on the PREMISES, Long-lane Brickfield, near the "Green Man," Brown's Wells, Finchley, on MONDAY, MARCH 13, at TWELVE, all the compact Stock and Place Bricks, quantity of Bats and Burs; also, a 750-strong Brick Cart, a Set of Pannell Cart, a useful Cart Horse, and various effects.—May be viewed the morning of sale; catalogues on the Premises, and of the Auctioneer, Tottenham.—February 3, 1854.

PREMISES WANTED, between Change and Land's-bridge, with an extensive ground floor of about 4,000 or 5,000 square feet, a frontage of not less than 30 feet, and side entrances. Apply to W. H. DAWSON, Auchurch-yard, City, London.

TO BE DISPOSED OF, solely on account of the owner going abroad, the LEASE (near fourteen years unexpired) of a first-class CARPENTER'S BUILT and PRINCIPAL MISER, with double high sash-shed, and large sawing entrance door attached; and held by No 8, St. Leonard's-street, Bromley, Middlesex. Application to be made personally on the Premises. Terms very moderate.

TO PLUMBERS, DECORATORS, GAS FITTERS, &c

TO BE DISPOSED OF, an excellent old-established BUSINESS, in a flourishing town with house, shop, &c. &c. of first respectability. For particulars, apply to Messrs. JAMES GAY and CO'S, Laurence Poundney-hill, Cannon-street, London.

A PLUMBER'S, PAINTER'S, and BUILDER'S JOBBING BUSINESS, with HOUSE AGENCY connected, at the West end of London, to be DISPOSED OF upon moderate terms.—Address, P. H. Office of "The Builder."

TO WRITERS, GRAINERS, FURNITURE JAPANNERS, &c.

AN excellent Opening for Beginners.—TO BE DISPOSED OF, immediately, a small BUSINESS, comprising the above branches, for very moderate terms, situate at 34, Cleveland-street, Fitzroy-square, London, where all applications must be made.

TO ENGINEERS, IRONFOUNDERS, &c.

TO BE DISPOSED OF, by Private Treaty, the extensive PREMISES and STOCK of the PHŒNIX FOUNDRY, in Lancaster, and the well-established business connected therewith, (all parts plans of which may be obtained on application to Messrs. GRIFFITH and PRINCE, 441 Strand; L. Ingoldsby, Esq. Accountant, and Bilston, Birmingham; Mr. JOHN GRANTHAM, C.E. Liverpool; Benj. FOTHERGILL, C.E. Manchester; Edwin RIGG, 21, Boar-lane, Leeds; Messrs. JOHNSON and MAWSON, Architects, Bradford; Mr. THOS. AUSTIN, Architect, Newcastle-on-Tyne; Messrs. ANDREW MORISON and SON, 37, Buchanan street, Glasgow.

TO ENGINEERS, MARINE-ENGINE BUILDERS, AND OTHERS.

FOR SALE, the following TOOLS and MACHINES, made and manufactured at Paragon Works, near Queen's-ferry, N. B.:—1. A most splendid and powerful self-acting screw-bolt-cutting-machine, specified from three to 180 revolutions per minute; diameter of spindle, 7 inches; travel of dittо, 3 feet 8 inches, with counter shaft complete, a most superior and valuable tool. 2. A bolt and nut-screwing machine, with taps and dies, from 4-inch to 24-inch, with counter shaft complete. 3. A self-acting slide lathe, planed for screw-cutting, with twenty four change wheels, having also a self-acting surfacing motion, with 4 lipped clock throw plate, compound slide-rest, complete. Length of bed, 7 feet; head-stocks, 7-inch centres. 4. A self-acting nut-shaping machine, finishing two sides at once, with tools (not circular cutters). 5. A powerful horizontal steam-engine, self contained, 11-inch cylinder, 15-inch stroke, with malleable iron crank, and crank shaft, 11-inches diameter, 7 feet 6 inches long. All the above are quite new, and drawings of the same will be sent to parties applying to Mr. JAMES PATTERSON, Paragon Works, near Queen's-ferry, N. B., where engines, tools, printing, and other machines of all sorts are manufactured of the best materials and workmanship, and on the most approved principles. The bolt and nut-screwing machine, with taps and dies, from 4-inch to 12-inches, little used, and nearly new. Parties residing about London who may wish to see drawings of the machines, and be desirous to learn further particulars will be informed regarding them, upon application to Mr. J. SCOTT, 38, Upper Thames-street; or Mr. SCRIPPS, Newspaper and Advertising Agent, South Moulton-street, New Bond-street. Paragon Works, near Queen's-ferry, N. B. February 28, 1854.

TO STONEMASONS AND MONUMENTAL WORKERS.

TO BE DISPOSED OF, in consequence of the proprietor's declining business, the GOODWILL and STOCK IN TRADE of an excellent old-established BUSINESS in the above line, of twenty-five years' standing, and known as the "Old Road Stone Works," opposite Stepney Church, Stepney. A respectable dwelling-house and premises are desirably situated in the centre of (and having) a good jobbing connection, and also doing a first-rate trade in head-stones and monumental work. To any one with a moderate capital the above offers an opportunity seldom to be met with. Apply on the Premises.

NOTICE.—TO CARPENTERS and BUILDERS.—Wanted, in the country, a BUSINESS in the above line.—Apply to Messrs. PAPPS, Builders, Frome, Somerset.

TO CARPENTERS AND BUILDERS.

TO BE DISPOSED OF, with immediate possession, a WORKSHOP, with benches, gasfittings, and every convenience, in a thorough business neighbourhood, doing a good trade; fixtures and stock at a valuation, the present proprietor having since been appointed to a district out of town. The above is a small concern, well worthy the attention of a person wishing to commence business. Cards to view, and further information may be obtained by applying to No 12, Belvedere road, Lambeth.

CITY of LONDON TENANTS' INVESTMENT and FREEHOLD LAND SOCIETY. Office, 70, King William-street, London-bridge.

Alderman Sir James Duke, Bart, M.P. The Right Hon. B. Disraeli, M.P.

The Directors have, with much consideration for the benefit of the members, purchased a splendid and unusually eligible estate at Dulwich, Surrey.

It looks upon the Crystal Palace, Sydenham, from which it is only half a mile distant, has good aspects and peculiar advantages, from a superior neighbourhood, high roads for the termination of those on the Society's estate, good frontages, building soil, excellent drainage, and abundant water of good quality.

The plot will be of the dimensions than 18 feet frontage to the road, by 100 feet in depth.

The estate presents peculiar opportunities for obtaining really serviceable plots of freehold ground, either for building or investment.

Plans of the estate are now ready for distribution, price 1*d*, either on application at the Society's Offices, or to Mr. Surveyor, E. HABERSHON, Esq. 38, Bloomsbury-square, London; or to the Secretary.

WM. RAYNER, Secretary and Managing Director.

Feb. 2, 1854

N B. Deposits of 1*l* and upwards received, and interest at the rate of 5*l* per cent per annum paid thereon, quarterly or half-yearly

WESTMINSTER FREEHOLD LAND SOCIETY.—President, Sir J. Y. SHELLEY, Bart. M.P. Shares, 50*l*: entrance, 1*s*. per share; subscription, 2*s*. per fortnight; 5 per cent. interest allowed on payments in advance. Estates allotted to members in rotation. A small sum for expenses of management defrayed by a separate fund. Statement of the cost of every estate published and supplied to the members.—Offices, 4, Beaufort-buildings, Strand.

GEO. HUGGETT, Secretary.

FINSBURY and GENERAL FREEHOLD LAND SOCIETY. Established 1850.

The Mitcham and Merton Estates will be balloted for shortly. All shares issued previously, on which one month's subscription is hereby paid, will be entitled for the ballot. Monthly subscription, 4*s*.; entrance and rules, 1*s*. 6*d*.

48, Hereford-row. R. A. MARCH, Secretary

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.

For preparing Gentlemen for Surveyors, Architects, Engineers, Land Agents, Building Surveyors, &c. and for giving EVENING INSTRUCTION, in Architectural Civil Engineering and Mechanical Drawing, Colouring, Perspective, Mathematics, Mechanics, Surveying, Taking out Quantities, Preparing Estimates, &c. &c. Terms very moderate. For prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell-square.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. Pancras. Printer, at the Printing-office of COX (Brothers) and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the Parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of Saint Paul, Covent Garden, all in the County of Middlesex.—Saturday, March 4, 1854.

ADVERTISEMENTS.

ROYAL ACADEMY of ARTS, Trafalgar-Square.—NOTICE TO ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 3rd, or TUESDAY, the 4th of APRIL next, after which time no Work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in Gilt Frames. Oil Paintings under glass, and Drawings with wide margins, are inadmissible. Excessive breadth in frames, as well as projecting mouldings, may prevent Pictures obtaining the situation they otherwise would. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

Every possible care will be taken of Works sent for Exhibition, but the Royal Academy will not hold itself responsible in any case of injury or loss, nor can it undertake to pay the carriage of any packages. The Prices of Works to be disposed of may be communicated to the Secretary.

COMPETITIONS.

NEW SENATE-HOUSE for the CITY of HAMBURG. The Commission appointed by the Senate of Hamburg for erecting a New Senate-house, hereby invite Architects and Artists to prepare and present to them DESIGNS for the CONSTRUCTION of the NEW BUILDINGS. The specification accompanied with plans and other details is published at Hamburg by Mr. MEISSNER, the printer to the Senate, and sold at one mark currency, for the benefit of the Church Building Fund, and may be ordered of Messrs. WILLIAMS and NORGATE, 14 Henrietta street, Covent-garden. Three premiums are set apart for the best plans, one of 35 Frederiks D'or, and two of 25 Frederiks d'or each.

Hamburg, the 15th of February, 1854.

The COMMISSION for the ERECTION of the NEW SENATE HOUSE.

TO ARCHITECTS.

GREAT YARMOUTH HOSPITAL.—The Committee of the Great Yarmouth Hospital being about to alter and add to, the present Building, offer a PREMIUM of TEN GUINEAS for the best PLAN of the intended new Works, and which are to comprise on the Ground Floor, an Accident Ward, capable of holding six Beds, a Waiting Room for out-door patients, and a bath Room; and on the Upper Floor, two Wards, each capable of holding six Beds, a Nurse's Room, and a Water closet. The expenditure in the new works must not exceed 800l., and each gentleman is requested to send an estimate of the cost, with his plans. It will be desirable to retain as much as possible of the present Recreation Ground, and a plan will be preferred which keeps in view a future extension of the building. The Committee do not pledge themselves to employ professionally the successful competitor. Gentlemen are requested not to put their names upon the plans, but a device or motto, and send enclosed and sealed in a small packet marked "Private," the corresponding device or motto with the names, which packets will not be opened until the selected plan is determined on. The ground plan of the present Building may be inspected at the Hospital any time between 11 and 4 o'clock. The new plans are requested to be sent to the Hospital, addressed to the Committee, on or before TWELVE o'clock at noon of WEDNESDAY, the 29th of MARCH, 1854. Plans not approved will be immediately returned, which keeps in view a future extension of the building. The

Great Yarmouth, February, 1854.

EDWARD STEELE, Hon. Sec.

TO ARCHITECTS.

STAMFORD BURIAL BOARD.—The Stamford Burial Board will be ready to receive PLANS and Descriptions for the ERECTION of TWO appropriate CHAPELS, either in one or separate buildings, with suitable Entrances and Lodge, in and for the purposes of the newly laid out Cemetery. Such plans and descriptions to be sent to me on or before the 20th MARCH next, being the day of the next monthly meeting of the Board. The plans not selected will be returned without examination, and the Architect whose plans are selected is not to be the Builder, and will not, if necessary, be required to superintend the works. Further particulars may be had on application at my Office.

By order,

JEREMIAH CLAPTON, Clerk.

Stamford, 28th February, 1854.

CONTRACTS.

STOKE-UPON-TRENT, STAFFORDSHIRE. To BUILDERS.—The Trustees of Stoke Market are prepared to receive TENDERS for the COMPLETION of the SOUTH WING of the TOWN HALL, in Glebe-street, Stoke-upon-Trent, and for the ERECTION of ADDITIONAL MARKET BUILDINGS (both jointly and separately), according to plans and specifications, which may be seen at the Offices of Messrs. WARD and SON, Architects, Hanley, Staffordshire Potteries. The Tenders to be forwarded to my Office on or before the 31st of MARCH next. The Trustees do not bind themselves to accept the lowest or any Tender.—By order,

WM. KEARY, Clerk to the Trustees.

Brock-street, Stoke-upon-Trent, February 23, 1854.

EAST and WEST INDIA DOCK COMPANY.—TENDER for STONE for ROADS. The East and West India Dock Company are willing to receive TENDERS for forty yards of broken Guernsey granite, 50 yards of broken Flint, and 50 yards of Stone Lime together or for separate portions, according to a specification and particulars which may be had at the Engineer's Office, Westminster-bridge.—Tenders to be addressed to the Secretary, and delivered at the Dock House, Billiter-square, on or before the 20th MARCH 1854.

GEORGE COLLIN, Secretary.

East and West India Dock House, Billiter-square, 8th March, 1854.

DOVER LOCAL BOARD of HEALTH.—IMPROVEMENT WORKS.—CONTRACT for the COMPLETION of DRAINAGE and WATERWORKS.—The Board hereby give notice, that they are prepared to receive TENDERS from persons who may be willing to CONTRACT for completing the construction of certain BRICK SEWERS, laying Stoneware Drain-pipes, Cast-iron Drain-pipes and Cast-iron Water-pipes, building Two Engine and Boiler Houses, a Cooling Pond, a covered Reservoir, and a Cottage, Sinking Pump, Wells, and other Works. The contract drawings, specification, and Form of declaration may be examined on and after the 7th day of MARCH next, at the Old Town-hall, Dover, where also copies of the quantities, and forms of Tender may be obtained, on payment of 5s. for each copy. Further particulars will be given at the Offices of T. W. RAMMELL, Esq. Engineer to the Local Board, 4, Trafalgar-square, London. Tenders must be sent in before the 22nd day of MARCH next. No Tender will be entertained unless it be made upon the printed forms to be supplied.

THOMAS BAKER BASS, Town Clerk.

Dover, February 25, 1854.

CONTRACTS.

GREAT WESTERN, OXFORD, WORCESTER, and WOLVERHAMPTON, and SHREWSBURY and BIRMINGHAM RAILWAYS.—WOLVERHAMPTON JOINT STATION.—The Committee of the Wolverhampton Joint Station Company are prepared to receive TENDERS for the ERECTION of STATION BUILDINGS, at Wolverhampton. Plans and specifications may now be seen, at No. 29, Great George-street, Westminster. Sealed Tenders to be sent under cover to the undersigned, addressed to 29, Great George-street, Westminster, before TWELVE o'clock on the morning of the 15th of MARCH next. The Committee do not bind themselves to accept the lowest Tender.—By order,

February 21, 1854. J. W. KIRSHAW, Secretary.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that certain Work is intended to be done in enlarging the Alms-house, or Hospital, at Bratton, Somerset, in the course of the summer. Plans and specifications of the Work will be deposited at the Hospital, from and after the 10th MARCH next. Proposals or Tenders for CONTRACT for the WORK are required to send or deliver sealed Tenders to the Master of the Hospital, at least three days before the 18th MARCH next, when the offers will be considered, and the party whose Tender may be accepted, will be immediately apprised thereof. The lowest Tender will not necessarily be accepted. The plans and specifications have been prepared by Mr. SHOUT, Architect, Yeovil, Somerset, of whom any further particulars may be obtained. Dated 27th February, 1854.

TO ROAD CONTRACTORS AND OTHERS.

PERSONS willing to CONTRACT for making about 2 miles of ROADS and FOOTPATHS on an estate at Walsall, in Staffordshire, may see the plans, sections, and specification, at the Office of Mr. LAMBERT, Surveyor, 4, New Basinghall-street. Sealed Tenders to be delivered on WEDNESDAY, the 15th day of MARCH next. The Proprietors reserve to themselves the power of refusing the lowest or any Tender then offered. Security will be required for the due fulfilment of the contract.

TO BUILDERS.

PERSONS willing to CONTRACT for ALTERING and REPAIRING the present FARMHOUSE and BUILDINGS also for erecting a new Farm Homestall on two Labourers' Cottages, on the estate of Mr. WARD, at Ashwell, and LANGHAM, in Rutlandshire, may inspect the conditions, plans, and specifications, on application to Mr. T. SMITH, Curator of the Fitzwilliam Museum, Cambridge. Sealed Tenders, addressed to Mr. WORTH, Trustees, to be delivered to Mr. T. SMITH on or before the 14th instant. The Trustees do not bind themselves to accept the lowest or any Tender.

Cambridge, 1st March, 1854.

TO GAS CONTRACTORS.

THE Commissioners of Athlone are desirous of CONTRACTING for the ERECTION of GASWORKS, &c. at Athlone, according to plans, specifications, and estimate of quantities, to be seen at their Office, and dep. sited at the Commissioners' Office by the 1st March, at the Lowest or any Tender. Security will be required for the due performance of the Contract. Tenders will be received until TWELVE o'clock on MONDAY the 13th MARCH next.

WILLIAM KELLY, Clerk to the Commissioners.

14th February, 1854.

CONTRACT.—THE BRITANNIA NATIONAL FREEHOLD LAND SOCIETY.—TO ROAD CONTRACTORS.—The Trustees of the above Society are prepared to receive TENDERS for CONTRACTS for the ROADS and DRAINAGE on the Pinchen Estate of the above Society, lately purchased, and now being laid out for Building Sites, situate in the parish of Wednesbury, Staffordshire, and distant about two miles from the Great Western Railway Station at Wednesbury. W. G. and E. HABERSHON, 18, Bloomsbury-square, on Monday the 13th inst.

WATERING and CLEANSING STREETS. The Commissioners for Watering Camden-town will MEET at their ROOMS, in Carey-street, Lincoln's-inn-fields, on THURSDAY, the 23rd inst at TEN o'clock in the Forenoon, to receive PROPOSALS or TENDERS for CONTRACTING to WATER the CARRIAGE-WAYS of the District until the end of SEPTEMBER next, at per day for horse, cart, and man; and also to receive Proposals or Tenders for supplying the Commissioners with horse, cart, and man for taking up and removing the Slop, Rubbish, and Sweepings from the several Streets and places of the district, at per day.—Further particulars may be had on application to Mr. DENT, Surveyor, High-street, Camden-town. The contractor will be required to give security for the performance of the work and to pay the Poor Rates.

SAMUEL BARKER, Clerk to the Commissioners, 21, Tavistock-square.

CONTRACTS.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that TENDERS for the ERECTION of DWELLINGS for the Non-commissioned Officers of the 4th Regiment of Middlesex Militia, at Hounslow, will be received at the Middlesex Lieutenancy Office, No. 4, Old Palace-yard, Westminster, on or before WEDNESDAY, the 22nd day of MARCH next. The plans and specifications of the proposed works may be inspected on and after MONDAY, the 13th inst. between the hours of TEN and FIVE, at the Office of the Architect, Mr F. H. POWNALL, No. 14, Whitehall-place, where also copies of the quantities may be obtained. The Lieutenancy reserves to itself the right of requesting the whole or any of the Tenders.

RICHARD NICHOLSON, Clerk to the Lieutenancy

4, Old Palace-yard, 8th March, 1854.

BURY and RADCLIFFE WATER-WORKS. To CONTRACTORS. EXTENSION of TIME. The Directors of the Bury and Radcliffe Waterworks are desirous of receiving TENDERS from competent persons for the CONSTRUCTION of a RESERVOIR on the Ogden Brook, near to Hooting Gate, in the township of Heaton and Manor, in the county of Lancaster. The works include about 19,000 Cubic Yards of Earth-work, Diversion of Streams, Construction of Grate Pits, Overflow, and Waste Water Channel, and other Works in detail. The plans and specification may be seen, and forms of Tender obtained at the Offices of the Engineer Mr JOHN J. MAWSON, Essex-street, Manchester. Sealed Tenders must be delivered in on or before SATURDAY, the 18th of MARCH, at the Company's Office, Bury, and addressed to the undersigned.

By order of the Directors. J. G. T. CHILD, Secretary.

Bury, March 1854

FALMOUTH BURIAL BOARD.—TO ARCHITECTS and BUILDERS.—The Burial Board for the Parish of Falmouth, in the County of Cornwall, is prepared to receive DESIGNS for LAYING OUT the proposed NEW BURIAL GROUND for the Parish, comprising about 4 acres, with suitable entrances and lodge, and for the ERECTION of TWO CHAPELS, with all requisite internal fittings, and either in one or separate buildings. Each design to be accompanied with specifications and estimates of the cost of the execution of the several works. A premium of £10 will be given for the selected design, which is to become the property of the Board; and designs, specifications, and estimates, are to be sent sealed, on or before the 25th day of MARCH next, addressed "To the Clerk of the Burial Board, Gilyng-street, Falmouth," where a plan of the ground may be seen, and further information obtained.

JOHN J. SKINNER,

Clerk. *pro tem.* to the said Burial Board.

Falmouth, February 28, 1854.

TO CONTRACTORS, IRONFOUNDERS, AND OTHERS.

ROCHESTER BRIDGE.—The Wardens and Assistants of Rochester bridge are prepared to receive TENDERS from persons willing to undertake to COMPLETE the REMAINING PORTION of the above BRIDGE in a fit and proper state for the use of the public.

The Contract will include one Cast-iron Centre Arch of 170 feet span, and Two Side Arches of 140 feet span each, together with the whole of the masonry, brickwork, &c. required above the springing level of the arches, the foundations, piers, and abutments being already built to that level.

The estimated weight of cast-iron is about 2,500 tons, more or less.

Plans, drawings, and specifications of the intended work may be seen at the Office of Mr. JOHN WRIGHT, the Resident Engineer, by Strood, where work is going on, on and after MONDAY, the 6th of MARCH, and of Messrs. RENNIE and FOWLER, where all requisite particulars may be ascertained.

Sealed Tenders for the above works, on a schedule of prices, are to be delivered at the Office of the Wardens and Assistants, Strood market on the outside "Tender for Superstructure of Rochester Bridge" on MONDAY, the 17th of APRIL, 1854, at or before TWELVE o'clock at noon after which hour no Tender will be received, as no Tender by a Letter from two persons engaging to become jointly bound in £10,000 will suffice.

The Wardens and Assistants will not bind themselves to accept the lowest Tender.

ESSELL and HAYWARD.

Rochester, February 24, 1854.

NEWARK-UPON-TRENT WATER-WORKS.—The Directors of the Newark-upon-Trent Waterworks are desirous of receiving TENDERS for the construction of the following WORKS, viz.—

CONTRACT No. 1.—Erection of Engine-house, Boiler-house, Chimney, Filter Tunnel, Shaft, Service Reservoir, Cottage Fences, and other buildings.

CONTRACT No. 2.—Ten miles, or thereabouts, of Iron Main Pipe and Service Piping.

CONTRACT No. 3.—Pipes for Bridging, &c.

CONTRACT No. 4.—Engine, Pumps, and other Apparatus.

Specifications, and drawings may be seen, and quantities of Contract No. 1 obtained, at the Office of Mr. C. BAILEY, Architect and Surveyor, Newark-upon-Trent, on and after Monday, the 13th instant.

The Company do not pledge themselves to accept the lowest or any Tender.

Tenders are to be delivered to me at or before SIX o'clock p.m. on SATURDAY, MARCH 25th instant, endorsed according to the number for which the contract is intended.

Any further information can be had upon application to the Engineer, T. HAWKESLEY, Esq. C.E. 30, Great George street, Westminster; Mr. C. BAILEY; or

WILLIAM SWINTON, Secretary to the Company.

Newark-upon-Trent, Notts, March 1, 1854.

TO BUILDERS

PARTIES willing to TENDER for the ERECTION of a VILLA, of the second rate, at Weybridge, Surrey, can see the plans and specification at the Offices of Mr. MATHEWS, Surveyor, &c., Upper Thames-street. The Surveyor does not bind himself to accept the lowest Tender.

CARLISLE LOCAL BOARD of HEALTH. SEWERAGE WORKS.

TO CONTRACTORS, IRONFOUNDERS, EARTHENWARE SEWER AND DRAIN PIPE MAKERS, BRICK-MAKERS, AND OTHERS

The Local Board hereby give notice that they are prepared to receive TENDERS from parties who may be willing to undertake either of the following contracts:

CONTRACT No. 1.—For the supply of EARTHENWARE SEWER and DRAIN PIPES, &c.

CONTRACT No. 2.—For the supply of about 500 tons of CAST-IRON SEWER PIPES and OTHER CASTINGS

CONTRACTS Nos. 3 and 4.—For EXCAVATIONS, and the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES and other WORKS (including the supply of Bricks), and for EXCAVATING, LAYING, and JOINTING CAST-IRON SEWER PIPES, PIXING SEWER CASTINGS, &c.

CONTRACT No. 5.—For the supply of about Three Millions of SQUARE and RADIATED, SOLID, and HOLLOW BRICKS.

The drawings may be examined on and after the 13th inst. and copies of the specifications, bills of quantities, and forms of Tenders may be obtained together with any further information required, on application at the Office of the Local Board, Carlisle, or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament street, Westminster.

The charge for specifications, bills of quantities, &c. will be five shillings for each Contract.

Sealed Tenders to be delivered at the Office of the Local Board of Health, Carlisle, before TWELVE o'clock on WEDNESDAY, the 29th day of MARCH, endorsed "Tenders for contract No. 1, 2, 3, 4, or 5," as the case may be.

ISAAC CARTMELL,

Committee Clerk to the Local Board.

Carlisle, 1st March, 1854.

CONTRACTS.

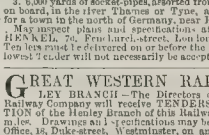
TO BUILDERS

IMPROVED DWELLINGS for SINGLE MEN.—Builders are hereby invited to TENDER for the ERECTION of a LODGING HOUSE (on an improved plan), to be erected for Messrs. Cruttwell, Ailles, and Company, at BLAINA, near Newport, Monmouthshire. Plans and specifications of the proposed building may be seen on application to FREDERICK LEVICK, Esq. at the Company's Office, at Blaina, on and after the 16th inst. Tenders for the works (except the cast and rolled iron girders for floors) to be sent on or before the 29th inst. under cover to the Architect, JOHN NORTON, Esq. 24, Old Bond-street, London.

TO GAS-WORKS CONTRACTORS, &c.

PERSONS desirous of TENDERING for the SUPPLY and ERECTING of the various parts of a GAS-WORKS, between the Hydra-the-Main, and the Governor's Exit Pipe, either complete, or separately for—

1. Two gasometers without balance-weights, 40 feet by 18 feet, with cast-iron pillars, guide rods, rollers, and every requisite complete



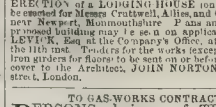
2. The purifying-house, fitted complete, with condenser, three purifiers, scrubber, slide-valves, and pipes; station-meter and governor. Also for the supply of—

3. 6,000 yards of socket-pipes, assorted from 2-inch to 8-inch, free, on board, in the river Thames or Tyne, all of which is required for a town in the north of Germany, near Hamburg

May inspect plans and specifications at the office of Mr. H. HENKEL, 70, Fenchurch-street, London, to whom also the Tenders must be delivered on or before the 1st APRIL next. The lowest Tender will not necessarily be accepted.

GREAT WESTERN RAILWAY, HENLEY BRANCH.—The Directors of the Great Western Railway Company will receive TENDERS for the CONSTRUCTION of the Henley Branch of this Railway, a length of about 4½ miles. Drawings and specifications may be seen at the Engineer's Office, 16, Duke-street, Westminster, on and after MONDAY, the 27th instant. The Tenders are to be addressed to the Directors of the Great Western Railway Company, and delivered at their office at Paddington before TWELVE o'clock on WEDNESDAY, the 22nd MARCH next.—February, 1854.

WARMING by HOT WATER.—J. WEEKS and Co. KINGS-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of January 14, 1854, which fully bears out the able address of the Rev. H. J. Boggis, delivered at a meeting of the Architectural Society, wherein Mr. Boggis shows that heating by hot water is truly the only effective system applicable to warming and ventilating large unclosed atmospheric



buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings. Messrs JOHN WEEKS and Co. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 2-in. 600 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOYLESVES PATENT CALORIFERE. The constant supply of fresh air carries out ventilation unconsciously, by a new well-improved process, and damp or vitiated air, from any decay, is duly carried off. Churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and conservatories. The Calorifere has been adopted by the Grand Duke of Bedford, at W. Inch Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, or send, to T. BOYLESVE, French Engineer, 53, King William-street, City

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and Large-red CONICAL IRON BOILERS, and Conservatory and Hothouse Building, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but efficient method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application

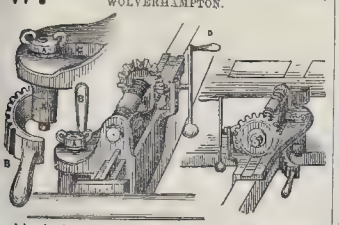
GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-bank, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water-pipes; Hooping, Castings, Furnace-pans, Barks, Buckets, &c. wholesale retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings tried complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation, and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

HOBBS' PATENT LOCKS.
HOBBS, ASHLEY, and PORTESCUE
Have so far completed their MACHINERY, as to enable them to supply the PUBLIC with their CELEBRATED IMPROVED PROTECTOR LOCKS of the best workmanship; and in order to satisfy all parties that they are determined to produce their patent locks at a moderate price, which shall be secure for all ordinary purposes, they hereby offer a "douceur" of 20l. to any person who will point out any defect in their IMPROVED LOCKS, which will admit of the POSSIBILITY of their being PICKED.
HOBBS' CELEBRATED PERMUTATING KEY LOCK.
MILLINERS' PATENT FIRE and THIEF proof SAFES, with HOBBS' PATENT LOCKS.
CASH, DEED, DESPATCH, BOXES, and COPYING MACHINES.
HOBBS & CO. 57, Cheapside, London. Manufactory, 33, Lawrence-lane.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.
J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 20 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope-street, Clare-market, London.

PARNELL'S PATENT DEFIANCE LOCKS, WHICH CAN NOT BE PICKED. These Locks are recommended to the public for their simplicity, durability, and perfect security. Also, Parnell's Patent NOI-SELESS BOX-STAPLE and Striking Plates. Fire-proof Safes, Deed and Cash Boxes, Copying and Letter Presses. Descriptions and lists of prices may be had at the Depôt, 36, 32, Strand, gratis.

RECENT TESTIMONIALS
of the practical worth and efficient security of
CHUBB'S LOCKS AND STRONG-ROOM DOORS.



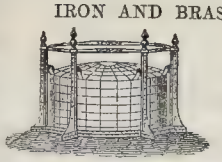
CHUBB and SON beg to lay before the public the two following Letters, which they have lately received, as affording further proof of the security of their Manufactures:
Ineffectual Attempt upon the Strong Room of the London and North-Western Railway, Liverpool.
"London and North-Western Railway Company,
Liverpool, 17th May, 1853.
"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the Iron Door and Locks of your make, which secure the Strong Room at this office, and which completely baffled the efforts of one or more burglars to get at the money-chest on the night of Thursday last, although it is evident that considerable force was used to break open the door.
"I am, Gentlemen, your obedient servant,
"Messrs Chubb and Son." "GEO. PALMER.
From Mr. Otway, Superintendent of Police, C Division.
"8, Great Vine-street, May 3, 1853.
"Gentlemen,—I have the pleasure to inform you, that having one of your Locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.
"I am, gent emen, your obedient servant,
C OTWAY, Superintendent C Division of Police.
"Messrs. Chubb and Son."
CHUBB'S LOCKS, with all the recent Improvements; Cash, Deed, and Paper Boxes of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with Prices and Sizes, will be sent on application.
CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE PEAR GARDEN LEAD WORKS, SOUTHWARK,
Invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES
W. BISSELL, PATENTEE,
WOLVERHAMPTON.



AA. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.
B. An eccentric notched lever, to be turned and pressed against the joist.
Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will gradually fix itself and hold the cramp firm: the greater the strain, the more rigidly, by its eccentric action, will it clever bind. The Patentee, in making the attention of Builders and others, assures them that his cramp possesses great advantages. It is a novel cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

TO TOOL DEALERS, IRONMONGERS, &c.
WILLIAM BAKER, BRADAWL MANUFACTURER. Manufactory, No. 14, Allen street, Clerkenwell, London. Established twenty-five years.

HIGGS and GEORGE, Wholesale and Export Ironmongers, Agents for the sale of the Patent Wrought Nails, Cannon-street and College-hill, London. (Removed from 179, Borough.) HIGGS and GEORGE beg to acquaint their friends and the public that they have removed to the above central and extensive premises, where they keep an ample stock of Nails, general Ironmongery, and the Patent Wrought Nails, for the supply both of the home and export demand.

STEVENS AND SON,
ENGINEERS,
IRON AND BRASS FOUNDERS AND MANUFACTURERS;

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds, these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.
GAS-FITTING IN ALL ITS BRANCHES.
GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.
IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.
These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.
PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.
Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.
DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

PLUMBIC ZINC.
MOREWOOD AND ROGERS'S PATENT PLUMBIC ZINC.
POSSESSES THE DURABLE QUALITIES OF LEAD, and not requiring to be more than ONE-FOURTH AS HEAVY AS SHEET LEAD, is, with great ECONOMY and ADVANTAGE, substituted for that Metal FOR ROOFING, RIDGES, GUTTERS, LOORING, and all other purposes to which Sheet Lead is applicable.
THE EXPENSE OF THIS METAL IS LESS THAN ONE-HALF THAT OF LEAD.
For further particulars, apply to
MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,
STEEL-YARD WHARF, 87, UPPER THAMES-STREET, LONDON.

IRONMONGERY, NAILS, STOVES, RANGES, &c.
AT WALMSLEY'S,
126, 127, and 128, LONDON-ROAD, SOUTHWARK.
FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.
Best Sheet Floor-brads, 1s. 6d.
Best fine Cut Clasp and Rose { 1½s. 6d. 1½s. 6d. 1¾s. 6d. 1½. 6d. 10s. 6d.
{ ¾ 1 1¼ 2 2½ and 3 inch.
Sash Weights. Air Bricks, 3s per doz. Hoopiron for bond, 12s. per cwt. Cast Lath, 11s. 6d. per cwt. Sash Pullies, 8s. 6d. per gross.
Arnott's Ventilators, 4s. each. Elliptic Stoves, with double backs, 9d. per inch.
Register Stoves from 5d. per inch.
Improved Self-acting Ranges with oven and boiler { 26s. 30s. 33 34 36 inch.
{ 28s. 34s. 32s. 34s. each.
Best Self-acting Ranges, with oven and boiler, wrought bars and bright fittings { 36 38 40 inch.
{ 66s. 68s. 60s. each.
An extensive stock of bright and black Register Stoves in every variety of design, at remarkably low prices. A large assortment of Rim, Drawback, Mortise, Iron Gate, and every other kind of Locks and Latches. Finger-plates, Levers, and Bell-pulls, en suite.
BAR, HOOP, SHEET, AND ROD IRON. RAIN-WATER PIPES AND GUTTERS, ALL SIZES.
The Stock of this Establishment is too extensive to be described in the limits of an advertisement, and the most correct idea that can be given of it is by saying that every trade consuming ironmongery can here select whatever they require at WHOLESALE PRICES.
WALMSLEY'S new Show-rooms are now open with a Modern and Choice Stock of General Furnishing Ironmongery unequalled in variety, and all at unprecedented low prices.

TO ARCHITECTS, BUILDERS, AND THE TRADE.

SASHES,
SKYLIGHTS, AND CONSERVATORIES,
MADE IN WROUGHT IRON AND BY MACHINERY,

Which has not only improved the workmanship, but greatly REDUCED THE COST.

EVERY DESCRIPTION OF SASH IN WROUGHT AND CAST IRON, PLAIN OR GALVANIZED.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and Co having elicited the unanimous approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures (instead of any kind of hurdles), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Est mates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES.—Gateshead-on-Tyne.

---

212 SAFES.—MILNER'S HOLDFASTS, fire-resisting by means of the only perfect non-conductor, vapourisation, are the strongest, best, and cheapest, because the only effectual safeguard against fire, robbery, or violence, for ledgers, deeds, cash, or valuables. Lord Chief Justice Campbell, in awarding to the late trials for infringement of MILNER'S SAFES, was pleased to observe:—"He must say he had been astonished to find such strong evidence of their usefulness; up to this time he had considered that there were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an invention, by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be allowed on all hands; IT STAND TO BE A MOST MARVELLOUS DISSIPATOR AGAINST FIRE, for the water remains permanently held in actual or natural vessels, AND THE VERY CALAMITY DESCRIBED, ONLY FOR THE BEST, RENDERS THE SAFE MORE SECURE. Milners' Phœnix Safe Works, Liverpool. London Depôt, 47A, MOORGATE-STREET, City, London.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.

TO RAILWAY CONTRACTORS AND OTHERS

WANTED to PURCHASE, about ten or twenty tons of CONTRACTORS' RAILS, from 20 to 30lb. per yard, with chairs and spikes to suit. Particulars to be sent to F. FORD, Iron-merchant, 9, Laurence Pountney-hill, Cannon-street, London.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Pentonville Hospital, various Lunatic Asylums, the Chatham Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Ranelagh Club, Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharp, Jones, and Messrs. Brady's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelling Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the Chief of the Nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDALS of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions which, are, in the last cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully reminds those who are disposed to patronise his establishment, to assure themselves that they are receiving his real slate, or satisfactorily AS LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear N.B. The Tariff for 1851 is now ready

Pimlico Slate Works, 38 and 40, Upper Belgrave-place.

A LOT of CHEAP SLATE SLABS, &c. Mr. MAGNUS being about to erect some additional buildings, is disposed to dispose of several lots of Slate Slabs, suitable for LAVATORIES and PAVING, which are now on the way.

Also a lot of DRAIN COVERING, and some PLANED SLATE GARDEN EDGING, from 5 to 8 inches deep and 1 of an inch thick, at 2s. 3d. per foot run.

List of quarries at the quarries and depots, and the cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

STRICKETT, VICTORIA STONE WHARF, Isle of Dogs, informs his friends and the building public generally, that he is prepared to execute orders to any extent, wholesale or retail, by vessel or rail, or from his depôt, Isle of Dogs, for all kinds of York Stock, Westwood, Brawley Fall, New Bramley Fall, Potternewton, Harehill, Westhill, Rawdon-hill, Portland, and other Block Stones, steps, sills, sinks, copings, landings, and paving bricks, &c. Punctuality, despatch, good articles, and low prices guaranteed. Estimates given for the supply of large contracts.

TO ARCHITECTS, MERCHANTS, BUILDERS, &c

TRICKETT and PERKIN can supply any quantity of their IMPERISHABLE RAWDON HILL STONE from their quarries at Harewood, near Leeds. This stone is of a fine grit, perfectly uniform in colour; can be seen to advantage in the much admired buildings now being erected in All-on-street, Leeds, for the Leeds and Yorkshire Assurance Company. B. Gingell, esq. of Bristol, architect; and also at Harewood House, where it was used for the extensive additions and improvements made by Sir Charles Barry. They have a high opinion of the stone; no part of the most exposed mouldings, or carved stonework, shows the least signs of decay. The stone has been analysed by an eminent chemist and geologist; his opinion is, that it is the most durable stone in the market, and, as known, must be most extensively used wherever a good, strong, and durable stone is required. The stone can be got of any size or length up to 10 tons, is most suitable for steps, stairs, balcony landings, ashlar fronts, columns, tombs and monumental work, &c. &c. Superior grindstones, large or small.—Address, STRICKETT, Victoria Stone Wharf, Isle of Dogs, sole London agent, who will keep a stock for selection for immediate use or supply, direct from the quarries, by vessel or railway, to order.

ANSTON STONE QUARRIES, Yorkshire, TO BE LET, in full working order Every facility exists for the convenience of the stone by railway and canal Apply there to be made by letter, 67, Princes-street, Leicester-square; W. P. SCOTT, Esq. 55, Lincoln's-inn-fields; and H. BROOMHEAD, Esq. Park-row-square Sheffield.

LIME-KILNS and STONE-QUARRIES at BURWELL, CAMBRIDGESHIRE.—FOR SALE, the Lease of a valuable Lime-stone Quarry and Lime Kilns, Sheds, and suitable Plant. The stone is of a very superior description and in great demand, and is found in blocks of any size, and the refuse will make lime unequalled in quality—Apply to C. A. GOVETT, Esq. 10, Lincoln's-inn-fields, London; or Mr. CARTER, Inn-keeper, Burwell, Cambridgeshire.

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Paviors, and Stone Merchants, to their stock of YORKSHIRE PAVING, and general assortment of stone goods, which are offered at the current prices, and on their usual terms of credit.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scalled Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stone-work for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs &c. &c.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.
TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the Office of the Park Estate, Plumstead, near the Royal Ar enal, Woolwich. Price 2s. 6d. per yard. Delivered into Larges alongside Woolwich.

FOREIGN TIMBER and DEALS of every description, at the lowest prices, for cash; and also Prepared Floors at the following prices, for the present month:—
¼in. ⅜in. ½in. ¾in.
17s. 6d. 18s. 6d. 21s. 30s. Yellow, per square.
26s. 6d. 27s. 6d. 29s. 6d. 34s. White, do.
Battens, 2s. 6d.; Deals, 4s. 6d.; and Plank, from 8s. 6d. per 12 feet. Pantile Timber 8s. per load, and every kind of English and Foreign Wood direct from the docks.—Apply to Mr. MAY, 90, Leadenhall-street.

DRY BEST PINE DEALS and PLANKS, Baltic Fir Timber and Deals.—Purchasers of the above may effect a considerable saving by purchasing in the docks of GEORGE WALLEN, Timber Merchant, Adelaide-chambers, St. Gracechurch-street, City, who will sell at the lowest prices for cash. Prepared flooring, &c. supplied direct from the mills.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on sale, at reduced prices, as under, for cash.
¼-inch Yellow, 17s. per square. ¼-inch White, 26s. per square.
⅜-inch " 18s. " ⅜-inch " 27s. "
½-inch " 22s. " ½-inch " 31s. "
Dantzic Timber, 30s. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and ATKINSON, St. Pancras Saw Mills, Old St. Pancras-road.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest price of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

MUIR'S PATENT PLANING MACHINE.

SAW MILLS, GILLINGHAM STREET, PIMLICO.
TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principle; Boards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of navigation and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks, and carted home free of charge. Address to HENRY SOUTHAM,
Saw Mills, Gillingham-street, Pimlico.
N.B. Estimates given for Sawing and Planing.

DRY MAHOGANY, OAK, &c.—S. J. CROSS begs to inform the trade that he has on hand a good assortment of the above at the lowest possible prices. Oak-sills and fencing in any quantity.—11, FEATHERSTONE-STREET, FINSBURY.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Irongate Wharf, Praed street, Edgware-road near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.
GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. R. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well-seasoned stock of Flooring Boards, Matched Boarding, and Mouldings, of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.
GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate conversion on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.
G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

TO CARPENTERS AND OTHERS.
WANTED, about Half a Dozen Secondhand CARPENTERS' BENCHES, in good condition.—Particulars, stating the lowest price for cash, to be forwarded to Mr. GEORGE CLARKSON, 46, Penton-street, Pentonville.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent on their mouldings as advertised on the 8th of November last is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.
1st January, 1854.

VERTICAL SAW FRAME, Complete (Second-hand), WANTED to PURCHASE, in good working condition, to cut 8-feet bulk.—Apply, by letter, K. E. Mr. Laking's, 26, Half Moon-street, Piccadilly.

BAYSWATER.—TO BE LET, by the Freeholder, a very eligible SITE for an HOTEL or first-class TAVERN, two large shops and six or more coachhouses and stables.—Apply to Messrs. MAY and SWEETLAND, Solicitors, 14, Queen-square, Bloomsbury.

TO BUILDERS AND OTHERS.
TO BE LET, on Building Leases, several PLOTS of FREEHOLD LAND, in that healthy locality, Holloway, two or three minutes' walk from the Archway Tavern; omnibuses every four or five minutes to all parts of town; situated in Rt. John's-road, where houses let as fast as built. For particulars apply to Mr. H. WITHERS, No. 9, Poultry. The leases direct from the freeholder.

EXTENSIVE, WELL-LIGHTED MANUFACTURING PREMISES, No. 80, Long-acre, with immediate possession, having entrances from Wilson and Charles Streets, MAY BE LET, the whole or a part.—Apply to Mr PARSONS, 82, Long-acre.

REIGATE.—TO BE LET, on Building Leases, singularly beautiful SITES for FIRST CLASS VILLAS in immediate contiguity to the railway station and town, and within an hour's ride of London-bridge There is good sporting in the neighbourhood, and the climate is proverbially salubrious Money advances if required.—For particulars, apply to Messrs. PAGE and KELF, Architects, Land Agents and Auctioneers, Reigate and Dorking.

BUILDING LAND TO LET, at very low ground-rents for ninety-nine years, close to Regent's-park, and on the foot of Primrose-hill, a few minutes' walk from the city station, for third-rate eight-roomed houses for which there is a great demand in that locality, and would readily let or sell. There are some frontages suitable for shops, and others for private houses; also some with great depth behind, where workshops or public establishments might be erected For plans and particulars apply to F. EILOART, 8, Harrington-square.

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND TO LET; term, Islington and Turnham green, 300 years.—Apply to view to Mr. GREEN, Grove-road, Upper Holloway; HARRIS, opposite Lee Arms, Brownlow-road, Queen's-road, a t oining Bellingham's Distillery, Dalston; PHILLIPS' Countin house, near Acton lane, High-road, Turnham-green; or Mr. D. HUGHES, 13, Gresham-street.—N.B. Populated localities; roads and sewers made.

TO BUILDERS.
TO BE LET on LEASE, most eligible BUILDING PLOTS, for small houses; ground-rent moderate; roads and sewers made; money advanced if required.—Apply to Mr. F. W. DERRANT, Holland-place, Kensington.

BUILDING LAND at PUTNEY, within three minutes' walk of the Putney Railway Station, TO BE LET for the term of ninety nine years, suitable for villa or other residences Advances made if required. Further particulars apply at Mr. HOOK'S Offices, Land Agent and Surveyor, 13A, Great George street, Westminster, where plans of the estate may be seen.

FREEHOLD BUILDING LAND at TWICKENHAM—8 acres, situate near the Church and Railway Station, with 1,500 feet frontage to Kingston New-road, and with private access to the river Thames at Cross Deep The land is thoroughly drained by a capacious sewer newly constructed, and will be LET or SOLD in parcels, to suit the convenience of buyers. Apply, for plan of the ground and further particulars, to JAMES CLARK, 24, Billiter street, London. N.B. About three acres of the ground consist of a productive well-stocked walled garden, with a large range of substantial forcing-houses.

ON THE COAST of HAMPSHIRE.—TO BE LET on BUILDING LEASES, LAND on the shores of the Solent, opposite Cowes and Osborne; commanding uninterrupted views of the Channel from Spithead to the Needle Rocks Excellent harbour for yachts, and good bathing. The property site forms part of the sea cliff of Lepe, in the Exbury estate, and in the parish of Fawley—Apply to Mr. WM ROSS, Steward of the Estate, the Grange, Alresford, Hants.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Bricks may be had, delivered on the site of the intended building, at 30s. per thousand.—For particulars apply to Mr. C. HAMBRIDGE, Architect, 73, Coleman-street, City.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES, part of a bold crescent, TO BE LET on building lease, at moderate ground-rent. Two-thirds of the amount will be advanced on mortgage —Apply at the Offices of GEORGE MORGAN, Esq. 3, Chancery-lane

BROCKLEY-HILL PARK ESTATE, FOREST-HILL TO BE LET, on Building Lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. The site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 6 acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

FREEHOLD BUILDING LAND.—TO BE LET or SOLD, eleven acres of FREEHOLD LAND, within 300 yards of the Carshalton station on the Epsom Railway. Soil chalk. Trains to and from London in half an hour. For plan and particulars, address Mr. R. C. BAXTER, 34, Clifton-road, St. John's-wood, London.

BUILDING LAND, with BRICK-EARTH, TO BE LET.—TWICKENHAM, MIDDLESEX.—TO BE LET, on Building Leases, a valuable SITE, facing the high-road leading from Richmond-bridge to Twickenham, with extensive frontages to the existing high roads and proposed new roads of 2,200 feet, or thereabouts, together with the privilege of making bricks from brick-earth on the property.—For particulars, apply to Messrs. PALMER and NEWTELSHIP, Solicitors, 4, Trafalgar-square; or Mr. ATWOOD, Surveyor, Mortlake, Surrey.

TO BUILDERS.
TO BE LET, for a term of years, desirably situated near the Mortlake Station of the Richmond Railway, the old-established BUSINESS PREMISES, consisting of large workshops, sheds, stable, yards, and other requisites for the above business, with a convenient residence attached.—For terms and further particulars apply (if by letter post-paid) to A. B. care of Mr. White, Station Master, Mortlake. N.B. No agent need apply.

BUILDING LAND TO BE LET, at ACTON, HOMERTON, WIMBLEDON, CHERTSEY close to the Station, HALLSVILLE adjoining the Barking-road Station on the North Woolwich Rail ways, at CROYDON within a mile of the Station, and at NORWOOD (within three minutes' walk of the Station), and LOWER NORWOOD, near Tulse Hill, admirably situate for Building purposes For particulars apply to Mr. W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish square. Leases direct from the Freeholder. Money advanced if required.

BUILDING GROUND, PUTNEY, adjoining the railway station, for private houses, two shops, and railway tavern, TO BE LET, for long terms, at moderate ground-rents. Land-tax redeemed.—For particulars, apply to Mr. LEADER, on the Ground; or to Mr. T. H. CLARKE, Surveyor, 11, Dalby-terrace, City-road.

NORWOOD.—BUILDING LAND TO BE LET within three minutes' walk of that Station in Wimpole-thoroughfare to be called Lincoln Road, South-hill, with a full view of the Crystal Palace and Grounds and all one mile Road, southern aspect, with some of the most magnificent views in the county of Surrey, on which Building has commenced, and Houses nearly completed for occupation. The Rates are being substantially made, and the Water of the South Lambeth Company, from Thames Ditton, laid on to the Houses erected. Builders and gentlemen desirous of a first-rate site will find this spot worthy their attention, and advances will be made if required. For further particulars and plans of the Estate, apply to Mr W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish square. Upwards of 40 trains stop at the Norwood Station during the day. Leases direct from the Freeholder.

ELIGIBLE BUILDING LAND to be LET, at a nominal rent, at SUTTON. The situation is very healthy and dry, commanding beautiful views, upon a chalk subsoil, and near to the railway station; a train to London-bridge in 35 minutes. Also, belonging to the same proprietor, several Plots of Freehold Land, in choice situations, suitable for villas, with or without meadow land —For particulars apply to Mr. ARTHUR TAYLOR, Architect and Surveyor, 18A, Basinghall-street.

EARL'S-FIELDS, Grantham, Lincolnshire.—TO BUILDERS, CONTRACTORS, TIMBER MERCHANTS, CAPITALISTS, AND OTHERS.—TO BE LET from APRIL 5th, 1854, a very desirable BUILDING ESTABLISHMENT and TIMBER YARD, with a good dwelling-house, offices, spacious workshops, engine-house with high chimney), and other out-buildings, replete with every convenience, &c. offering an opportunity for investment rarely to be met with. These old-established premises are most admirably situated in all respects for carrying on a first-rate and lucrative business, as they adjoin the Ambergate Railway Station, and are within a few hundred yards of the Great Northern Railway Station. The tenants can be accommodated with about 15 acres of good grass land adjoining the premises; and as there is abundance of excellent clay and sand close to the surface in one of the fields, the tenants will be permitted, if they choose, to open a public brick and tile-yard in the said field—For rent and particulars apply to the Agents of the Earl of Dysart, at the Office, Buckminster-park, Cottersworth, Lincolnshire.

EAST-HAM.—BUILDING LAND.—TO BE LET, on BUILDING LEASES, several eligible lots of LAND close to the Rising Sun Inn, and near the Forest-gate station, and immediately abutting on the London, Tilbury, and Southend Railway, and on the high road to London. The Lots will have a frontage of 60 feet, with depths of about 130 feet, and are well adapted for the erection of houses of from 20l. to 35l. a-year.—For particulars, apply to Messrs. GEORGE NICHOLSON and SON, Solicitors, 4, Old Palace-yard; or to THOMAS SMITH, Esq. Architect, 14, Hart-street, Bloomsbury.

BERKSHIRE: READING.—FOR SALE, by PRIVATE CONTRACT, or TO BE LET on LONG BUILDING LEASES, several commanding and desirable PLOTS of FREEHOLD BUILDING LAND, possessing frontages of 50 feet and upwards, and depths of 210 to 310 feet, situate on the rising ground between the Oxford and Bath turnpike roads, and commanding extensive views of the Oxfordshire hills and adjoining country, and within fifteen minutes' walk of the Great Western and South-Eastern Railway Stations of the same place. Most of the plots are ornamented with trees and shrubs, and fenced in on all sides with good quickset hedges. The whole are admirably adapted for detached and semi-detached residences, a class of house much sought after in Reading and its neighbourhood. The selling price varies from 2l. 10s. to 3l. per foot.—For further particulars apply to Messrs. WRIGHT and WEEDON, Solicitors, 4, Farnival's-inn, Holborn, London; or to Mr. WM. WEEDON, Solicitor, 61, Minster-street, Reading.

FREEHOLD BUILDING GROUND, of a first-class character.—TO BE LET, a very attractive PIECE of superior LAND, advantageously situate within three miles of the Post-office, with a considerable frontage to the high road, in the immediate vicinity of a national undertaking, and most admirably adapted for erecting detached or semi-detached villas, which are much needed and constantly sought after. The respectable and healthy character of the locality, and its proximity to the metropolis, make it a very desirable situation.—For particulars apply to Mr. HERBERT PRICKETT, Surveyor and Estate Agent, 15, Chancery-lane, and 23, Paddington green.

BUILDING LAND, SUTTON, SURREY. TO BE LET, direct from the Freeholder, five minutes' walk from the railway, and close to the church, eligible PLOTS of LAND, beautifully situate, and of low ground rents. Term, 99 years.—Particulars of Mr. R. L. CURTIS, Surveyor, 1, Richecourt, Lime-street, City, and Stratford, Essex.

LIMEHOUSE.—Waterside Premises of commanding and extensive character, fronting the Commercial road and consisting of capital wharfs and private dock or basin, yard, large warehouse or workshop, sheds, saw-pits, &c. &c. the whole occupying about one acre, TO BE LET, on lease, with or without the comfortable dwelling house The premises are situated on the Limehouse Cut, which now communicates with the Regent's canal as well as the rivers Thames and Lea, and there are also good land approaches toll free, as well as from the commercial road. The premises have been occupied for these last fifty years as a timber and deal yard, and are also very eligible for saw-mills, or for a contractor or builder, coal merchants, engineers, or manufacturer For particulars apply to Messrs. HUMPHREYS and WALLEN, 68, Old Broad street, City.

SYDENHAM.—BUILDING LAND TO BE LET for the term of 99 years Most eligible frontage by 200 feet deep for Villa residences. Advances made if required.—For further particulars apply to Mr. A. C. HOOK, Land Agent and Surveyor, 13A, Great George-street, Westminster.

FREEHOLD LAND.—TO BE SOLD, TWO ACRES of FREEHOLD LAND, situate within 200 yards of the Norwood Station, on the Croydon line. Also, a Plot of Freehold Land, nearly half an acre, full of gravel, situate in Whitehorse-road, Croydon, two miles from the Crystal Palace.—Apply to Mr. G. H. HOLLEDGE, Whitehorse-road, Croydon-common.

TO LANDOWNERS, ESTATE AGENTS, AND OTHERS.
FREEHOLD or COPYHOLD (to be enfranchised) LAND.—WANTED to PURCHASE from TEN to FIFTEEN ACRES, not beyond fifteen miles from London, and within an easy distance of a railway station East or north east of London would be preferred. The ground must have good means of drainage, but frontage to road not essential provided the access is broad and easy.—Full particulars, with lowest price, to be addressed to JOSEPH JENNINGS, Esq. Architect, Kingstreet, Portman-square, before the 31st inst. Letters to be endorsed, "Offer of Land."—Dated March 8, 1854.

WANTED, PREMISES suitable for a PUBLIC INSTITUTION, in a central situation in the Metropolis. Apply to Mr. J. TILLEARD Twickenham.

ADVANCES made for BUILDING Fourth-rate HOUSES upon LAND TO BE LET in a first-rate situation, the above class of houses being in great demand.—For particulars apply to Mr W SMITH, Jun Surveyor and Estate Agent, 13, Wells-row, Highbury, Islington.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON,

LITHOGRAPHERS TO THE QUEEN.

Landscapes, Architecture, Shipping, and Figure Subjects. Portraits direct from Life on Stone, or from Paintings, Drawings, or Daguerreotypes. Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Ca opies copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c.

FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to Solicitors, Engineers and Surveyors, Stationers and Printers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan received by the morning post may be lithographed and despatched by the return post.

To meet the growing demand upon

LITHOGRAPHY FOR COMMERCIAL PURPOSES,

Messrs. DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

And every other description of Lithography and Colour Printing Messrs. DAY and SON promise a style of work of unequalled excellence, with economy and rapidity of execution. The smallest consumers of the productions of Lithography in any part of the Kingdom should apply to Messrs. DAY and SON for estimates, and it will be found, owing to the extent of this Establishment that its manifest advantages, viz. superiority of work, great speed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs. DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The first and only perfect realization of a painting in colours "The Blue Ladies" after Turner, executed at this establishment, secured for itself the designation of a Painting Print. Other examples of great merit, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES," "METAL-WORK AND ITS ARTISTIC DESIGN;" and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of one Guinea a-piece. The last-named, consisting of 160 plates, issued in Fortnigh ly Parts of four plates, proves the possibility of applying the art of lithography to Periodical Works — to Book Plates requiring long numbers cheaply and quickly and to Geological or other Coloured Maps.

Messrs. DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own Sketches, by means of lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON,

LITHOGRAPHERS TO THE QUEEN,

17, Gate-street, Lincoln's-inn Fields, London.

LITHOGRAPHY.—C. MOODY executes every description of Lithography for professional persons or the trade; Portraits, Landscapes, &c.; sketches and bills graphed, or copied on the first application. Instructions afforded. — Lithographic Offices, 257, High Holborn.

JOHN LANE and COMPANY, Patent Agents, Draughtsmen, Surveyors, and Lithographers, 128, Chancery-lane, London.

DECORATIVE ARTISTIC PAINTING.—Mr F. SANG, from the Royal Academy at Munich, whose works may be seen in the leading Hotels and private buildings in the metropolis and the country, draws the attention of his patrons to his new and improved STYLES of ARTISTIC EMBELLISHMENTS of INTERIORS, in the modern and ancient styles. Address, Mr SANG, 58, Pall-mall, London.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen, &c." and "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner. Address, Mr. BOYS, 32, Albany street, Regent's-park.

SURVEYING, LEVELLING, ARCHITECTURAL and ENGINEERING DRAWING, and LITHOGRAPHY; maps and plans reduced or enlarged; diagram maps for committees on private bills; drawings for patents, &c.—H. CUNDELL, 1, Johnson's-court, Fleet-street, Corner of Portman-street. A Pupil wanted.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.

For preparing Gentlemen for Surveyors, Architects, Engineers, Levellers, Draughtsmen, Measurers, Valuers, &c. and for giving EVENING INSTRUCTION, in Architectural, Civil Engineering and Mechanical Drawing, Colouring, Perspective, Mechanics, Specifications, Taking out Quantities, Preparing Estimates, &c. &c. Terms very moderate. For prospectuses, &c. apply at the Offices, 24, Guildford-street, Russell square.

ARCHITECTURAL PUBLICATION SOCIETY. At the complete sets of the works hay ng been taken, the Secretary will be glad to receive copies of the year 1846 from those members who may not have continued their subscriptions.

A few copies of the parts for the succeeding years to complete sets can still be obtained.

Part II. 1847 to DICTIONARY ARCHITECTURE, will be ready in a month. A prospectus forwarded on application to WYATT PAPWORTH, Hon. Sec

11a, Great Marlborough-street, March 2, 1854.

Just out, sent post-free,

BRADLEY BATSFORD'S CATALOGUE of BOOKS relating to ARCHITECTURE, CIVIL ENGINEERING, &c. on Sale at 52, High Holborn, London.

Post-office Orders payable at High Holborn.

N.B. Purchasers to the amount of Five Pounds sent CARRIAGE FREE to any part of England.

At ARROWSMITH'S, Decorators and Upholsterers to her Majesty, 80, New Bond-street.—Parquet Flooring of any pattern

The Builder.

SATURDAY, MARCH 11, 1854.

THE duties of the district surveyors have again occupied the attention of her Majesty's justices for Middlesex, and they have appointed a committee to inquire into the matter, and report to the Court. Mr. Burslem brought the matter forward: his object, he said, was not to reflect on the conduct of the surveyors, but to learn what their duties were. The surveyors were the officers of the Court, they were sixty-three in number, and their income averaged 500*l.* per annum each. He had not a word to urge against the surveyors, but he thought they had less power than they should have. Mr. Halswell seconded the motion. Mr. Armstrong, in supporting it, urged that some of the surveyors had hitherto performed their duties imperfectly, in not making the returns required by the Court, but the number of those who neglected this was now small. Mr. Watts and Mr. Read both drew attention to the small power possessed by the surveyors over the materials used.

Mr. Kemshead thought little good would result from the appointment of the committee: the duties of the surveyors were defined by the Buildings Act, and the Court had no power to extend or alter these. Mr. Fitzroy had given notice that it was the intention of the Government to bring in a new Buildings Act, and he was disposed to think that was the point to which the justices should apply themselves, and not the surveyors.

Mr. Turner agreed in the view taken by Mr. Kemshead, that the Court could not place itself in the position of the Legislature.

Mr. Woodward agreed as to the want of power in some cases on the part of the district surveyors: he was satisfied that, as a body, they were anxious to act in an honourable manner. Mr. Burslem, in replying, said his object was to give sufficient power to the district surveyors: they had done their utmost, but that utmost was not enough. The motion, as amended and carried, stood as follows:—

"That a committee be appointed to inquire into the duties of the district surveyors, and the performance of such duties, and to report whether the powers and duties of the district surveyors, as at present defined by Act of Parliament, are such as to give confidence and security to the public, and that they have authority to make such recommendations on the subject to the Court as they may deem fit."

The committee named consists of Mr. Pownall, Mr. Kemshead, Mr. Woodward, Mr. Armstrong, Mr. Cottrell, Mr. Watts, Mr. Buchanan, Mr. Brooking, Mr. Whiskin, Mr. Burslem, Mr. Lawrence, Mr. Robinson, and Mr. Thompson. It must be satisfactory, we think, not merely to the district surveyors, but to the public, to find that during the long discussion which took place no complaint whatever was made against any of the surveyors beyond that of omitting to send returns on the part of three or four of them, which omission, now that the requirement is understood by all, will doubtless be supplied. It is to be hoped that the district surveyors will take means to inform the committee of magistrates of the extent of their laborious endeavours as a body for some years past to place the working of the Act on a proper footing, and of the time bestowed by them on the various Bills which have been prepared by different administrations. We are informed that in one half-year they spent more than a hundred pounds in obtaining legal opinions, and the preparation of "forms," and that on the occasion of a committee appointed by Lord Carlisle, some of the surveyors were in attendance day by day for three weeks.

NOTES ON THE HISTORY AND CONDITION OF THE BUILDING TRADES.

PLASTERERS.

THERE are certain trades whose principles, although well developed in our day, are but of yesterday, when compared with the long established usages of some others with which they are associated. Thus the plumber, of whom we have already spoken, is a much younger offspring of the useful arts than the painter, for example, whose handiwork is conspicuous on the tombs and monuments of early nations which flourished before the science of hydraulics or the art of soldering metals was discovered. The plumber, on the other hand, is entitled to a far higher rank in antiquity than the glazier; for the use of the soldering-iron preceded that of the putty-knife; sheet-lead was cast before glass was manufactured; and ancient Rome had silver tubes attached to her marble baths, while her windows were still protected by open trellis work, or, in some rare cases, with costly plates of a transparent mineral, derived from the uttermost end of Spain.

We question, however, whether any of the trades connected with building can compare, in this respect, with the trade of plasterer. We are not sure, indeed, that he is not entitled to claim precedence over them all. If we accept the theories on this point of the modern transcendental school, we should at once admit that the art of plastering—never mind in what materials,—is one of the most primitive handicrafts ever vouchsafed to mortal man. And here is their argument. The origin of the useful arts is to be referred to the progressive development of the habits of the lower animals. None of the lower animals have been known to reach so far up in the useful arts as to make implements, to cut down wood, or to rear pillars of stone. But many of the lower animals —the beaver among the *mammalia*, the swallow among the birds, the ant among the insects—are plastering animals. Ergo—man was a plasterer before he became a carpenter or a mason!

We are always pleased, without any reference to the character of the philosophy, to fall in with arguments among the dry materials of the mechanic that are capable of illustrating, perhaps of proving, philosophical speculations. We have, indeed, sometimes entertained the idea that if the philosopher were to draw more upon the uncultivated field of the useful arts, and less upon his own imagination, he would then be able to build up his psychological theories upon a much more substantial basis than he usually thinks it necessary to adopt. In the present case we shall most gladly assist him to cross the Rubicon. We believe it to be an indisputable truth that the plasterer preceded, at all events, the mason in this earthly pilgrimage. And we draw our conclusions, not from the mystical and fabulous traditions of former ages, but from the condition of society in our own country, in our own day. Let us look at the hovels of the peasantry on the shores of Lough Corrib, in the land of the west, and those on the banks of the Spey, in the land of the north. In the one case the miserable dwelling-places are constructed with the rough boulders of flinty limestone, which abound in the northern section of Galway; and in the other with unhewn blocks of the primitive granite, derived from the slopes of the Highland hills. Both of them are covered with turf; both are *plastered* with mud; and both belong to a condition of humanity but a few steps removed from that of the animal. It is not difficult, we think, to perceive that in this case the impulse to use the trowel precedes the far nobler disposition to use the chisel. Again, when we look at the sickening profusion of compo ornaments wherewith the fronts of our fashionable streets and squares in this great metropolis are bedaubed, we also perceive that a far different aspect of civilization—a far greater progress in science and in art—has in no material degree affected the primitive habit; and thence we argue that the plasterer is not only perhaps among the first of our tradesmen; but, in all probability, he is destined to exist among the last.

Some of our readers may perhaps think that we should not interfere with these phenomena; but we ask them to suspend their judgment. In the meantime, we shall proceed to give, within our prescribed limits, some information concerning the trade of the plasterer.

There is no art in connection with building which bestows, or should bestow, so much grace and beauty on the interior of a house as that of plastering. A simple inspection of the skeleton of a house—the bare surfaces of the partitions, the ceilings without any cornices, and the dark unsightly interspaces between the laths and quarters—before it is plastered; and another inspection when the plaster work is executed—when the third coat is finished, the cornices run, and the last ornament planted in the ceiling—will convince the most casual observer of the truth of the remark; and will cause him to regret that an art, so useful and so beautiful in one respect, should be so often degraded to the most contemptible purposes in another.

The trade, we have seen, is entitled to claim a very high antiquity. Wilkinson mentions that the interiors of some of the Egyptian pyramids are plastered. "In Egyptian buildings, indeed, it sometimes happened that the shafts of columns were covered with white stucco, without any ornament, and even without the usual line of hieroglyphics; and the same custom of coating certain kinds of stone with stucco was common in Greece. The Egyptians also put this layer of stucco or paint over stone, whatever its quality might be; and we are surprised to find the beautiful granite of obelisks and other monuments concealed in a similar manner, the sculptures engraved upon them being tinted either blue, green, red, or other colour, and frequently the one and the same throughout."* We should have wished to know something more about the word "stucco," which the author somewhat loosely makes use of here; and which, as we shall see hereafter, is often strangely misapplied by writers on decoration. Whether it consisted of the common limestone from which the Egyptians obtained their mortar, or whether it was not a cement of sulphate of lime, is a point which is still left undetermined. But it is highly deserving of further investigation; for to this printed plaster work in the Egyptian pyramids, we must clearly assign the origin of an art which gave rise to the polychromy of ancient Greece, and to the splendid frescoes of the Roman and Italian architecture.

The Greeks, at a very early period of their civilization, used compositions, of which lime was the base, to plaster walls constructed of unburnt bricks. A considerable skill was likewise obtained in the mixture of the substances; and the utmost care was taken with the mixture of them. After the ingredients were put together, they were beaten with wooden staves by a great number of men, which gave the plaster a particularly smooth and beautiful appearance when dry. The Etruscans seem to have applied plaster to another purpose, namely, that of an interior covering for water-cisterns. In the year 1739, a cistern was dug up near Volterra, which was carefully lined with the common mortar employed in their walls. There can be no doubt, therefore, that the perfect acquaintance which the Romans afterwards acquired of the principles of manufacturing, and the modes of applying mortars and cements, was derived to a large extent from the Etruscans. In our notes on mason work, we have already alluded to the great attention the Romans bestowed on the mixing of their mortar; and we may add here, that the same thing is noticeable in their plaster work. We could scarcely find in our day a more intelligent writer on the subject than Vitruvius. His chapter on tempering lime for stucco work, and that on the application of stucco work, are not far below the present practical state of our knowledge. And as to its artistic value in architecture, he goes beyond us. "As a silver mirror, made from a thin plate, reflects the image confusedly and weakly, whilst from a thick solid plate it takes a high polish, and reflects the image brilliantly and strongly; so plastering, when thin in substance, not only cracks, but soon decays. On the contrary, that which is well covered with plaster and stucco,

* Ancient Egyptians, vol. 3, p. 70.

and closely laid on, when well polished, not only shines, but reflects to the spectators the images falling on it." The ceilings of the Roman domicile seem to have been originally left uncovered, the beams of the roof forming the only finishing. Afterwards, planks were nailed across these beams. But at length the fine arched ceilings of the palaces and temples, during the age of Augustus, formed by semi-circular bands or beams of wood, were covered with lath, and plastered after the most approved manner. Finally, we may mention the system of panelling (*lacunaria*), which was common in the Roman houses. Upon the rafters of wood sunk panels were constructed, which were decorated with plated ornaments, with ivory, and with gilding; and the whole were in process of time covered over with costly paintings.*

During the earlier periods of the Gothic architecture, when the roofs were constructed of timber, and during its later period, when the groined vaults were constructed of stone, plaster work was little practised. The most celebrated castles of the feudal barons were covered with tapestry or wide oak panelling. The dwellings of the peasantry alone were the depositories of the art, rude as it was, since we know them to have been plastered with mud, clay, and occasionally with lime or mortar. The practice of plastering in clay was common in Cornwall and Devonshire up to the close of the last century; and nothing is so common in the interior of the old houses there as to find a mixture of the yellow clay and sand of the district to be the materials with which the plaster work of the walls and cornices are executed. In general it may be stated that previous to the Elizabethan style of architecture we had no artistic plaster work in this country of whatsoever description; but with that style came the panelling in plaster which distinguishes the buildings of the period, and which seems so well fitted for the reception of the full-length portraits of Holbein and Vandyke with which they are so frequently enriched. Even in the best periods of this style, however, there was not that amount of ornamental plaster-work which was used after the Cinque-cento style and Inigo Jones.†

THE ARCHITECTS' BENEVOLENT SOCIETY.

The annual general meeting of this society, established for the relief of the unfortunate in all branches of the architectural profession, was held on the 8th, at the rooms of the Royal Institute of British Architects, Mr. S. Smirke, A.R.A. in the chair. The hon. sec. Mr. John Turner, read the report of the council, from which we learn, "That the expenses of the year have been 20 per cent. less than the expenses of the previous year; that the amount of relief afforded has been doubled; and that, whilst the amount of invested stock has been materially increased, the balance in the banker's hands on Dec. 31st, was 50 per cent. larger than at the corresponding period in 1852."

"The council feel themselves called upon to point the attention of the society to the kind and generous act of a distinguished member, Mr. Cockerell, the professor of architecture in the Royal Academy, who, in addition to his annual subscription and his previous liberal donations, has this year placed at our disposal the further sum of 20*l.*"

The report closed with a strong appeal to each member, urging him "not to limit the proofs of his good will within the strict limits of his annual contribution, nor think that in affording direct pecuniary aid, he had fully satisfied all that an association of this kind expects from its members."

The Chairman said the report which had just been read to the meeting, of which he now moved the adoption, marked the fourth year of the society's existence. It had been the happiness of the council in every succeeding year to report the continued progress of the society. To what was its prosperity to be attributed? There were indeed many causes. It was due to the liberality of the members, and to their kind exertions on its behalf; it was due to the zealous efforts of a few individuals, and to the good sense and right feeling of the profession generally. They might depend upon it, however, that the principal cause of success was, that it was right and proper that such a society should exist. Their real strength was in the goodness of their cause. It was unquestionably right that men whose professional career had been attended with some degree of success, should hold out a friendly hand to those who had failed in the race, who, with claims perhaps as great, possibly greater, than their own, had yet through some unforeseen combination of causes, been disappointed in their hopes. The cold, calculating political economist might tell them that the profession was a flourishing one, affording abundant employment to all its members; that every man of tolerably good character, and with a moderate amount of industry, might calculate on at least obtaining a subsistence, and that if he failed to do so it must be owing to his own misconduct, and he must take the consequences. That was a style of reasoning which was well calculated to find acceptance with those who were desirous of keeping undrawn their purse-strings. But the argument was here insufficient,—the excuse set up for indifference by no means adequate. He admitted that the profession was a thriving one; but what if disease or death came in! What did a man profit by the abundance of employment if he had not strength to reach out his arm to help himself? How could the prosperity of the profession benefit the poor desolate widow or her sick child? These were the cases which most frequently came before the council. Every case of distress brought before them was traceable, directly or indirectly, to those two great sources of human misery,—disease and death. He would name an architect of good abilities who, having become sick, and fallen into a deeper and deeper state of incapacity, during which he exhausted all his little savings, ultimately died at Colney Hatch. He did not think there was any economical sin in giving relief to the widow of such a man. He had known another architect, of such brilliant talents that had he lived he would unquestionably have stood in the foremost ranks of the profession, who, having died suddenly, and having unfortunately in life exhibited that disregard of pecuniary considerations which was so common an attendant of genius, left a wife and five children utterly destitute. Another member of the profession, one known to almost every one present, of great abilities and most estimable character, fell sick before he became generally known. He lay for a long time in a disabled state, exhausting the liberality of his friends, who were not in affluent circumstances, and he, too, ultimately died, leaving a wife and several children, without any means of support. He trusted they would all continue to put forth their best exertions on behalf of a society which was yet in its infancy; bearing in mind that beautiful figurative declaration of Scripture, "He that watereth shall himself be watered."

The report was adopted unanimously.

The treasurer, Mr. Tite, read the balance-sheet, from which it appeared that there was a balance at banker's, December 31, 1853, of 155*l.* 7s. 3d. The amount of stock invested is 516*l.* 10s. 5d.

Mr. Tite, in moving the adoption of the balance-sheet, said he did not know any profession so uncertain as that of an architect. One year a man was in the receipt of a large income, the next year he had no income at all. He had himself met with cases of distress similar to those mentioned by the chairman; and among them was that of the widow of a young architect, to whom Liverpool was indebted for one of its most beautiful architectural ornaments, who, though really a lady, might, but for this society and some little additional temporary aid, have been reduced to a sad necessity. He considered it very desirable that the society should obtain the means of offering something more than temporary assistance in a certain class of cases; and he hoped something would soon be done in the way of providing pensions of moderate amount.

On the motion of Mr. Mocatta, seconded by Mr. Porter, Mr. G. Bailey was re-elected a member of the council, from which he retired by rotation. The following gentlemen were added to it:—Mr. D. Brandon, Mr. W. N. Inman, Mr. C. C. Nelson, and Mr. R. Poynter.

On the motion of Mr. Godwin, seconded by Mr. Tite, thanks were given to the council.

And on the motion of Mr. Mocatta special thanks were presented to Mr. Cockerell for his liberal additional donation.

Mr. Bailey moved a vote of thanks to the secretary, and in doing so paid a warm tribute to him for his zealous discharge of his duties.

After the proceedings about thirty of the supporters of the institution dined together under the presidency of Mr. Ambrose Poynter, Mr. George Mair, one of the active originators of the institution, and always ready in a good cause, at the other end of the table.

FOREIGN ARTISTICAL INTELLIGENCE.

M. Visconti, the Architect.—A commission has been formed at Paris for commemorating the name of the above distinguished artist, amongst whose works the completion of the Louvre ranks first. Messrs. Nieuwerkerke, Duruflé, Horace Vernet, &c. figure amongst those who have taken part in the preliminary meetings. During one of these it was also stated, that M. Visconti was one of the few persons who had access to those confidential after-breakfast *réunions* of Napoleon Bonaparte, others being Dénon, David, Lacepède, &c. Matters of science and art were there discussed from the highest point of view, and so far from any *gêne*, that the Emperor used to say, "Now I have shut the door of my cabinet." It was here that M. Visconti produced the embryos of his architectural plans and ideas.

Archæological Society of Tours.—Some time ago a charter of Charles the Simple of 919 had been laid before the society, wherein *Arenas* were mentioned, situate in the interior of the city, close to the gate leading to Orleans. The site near the cathedral was, therefore, examined with perfect success. First, some passages were discovered, running straight east and west and south and north, which served as communications of the podium with the exterior of the amphitheatre. Moreover, two boxes (*loges*) contiguous to the passages, and a portion of the exterior circular wall were discovered. These parts of the old Roman arena were surveyed by General Courtigis, who thus lays down its dimensions: great axis of the amphitheatre, 120 m.; great axis of the arena, 68 m.; small axis of ditto, 30 m.; breadth of the passages, 4 m. 50; surface of the seats for spectators, 13,500 m. Hence, therefore, the amphitheatre of Tours is somewhat larger than those of Saintes and Nismes.

The Great New York Exhibition.—A correspondent of a German contemporary (the *Cologne Gazette*) has furnished the following *report*:—"The New York World Exhibition has closed,—an abortion from beginning to end, a failure as far as the advancement of national industry is concerned, quite unworthy of the national patronage, and only valuable as a *lesson* for the future. Although the 800 pictures exhibited occupied as much space as the Louvre Gallery of Paris, yet not fifty amongst them were worth the frame they were in. In December last the jury met, whereby men of intelligence were mixed up with those who were devoid even of every rudimentary knowledge. Thus, even the *honesty* of some of the juries was suspected; in other cases it seemed mere chance which had guided their awards. Thus, it is said, that the list of the prizeholders affords but an insufficient sample of the capabilities of American arts and manufactures."

Cambridge Architectural Society.—The second meeting of this society for the present term was held on 22nd ult. the Reverend the Master of Jesus College as president, in the chair. After some official business, Mr. E. S. Lowndes, B.A. of Christ's College, read a paper containing notices of the Churches in the neighbourhood of Bourn; and Mr. J. Ramsay, of Trinity College, a paper on the History and Present Condition of the Ancient Cathedral of Iona. The meeting then adjourned till March 8th.

* Vitruvius, book vii. chap. iii. See for some curious information concerning the Roman wall decoration, Becker Gallus, p. 275, Metcalfe's translation.

† To be continued.

CHURCH OF STA. CATERINA, PISA.

CHURCH OF STA. CATERINA, PISA.

THE quiet town of Pisa undoubtedly possesses as much to interest the student of architecture as any other of the same size throughout Italy. A railway from Leghorn enables the traveller to reach it from that port in about half an hour. On entering the town he is struck with its cleanliness (compared with other Italian towns) and the neatness of the buildings; while several edifices of great architectural pretensions arrest the eye.

The Church of Santa Caterina lies back from the main streets and faces the piazza of the same name. It formerly belonged to a monastery, which has been destroyed long since; and is said to have been completed about the middle of the thirteenth century, by Guglielmo Agnelli. The front shown in the accompanying sketch is a good specimen of the Gothic of Northern Italy: it is of white marble, relieved by bands of a dark colour. The present bronze door is evidently of a more modern date than the edifice itself. The circular opening above appears to have been occupied by a clock of considerable dimensions, but of which nothing remains. The white marble, of which so much is used in the town, is brought from a neighbouring quarry.

E. W. TARN.

GLASS.—Mr. T. Y. Hall, of Newcastle-upon-Tyne, coalowner, has patented a mode of increasing the durability of glass, by combining with it, either on the surface or internally, wire gauze, perforated copper, platina, talc, &c. by fusing such materials with the glass, or by imbedding them in it while in a plastic state, or in any other convenient method.

A NOTE FROM MELBOURNE.

THE following extract from a letter lately received, and dated Melbourne, December 1st, 1853, gives some account of what they are doing there, and may interest some of your readers.

D.

"Wages are enormously high still, as emigration has fallen off rapidly. Masons, good hands, 42s. per day (not per week); and rubble ditto, 35s.; carpenters, 35s. to 40s.; plasterers, 40s. per day. Timber is a little down just now; bricks ditto; but after Christmas they will be up again. They are at present 14*l.* per 1,000; Countess slates, 50*l.* per 1,000. They were, about six weeks ago, down to 35*l.* but are very scarce again. Very large three and four-storied stone stores are being erected in all parts of the city and suburbs, and many fine stone mansions. Many a ten-roomed house I have seen let at 1,200*l.* per annum; nothing but a plain hammer-dressed blue stone front,—nothing particular about it. Building in stone is frightful, still there is nothing thought of it here: thousands are spent very freely. We have a very fine arcade—something like the Lowther—cost a little over 30,000*l.* and another erecting, which for elegance of design far outstrips the other: it is estimated to cost 150,000*l.* Tattersall's Grand Horse Bazaar outdoes anything I have yet seen for horses: Tattersall's at home is a mere shed to it. I will send you a plate of it when I can send overland. We have also eight churches and chapels erecting at this time of stone and brick, one college, one Free Church of Scotland, high school, one opera-house, two bridges, and two railways making,—the posts also being fixed for the telegraph to Williamstown, Port Philip Heads. J. Knight and Kemp have just got 500*l.* for the best design for new Government offices, to cost 150,000*l.* and expect the contract to carry it out. We have also a new mansion for the governor, to cost 50,000*l.*; baths and washhouses, 30,000*l.*; a new custom-house, and many large jobs; but I have enumerated enough to show you what we are doing, and expect to do, in the building way, in this golden city.

h——, late of Jay's, has many things in hand. Amongst others, the railway bridge over the Yarra Yarra. He is also building a steam-boat for the Gondola Company, which is to run to Cremorne Gardens, very beautifully laid out at Richmond, on the Yarra Yarra. I also expect he will be the contractor for the grand reservoir, to supply this golden city with water: it will be fifteen miles up the Renty River, from Melbourne,—15,000 acres of land to compose the large and two smaller reservoirs,—and will cost over 150,000*l.* and take two years to complete: so you see we intend improving a little."

PROVINCIAL NEWS.

Lynn.—Lord Stanley has offered to give one-fourth of the sum requisite for the erection of baths and washhouses for this town, on condition that the corporation give another fourth part, and the inhabitants the remainder by subscription. His lordship estimates the probable cost at 1,200*l.* for a place such as Lynn.

Lowestoft.—Preparations are being made for the erection of reading and refreshment rooms, &c. about midway on the south pier.

Barnoak.—The parish church of this place, dedicated to St. John the Baptist, is about to be reseated and restored, under the superintendence of Mr. Browning, of Stamford; the whole of the seating of nave and aisles to be constructed of solid oak. The bench-ends and external fronts are richly carved, as also the pulpit and prayer-desk. The chancel is to be fitted with stalls, having carved standards and fronts, also altar-railing of oak. The works are being executed by Messrs. Ruddle, of Peterborough.

Faringdon. — Denchworth Church, which, through the exertions of the Rev. W. Eaton, has been restored, was re-opened for Divine Service on Tuesday in last week. The contractors, Messrs. I. Kent and Son, of Wantage, carried out the works under the direction of Mr. Street, the diocesan architect.——A new school has been erected at Longworth, at the sole expense of Mr. Thomas Dewe, who has also endowed it.

Bristol.—Mr. C. Burder read a paper lately at the Philosophical and Literary Society of this city on the commercial and scientific advantages as well as the general practicability of erecting and supporting an observatory here for astronomical magnetical and meteorological purposes. After the reading of the paper, a discussion took place, when the general opinion appeared decidedly favourable to the project, and it was understood that Mr. Burder would undertake, before taking any further steps in the matter, to prepare some estimate of the probable expense which would be incurred in order to carry it out in a manner creditable to the city.

Cardiff.—The conveyance of the land, given by Mr. John Homfray, for the site of Canton Church, having been completed, it was resolved, says the *Cardiff Guardian*, that advertisements for tenders for the execution of the work be inserted in a Cardiff, Swansea, Bristol, and Gloucester paper, and also in the *Builder*. In a few weeks the work will probably be commenced. The amount now subscribed is 939*l.* which the committee expect will be sufficient for the erection of a nave, so as to be able to get Divine Service performed in it; the chancel and side aisles to be deferred until additional funds can be obtained.

Stafford.—The new Guildhall and covered market here, it may be in the recollection of our readers, was founded on the 1st of September last. The whole has now been completed, and was to be delivered over to the corporation on Saturday last for occupation. The works have been executed by Messrs. Arthur and George Holme, of Liverpool, from designs and under

the superintendence of Mr. Charles Trubshaw, county surveyor. The buildings are erected on the site formerly occupied by the Star premises. The Guildhall, as described in the local *Advertiser*, has a frontage of 34 feet, and is built of stone filled in with white bricks. A stone balcony projects over the doorway, and the building is surmounted by an ornamental cornice. The whole width on the upper or first floor is occupied by the council chamber, which is 31 feet 6 in. in length, 20 feet wide, and has a height of 15 feet. The new market has two fronts, composed of three open arches built of white brick, with stone dressings. The front in Crabbery-street is upwards of 36 feet wide, and in that street will be the entrance for carts. The other approach is from the Market-square, through the same entrance as that of the Guildhall, the thoroughfare being 8 feet wide. The whole market occupies an area of 655 square yards, which is nearly one-half greater than the area of the old market. It is covered with an open stained roof, and lighted from the top. About one-half the area of the market is provided with stalls. Near Crabbery-street are slate fish-stalls, 30 feet in length, provided with water from a tank. These erections are provided for the corporation of Stafford by the county, as a substitute for the offices and market which now form part of the Shire Hall premises, and which are required for the improvement of the court and the cells underneath. The Magistrates' Chamber it was hoped would have been large enough for lectures and meetings.

Tredington.—A new east window has been recently erected in the church of Tredington by the Rev. Wm. Hopkins, son of the late rector, to whose memory it is erected. The window consists of five lights, the stained glass in which represents ten parables of Christ, &c. The tracery is of the Decorated style; the design and execution of the stonework by Mr. E. Gibbs, of Stratford, architect, and the window by Mr. Wm. Holland, of Warwick. A lithograph of this window has been printed by Messrs. Lacy and Co. of Warwick, printers.

Doncaster. — The foundation-stone of the parish church of this town was laid with great ceremonial, and in the midst of closed thoroughfares and a general holiday, on the 28th ult. by the Archbishop of York. Amongst the records, which were inclosed in a leaden box, and implanted in concrete, were the names of "George Gilbert Scott, esq. of London, architect; Charles Ireson, junior, of Northampton, builder; George Stephen Cleverley, clerk of the works." Thanks to Mr. William Battie Wrightson, M.P. according to the local *Gazette*, it is now definitely settled that the stone from the quarry on this gentleman's estate at Cusworth is of such quality and dimensions as to answer all the requirements of the building. The opening of this bed of stone is of great advantage to the rebuilding fund, especially considering its close proximity to the town. The spot chosen for the laying of the foundation-stone was at the south-east corner of the transept. Its dimensions were 6 feet 4 in. long, 4 feet 7 in. wide, 2 feet 8 in. thick, and it weighed five and a half tons.

Keighley.—The laying of the chief corner-stone of the church of St. Mary the Virgin, Eastwood, Keighley, took place on Tuesday in last week, on a site given by the Earl of Burlington. Messrs Perkins and Backhouse are the architects.

Preston.—At a meeting last week of the building committee of the corporation it was resolved, "That considering the delay which has taken place in obtaining and deciding upon the plans for the new town-hall buildings, the present state of the money-market and of the town, it is desirable to postpone the erection of the buildings for the present." The steward was instructed to relet all the property for one year, except the Guildhall news-room. The committee refer to the council the consideration of the propriety of taking further steps in maturing the plans selected.

Wigan.—At a special meeting of the local Board of Health, Mr. Rawlinson, the engineer of the proposed waterworks, laid his plans before the meeting, and explained the nature of them. The total cost of the works he estimated at 34,593*l.* 12s. 1d. Mr. Rawlinson said, that according to the Public Health Act, they would have to repay the principal and interest within thirty years; but the plan he suggested was, not to repay the principal by annual instalments, but to pay 5*l.* 15s. 8d. annually for every 100*l.* which would be 4 per cent. plus 1*l.* 15s. 8d. which would go towards the repayment of the principal. By these means the ratepayers now and nearly thirty years hence would be placed on an equality. They might make such an arrangement with an assurance company, and only receive the money as they required it, so as not to lose sixpence in the shape of interest. Several members of the board expressed their approval of this suggestion; and a resolution for carrying out the works according to Mr. Rawlinson's plan was adopted.

Stanraer.—Mr. Abernethy, C.E. London, was lately engaged in examining Stranraer harbour, previous to drawing out the requisite plan for the proposed new harbour here. The one most in favour, it is said, is to widen the present pier, and to extend it about 300 feet in a north-eastward direction towards the deep water, with other improvements.

Stirling.—The designs of Messrs. Hay for the new workhouse, lunatic asylum, and infirmary for the county of Stirling, have been selected.

Dalkeith.—The Duke of Buccleuch has intimated his intention of appropriating one of the fields in the immediate vicinity of this town as a place of public recreation for the inhabitants.

WHERE SHALL THE NEW LAW COURTS BE BUILT?

UNDER this title, a pamphlet by "An old Law-reformer" has been published by Day of Carey-street, in which the centre of Lincoln's-inn-fields is advocated with much fervour and some ingenuity, as in every respect preferable to the Strand site a little to the south-east of the Fields. The proprietors of the Fields are said to be willing to cede the gardens in the Square, wholly and without special cost, to Government, on condition that several new and wide streets be opened out, at a presumed cost of some 300,000*l.*,—a metropolitan general improvement, as well as a special improvement to the property forming Lincoln's-inn-square, which the proprietors would regard as an equivalent for the gardens. On these gardens then it is proposed to erect the New Law Courts, which would only, it is said, occupy one sixth part of the whole open space within the square including the courts in front of the houses, and which it is proposed—on a plan by the bye first suggested in our own columns, though unconnected with the occupation of the centre by law courts,—to clear away, forming the pavement close to the houses, and extending the centre space, which would be thrown open to the public. By such means, and in connection with the new streets proposed to be opened out by the Woods and Forests, it is argued that, instead of blocking up an open space or lung of the metropolis, the balance would be the other way, additional space would be opened, and close and unwholesome back streets cleared away; and the law courts erected at considerably less cost than on the Strand site.

We need not enter more minutely at present into the details of what must be admitted to be a fine scheme, ingeniously put. There is much truth in what is said as to the question of open space, and without a doubt the centre of Lincoln's-inn-fields would be the best and most tempting site for the law courts themselves; but the sanitary question is not quite so clear as this author would have it. It is not merely on account of its being an open space that the gardens of Lincoln's-inn-fields are valuable to the metropolitan public. Doubtless quite as much open space might be got by cutting out wide streets, as might be filled up by the law courts; but streets are not gardens, and it is as wholesome generators of vital air through abundant vegetation that such gardens are esteemed as of vital public importance in the midst of the metropolis. Moreover, with the Strand site cleared away to the great extent proposed on the other hand, the public would have the benefit of a new and large open space added to the gardens as they stand, and still too the Woods and Forests' project in addition to such spaces as before. Temptingly also as the Lincoln's-inn-fields' project is got up, it comes out at last that the courts here would form "a site round which may be hereafter raised, along the sides of the great square of the courts, those *further structures* which our improved jurisprudence and extended wants will require;" and it is hard to say how much "farther" encroachment would thus be effected, until finally we might have squares within squares, and all open area at length utterly extinguished. Now it is the edge of the wedge that must be resisted: the edge may be but "a sixth part" of the "open space" into which it is proposed to be inserted; but we all know too well what would follow, to need here to carry out the illustration any farther.

TEMPERANCE HOTELS.

A HINT.

As we are on the eve of great and material alterations in the hotel system, and as temperance hotels will now be in greater demand, a few words on the way to make them more attractive will, I am sure, be taken in good part.

A temperance hotel is simply a private house in a convenient part of the town, or near a railway station. The proprietor having two or three spare bedrooms, and a front parlour upstairs that is not much used, and a wife and one or two daughters that want something more profitable to do than practising the piano, making paper-cuttings, or crochet-work, thinks he could not do better than turn his house into a temperance hotel, his wife into superintendent and head-cook, his two daughters into waiters, and himself, after attending to his business during the day, will see that all is shut up and regular at night before going to bed. If the rooms are already furnished, there will be very few alterations to make.

We will begin with the tea or coffee room, which is the upstairs parlour, as the parlour below on the ground-floor would be too small, and the tenant will require it for himself and family, as a kind of bar. Place a long table down the centre of the room, at which all comers can breakfast, dine, &c. If it is of mahogany, do not put any cover over it during the day; it is a good article, and will bear looking at. If it is of deal, put an oilcloth oak-coloured cover over it, sewed down at the corners; it is a clean-looking colour, and the great charm about your house should be that it looks as clean and unpretending as possible. Therefore get rid of those silly knicknacks on the chimneypiece, pet-lambs, Snowdon pebbles, those dogs'-eared paper racks stuck full of old pens and lavender; they do not look business-like. The same condemnation may also be passed on that fly-trap in the window, and you may substitute a good print or two as you can get them. Have a small table to put tea upon, in case the large table should be laid for dinner; different meals should be avoided at the same table together.

Do not put too many chairs in the room, and have them, if possible, all of the same pattern; it would otherwise look as if you had got them here and there as a bargain, and were trying to do the thing cheap.

Paint the woodwork a creamy white, picked out in broad blue,—blue throws out the white, and it always looks clean; it gives also a pleasant feeling to the eye, which, though it may not be perceived, yet still the feeling is unconsciously present to the mind. Paper your wall with an oak pattern, or something not too bright or not too white, it will not then attract attention and not look cold.

Have your crockery for breakfast and dinner of plain white, or with a simple blue line round the rim; it shows dirt better, and, therefore, secures confidence, as your great hope of success must be in the cleanliness and comfort that travellers can obtain at a reasonable price.

Now about the attendance. See that your daughters or waiters are dressed neatly and modestly. Modest and civil attendance will always be a good advertisement; therefore see that their gowns are well made, good fitting, clean, and quiet; their hair neatly done; no ringlets, but to look as if they could move about smartly: if the waiter looks quick and lively, the traveller will be more likely to excuse delay. Some waiters, though bringing a thing at once, look as if they had been a week about it.

As to the eating department. On the wall or against the door in the coffee-room print up conspicuously the price of everything that a traveller is likely to ask for, and that can be had at the season: begin with the cheapest example. Bread and butter, 2d.; bread, cheese, and butter, 3d.; Cup of tea or

coffee, 4d.; Chop, 6d.; tea, 10d.; breakfast, 1s.; breakfast, and two eggs, 1s. 2d.; breakfast, and eggs and bacon, 1s. 4d.; dinner, two chops, 1s. 4d.; waiter, 2d. a meal. Beer or spirits sent for, if required. You do not know the amount of time, trouble, grumbling, and mistrust that will thus be saved. A traveller comes into the room and sees at once what he can get and what he will have to pay—a great satisfaction to him in eating his dinner, as there can be no real happiness in uncertainty.

Now about the bedrooms. If they are not already furnished, have the bedstead small and of iron; no curtains, no muslin: a large washhandstand and plenty of water: paint the woodwork of a light colour, but warmer than the coffee-room: bird's-eye maple always looks pleasant and clean; it hides spots well. The floor should be covered with a plain drugget, not one of those vulgar flowery patterns, but of a plain dark grey or dark brown; it will throw out the rest of the room, and give a freshness to it, which is the great charm of a bedroom. Keep the windows well open, and have, or tell your wife to have, a sharp eye, as Sam Slick says, for dirt.

First appearances with a hotel are everything; therefore keep the pavement and gutter clean and the door-step well whitened; the window-cills painted, with flower-pots placed on them; and the board over the door, informing the public that your house is a temperance hotel, should be painted in large white letters on a blue ground. W.

PAU.

AN old correspondent asks us if we know anything about Pau. We do not profess to answer all such inquiries (one writer has this week made seven on the same piece of paper), but it does happen that we have just now received a letter from a friend at Pau, so he shall have an extract from it for his special advantage. The writer, a lady, says:—

"When steam, rail, and diligence had brought us safely here, my first care was to secure an apartment, and I was fortunate in finding a comfortable one in the very best and healthiest situation here (according to the opinions of doctors, landscape painters, and self), a nice garden attached, no opposite neighbours, but an uninterrupted view of the country, river, hills, mountains, and all; rooms neatly furnished, rather draughty (as they all are in Pau), but all looking south, an important point, as firing is fearfully expensive. When we were tolerably settled, we joined some friends who were like ourselves in a wandering mood, and went on an exploring expedition to the mountains. We visited all the principal watering-places in the Pyrenees, went on horse and foot up and down impassable roads (?), saw cataracts, and glaciers, and unfathomable lakes, at remarkable, and certainly uncomfortable heights; got nearly roasted to death in going to the celebrated Cirque de Gavarni, having been too lazy to rise early, and so having to toil through the heat of the day; went from Bagnères de Luchon into Spain, where we stayed a few hours, and thought we should never be clean for a month or two after; and finally, after a tour of three weeks, returned to Pau much delighted by the scenery, and altogether charmed with our excursion.

Pau is, on the whole, a very agreeable winter residence; the climate is good, though more changeable and not so mild as I expected; in fact, we are too near the mountains (twenty-six miles) not to feel the effect of every coat of snow they receive. We had one very severe week from December 24 to January 1; the snow remained three days hard on the ground, though on one of these the sun was shining bright and warm. Then, again, in January the weather was fine and as mild as spring; in February we had another sharp pinch, but this time the snow only remained one day. These two attacks of cold weather sent many of the invalids here to eternal tranquillity.

The English abound in Pau; we muster nearly a thousand; most of our compatriots are supposed to be on the invalid list, yet they are extremely eager to enter into all the dissipations of the Carnival; they are dying one day and as lively as flies the next. There are balls every night; the theatre (which is a hole, and rarely visited by anybody in most seasons) has this year been well attended, as the *sous officiers* of the regiment quartered here got up very creditably some performances, the receipts being given to the poor. Some concerts, but these are very weak affairs. The hounds meet every day nearly, and the English have a cricket-match every Saturday," and so on, and so on.

FORGING METALS.—Mr. R. Morrison, of Newcastle-upon-Tyne, engineer, has patented an apparatus for forging, shaping, and crushing iron and other materials, and for driving piles, by substituting for the hammer-block, piston, and piston-rod of large hammers a cylindrical bar of wrought-iron or other metal, to form the working hammer.

THE LOUVRE AND THE TUILERIES, PARIS.*

A MAP, supposed to be of the period of Dagobert I. the authenticity of which, however, is much contested, would lead to the supposition, that the Louvre already existed as a hunting palace at that time, that is, A.D. 633. But the first precise mention of the Louvre would appear to be under Louis le Gros, 1108, who received the oaths of fidelity to him at the Louvre, at that time regarded as an important fortress.

It was placed just outside the town, on the bank of the Seine, where its position commanded the approach to Paris on this side, and defended the city from the attacks on this quarter, the main road passing inside its exterior defences.

Philip Augustus (1180—1223) rebuilt and made considerable additions to it. He constructed the great donjon tower in the centre, as a state prison, and for the safety of his treasure, 96 feet high and 48 feet in diameter, the walls being 13 feet thick at bottom, and 12 feet at top, and surrounded by a ditch.

Charles V. (1370—80), was the first king after Philip Augustus who embellished the Louvre, hitherto more distinguished as a strong fortress than a kingly residence, attractive by the graces of art and embellishments of taste. The reign of this king was most favourable for architecture and sculpture, as he was fond of the magnificence of the kingly state, and loved the arts, as adding to its value and conferring true beauty. He enlarged and adorned many royal residences, and erected many castles, as those of Creil and of the Bastille. He added considerably to Vincennes. Monsieur De Clorac gives a plan of the chateau of the Louvre, founded on the work of Sauval, who wrote at the time of Louis XIV. and whose book is entiled "Œuvres Royales." And although Sauval has no plan, he is so minutely particular in his description of each portion of the castle and dependencies, as to afford authority for every part. The enclosure of the Louvre, comprehending the fosses, but exclusive of the outer works, was nearly square, measuring 360 feet towards the river, and 342 feet in the other direction. At the angle of the outworks next Paris, and close to the Seine, there was a lofty tower, opposite to a corresponding one, the Tour de Nesle, on the opposite side of the river, and which forms a prominent object is the old prints of Paris by Sylvestre and others. A line of wall fortified by towers afforded security from attack on the side next the river, and formed an inclosed space outside the chateau. This angle tower was possibly the Tour de Vindal of those times; and as a leading position probably had under it the sluice-gates, which regulated the quantity of water in the fosses, securing from any attack, which might leave the ditches dry. Attached to it was the gate of Paris, flanked by circular towers; and a corresponding one, the Porte Neuve, was at the other end of the court.

Near the Gate of Paris is an entrance into one of the *basses cours* of the chateau, leading to the gate of the *tête du pont*, close to the central towers of the façade facing the river. Here also was an entrance to the gardens laid out in beds, with a trellis at the further end, and immediately in connection with the dependencies. It will be remarked that this gate at the *tête du pont* has a lateral entrance, not immediately fronting the entrance towers of the castle,—a precaution observable in other castles, as affording greater security to the approaches.

The fosses were not all of equal width, varying from 32 feet to 48 feet wide, and about 20 feet deep. On the side next Paris were the offices of the chateau outside the fosse, and containing those dependencies required for the service of the royal family. Towards the north and outside the fosse was the "*grand jardin*," or grand park, and being outside the city, it produced abundance of vegetables, fruits, and flowers. On the west side and near its south-west angle was the arsenal of the artillery establishment, with courts and buildings necessary for all the works, as the foundry, stores, and workshops, &c. connected with that arm of military warfare; and attached to it was an ample residence and garden for the master of the artillery. Near the street of the Froidinanteau there was ever since 1333 the *ménagerie*, a usual appendage to royal residences of that period, and which also remained in the tower of London up to within our own time. Here were kept rare animals brought at a great expense from foreign lands, which served as a curious show, and sometimes afforded sport by being made to fight each other. Charles V. had one in his Hôtel de S. Paul, a record of which is retained in a street, Rue des Lions, which was carried through the spot formerly occupied by the *ménageries:* so frequent is it that names of streets hand down traditionally the former purposes for which certain sites once served. Having thus generally noticed the arrangements connected with the fortifications and the domestic arrangements of the *basse cour*, gardens, and arsenal, &c. we shall now proceed to examine the body of the castle itself.

The central court was about 206 feet by 197 feet square, entirely surrounded by buildings, with the donjon in the middle. Raimond du Temple was the master of the works or architect to Charles V. and executed the various additions and alterations which were made at this time, not only to the chateau of the Louvre, but also to that of Vincennes.

The several towers had each a specific name, particularly those at the angles, which were called respectively next S. Nicolas, next the Seine, next the Great Garden, according to their position, and are represented in various views of remote periods as still existing, as in those of Quesnel, Sylvestre, &c. in various manuscripts as late as the sixteenth century.

Each entrance was flanked by two towers, but that towards the Seine, being the principal one, was strengthened by being of larger dimensions. Over the centre was, doubtless, the clock tower: probably the clock was placed there by Charles V. about 1370, when public clocks were first generally introduced in Paris; for, doubtless, that enlightened prince, the first to patronise any novel invention, had one placed at the palace by Henri de Vie.

On the west side there would appear to have been an entrance equally important with that next the river, flanked by two towers with a drawbridge and two turrets, forming as it were a *tête du pont*. And there is an ample open court or space outside the precincts of the castle next the Rue Froidinanteau, affording access to the artillery arsenal and the *ménagerie* already mentioned.

On the north side there was only a secondary class of exit for the purpose of reaching the great garden over a light bridge.

On the east side is a central secondary entrance, flanked on the outside and leading by a drawbridge to the domestic offices, an arrangement apparently founded on the authority of Sauval's description.

The central donjon tower communicates with the buildings which surround the court by a bridge and a narrow gallery, leading to a grand circular staircase (*la grande vis*), affording access to the upper floors. It was in a circular tower 61½ feet high, with a terrace on the top. This staircase, which existed up to the time of Louis XIII. is mentioned by Sauval as having been a *chef-d'œuvre* of Raimond du Temple, the architect and sculptor, both in point of construction and decoration. There were ten large statues on pedestals. The mouldings were richly carved.

We will now consider the arrangement of the apartments on the authority of Sauval, who appears, according to the registry of the "Œuvres Royaux," to have followed the order of several rooms and halls. The apartments of reception and ceremony were on the west side, the apartments of the king and queen to the south, next the river. Those of the queen, on the east side of the principal entrance, consisted of two large chambers, cabinets, and garderobes, an oratory, and bath. On the western side of the entrance was a noble hall, called "Salle Neuve de la Reine," 54 feet long by 27 feet wide, and at one end of it the tower of the library, to which there was access by a small circular staircase in the thickness of the wall,

* The following paper was read by Professor Donaldson, at the Institute of Architects, on the 6th inst. when the Royal Medal was presented to Mr. Hardwick: Earl de Grey in the chair. We shall give report of the proceedings next week.

from a vestibule opening immediately into the court. Although dignified with the name of library, the apartment destined to receive books was not necessarily large in extent, for before the invention of printing, as all books were of course in manuscript, the amplest fortune could not boast a very numerous collection, frequently more used by the chaplain than the owner. It is a question whether Charles V. on the death of his father, John, had ten or twenty volumes. About 100 years before printing was discovered 900 volumes was a very considerable number. Charles V. had collected them from all countries: he sought those most beautifully written and emblazoned, and had them richly bound, and he allowed any one the privilege to consult them who was distinguished by his learning or known to be studious; and for this purpose the library was open by day and in the evening. It is a curious circumstance that forty-nine years after the death of Charles V. that is in 1429, the Duke of Bedford, then regent of the kingdom, purchased the collection of works, then only 853 in number, which were sold for 2,323*l.* of our present money, and sent over to England.

It may be well imagined that this royal residence was embellished with becoming decorations, and that the furniture, fittings up, and other accompaniments were of corresponding beauty and magnificence. But after the time of Charles V. (1380) it was much neglected. Charles VI. only added to the fortifications, and the immediately succeeding monarchs no longer occupied it as their residence.

SECOND EPOCH.

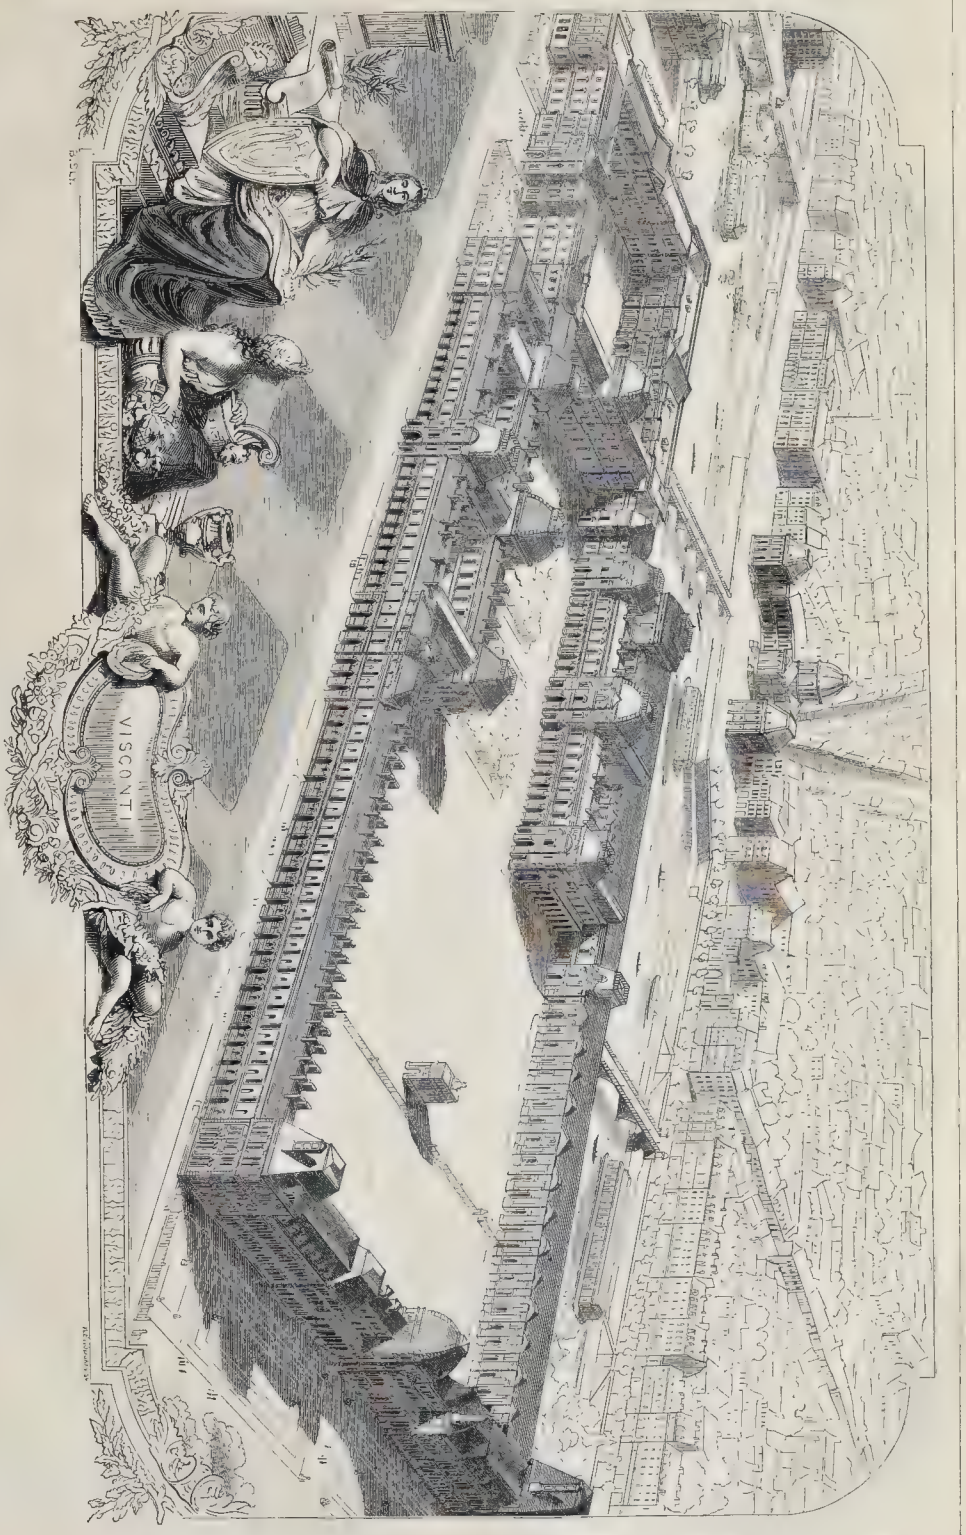
We now enter upon the second epoch in the history of the Louvre, which had hitherto served as a fortress and a castle.

About 140 years after the death of Charles V. François I. mounted the throne: he was a monarch who deeply felt the charms of art, appreciated their value, and by his enlightened taste created a school which has held ever since a first rank in Europe. He turned his attention to the embellishment of Paris, and while the Popes and the Medici were promoting the fine arts in Italy, he encouraged them in France, and by his favour and liberality he attracted the Italian artists to France, where they found an honourable reception. François I. perceived at once the vast changes which the feudal castle of the Louvre required in order to make it accord with the wants of a more refined age. He resolved to destroy the greater portion, and to rebuild it on a new plan. In fact, it is generally more easy and judicious, and often also less expensive, to construct an edifice anew rather than to make ancient constructions accord with new arrangements.

D'Argenville is of opinion that the new works were commenced about 1540; and it is supposed that Pierre Lescot, then about thirty years old, had charge of the project. But during the reign of that monarch, it would seem, that the operations rather consisted in pulling down the old building and in arranging a noble hall in it, since known, from its decorations, as the Salle des Caryatides. Lescot continued his operations under Henri II. François II. Charles IX. and Henri III. and called in aid the rare talents of Jean Goujon and Paul Ponce to execute the sculptures. Whether François I. contemplated the great enlargement which the Louvre subsequently received cannot be ascertained, as the plans of the architect have not been preserved, and Lescot only operated upon the south and west sides of the old chateau, which were only half as long as they are at present. He gave the elevations the Renaissance character of decoration, converting the circular angle towers into simple flat projections. He was influenced by the feelings which directed the architects of the mediæval period. The outsides of their chateaux and palaces were simple and severe, defying attack; but they rendered their interior courts more rich in ornamental detail, as being secure from danger: the windows were more spacious, as offering no facilities to any enemy in that position; and they sought to give a more cheerful character where the sombre appearance of the building would have offered no advantages. So Lescot made his exterior plain in feature, but the interior of the court revels in excess of ornament profusely lavished. Columns and pilasters, richly-carved cornices, pediments, imposts, and panels; statues, bas-reliefs, and sculptures throughout, produce a dazzling brilliancy which bewilders the attention and evinces a great want of repose. But Lescot was a great master in his art, and for his noble conceptions was made canon of the cathedral of Paris and abbot of Clugny, near Versailles, thus uniting the crozier to the T-square. Serlio, who was in France at this period, is supposed to have been occupied upon the Louvre, and to have made a design for it. But Lescot's was preferred, even, it is said, with the concurrence of the frank Italian, who acknowledged, as it is affirmed, the superiority of his rival's design. Serlio died in 1552, passing the latter years of his life at Lyons and Fontainebleau, highly respected for his talent, but tormented by the gout and miserably poor. Parts of the Chateau of Fontainebleau are attributed to him.

Catherine de Medici, widow of Henri, undertook a work, about 1564, which hereafter much influenced all operations connected with the Louvre, and of which it was henceforth to form an integral part. This queen determined to erect a country palace just outside of Paris, but not too remote from the Louvre, in a plain where there were certain tile-kilns, and which gave the name to this palace of the kings and emperors of France,—I mean the Tuileries. She called in the taste and skill of Philibert de l'Orme, already advantageously known under François I. for works at Fontainebleau, Meudon, Villers, Cotterets, in the tombs of the Vallois, and for the charming gem, the Chateau d'Auch, which he built for Diane de Poitiers. He associated with him Jean Bullant, a man of no mean reputation, and they together designed a magnificent project, of which they executed only a fragment as it were; such as the banqueting-house of Whitehall is to the grandiose project for the palace of Charles I. as fully designed by Inigo Jones.

The complete plan for the palace of the Tuileries of Catherine de Medici consisted of a parallelogram, 895 feet by 555 feet, with three courts, the central one being much larger than the others, as, according to the plan in Du Cerçeau and Durand's parallel, it measures 377 feet by 295 feet, the two smaller ones each as long as the large court, though less wide. The rooms and galleries appear to be from (10 m. to 12 m.) 33 feet to 40 feet wide, and some of the galleries 426 feet long by 36 feet wide, with noble staircases, chapels, and other palatial arrangements on the most magnificent scale. One front only, however, was executed of this stupendous project: the rest, had it been carried into effect, would have occupied a considerable portion, at least one-third, of the present Court of the Carousel. This gigantic conception, even in its reduced part, was incomplete when De l'Orme died, in 1570, and never inhabited by the dowager queen,—whose capricious taste was taken up with the erection of another palace, upon the site of the present "Halle au bled," first called the "Hôtel de la Reine," and afterwards the "Hôtel de Poisson,"—the expense of which absorbed the funds intended for the Tuileries.



It was during the progress of these works, that an addition was made to the Louvre, by bringing out from its south-west angle the gallery which runs down towards the Seine. It was only one story high, covered by a terrace, like the projecting wings of the Palazzo Pitti, of Florence, which possibly gave rise to the idea in the mind of the Queen, a Florentine by birth. At this period, then, the Louvre and Tuileries present the following aspect. We find the west and south sides of the chateau, as they were modernized by Lescot, under François I. and Henry II.; but the other sides of the chateau presented still the aspect of a fortress or prison, although many of its towers had been taken down. The projecting gallery struck out from the south-west corner towards the Seine; and some imagine that possibly it was continued for a certain length along the side of the river. In the distance was the fragment of the Tuileries contemplated by Catherine de Medici, and partly erected by Philibert de L'Orme and Jean Bullant. Such was the state of these two palaces when Henry IV. mounted the throne; and as soon as he was at leisure, he determined energetically to embellish that Paris which he had purchased at the sacrifice of his religion. He carried out the works that united the two palaces, by continuing the gallery along the bank of the Seine, and prolonging that end of the Tuileries. He added an upper story to the projecting wing of the Louvre at the south-west corner, upon which works Du Cerçeau was first employed, until he left France in 1598. Du Cerçeau was succeeded by Du Perac, and after him, in 1602, Métézeau took part in these operations. Henry IV. also completed the Pont Neuf and the Hôtel de Ville. It is also worthy of incidental notice, that Cosmo II. Grand Duke of Tuscany, from the affection he bore to Henry IV. who had married Marie de Medicis, after his death sent an equestrian statue to Paris, when Louis XIII. ascended the throne; and this was the first monument of the sort put up at Paris in memory of the French monarchs.

It was under the son of Henry IV. that the Louvre first commenced its development upon its present large scale. During the able ministry of Richelieu, its present extent was contemplated, which rendered its court four times the size of its original dimension. Le Mesurier was employed as the architect, and he extended the two sides already altered and faced by Pierre Lescot, and completed the square, by adding the two other long sides: the principal entrance was under the central pavilion next the Tuileries. This, however, he rendered overpoweringly lofty, by adding an attic, with colossal caryatides, which crush, by their gigantic proportions, the details of the lower stories. Le Mesurier only executed the entrance story of these new parts, and pulled down the northern and eastern sides of the old chateau. The grand entrance in the centre of the north side is enriched with coupled Ionic columns, the idea of the whole arrangement being supposed by Argenville to have been inspired by the entrance vestibule of the Farnese Palace at Rome, and somewhat similar to the more recent noble entrance vestibule of our Somerset House, by Sir W. Chambers, which it might, perhaps, have suggested.

In 1660, that is, after thirty-six years' service in works of the highest order, carried out with the greatest talent, Le Mesurier died, wretchedly poor, like his predecessor, Serlio. At this time Louis XIV. reigned, and Le Vau was directed to continue the works at the Louvre, and he carried them on with an activity which was peculiarly his characteristic. He also extended northwards the Palace of the Tuileries, so as to correspond with, and equal in length, the south end, already erected by Henri IV. But in 1664, the great Colbert being minister, a man of enlarged ideas and noble conceptions, found that the style of Le Vau was not sufficiently dignified, and did not correspond with the magnificence which should distinguish a royal palace. Although immense sums had been expended by Le Vau, he determined at once to stop the works, and reconsider the design, which had been too hastily adopted, convinced that posterity did not at all consider the cost of a building, if its beauty answered expectation, whereas no consideration of economy ever reconciles after ages to an unsightly inappropriate edifice.

We give a view of M. Visconti's design for the junction of the palaces of the Louvre and the Tuileries, referred to in the continuation of the foregoing paper, which will appear next week.

Scottish Antiquarian Society.—A meeting of the Society of Antiquaries of Scotland was held on Monday week, when a communication was submitted by Dr. Buist, of Bombay, on the "St. Andrews' Sculptured Stone and its connection with Eastern Antiquities." This stone was found at St. Andrews in 1833, 20 feet below the surface, while digging a grave. The animals and figures sculptured on it Dr. Buist supposes to be representations of Eastern hunting subjects, monkeys and lions being introduced; and, from this he conjectures that the stone is of very remote antiquity, dating, perhaps, beyond the Druidical times—as far back as the first colonisation of this country by eastern tribes. The oriental character of the representations resulted, in his opinion, from their recollection of former times and customs.

THE LOUVRE AND THE TUILERIES UNITED.

OIL OF VITRIOL IN GAS.

WE have been requested by some entitled to our best consideration to give insertion to the following statement; and, having no object but the discovery of the truth, we willingly comply with the request, and reserve our observations upon it for another occasion.

"*First Citizen:* Not heerd the news, Jemmy? Vell, then, Prince Albert, along o' two more Commander-in-Chiefs, is in the Tower, which Louis Napoleon diwulged him a-sendin' fi-pun notes to the Hemperor of Roosby (which was a-goin' to be suspended, mind yer), and blowed the gaff.

"*Second Citizen:* Lor!"—*Punch.*

"*Fusbos:* I have found that some of the companies are supplying gas to the metropolis, which in the course of a few years must tend very much to damage property and deteriorate the atmosphere; for it is so highly charged with bi-sulphuret of carbon, that I have been able to obtain as much as 21 grs. of oil of vitriol from 100 cubic feet.

"*Chairman and Court of Sewers:* Lor!"—*Vide proceedings of Jan.* 10, 1854.

Punch alone could furnish me with a parallel, and there it is. Twenty-one grains of oil of vitriol from 100 cubic feet of gas! Such is the absolute reading of the reporter's notes; and pray mark the words, "oil of vitriol." Now, oil of vitriol is a well-known chemical compound, and consists of sulphuric acid and water: it is, according to Graham, "a sulphate of water," in which the water acts the part of a base. In short, water is as necessary to the constitution of vitriol as the sulphuric acid is; and it would be just as improper to call Epsom salts (sulphate of magnesia) oil of vitriol as to call anything oil of vitriol which did not consist wholly and entirely of water and sulphuric acid: there must be these two substances in certain proportions, and there must be nothing else. This is the true definition of the article oil of vitriol, and I am thus particular about it for the following reason:—No mortal man ever did or ever can obtain 21 grains of oil of vitriol from (I will not say 100 cubic feet, but from) the combustion of 100,000 cubic feet of any coal gas supplied to the public within 20 miles of St. Paul's cathedral. The substance really obtained is not oil of vitriol at all, but sulphate of ammonia; and upon this I most unhesitatingly pledge my character as a chemist and a gentleman. Oil of vitriol is a highly corrosive fluid, whereas sulphate of ammonia is a harmless solid; and I bring this matter fairly before the public in order that truth may be elicited, and a stop put to misrepresentation and falsehood.

Fully persuaded as I am of the enormous advantages of gaslight in private houses, I repudiate and impugn every improper endeavour to alarm or prejudice the public against so truly valuable an agent. With this view only I resume my pen, and am prepared to vindicate coal gas from the charge thus unfairly or ignorantly thrust upon it. There is no oil of vitriol whatever generated by the combustion of coal gas, for the ammonia it constantly contains is more than sufficient to neutralise and render harmless both the sulphurous and sulphuric acid caused by its combustion. I have long ago pointed out this fact, and have lately corroborated it by experiments made upon nearly every gas supplied in London. Let those, however, who take an interest in such matters test the accuracy of my statements themselves: the thing is easily done as follows:—Having provided a glass tube of about 1 inch in diameter, and 4 feet in length, let it be bent at right angles.* Let this then be suspended over a small gas jet consuming about half a cubic foot per hour, and provided with a vessel to receive the condensed products of combustion. Thus arranged, water will gradually collect in the receiver, which is to be evaporated to dryness in a clean porcelain dish, at a temperature not exceeding 212 degrees Fahr.; and this collection and evaporation of water must go on for eight or ten days, or until 100 cubic feet of gas have been consumed. At the end of this time the evaporated liquid will be found to have left in the dish not a corrosive fluid, but a dry saline mass, which is almost neutral to solution of litmus, or possesses at least only the acidulous reaction of the salts of ammonia in general. Redissolve it in distilled water, and add a portion of litmus solution to it; then prepare a fluid by dissolving 62 grs. of crystallised carbonate of soda in 148 grs. of warm distilled water, the total weighing, of course, 210 grs. If, now, this soda fluid be slowly dropped into the solution containing the presumed oil of vitrol until that solution becomes blue, the quantity of oil of vitriol present will be shown by the loss of weight; for every 10 grs. of the soda fluid indicate 1 gr. of oil of vitrol; and the total quantity, or 210 grs. would therefore be required to neutralise 21 grs. of that acid substance. I pledge my reputation that not one of my readers will find so much as one grain under the above circumstances, no matter where the gas comes from. Indeed, I challenge every gas engineer and chemist throughout Great Britain to show me any coal gas foul enough to yield so much as 5 grs. of oil of vitriol by the combustion of 100 cubic feet, in the way that gas is usually consumed by the public.

LEWIS THOMPSON, M.R.C.S. &c.

* Those who possess a Wright's apparatus need not be told that this is a simple form of that instrument.

ST. MARTIN'S HALL.

MESSRS. ASHBEE and DANGERFIELD have just now issued a lithographed view of the interior of Mr. Hullah's hall, which gives a good notion of its appearance when filled with an audience. Until last week we had not an opportunity of hearing the effect of music within the new hall. On that occasion we listened with great satisfaction to the first performance of an oratorio, called "Immanuel," by Mr. Henry Leslie, and are disposed to think that the room is exceedingly well adapted for sound. Respecting Mr. Leslie's oratorio, the composer, who has received a column and a half of praise from the *Times*, will probably care little as to our opinion; but as we were amongst the first to recognise and applaud the ability of Mr. Leslie, who is, moreover, connected with one of whom we have more often had occasion to speak in our journal, we have pleasure in recording the distinguished success of his production. It seems to us a work of a very high order.

THE ROYAL IRISH INSTITUTE OF ARCHITECTS.

THE above Society held their monthly meeting on the 25th ult. Mr. Jacob Owen, V.P. M.R.I.A. in the chair. Mr. Jas. Owen continued his observations respecting damp walls. Mr. Kirk (honorary member) exhibited some photographs of the figures which he has been executing for the New Campanile at Trinity College. Mr. Denny displayed a large portfolio of lithographed drawings of the continental and British cathedrals, town-halls, &c. Messrs. Symes and Lyons were introduced as members, and the latter gentleman intends reading at the next meeting on 18th inst. a paper on the "Influence and Results of Education on the Fine Arts."

IRISH BUILDING AND OTHER DOINGS.

THE National Bank of Ireland are about having a new bank-house erected at Moate, in the county of Westmeath, and also a building for similar purposes (almost new) at the corner of Glentworth-street, Limerick. Mr. Caldbeck Architect.

A new Sailors'-home is to be built at Limerick, and is purposed to contain a dining-hall, smoking-room, reading room, housekeeper's apartments, culinary offices, and dormitory or cell accommodation for thirty inmates; the intended outlay being only 600*l.* which seems a very small sum for all that is required. A premium of 5*l.*! has been offered, and some plans have been sent in, but we are not aware as yet that the competition is decided.

The new (R. C.) church at Ballina, Mayo, which has been so long in an unfinished state, is to be completed, and the spire, &c. built. We hear upwards of 10,000*l.* have been already collected.

Ship-street Barracks at Dublin are (we are told) to be enlarged at an outlay of 6,000*l.* The proposed additions comprehend new soldiers' rooms, &c. at the west side.

Alterations to the court-house at Moate are to be proceeded with.

A new convent of Mercy and R. C. church are to be built at Clifden, Galway, and the new buildings will comprise accommodation for a large number of sisters.

The Church of Clonulty, county Tipperary, is to be rebuilt by the Ecclesiastical Commissioners, and that at Urney, Cavan, is to be enlarged.

ARCHITECTURAL SOCIETY OF THE ARCHDEACONRY OF NORTHAMPTON.

At a meeting of the committee, held February 13, various donations were announced. The ground-plan of Theddingworth church was submitted to the committee. On the application of the vicar of Oundle, a sub-committee was appointed, to render assistance in the restoration and reseating of the church, as had been afforded by the society to other parishes. It having been represented to the society that considerable restorations were about to be effected in St. John's Hospital, in this town, the chairman was requested to communicate to the authorities on the subject of the works going on there. It was agreed that the sprug meeting should be held at Leicester, some time in May, in conjunction with the Lincoln Architectural Society, it having been intimated that a local committee was in course of formation in Leicester for receiving the societies. A printed notice having been laid before the committee, that the dean and chapter of Peterborough had ordered the opening of the cathedral to the public from eleven to four, without any payment to the vergers, it was resolved that this committee beg to offer their thanks to the dean and chapter for effecting an arrangement so desirable on every account, and tending to excite an increased interest in the sacred building committed to their care. The committee beg also to express a hope that this example may be followed by every cathedral body in the kingdom. The secretary was requested to communicate with the secretaries of the Northamptonshire Agricultural Society, and to inquire whether they would be willing to co-operate with the Architectural Society in some plan for offering prizes for, or otherwise assisting in, the production of the best designs for labourers' cottages for the midland counties. The Birmingham and the Worcester Diocesan Architectural Societies were taken into union.

THE LABOUR QUESTION.

THE adoption of some modification of the principle of anonymous and limited partnership as a means of bringing about a more satisfactory state of feeling between employers and employed, appears to have struck many of the workmen, since its suggestion by Mr. Slaney, late M.P. for Shrewsbury, at the Society of Arts Conference. Indeed, some of our correspondents of that class seem to look to it as their sole hope and refuge from strikes, which they admit to be objectionable in principle. One who is of this opinion, and who designates himself "One of the late Bricklayers' Wages Movement Committee," while thanking us, as others have done, for the general tone of our late leading article on the subject of strikes, declares it to be his belief that "the necessity for strikes will never have passed away until there is a complete revolution in our social system." "Perhaps," he adds, "it will not be too much to say that the working classes have a sort of political economy of their own, but the fact is, there is no one knows better than the working classes themselves what their real wants are. And talking of identity of interests, the interest of the master and man will never be identical under the present social system; for the interest of the employer is to get as much labour performed as possible for the smallest amount of capital possible; while, on the other hand, the labourer having nothing else but his labour to take to the market, it is of course his interest to get as much capital as he possibly can for it. It will at once be perceptible that strikes, although objectionable, can never be dispensed with under the present system. I believe the only plan which would have a tendency to prevent strikes would be the adoption of the suggestion (at the late labour conference at the Society of Arts), of Mr. Slaney, late M.P. for Shrewsbury, that some arrangement might be made by which the workman might receive some division of profits in the shape of wages."——The labourers employed upon the Holyhead New Harbour work, struck for wages on Friday in last week, the contractors, Messrs. Rigby, being unwilling to accede to their demands. Their present wages are 2s. 8d. a-day, and they ask for an increase to 3s.——The shipsmiths employed on the Wear have struck for thirty-six shillings a-week, being an advance of six shillings on their former wages. The ship joiners have also struck for thirty-six shillings a-week.——A meeting of masons, joiners, &c.

nt Galashiels, has been held, to consider the propriety of reducing the present number of working hours. A resolution was agreed to that the masters be informed that after the 15th ult. the workmen of the above trades will leave off work at two o'clock on Saturday afternoons, thus reducing the number of hours to fifty-seven a-week—the wages to remain as at present.

POISONED WELLS.

Could any of your correspondents help us in this case? Our country-house (in Essex) stands upon a mixture of clay and gravel. The subsoil, at the depth of 30 feet, is the London basin of clay, 200 feet deep. We are supplied with water from a well 30 feet deep, in which a very strong land-spring rises to within 10 feet of the surface. The water is hard, but very good, and has been so for thirty years, until the beginning of November, when it was found that, when used for washing fine linen, it made it yellow; but no further change in the water was discovered until the thaw in the beginning of January, when the water became very disagreeable both to the taste and smell, and was found, on being analysed, to contain considerable quantities of putrid animal and vegetable matter. Nearly every member of the family became ill, both before and after this discovery,—some with diarrhœa, and some with typhus fever, which in one instance terminated fatally. Our difficulty is, that we cannot discover from what source the putrid matter has come. The bricks lining the well are set in compo for the depth of 16 feet, but below that are laid without mortar, and although they are black, and smell disagreeably, no place has been discovered where putrid matter appears to have oozed through them. There are two cesspools, one 6 feet, and the other 45 feet distant from the well, but both they and the drains leading to them appear quite sound, and we can discover no leakage from either of them, or from any drain which can have got into the well. The well has been pumped out several times, but the water is still bad, though better than it was. No alteration in the drainage or buildings of any kind has been made for fifteen years. The well is situated under the stone flooring of part of the offices, and is so surrounded with walls, that we cannot dig into the ground immediately around it. Under these circumstances, could any correspondent of the *Builder* suggest any probable cause for the poisoning of the water? Is it possible that the spring itself could have become poisoned?

R. C. C.

Notices of Books.

The Electro-Magnetic Telegraph. By Lawrence Turnbull, M.D. Second Edition. A. Hart (late Carey and Hart), Philadelphia. 1854.

Mr. Turnbull's work, if we mistake not, has before come under our notice. It contains an historical account of the rise, progress, and present condition of the telegraph, with practical suggestions in regard to insulation and protection from lightning, and an appendix containing several important telegraphic decisions and laws of the United States courts. The work is illustrated by numerous engravings, and enters fully into the details of many forms of telegraph, including House's printing telegraph. The present edition is considerably improved and extended, and the whole forms one of the most comprehensive works of the kind yet published. The author is lecturer on technical chemistry at the Franklin Institute of Pennsylvania.

Whitaker's Educational Register. 1854. Whitaker, Pall-mall.

This very useful Register contains an account of the universities, colleges, and institutions, foundation and grammar schools, training institutions for teachers, national education, &c. &c. This is the fourth year of this three-and-sixpenny publication.

The City of London Corporation Inquiry. By A. Pulling, Esq. of the Inner Temple, Barrister-at-Law. London: Hatchard, 187, Piccadilly. 1854.

Mr. Pulling's writings are not new to our pages. He is the author also of a cognate book on the laws and customs of London. This little pamphlet enters pretty fully into the merits of the moot question of City corporation reform, into which we are not much inclined to plunge. In the conclusion of his remarks the author says,—"The London Corporation Commission was not issued prematurely: it does not, however, go far enough. The investigation of the charges against, and the defence of, the present members of the corporation of London really forms a very small part of the public demands. The greater, the more important, labour remains behind,—to rid the metropolis of England of the incubus of a conflict of local jurisdictions, a confusion of law and local government, and to substitute system, economy, and efficiency."

The Eye in Health and Disease. By Alfred Smee, F.R.S. Second Edition. Longman and Co. London. 1854.

This work has little or no connection with Mr. Smee's "Electro-biological" doctrines: it is one in which much valuable experience and suggestions are embodied by the author, in his professional character as a surgeon, and his amateur reputation as an optical *savant*. It contains an account of the optometer, for the adaptation of glasses for impaired, aged, or defective sight, and is the substance of lectures delivered at the central London Ophthalmic Hospital, to which the author is surgeon, as well as to the Bank of England and the Royal General Dispensary. It also contains a paper, by way of appendix, on the stereoscope and binocular perspective. The work is illustrated with engravings, and it contains much matter of value, especially to all troubled with defective vision, besides much that is interesting to men of science.

Miscellanea.

The Sewer Accident at Chelsea.—Sir: Being one of the jury on the inquest held on the bodies of two men in the employ of Mr. Eldred, contractor, who lost their lives on the 22nd of February, whilst constructing a new sewer in Paradise-walk, Queen's-road West, Chelsea, I think it only just, with reference to a paragraph which appeared in the *Builder* of the 4th inst. to send you the summing up of Mr. Wakley, the coroner, as follows: "Had there been a deficiency of timber or material, or restriction in the use of the same, or had any of the workmen complained of danger, and their complaints not been attended to, you would be justified in bringing in a verdict of manslaughter; but as all the witnesses had stated there was an unlimited supply, and time allowed to do their work properly, and that the plan adopted in securing the earth was the usual one in carrying on works of this nature, but had in this instance failed, you could not bring it in otherwise than an accident." I am happy to inform you a subscription is being raised for the widows and family of the two deceased men. On the Sunday following a slip of earth took place in Cheyne-row, Cheyne-walk, Chelsea, where a sewer is being constructed under another contractor.—One of the Jury.

Progress of Naval Architecture.—It was recently intimated, at the third annual meeting of the Eastern Steam Navigation Company, in London, that they have just begun a vessel which would be able to carry 10,000 troops, if called upon to do so. Mr. Brunel, the company's engineer, stated that this ship would be propelled either by screw or by paddles, or by both, as she would have sets of machinery fitted up for both, so that, if one set got deranged, the other would still be available. Considerable progress, he said, had been made with the ways on which the vessel was to be built, and her plates were being manufactured. The draught of water would be 22 feet, that of a line-of-battle ship being from 28 to 30 feet. As to the large-ship question generally, the chairman said that whatever different companies might have said on the subject, they had always congratulated themselves after having built a larger vessel than they had previously possessed. With regard to speed, it would be recollected that the report of last year proceeded on the supposition that fifteen knots an hour was all that could be attained. He believed it was now understood, however, that that was by no means a great speed compared with the means and appliances of engineering skill; and, although it would of course be wrong to adopt any of the wonderful calculations which they heard of till they had been supported by experience, yet he would observe that it was actually stated that a vessel was now being built in America which would cross the Atlantic in six days. —Mr. Phillips, M.P. said, the accounts continually received of the success of that splendid ship, the *Duke of Wellington*, might well encourage a hope that the size of vessels might be still further increased with advantage to the public. It was said of that vessel, the other day, that she was steered like a Cowes yacht. It is to be hoped we are not teaching our foes how to invade our "tight little island."

Ventilation of the House of Lords.—On the 6th the Earl of Harrowby gave notice of his intention on an early day to call attention to the proceedings of the Sanitary Commission, particularly as regarded the metropolis. The Earl of Hardwicke, observing upon the very dense fog that filled the house, inquired whether anything was to be done with regard to the ventilation. He believed that at that moment all the valves were open to the admission of atmospheric air, which, charged as it was with every sort of filth, was pouring into the house. He understood something had been done to remedy the evil, but instead of effecting any improvement he thought it had made matters ten times worse. The Lord Chancellor professed himself unable to give any information on the subject, but if the noble earl required any support for the observations he had made, he might paraphrase the well-known line on Sir Christopher Wren's tomb, and say, "*Si argumentum requiris, circumspice.*"

Opening of Free Church of Scotland at Melbourne.—The committee having applied to Government for a site, obtained one on the eastern hill, which is about equidistant from Melbourne, Richmond, and Collingwood; and in three weeks a large and commodious church of wood was erected, the materials of which will be used afterwards in the construction of a more substantial and permanent erection. The building will hold about 1,200. It is nearly square, with a double roof, supported through the centre by pillars. The seats are open: they are placed merely on the original turf, without any flooring, but they will be more comfortable than the original turf seats of the covenanting forefathers of the emigrants. About 200 yards from the church is erected the iron cottage which Dr. Cairns, the pastor, brought out with him. From the elevated situation on which both church and manse are placed, an extensive view is obtained. The wooded ground towards Richmond, backed by a glimpse of Hobson's Bay, with its forest of masts on the one side, with St. Peter's Church (Episcopalian), and numbers of buildings in course of erection belonging to different religious bodies and private individuals (among which is a Roman Catholic Church), on the other side, render this locality a lively one independent of its central situation.

"London Shadows."—We have to thank se correspondents for encouraging notes on the subject of our proposed publication. One says, "'London Shadows' will do much good: there is a great deal of work for the pen still to accomplish. The Clerkenwell Improvements have to remove Lamb-court, Lamb-square, Bitt-alley, Frying-pan-alley, Rose-alley, Broad-court, and other shadows, for the sun never shines in many of them. It has often occurred to me that there has been a great moral evil in severely punishing poor miserable half-starved children for purloining a few pence' worth of victuals, and at the same time allowing and encouraging disgusting courts and alleys, wretched habitations, and abominable nuisances. In the former case the children are immediately punished, whilst in the latter it requires an agitation *ad infinitum*; and even now I fear, until another visitation of the cholera—unless the evils be constantly exposed in the manner you have done—that there will be but little chance of a permanent improvement of the humble classes. The Ragged-Schools are working wonders, but we want Ragged Lodging-houses and Ragged-Churches. It is to be regretted that Members of Parliament do not fight as strenuously for home reforms as they do for power, places, and pensions."—W. P. G.

Cardiff.—The Proposed New Docks at Ely. —At a recent meeting of Welsh capitalists at Cardiff, to consider the question of dock accommodation for the port, the following figures, were adduced by one of the speakers, Mr. Crawshay Bailey, M.P. Lord Bute's dock cost 380,000*l.*: its present revenue is 38,000*l.* Charges on iron from the canal, 9d. per ton; and from the Taff-Vale railway, 6d. per ton. The quantity of coal on his (Mr. Bailey's) own estate at Aberaman, if sent by Lord Bute's dock, at 3d. a ton, would yield 900,000*l.* The coal under the estates at Merthyr, Llanwynno, Ystradyfodwg, Eglwysilan, Llanfabon, Llantrissent, Llanwit Vardre, and Pentyrch, if all sent by Lord Bute's dock, would give at 3d. per ton, 33,166,000*l.*—in 1,217 years it appeared, the coal being estimated to last for that time.

American Artisans.—The principles which ought to regulate the relations between the employer and the employed seem to be thoroughly understood and appreciated in the United States; and, while the law of limited liability affords the most ample facilities for the investment of capital in business, the intelligent and educated artisan is left equally free to earn all that he can, by making the best use of his hands, without let or hindrance by his fellows.—*Mr. Whitworth's Report (New York Industrial Exhibition).*

Explosions in Coal Mines.—The recent occurrence of a dreadful explosion—the second which has occurred in the Arley mine of the Ince Hall Coal and Cannel Company, near Wigan, within a comparatively short period, and in which latter instance about eighty-eight persons perished, while in the former fifty-eight perished,—renders this a fitting time for the appearance of a pamphlet on mining explosions, their causes, and the means available for their prevention or control, by J. K. Blackwell, F.G.S. late Commissioner Mines Inquiry, 1849-50, and author of the report presented to Parliament (1850) on the ventilation of mines. This pamphlet is published by Taylor and Francis, of Red Lion-court, Fleet-street, and contains a review of the report of the committee of 1852 on this subject, a letter to Lord Palmerston on the late explosions and on mining inspection, and notes on various forms of the Davy Lamp, and their relative value. It is Mr. Blackwell's opinion that had the safety-lamp been employed exclusively and under proper regulations in all those collieries where explosions have occurred, and had unguarded fire and light been prohibited in them, probably none of the dreadful loss of life now to be lamented would have occurred. In the conclusion of his letter to Lord Palmerston the author says,—"Perhaps I may be permitted to pass in review the various courses which seem to be open to the Legislature in dealing with this question. The first appears to be, to enlarge the present virtually irresponsible system of inspection, which, however, can scarcely be expected to remove, in any degree, the existing defects in its action. Secondly, to frame another system, with a different organization, in which, subject to proper and effectual responsibility, greater but clearly defined powers of control might be given. Thirdly, to abolish the system of inspection altogether, but at the same time to make the use of unprotected lights and fire in the air-currents of mines yielding fire-damp contrary to law; and by the giving to the miner, if he survives an accident of this nature, or to his family in case of his death, power, under statute, to sue for damages in a court of law." Something really must be done, and without any more delay.

Horrible Death of a Bricklayer.—Mr. Henry Smith, the master bricklayer attached to the Stanton Ironworks, in Derbyshire, ascended the top of a furnace, for the purpose of effecting some repairs to a wall, and while standing upon the gas conductor, which he was preparing to remove, it gave way under his feet, and the poor fellow was precipitated into the midst of a mass of molten metal, at a depth of 15 feet below. The operatives poured vast quantities of water upon the person of their unfortunate fellow workman, whom they could see stooping, with his hands and feet in the red-hot metal. After two hours and a half of great exertion, the heat of the furnace was so far subdued as to allow of the insertion of a rake, by which the body was drawn forth, when all that remained was some two or three feet of the shrivelled trunk of a man who, when alive, stood over six feet high. Deceased, who leaves a widow and eight children, was much liked among the workmen, many of whom, it is said, cried like children when their exertions were no longer of any avail.

The Timber Trade at Birkenhead.—Messrs. Holme, Slater, and Crook, in their monthly circular, state that the arrivals from British North America into the docks of the Mersey, containing timber, during the past month, were twenty-five vessels, 16,345 tons; for the corresponding period last year, five vessels, 4,230 tons. The consumption, during the month, of timber and deals, had been of an average character, and the closing prices of last month had been maintained, and in some instances advanced upon, for square timber: spruce deals have been rather lowered in the market. Baltic timber is on the advance; and a sudden decline, owing to pressure of many cargoes arriving simultaneously last month, has been removed.

Houseless Classes.—The population sleeping in barns, in tents, and the open air, comprised chiefly of gipsies, beggars, criminals, and the like, together with some honest but unfortunate people out of employment, or only temporarily employed, was 18,249 in 1851. It is mentioned as a curious trait of gipsy feeling, that a whole tribe struck their tents, and passed into another parish, in order to escape enumeration.—*Cheshire's Results of the Census.*

The Abbey and the Churchyard. — A correspondent, "T." suggests that now the gravestones of St. Margaret's churchyard are partly levelled, and a safe thoroughfare opened across it, the authorities should plant a few ornamental shrubs alongside the Abbey, such as Irish Yew, Arbor Vitæ, and Cedrus Persica, which are of slow growth and evergreen, not shedding their leaves all of a heap, so as to create collections of trash about the ground at any one time of year, or become troublesome, and require much attendance, while every year would increase their beauty and effect.

A Tablet to the late John Wilson, the Vocalist.—It is proposed to erect a tablet or monument, by public subscription, in one of the suburban cemeteries of Edinburgh, or within that city, to the memory of the late John Wilson, the Scottish vocalist. Mr. John Gray, of the *North British Advertiser*, is acting in the matter. "John Wilson, originally educated to the business of a printer, and subsequently employed in the celebrated house of James Ballantyne and Co. printers to Sir Walter Scott, afterwards became a highly esteemed representative of English Opera, in which capacity he trod the stage for some years with great success. But *so far* without any greater claim for a tablet or monument to his memory, to be erected by *public* subscription, than that of five hundred other performers who have gone before and followed him. In one respect, however, Wilson stood alone. He was, in an especial manner, the expositor, the illustrator, and the teacher of the ballad poetry of his native land, the exquisite beauties of which he exemplified to thousands upon thousands of persons—abroad, in England, in Ireland, and even at home—by whom the songs of Scotland were previously but little known, and less appreciated." A sufficient sum of money to carry the object into effect being first obtained, a committee of gentlemen, including Sir William Johnston, of Kirkhill, late Right Honourable Lord Provost of the City of Edinburgh, will select a site for the intended monument, and resolve upon the character of the monument itself.

Pall-mall.—At a meeting of the Archæological Institute lately, Mr. G. Vulliamy produced a pair of "mails" for playing at the game of "pall-mall," as also one of the wooden balls used for that favourite amusement of the seventeenth century. These objects had been found lately in the house of the late Mr. Vulliamy in Pall-mall, and are probably the only existing relics of the kind. The mail or mall consisted of a long-handled hammer of wood bound with iron, the handle being very elastic; the game was probably of French origin, and introduced into England in the reign of James I. During the Commonwealth it probably fell into disuse, and the alley where it was practised, the site of the present Pall-mall, became occupied by dwellings. At the Restoration a new mall was made in the Park, by direction of Charles II. who was remarkably fond of the game. Many curious particulars are related by Pepys, illustrative of this scene of the disports of the merry monarch.

Gas.—At Over Darwen, the movement in favour of cheap and good gas prevails, and in a circular lately issued, the consumers, and would-be consumers, say, "We find that in Durham, 2s. 6d. per thousand feet only is charged; Burnley and Sheffield a uniform rate of 3s. for the same, and numbers of other places equally as low; whilst Mr. Flintoff stated, at Blackburn, that he would undertake to manufacture good gas at 2s. per thousand feet. But whilst we give these prices, we do not ask to have it at the lowest rate, yet we do most decidedly object to pay higher for an inferior article than any other town. In conclusion, we feel assured that by acceding to this request your profits will not be diminished, inasmuch as a greater quantity will be consumed, many being debarred by the present high prices."——Mr. A. W. Warder, of Brompton, has patented a gas-stove of earthenware. The interior chamber is divided into three compartments; the centre one open from bottom to top, so that the external air may pass from below upward, become heated, and then pass into the apartment. The two other compartments are connected together at the upper part of the apparatus by tubular passages. Gas is supplied to one of the compartments, and air is allowed to flow freely through the products, passing through into the third compartment, and away by a suitable passage into a chimney or flue.

Ruinous Buildings.—"J. L." complains that a body of men sent from the Guildhall, to shore up a warehouse that has just been finished, near Cannon-street, were defeated, and put at defiance, by the foreman in charge of the alterations. He wants to know, in the event of the warehouse falling *down*, and *destroying life*, who would be responsible?

Swansea Board of Health.—At a late meeting of this board, it was resolved to request from Mr. Gant, who had offered, on the 2nd of November last, to complete the general plan of the borough at his own cost within a week, to state in writing whether he is prepared to complete the plan forthwith on the terms he proposed. Mr. Shaw, the surveyor to the board, stated that about 250 acres in the higher part of the parish of St. John had not been surveyed at all. It is really full time this board were at work in earnest. At the meeting alluded to, it was unanimously resolved that the services of the present surveyor will not be required after the six months for which he was appointed. One of the members postponed an intended notice with respect to defining the duties of the surveyor.

King's College Hospital.—The first portion of the building for the new hospital, in Carey-street, Lincoln's-inn-fields, is now completed: it extends from Carey-street the entire length of Grange-court, into Clement's-lane: the new buildings comprise the chapel, the entire out-patient department and dispensing establishment, and wards for the reception of 200 in-patients: the internal fittings, which are estimated at a cost of 6,000*l.* are at once to be proceeded with, as it is intended to open this part of the new hospital in June. The building committee having obtained the whole of the ground required for the erection of the new hospital, including the Portugal-street burial-ground, the completion of the hospital and demolition of the present building, formerly the St. Clement's Danes workhouse, will be proceeded with directly the new wing is ready for the reception of patients.—*Advertiser.*

Peel-park, Bradford.—A numerous meeting of the subscribers to the Peel-park was held on Friday in last week, in the Artists' Room, at St. George's Hall, for the purpose of considering the design for laying out the park. The chairman stated the design recommended by the committee was the joint production of Mr. Barrons and Mr. Gay, the latter having designed the terrace, and the former the rest of the plan. After some conversation this design was adopted, with a slight modification; and a committee was appointed to carry it out. It was stated by Mr. T. Dixon, that at a rough estimate the sum of 2,000*l.* would have to be expended in carrying out the design, besides outlay for lodges, &c. Mr. Walker stated, that in all the sum of 4,000*l.* was required, and must be obtained by 30th June next, if they would receive the whole of the large sums offered conditionally by Mr. Salt and Messrs. Milligan, Forbes, &c. A determination was expressed to institute a vigorous canvass. The chairman proposed to add 100*l.* to his previous donation of same amount, on condition that the whole sum required be obtained by the period mentioned.

The Decimal System of Coinage, Measures, and Weights.—There seems to be an important movement on the tapis in favour of decimals as a national system of accounting. The first great object is to form a public opinion on the subject, and the next to press that opinion on the Government, who are ready to respond to it, and, indeed, await its expression, and are at same time initiating that opinion in the Committee of Privy Council, as we lately announced. Meantime various associations are engaged in the discussion of the whole subject. The Institute of Actuaries at two recent meetings were solely occupied in this way; and it was as surprising to observe the variety of ideas on the details, as the unanimity of opinions on the general principles. The following resolution was unanimously carried:—"That this meeting is of opinion that the plan recommended by the Decimal Coinage Committee of 1853 is the best that has been proposed; and that the council be requested to prepare a petition to Parliament, urging the adoption of that plan; with a recommendation for the issue of four-mil pieces, as necessary for the protection of the interests of the poorer classes." In the Institution of Civil Engineers, too, on 28th ult. the paper read was "On the Means of attaining Uniformity in European Measures, Weights, and Coins," by Mr. James Yates, M.A. F.R.S. &c. Mr. Yates in the conclusion of his paper suggested, that all persons who were interested in this question, either on commercial grounds, from the love of science, or as the friends of peace and human progress, should use every means of co-operating with the Government, and either by forming associations, or otherwise, endeavour, in every possible manner, to induce the mass of the people to become acquainted with the principles and advantages of the French system; and thus, with all convenient speed, to introduce the knowledge and use of it, not only in Great Britain and Ireland, but in all the colonies and dependencies of the kingdom, and through the influence of example, eventually to extend it to the United States of America, and other independent countries. The meeting was then adjourned until Tuesday, March 7th, when the discussion was to be resumed.

A Wellington Statue in Falkirk.—A sum has been subscribed sufficient to secure a statue of the late Duke, which it is proposed to erect at the Cross of Falkirk. The statue is one of the works of the late Robert Forrest, of Edinburgh.

Accidents in Tunnelling.—The frightful accident which occurred in Chelsea, as reported in the *Builder* of last week, is a subject of deep regret, especially when the lives of those who were "buried alive" might have been saved, as well as every other suffering and loss consequent thereon, by the adoption of a simple shield, invented and used for tunnelling by Mr. Abraham Rogers, of Yorkshire. The Metropolitan Commissioners of Sewers have had Mr. Rogers's plan under their consideration, as well as the Board of Health, and have given their consent for its use by their contractors.—A. C.

ENLARGEMENT AND RESTORATION OF SAINT SEPULCHRE'S CHURCH.—A committee meeting was also held on the same day, at the same place, to consider the present position of the undertaking of the enlargement and restoration of St. Sepulchre's, and to decide on what further steps should be taken in the matter. The secretary, Mr. James, made a statement of the causes that had hindered the progress of the work, viz. the delay and inactivity of the London Committee for the memorial to the late Marquis of Northampton, the fact of other claims having arisen in the town of Northampton, together with other local circumstances, and suggested whether the work might not be postponed for a short period. A long discussion took place, in which many suggestions were made as to the practicability of executing portions of the work with the money already in hand and promised; and a feeling was very strongly expressed that the commencement of the work should not be indefinitely postponed. It was ultimately resolved, that so much delay having occurred in the proceedings of the London committee in erecting a monument to the late Marquis of Northampton, it is desirable to form a county committee to carry out the original plan of restoring the round part of St. Sepulchre's, as a monumental work, it being known to all the friends of the late marquis, that there was no county work in which he took so deep an interest; and that a letter be written to the London committee to inform them that it is proposed to form such a committee, to act independently, in carrying out the monumental work above alluded to in memory of the late Marquis of Northampton. The Vicar of St. Sepulchre's stated that, although very little application had yet been made, either in the county or elsewhere, the sum of 1,270*l.* of which a considerable part was paid, and at interest in the banks in the town, had been already promised.

THE BRISTOL GRAPHIC SOCIETY'S CONVERSAZIONE.—The first conversazione of this new society has turned out a successful one. The collection of water colours, drawings, &c. on the walls and stands of the Victoria Rooms on Tuesday evening in last week was an attractive one, enhanced by a fair exhibition of photographs, rare engravings, &c. which filled the portfolios of the octagon and decorated the walls of the photograph chamber. The principal saloon was the chief resort, as containing in greatest number the objects of attraction, which were almost wholly water-colour drawings and sketches by artists and amateurs. There was but one oil painting, "The Avenue of Sphinxes" at Luxor, by the late William Müller, contributed by Mr. Harrison. Framed pictures were excluded, but this work was made an exception. Hung round the room were the late William Müller's Lycian Sketches, contributed by his brother, Mr. E. G. Müller; also the works of G. A. Fripp, Branwhite, Curnock, Jackson, West, Wolfe, Prout, Syer, &c. Bath contributed its quota to the occasion, from Hardwicke, Rosenberg, and Aylmer; and London sent works from Bennett, Cromek, Hart (R.A.), Stephenoff, Deane, Copley Fielding, &c. The sketches by Mr. Harrison, according to the local *Times*, had a peculiar interest for the connoisseurs, as the medium in which the colours were mixed was starch, and employed with great effect, being dry, bright, and durable.

ORNAMENT.—The use of legends as decorations thoughtful and more suggestive than mere angular crystallisations is too much overlooked in the present day. The most beautiful ornaments of the Alhambra are those gilded sentences from the Koran that fill every intersection. The Egyptian walls were but ever-expanded leaves of a religious book, and in which every letter has a written beauty of colour appealing to the eye that speaks every language as to the mind that may know but one. The monks, too, encircled their table-tombs with Lombardic—"Jesu merci, prie pour l'ame," flourished their shields with protests of knightly honour and daring, or introduced scrolls winding like immense horns from the mouths of saints and kings. Old English still gives us the opportunity of devotional sentences, and curt proverbs suitable to particular places. There still exists a thousand flowers, capable of myriads of combinations, which have never yet been employed by the artist. The beautiful curves and ellipses of the leaves of trees alone are sufficient to enrich a new order of architecture. The world was dead to the moukish thinker as it is to us. He had Roman traditions weighing down his imagination, and Byzantine uglinesses goggling from every altar. He trampled over these and strode out to the forest and the field. Here all was new and yet eternal, perpetually changing and yet grounded in stability. Grimly and faithfully he went to work, and at once the most poetical and suggestive of all styles of architecture rose to light—one not grounded on the finality and repose of abstract beauty, like the Greek, but full of aspiration to that heaven towards which pointed its spires, its towers, and its pinnacles.—*Athenæum*

ST. GEORGE'S HALL, LIVERPOOL.—The St. George's Hall committee have been testing various modes of illuminating the great hall. There are to be ten gasiliers, one over each recess, every gasilier depending from a design in the ceiling representing the prow of a ship. This projects the burners under the great arch, and the building is lighted, according to the local *Journal*, with very little shadow. The styles of burners used were of two forms, one being simple circlets of light, the same as in the assize courts, and the other so arranged as to form a design like the strawberry-leaves in a ducal coronet. The latter style is said to be most in character with the hall, and to have received the approval of the committee. The new tesselated pavement for the flooring, according to the *Albion*, will be composed of Minton's tiles. The field of the floor is a diapered groundwork, of ornamental encaustic tiles, in blue, red, buff, chocolate, and white. In the centre compartment are to be introduced the royal arms on a blue ground, surrounded by a laurel wreath, from which radiates a star of sixteen points, between which appear the caduceus of Mercury: this is surrounded by an ornamented border, following which is another border or frieze, bearing figures emblematical of the sea: this is again surrounded by bands and borders of classical ornament. The raised platform round the hall is to be laid with encaustic tiles, the spaces between the doors being filled with rich borders, having inscriptions appropriate to figures of Justice, Temperance, Prudence, Art, Science, &c.

REPORT OF CITY SEWERS WORKS.—The usual report of Mr. Haywood, engineer and surveyor to the Commission, on the works executed in course of the past year, has been printed. From this report it appears that sewers were constructed in twenty-five different places, their aggregate length being about 4,951 feet, nearly the whole being in substitution for ancient shallow sewers, intended originally for surface drainage, but temporarily used till now for house drainage. As to drainage, the reporter states that it would be difficult to find a sixteenth of the houses within the City undrained at the present time. At the end of 1852, there were forty-seven single halting-places within the limits of the City: now there are fifty-eight. Outside these limits, we may here observe, the authorities seem only intent on taking away the few that once existed. Hoards and scaffolds have been put under restriction by means of new licensing regulations. Improvements have been effected in thoroughfares at White's-alley, Whalebone-court, Middlesex-street and Stoney-lane, Thames-street by St. Peter's-hill, and others are about to be made at Gresham-street West, Chancery-lane, and Fetter-lane, in Tudor-street, Newgate-street, Upper Thames-street, Little Distaff-lane, and Throgmorton-street. The street orderly system seems to have been altogether given up, as too expensive. Tenders from the gas companies having been requested for lighting the public lamps, that of the Chartered Company for the northern and eastern district, at 2*l.* 19s. 6d. a light per annum for three years, and that of the Great Central for the south-western districts, at 3*l.* 3s. for the like term, were accepted. The public lighting is now 2,190*l.* a year less than it was a few years since with 30 per cent. less light. The smoke nuisance is being steadily abated. Lodging-houses have been to a great extent supplied with twenty-four gallons of water per room per day. The works for constant water supply, undertaken by the New River Company are reported to be rapidly progressing, and have already led to extensive openings of pavements within the City. Many other works besides those now noticed are reported on, and the engineer concludes with an allusion to the plan of intercepting the sewage from the Thames, which the subsequent resignation of the Metropolitan Sewers Commission annuls.

THE FAUSSETT COLLECTION OF ANTIQUITIES.—In consequence of the refusal of the trustees of the British Museum to purchase this valuable collection of Saxon antiquities, it has been bought by Mr. Joseph Mayer, of Liverpool, whose liberality and public spirit are well known. This collection consists of the contents of upwards of 500 barrows, excavated from about 1750 to 1776, by Mr. Bryan Faussett, Fellow of All Souls. Up to the present day, the result of this extensive exploration has never been laid before the public. Mr. Bryan Faussett made minute entries of the discoveries: and these accounts of his researches, which are illustrated by sketches, fill six volumes of manuscript The executors, by advice, gave the nation the chance of acquiring for the British Museum a choice assortment of the antiquities of our country, in which this institution is peculiarly barren, at a sum under 700*l.*; but after keeping them waiting seven or eight months, and detaining the MSS. for this long period, a last and final refusal was given; and the purchase was immediately effected by Mr. Mayer. The Society of Antiquaries sent a strong memorial to the Treasury, praying that funds should be granted for its purchase, but without avail.

PARIS A PORT: DOCKS TO BE FORMED.—Messrs. Fox, Henderson, and Co. have contracted for the building of docks at Paris. A company has been organised under their auspices to carry out the project.

TICKET SALES OF TIMBER.—A correspondent says, "It may not be generally known, but such is nevertheless the fact, that a sale of timber by ticket cannot be legally carried on, except by a licensed auctioneer."—*Bristol Mirror.*

SANITARY EVILS AND THEIR PALLIATIVES.—The paper read by Dr. Stenhouse on the properties of charcoal would lead us to the conclusion that it is a desirable thing to find efficient means of living safely in pestilent localities. Without doubting the utility of his respirator, under certain circumstances, like Davy's or Stephenson's safety lamp, or the glass masks formerly worn by alchemists and the preparers of poisons, or the magnetic masks of needle-grinders, I demur strongly to his views of living surrounded by walls and ceilings of charcoal, in hermetically sealed dwellings, with breathing air supplied through charcoal interstices. I hold that all mere palliatives of evils are worse than the evils they are supposed to obviate. Improved fire-escapes are a premium on the continuance of dangerous combustible dwellings, and insurances are another; and the possibility of so contriving a dwelling as to live unharmed in miasms, is a premium to people to disregard drainage. For one house that would be efficiently and accurately constructed, fifty would be badly done, and people would dwell in a condition of false security. The house cracking, or the mask falling off, would induce poisoning, and the fire-escape might not be at hand when required. Palliatives ought only to be used in cases of necessity, but wise laws should provide for removing the necessity.—*W. Bridges Adams.*

WOODS, FORESTS, AND LAND REVENUES.—The accounts of this department for the year ending with March, 1853, have been presented to Parliament. The "land revenue" receipt (from Crown rents, &c.), amounted to 292,156*l.*; the expenditure, including 7,450*l.* for repairs, and 7,115*l.* for rates and taxes, was 41,513*l.*; the receipts from Windsor Forest and parks were 5,573*l.*; the expenditure, including the Royal stand and hound kennel at Ascot, 15,485*l.* The receipt from the other sixteen Royal forests and woodlands was 84,667*l.*; the expenditure, 44,919*l.* The balance in hand from last year, 167,865*l.* makes the total amount of receipts 550,262*l.*; the expenditure above stated amounted to 101,918*l.* and there was paid over to the Consolidated fund, as surplus income for the year, 252,000*l.* leaving the department with a balance in hand of 196,343*l.* This apparent net income of 252,000*l.* is subject to a further deduction of 20,000*l.* for the salaries and expenses of the office of Woods and Forests, which are voted by Parliament among the miscellaneous estimates, and ordered by the same authority to be paid out of the Consolidated fund; but, on the other side, it is to be noticed that the balance in hand at the end of the year was nearly 30,000*l.* more than at the beginning.

VALUE OF THE INDIAN DEODAR AS TIMBER.—At a recent meeting of the Horticultural Society, Dr. Royle, who has lately reported to the Commissioners of Woods and Forests on the value of this and other woods, exhibited a slab of Deodar timber, 18 feet 6 inches long, 4 feet 6 inches wide, and 4 inches thick, recently imported by the East-India Company for submission to European criticism. The Court of Directors have imported for many years an ample and gratuitous supply of the seeds of this tree. The Deodar is a description of timber ranking, it is said, among the highest of the class of firs and deals, being clean from end to end, massive, free from knots, towards the outside so close-grained that it was difficult to count its rings of growth, and fragrant as sandal wood. Dr. Royle produced a report from Mr. Wilson Saunders, and other gentlemen of Lloyd's, pronouncing it to be well adapted to shipbuilding, ranking between the best kind of larch and hard woods. One of the advantages which planters may look to in the Deodar is rapidity of growth. The Indian slab, although 4 feet 6 inches in diameter, was not more than 190 years old. If Deodar wood grows as fast in England as in the north-west of India, the trees would be fit to fell in thirty years, at which time they would be 26 inches in diameter.

TENDERS

Delivered for the erection of Rectory-house, Tingewick, Bucks. Mr Tarring, architect:—

Haynes and Hare	£3,229	0	0
Myers	3,120	0	0
Higgs and Cullingford	2,940	0	0
Franklin	2,677	0	0

For a double Villa at Edmonton, for Mr. Fisher: Mr. Hudson, architect

Hall	£1,120	0	0!
Smith	1,055	0	0
Wood	986	0	0
Tolley	893	0	0
Humphries	750	0	0!

THE BUILDER.

Books.—Notices of several works are unavoidably delayed.

"*Books and Addresses.*"—We have not time to point out books or find addresses.

NOTICE. All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the EDITOR, and *not* to the Publisher.

NOTE.

We have been urged from several quarters to re-publish in a cheap form for distribution the papers on the Homes of the Poor which appeared in our last volume. Fearing that a return of the cholera must be looked for, and that little has really been done to lessen the risk, and believing it to be of the utmost importance that the actual condition of our great towns should be widely known in order to induce attempts at amelioration, we have determined on complying with the request to a certain extent. We propose, therefore, to issue an octavo of about ninety pages, with numerous illustrations, for *One Shilling*, under the title of "LONDON SHADOWS," and we solicit the kindly co-operation of all who may feel disposed to aid in circulating it.

ADVERTISEMENTS.

PROVIDENT INSTITUTION of BUILDERS' FOREMEN and CLERKS of WORKS.—Established for the Relief of its Decayed Members' Widows and Orphans.

GEORGE BAKER, Esq. Governor.

PATRONS.

W. ALLARD, Secretary.

Bay Tree Tavern, St. Swithin's-lane, March 9, 1854.

ENGINEER'S ASSISTANTS.—WANTED, an active person as CLERK of WORKS, and to make himself generally useful. He must have had experience in iron-work, and if he has a practical knowledge of iron roofing will be preferred. Must be able to make working drawings. All applications to contain full particulars, with references.—Address, Box M. 133, Post-office, Liverpool.

MESSRS. PYNE and WILLIAMS, Grainers, have a VACANCY for a respectable Youth as an Out-door APPRENTICE (wages, 5s. Upper Ebury-street, Pimlico. A premium will be required.

TIMBER-TRADE.—WANTED, a CLERK in the RETAIL TRADE, as Salesman, Bookkeeper, and Collector. Apply by letter, stating particulars of previous experience and salary required, to Mr. WALFORD, Timber and Slate Merchant, Brunswick Sawing and Planing Mills, Wolverhampton.

WANTED, ACTIVE AGENTS for the AMAZON LIFE ASSURANCE and LOAN COMPANY, and SICK BENEFIT SOCIETY. A liberal commission and procuration fees allowed. Applications to be made to
ROBERT GEORGE WEAR, F.R.G.S
1, Ironmonger-lane, London. Manager and Actuary.
Loans on personal security.

TO CLERKS OF WORKS.

WANTED, an experienced Person to SUPERINTEND the CONSTRUCTION of WATER-WORKS, under the immediate direction of the engineer. Parties applying must forward testimonials and statement of age, salary required, abilities, and description of works executed under their superintendence to JOHN J. MAWSON, Civil Engineer, Town Hall Chambers, Essex-street, Manchester, on or before THURSDAY, the 16th of MARCH.

TO GAS ENGINEERS.

WANTED, immediately, a RESIDENT SUPERINTENDENT for the BOSTON GAS WORKS. He will be required to attend to the manufacture of gas and all general details of the works, to inspect and keep in order the mains and service pipes throughout the town, to check and regulate the meters, and to superintend the cleaning and lighting of the lamps, under the direction of the Surveyor of the Company. A salary of about 100l. a year, together with a house attached to the works, free from rent, rates, and taxes, with firing, gas-light, and a large garden, will be allowed to an efficient person. The Superintendent will be required to devote the whole of his time and attention to the service of the Company, and particularly to control and direct the workmen at the works; his engagement will be determinable on one calendar month's notice by either party. The most satisfactory testimonials will be required that the person to undertake these duties is honest, sober, and industrious, and has been accustomed to work large brick retorts (not iron), and that he thoroughly understands the general management of gas works, and is capable of rectifying injuries to the gasholders or the other parts of the works if arising). Applications, enclosing testimonials, to be sent by letter, postage paid, to Messrs. WHITE and CALTHROP, Solicitors, Boston, before TUESDAY, the 14th day of MARCH next. No answers will be given to any applicants, excepting those selected by the Committee of Management.—Boston, Lincolnshire, 24th February, 1854.

TO BUILDERS' CLERKS.

WANTED, in the Office of a Builder, a respectable YOUNG MAN as CLERK. He must be a good and expeditious writer, and accustomed to builders' accounts. —Apply by letter only, to W. B. Office of "The Builder," stating age, salary required, and where last engaged.

TO BUILDERS' CLERKS.

WANTED, immediately in a Builder's Office in the Country (in consequence of the illness of the present Clerk), a steady, sober PERSON who thoroughly understands the routine of a Builder's office, including accounts, estimating, drawing plans, &c. No person need apply who cannot give the most satisfactory references as to character, or who would object (if approved) to a permanent residence in the country.—Apply by letter to A. B. care of J. Phillips, Chemist, 3, Vernon place, Bagnigge-wells-road, London.

WANTED, a YOUTH, 15 to 18 years of age. Must write a good hand and have some knowledge of accounts. The son of a carpenter, who has had some practice in taking men's time and entering building materials, will be preferred.—Apply by letter to Mr. DEARIN, No. 5, Earl-street, Southwark-bridge-road.

WANTED, in a Builder's Office, a respectable steady LAD about 16, who would fill up his time at the bench, and thus gain a practical knowledge of the business.—Address in his own handwriting to A. H. No. 1, Queen Charlotte-row, New-road. No premium required.

TO DRAUGHTSMEN.

WANTED, an intelligent Man as DESIGNER for a Cabinet and Upholstery Establishment.—Address, with particulars and salary expected, GEORGE WALLIS, Esq. School of Design, Birmingham.

TO CARPENTERS AND JOINERS

WANTED, in the country, a WORKING FOREMAN of CARPENTERS and JOINERS. He must understand a building as well as the preparation of work. To a competent and temperate man good wages would be given.—Address, by letter, prepaid, Mr. THOMAS KING, Architect, Tunbridge.

WANTED, a CLERK of the WORKS, to superintend the erection of a Parsonage House in the Midland Counties.—Application, stating age, experience, references, and salary required, to be addressed to A. B. care of Mr. Kaye, Bookseller, Blackett-street, Newcastle-upon-Tyne.

TO GRAINERS.

WANTED, in a Firm in the City of Bath, a good GRAINER. He must be competent to execute good imitations of both woods and marble. Sobriety and industry indispensable. Address, stating qualifications and salary required, for a constancy, to DECORATOR, Jennings's Library, Bath.

TO ARCHITECTS AND BUILDERS.

WANTED, by the Advertiser, a SITUATION as ASSISTANT in either of the above branches; he is a thorough practical man, having been brought up at the bench, and is a good draughtsman, having been several years with an architect. The advertiser is acquainted with levelling and draining, and has been accustomed to the routine of a builder's office, and estimating and measuring work, and can give the most satisfactory references as to character and ability. Would have no objection to going abroad.—Address, A. B. 7, King's square, Goswell-road, London.

TO ARCHITECTS, SURVEYORS, &c.

WANTED, by a Youth, aged 16, who understands Architectural Drawing, Mapping, &c. a SITUATION as CLERK, in either of the above Offices. Can give good reference from last employer in town.—Address, post-paid, to A. B. Mr. Gurney's, East Barnet.

TO MASTER BUILDERS, PAINTERS, &c.

WANTED, by a steady Young Man, aged 22, who has served his time to the plumbing, painting, and glazing, and who can do writing and graining, PERMANENT EMPLOYMENT.—Address, pre-paid, A. Y. R. 20, Charlotte-row, Walworth.

TO ARCHITECTS

WANTED, by a Young Man, aged 18, a RE ENGAGEMENT in an Architect's Office. He possesses a good taste for drawing and designing.—Apply to X. Y. Z. Post-office, Sleaford, Lincolnshire.

TO WRITERS, GRAINERS, HOUSE PAINTERS, &c.

WANTED, a permanent SITUATION in town or country, by Advertiser, of steady and sober habits, with some ability in all the branches of plain and decorative work. Twenty eight years' experience.—Address, M. 35, Newstreet square, Fetter-lane, City.

WANTED, by an experienced person, an ENGAGEMENT as CLERK of WORKS or GENERAL FOREMAN to a Builder. Good reference given as to character and ability where last employed.—Address, A. Y. Post-office, Mount-street, Lambeth.

WANTED, a Situation, as a BUILDER'S FOREMAN, or CLERK of WORKS; is well experienced in all the branches of building, can get up plans and working drawings, and can have good reference from his previous engagements.—Address, to Z. A. 31, Spring-street, Paddington.

TO ARCHITECTS AND SURVEYORS.

WANTED, by a Gentleman, INSTRUCTION in taking out QUANTITIES, and Measuring up ARTIFICERS' WORK; is willing to fill up his surplus time in drawing plans, or in any way of service to his instructor.—Address, stating terms, &c. to S. S. Office of "The Builder."

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION in an Architect's or a Builder's Office, by a Person accustomed to the duties.—Address, A. W. Office of "The Builder."

TO MASTER BRICK AND TILE MAKERS.

WANTED, by a respectable Man, who thoroughly understands his business in all its branches, a SITUATION as FOREMAN, or by CONTRACT, with good references.—Address, L. M. Mr. G. Head's Zinc Works, Walworth-road.

TO MASTER PLUMBERS, &c.

WANTED, to APPRENTICE a YOUTH, aged 15, either in-door or out-door, for six years; has been with a plumber twelve months; can have good reference.—For particulars address J. H. 13, Belvedere-road, Lambeth.

WANTED, by the Advertiser, a Situation in an Architect's Office; can make fair and working drawings. References and testimonials of qualifications can be given.—Address, ALPHA, Office of "The Builder."

TO BUILDERS, &c.

WANTED, by the Advertiser, a SITUATION as FOREMAN, or otherwise, in the Plumbing, Painting, and Glazing department. Can measure and estimate for work, and is a good accountant. References given, and satisfactory reasons for leaving present employ.—Address, G. C. Office of "The Builder."

TO IRONFOUNDERS AND ENGINEERS.

WANTED, by a Young Man, 29 years of age, a RE-ENGAGEMENT, in an Ironfounder's or Engineer's Counting-house, as CLERK or CASHIER. References of the highest respectability can be given, and security, if required.—Address, A. B. Mr. Waller's, 9, Lillypot lane, St. Martin's-le-Grand.

TO BUILDERS AND OTHERS.

WANTED, by a respectable Young Man, a SITUATION as TIME'S GATE KEEPER; writes a good hand, and can be well recommended. Address, B. 18, Guildford-street East, Wilmington-square.

TO ARCHITECTS AND SURVEYORS.

WANTED, an ENGAGEMENT, by a fully-qualified ASSISTANT, at a moderate salary.—Address to H. Y. No. 13, St. Oswald's-place, Vauxhall-gardens.

WANTED, a SITUATION, in Town or Country, as Plumber, Painter, and Glazier, by a YOUNG MAN, aged 26.—Address, J. M. 18, Chandos-street, Covent-garden.

WANTED, a SITUATION as CLERK of WORKS; is well experienced in all the branches of the building; can get up plans, working drawings, and has unexceptionable reference from previous engagements.—Address, A. J. 6, Little St. James-street, Pall-mall.

TO CARPENTERS AND BUILDERS.

WANTED, to Apprentice a Youth to the above (in-door).—Direct, G. A. Post-office, Stratford, Essex.

WANTED, by a respectable Young Man, a SITUATION as Gas Fitter and Bell hanger; has been used to General Repairing in Ironmongers' Shops.—Address S. B. 18, Park-side, Knightsbridge.

TO BUILDERS AND DECORATORS.

A YOUNG MAN is desirous of obtaining a SITUATION as Painter, Glazier, and Paperhanger, who has held a situation as Foreman six years.—Address N. F. 57, Cornwall-road, Lambeth, Surrey.

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, well acquainted with the various styles, and having a thorough knowledge of construction, is desirous of an ENGAGEMENT, in town or country. The Advertiser is accustomed to prepare working and other drawings, and can give the highest testimonials. As a permanent situation is required, a moderate salary will be accepted.—Address, E. A. G. Office of "The Builder."

AN ARCHITECT is desirous to undertake any description of OFFICE WORK connected with the profession, on moderate terms.—Address, A. WINDER, 3, Howford-buildings, Fenchurch street.

TO ARCHITECTS AND BUILDERS.

A GENTLEMAN, who is completing an engagement with a provincial Architect, is desirous of a SITUATION in London; he is fully conversant with the routine of his profession, and has a good knowledge of construction, accounts, &c. References will be tendered.—Address, S. S. Mr. Reed's, 15, John-street, Oxford-street.

TO BUILDERS, &c.

A BUILDER'S CLERK wishes for a SITUATION. Good references.—Address, A. B. 39, High-street, Portland-town.

TO ENGINEERS, ARCHITECTS, ARTISTS, AND WOOD ENGRAVERS.

A YOUNG MAN wishes for a SITUATION in either of the above occupations where he could make himself useful in making out and copying engineering, architectural, ornamental, and other work. He has excellent taste for it, and can show very good specimens of engineering, architectural, and pen and ink drawings, &c. Has been with an architect and surveyor twelve months.—Address, R. B. M. 83, Harrow-road, Paddington

TO ARCHITECTS, SURVEYORS, AND BUILDERS.

A JUNIOR ASSISTANT begs to OFFER his SERVICES in either of the above capacities, where he would have an opportunity of furthering his knowledge; is a fair draughtsman, and understands the general routine of office duties.—Address to J. C. C. 59, Huntingdon-street, Thornhill-square, Islington.

AN active, respectable, middle-aged Man, wishes for an ENGAGEMENT, either as CLERK of WORKS or FOREMAN to a BUILDER; has a thorough practical knowledge of all matters connected with building operations. Unexceptionable references can be given.—Address, B. A. office of "The Builder."

TO ARCHITECTS, BUILDERS, AND OTHERS.

A THOROUGH PRACTICAL MAN, as CLERK of WORKS, or GENERAL FOREMAN, fully qualified to manage extensive works, is now DISENGAGED. Satisfactory testimonials can be produced, and the highest references given.—Address, A. B. care of Mr. SHAW, Ironmonger, Blackfriars-road.

TO ARCHITECTS.

A GENTLEMAN, who has had experience in Ecclesiastical and Gothic Architecture in general, is desirous of a fresh ENGAGEMENT with a London Architect. References unexceptionable.—Address, DELTA, Post-office, Norwich.

TO DECORATORS, PAPERHANGERS, CARVERS AND GILDERS, UPHOLSTERERS, &c.

A GENTLEMAN above the middle age, without family, whose time is much occupied with other business, wishes to meet with a respectable young man with 400l. or 500l. to join him, and conduct the business in a good town within a short distance from London.—Address letter, B. No. 201, Office of "The Builder."

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

TO GENTLEMEN, BUILDERS, AND OTHERS

TWO Young Men having a thorough knowledge of Carpentry and Joinery, are willing to take any quantity of WORK, either to prepare or fix, or both, or Houses to carcase in, or to finish, or both.—Satisfactory references given from last job.—Address, X. Y. Z. 33, York-road, Lambeth, Surrey.

TO PAINTERS, DECORATORS, PLUMBERS, &c.

THE Advertiser, a Practical Man, wishes an ENGAGEMENT to SUPERINTEND one or all departments of the above businesses. Is capable of measuring and valuing work, bookkeeping, &c. Good reference can be given.—Address, A. B. Mr. Lee's Academy, Bromsgrove, Worcestershire.

TO BUILDERS, PAINTERS, &c.

THE Advertiser, having had the superintendence of workmen for the last twenty years, is desirous of a RE-ENGAGEMENT as FOREMAN. Is a good writer, grainer, and paperhanger, and has a thorough working knowledge of plumbing, painting, glazing, &c. References as to character and ability.—Apply by letter, pre paid, to A. Z. 5, Riding House-lane, Portland-street, Marylebone.

TO ARCHITECTS.

THE Advertiser is desirous of a RE-ENGAGEMENT as ASSISTANT. He has been in the habit of preparing fair and working drawings, specifications, &c. of ecclesiastical and domestic buildings. London preferred.—Address, M. N. 11, Bloomsbury street.

TO ENGINEERS AND ARCHITECTS.

PARTNERSHIP.—A Gentleman, practising as above in South Wales, is willing to treat for a Partnership, or for the Sale of his Practice.—For further particulars address S. W. R. 24, Aisop-terrace, Regent's-park.

A GENTLEMAN about to leave for Australia, and who has had considerable professional practice in ORNAMENTAL GARDENING, is desirous of DISPOSING of his PLANS and SPECIFICATIONS. Rural architecture could be very advantageously combined.—Apply to A. B. 80, Mr. Bishop's, Newsagent, 1, Lillypot-lane, London.

ST. MARTIN'S HALL.—A VIEW of the INTERIOR, lithographed in the first style, and printed in tint, is now ready. Price 2s. 6d.; proofs, 5s. Either sent post free, packed on roller, 6d. extra.

London: F. PITMAN, 20, Paternoster-row.

TO ARCHITECTS AND ARCHITECTURAL DRAUGHTSMEN.

MR. EDWIN T. DOLBY (pupil and for many years assistant of the late Mr. George Hawkins) will be happy to undertake the colouring of drawings required at a short notice for competition; or those more highly finished for exhibition. Address, 34, Howland street, Fitzroy-square

SLATHS.—A large stock of PETERSBURGH SLATHS of best quality ready for delivery at J. EASTWOOD and SONS', Wellington Wharf, Belvidere-road, Lambeth.

WANTED, a good Second-hand 5-inch plate THEODOLITE, complete.—Apply to A. B. Post-office Banbury

ELECTRIC POWER LIGHT & COLOUR COMPANY. The Electric Colour Company are now able, by the completion of their works at Frogmore-creek, Wandsworth, which are at present in full operation, to SUPPLY any quantity of their DRY ELECTRIC COLOURS, which, from their brilliancy, durability, body, purity, and price, cannot fail to obtain a preference by the trade generally over those made by the ordinary processes. The colours consist of scarlets, reds, yellows, greens, and blues, of all shades and varieties.—For price and all other particulars, all applications must be made, and all communications addressed, to the Commercial Manager, at the Works.

LADDERS, BARROWS, &c. for SALE or HIRE.—G. ELL invites the attention of builders, decorators, and the trade generally, to the Large Stock of Ladders; excavators', brickmakers', and other Barrows; Painters' Machines, Trestles, Steps, &c. he has always on hand, at a very low scale of charges.

Manufactory, 3, TOTTENHAM-COURT, NEW-ROAD, opposite Hampstead-road.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

HEAL and SON'S ILLUSTRATED CATALOGUE of BEDSTEADS, sent free by post. It contains designs and prices of upwards of ONE HUNDRED different bedsteads; also of every description of bedding, blankets, and quilts. And their new ware-rooms contain an extensive assortment of bed-room furniture, furniture chintzes, damasks, and dimities, so as to render their establishment complete for the general furnishing of bed-rooms.

HEAL and SON, Bedstead and Bedding Manufacturers, 196, Tottenham-court-road.

Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application. post free.

TO RAILWAY CONTRACTORS, BUILDERS, AND OTHERS.

TO BE SOLD, 50 EARTH WAGGONS; also, about 100 Axles, with wheels, and Two Wrought-iron Girders, 32 feet long, 18 inches deep; Four Cast-iron ditto, 20 feet long, 15 inches deep.—Inquire of Mr. HARGRAVE, 29, High-street, Shadwell; or of Mr. BECK, 20, Prices-street, Blackfriars-road.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 250 lbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf road, City-road, London.

PATENT VULCANIZED INDIA-RUBBER TUBING, for Gas Fittings, Chemical Purposes, Fire Engines, Manure Pumps, &c. JAMES LYNE HANCOCK, Sole Manufacturer (and Licensee), Goswell-mews, Goswell-road, London, begs to invite the attention of Architects, Builders, Engineers, and the trade generally, to the Vulcanized India-Rubber Tubing, which is now manufactured from 1/8 to 3 bore and upwards, in lengths from 50 to 100 feet, and of various strengths, suitable to the purpose for which it is applied. VULCANIZED HOSE for FIRE ENGINES, LIQUID MANURE, and for conveying HOT WATER to BATHS in DWELLING-HOUSES and BREWERIES, manufactured to resist great pressure of any length and size to order.

*** Testimonials may be had on application at the Manufactory.

N.B. VULCANIZED WASHERS and SHEET RUBBER for Steam and Hot-Water Pipes, and Packings for Pistons and Gland-Boxes of Steam Engines, cut any size to order.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1854:—

"An important feature in the contract for the maintenance of the Permanent Way, is that the contractors are bound to reduce their charges 8d. per mile per annum, whenever the Fish Joint, or certain other improvements, are hereafter introduced."

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 26, Great George-street, Westminster.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROOMS WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PAPER-HANGINGS.—JEFFREY, ALLEN and CO. Paper Stainers, beg to call the attention of the trade to their patterns of Paper-hangings for the present season, which comprise every description of style and quality, from the most elaborate decoration to the cheapest paper that can be produced, and which they are prepared to offer at very low prices. J. A. and CO. also respectfully inform the trade that they have OPENED a WAREHOUSE at No. 500, OXFORD-STREET, where all goods can be obtained on the same terms as at the Factory.

GUTTA PERCHA PAPER FOR DAMP WALLS. J. A. and CO. are the sole vendors of this well-known remedy for Damp Walls.

113, Whitechapel, near the Obelisk, and 500, Oxford-street.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne,
139, Strand, London.
67, Hyde-park-street, Glasgow
27, Dale-street, Manchester.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre, ...

JOHNS'S PATENT PERMANENT STUCCO WASH. STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT. This Cement, which has been established many years, is now manufactured on such improved principles that its a knowledged advantages and its suitableness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT. The merits of this Paint are so justly appreciated by the trade, for its really affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cleanness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 5 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted for all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, a nice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK——LONDON PATENT.

not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks, London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely poisonous and free from the pernicious effects of whitelead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. Have a liberation has taken place in the oxide, either in consequence of impurity in the material pr mar.ls male use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to use cheapness. In either case it then produces a very inferior instead of a very superior paint, and the economy realized by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and Co.; ground and dry, by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents, In London, Messrs CHARLES DEVAUX and CO. wholesale agents, 62, King William-street, City; Mr. CHARLES JACK, wholesale and retail agent, 8, Tottenham-court, New-road, and 88, Upper Thames street, City In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, North Parade, Liverpool, Also are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c In Leith, by Messrs. R. ANDERSON and CO. Timber-built. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c.—This valuable and economic material is always ready for use, simple in application, and quite one-third the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 15s. and 24s. each, casks exclusive

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt. at 15s. 6d. each.

PATENT ZINC PAINTS. These paints are really mixed for use, economical, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 8s. per gallon

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS—PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or finishing in oil colours. Price 10s. per gallon, which will cover and finish about 150 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington street, Goswell street, London.

DAMP WALLS! DAMP WALLS!—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of long experience; it is unfailing in its applicat on. Entire houses have been papered in a short time after the last coat of plaster has been put on. Also for the repairs of old houses its value is great. A moderate room can be prepared for 2s. 6d.—Prepare l only by Mr. J. STENT, Surveyor, Warminster. May be purchased of all respectable Druggists or Paper-dealers for 3s. per quart, or 10s. per gallon.

PERMANENT ZINC COLOURS and WHITE.—Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc at prices which render them an advantageous substitute to the Lead, Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and never change by exposure to any Gases Salt Water, &c For Ships and Machinery, also for all kinds of House Painting, no other but Zinc Colours ought to be used to insure durability and economy. For Prices, apply to the Patentee, Mr. GEO. K. GEYELIN and CO. White Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park-basin, London.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster, who prepare one quality only of Portland Cement

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes Cement is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster Bridge, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Masti-Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its smooth hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, as has been proved in docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stuccoes. Orders received by Londn. Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington, and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Nails, Fire-bricks, Grindstones, Cement Chimney Pots, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ROMAN and OTHER CEMENTS, Manufactured by J. M. BLASHFIELD, successor to the Patentees, PARKER and WYATT, who, in 1796, first introduced PARKER'S ROMAN CEMENT; also Tarras and Portland Cements, English and French Plaster, Terra Cotta Chimney Pots, Trusses &c.

Manufactory, Mill Wall, Poplar; Depôts, Commercial-road, Lambeth; and Paddington-basin.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted 1820.

SAMUEL HIBBERT, Esq. Chairman.
WILLIAM R ROBINSON, Esq. Deputy-Chairman.

THE SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent of the profits, are assumed to be declared every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 50l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY.—Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which nearly 150,000l. is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

On the 31st October, 1838, the sums assured, including bonus added, amounted to	£2,750,000
The premium fund to more than	560,000
And the annual income from the same source, to	105,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

CALEDONIAN INSURANCE COMPANY, Established 1805. Life Insurance of every description. Loans granted. E. F. SEALY, Manager.
57, Moorgate street, London.

WESTMINSTER FIRE OFFICE, Chief Offices—27, King-street, Covent-garden, London. Established 1717.

Rates of Premium moderate.
Short period Policies granted.
Rent Deducted.
Losses promptly and liberally settled.

WESTMINSTER AND GENERAL LIFE ASSOCIATION. King street, Covent-garden, London. Established 1836.

Life Assurance in all its branches effected.
Eight tenths of the Profits given to the Assured.
A Division of Profits every Five Years.
The Bonus additions have amounted to One half the Premiums paid on the Policies.
Assurances without profits at reduced rates.
And information respecting either Fire or Life Insurance, with prospectuses and forms of application, may be obtained on application to the Office.

W. M. BROWNE, Secretary and Actuary.
Agents required in the principal Country Towns.

BRITON LIFE ASSOCIATION, 36A, Moorgate-street.

Assurers in this Office may receive the amount assured during Life, without increased Premium.

Loans can all times be obtained and repaid by small instalments.

Investment Policies secure a payment of the amount assured in 13, 10, or 7 years, or at death if it should previously occur, on which advances can be obtained

Persons about to subscribe to Building Societies, will find the Building Policies issued by this office combine the Assurance of Life with all the advantages derived from a Building Society.

Medical Gentlemen remunerated in all cases for their reports.

Annuities granted. All descriptions of Life Assurance transacted.

Policies indisputable. Office hours from 10 a.m. to 4 p.m.
EDWARD PARSONS, Secretary.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT AIR-VENTILATORS have been successfully applied to Churches, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a postage stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing. Apply at the Manufactory, CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

PRIZE MEDAL, CLASS 29.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 320 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

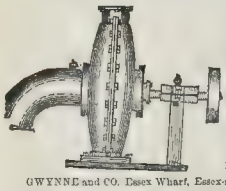
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,

Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 3, Crescent, Jewin-street, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids (hot or cold) to raise, will find it their interest to use these Pumps. For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal. Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l 15s.

The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 18 in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT

CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

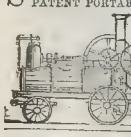
Patent Pump £1 15 0

Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing..... 3 0 0

Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,



JOHN WARNER AND SONS, 9, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade. An Illustrated Book sent on application post-free.

STEAM PUMPING ENGINES.—

PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

PORTABLE STEAM-ENGINES.—

To CONTRACTORS.—TO BE LET on HIRE, or for SALE, several strong and simple STEAM-ENGINES, mounted on wheels, with iron chimney, &c. complete, ready for immediate use, with nut any fixing, of 6 horse, 8-horse, 10 horse, 12-horse, 16-horse, 20-horse power, and upwards, adapted for pumping, winding, sawing, and general contractors' purposes.—Apply to MEDWIN and HALL, Engineers and Portable Engine-makers, 99, Blackfriars-road.

STEAM-ENGINES,

of various sizes, from two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double-purchase cranks also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery, made to order by ANDREW McLAREN and Co., Windsor Iron Works, Windsor-terrace, City-road, and 174, Upper Thames-street.

CAUTION.—BEART'S PATENT

PERFORATED BRICKS. Mr. ROBERT BEART, the patentee, to prevent complaints of proceedings being taken to stop the making of Perforated or Hollow Bricks with a series of holes, without his license, hereby declares his intention to proceed against all parties infringing his patent without further notice. Applications for licenses to be made to, and information obtained of W. J. and G. BOULTON, Solicitors, Northampton-square, London.

PLAKE'S TERRO-METALLIC TILES,

PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "REPORTS OF THE JURIES," page 681, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.

MAW and CO send free, per post, their NEW BOOK OF DESIGNS,

with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.

BENTHALL WORKS, near Broseley, Shropshire.

Specimens at 31, Aldersgate-street.

MINTON and CO.'S ENCAUSTIC and

other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c.; Antique, Geometrical, and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Dado or Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

TO TILE MAKERS.

FANCY BORDER TILES.—WANTED to

PURCHASE, from 1,000 to 2,000 FANCY BORDER TILES. Drawings, stating size and pattern, and the lowest price per hundred for cash.—Direct, A. B. C. 5, Trafalgar-terrace, Greenwich.

BRICKS.—Malm Cutters, Yellow and Pale

Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Lightly-ground Pit Sand of approved quality, constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS! BRICKS! BRICKS!—PARK

ESTATE BRICKFIELDS, near the Royal Arsenal, Woolwich. Price for the present Month, and until further notice: Stocks, 32s.; Place, 26s. per thousand. Ready money on the field. February 20, 1854. L. DAVIS, Proprietor.

BRICKS.—2,000,000 of sound KENT

GREY STOCK for SALE, for present delivery alongside in the river.—Apply to W. ALLAWAY, 4, Catherine-court, Tower-hill

BRICKS from COWLEY and KENT.

Also WHITE, YELLOW, and RED FACING BRICKS.

BLUE VITRIFIED BRICKS;

Fire Bricks, Lumps, and Tiles.

CHARLES RICHARDSON, 6, SOUTH WHARF, PADDINGTON.

TO BRICKMAKERS.

800,000 BRICKS to be made, for labour

only, with cottage to live in on the spot.—Apply personally to Mr. G. H. HOLLEDGE, White-horse-road, Croydon.

BRICKS! BRICKS!—A Constant Supply

can be had in large or small quantities, of BEART'S PATENT PERFORATED, or 12 Holes ditto, or Solid Bricks, superior in quality to any stocks, and well adapted for Facings, &c. made of the best Sussex clay. Delivered at the Bricklayers' Arms Station.—Apply to Mr. HUBLEY, Surveyor, 11, Walworth-terrace, Walworth, where samples may be seen.

TO BRICKMAKERS.

TO BE SOLD, about 100 Chaldrons of very

good SOIL.—Apply to Mr. GEORGE STONE, Millpond-street, Bermondsey.

BRICKLAYER'S CART, young HORSE,

and HARNESS (nearly new). FOR SALE.—Inquire of G. PERRIER, Oakfield-terrace, Oakfield-road, Penge.

ASPHALTE.—GERVASE FOOTTIT,

Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—

Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, PULPCRAG'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TARPAULINS for COVERING ROOFS

during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGOTT, 113, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

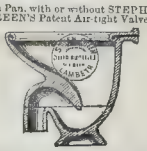
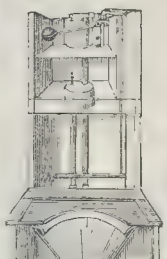
TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES,

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.



STEPHEN GREEN'S IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.

R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1853.

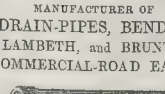
GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,

Your obedient Servant,

WILLIAM CARTWRIGHT.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK,



MANUFACTURER OF

GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY, COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2-FEET LENGTHS.

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

JENNINGS'S ESSENTIALS FOR PIPE-DRAINAGE.

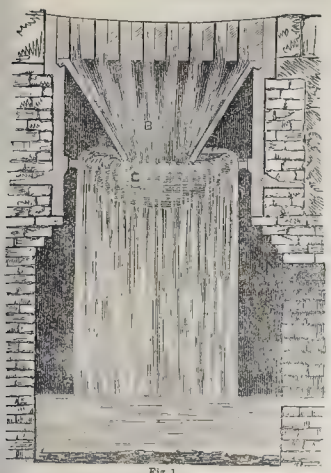


Fig. 1.

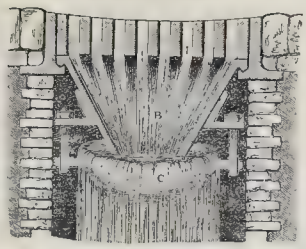

Fig. 2.

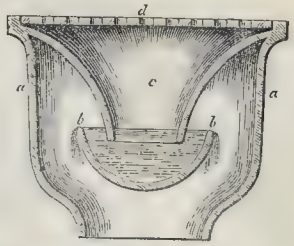

Fig. 3.

ALL PIPE DRAINS, however well adapted for the purpose intended, without the above guards MUST BE LIABLE TO STOPPAGE. The entire drainage of a large Union was, a fortnight since, stopped, which rendered the breaking up of the floors, &c. necessary: after GREAT EXPENSE and trouble, a common table-fork was found across one of the pipes, which had obstructed and ultimately blocked the drains. JENNINGS'S TRAPS have since been fixed in all the sinks and yards, as nothing detrimental to drainage can pass them.

JENNINGS'S IMPERISHABLE WATER-CLOSET is also an effectual guard.

Fig. 1 shows Jennings's Street Gully Trap, with an iron casing.

Fig. 2 is Jennings's SKELETON Street Gully Trap, quite as efficient as Fig. 1, the brickwork of the gully-hole answering for the iron case; this not only reduces the first cost, but the cost of carriage.

Fig 3 is one of Jennings's Sink or Area Traps.

Fig. 4 is a sectional view of Jennings's Imperishable Water Closet, the weekly sale of which NOW exceeds 350.

Fig 4

These Closets save FIFTY PER CENT. IN PLUMBERS' WORK, and are fit, in their different varieties of ware, for the MANSION or COTTAGE.

A Book containing Illustrations, Descriptions, and Prices can be had on application, or post-free if two stamps are enclosed to

GEORGE JENNINGS,

ENGINEER AND PLUMBERS' BRASSFOUNDER, 29, GREAT CHARLOTTE-STREET, BLACKFRIARS-ROAD.

DOULTON AND WATTS'S

REGISTERED CLOSET PANS IN

ENAMELLED STONE WARE,

LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.

The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.

They may also be had turned down.

PRICE 7s. 6d. each,

The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

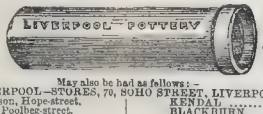
JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. at HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.



Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER 2, South Wharf, Praed-street, Paddington; and at COLWILL, Brothers, 52, Brydges-street Covent Garden.

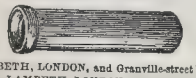
Drawings and List of Prices will be forwarded free on application.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S

STONE WARE PIPES, BENDS, JUNCTIONS TRAPS, &c.

TERRA COTTA VASES, CHIMNEY-TOPS, &c. FIRE-CLAY FLUE PIPES.

May also be had as follows:—



LIVERPOOL—STORES, 70, SOHO STREET, LIVERPOOL.

GLASGOW	J. A. Mathieson, Hope-street.	KENDAL	Robt. Thompson.
DUBLIN	Robt. Lovely, Poolbeg-street.	BLACKBURN	W. Hopwood, Clayton-street.
CORK	W. N. Brash, Dean-street.	CARLISLE	C. Armstrong, Lowther-street.
WATERFORD	J. Sparrow and Co	WHITEHAVEN	Hugh Podhunter.
CARNARVON	Jno. Jackson.	COCKERMOUTH	John Hird.
PRESTON	J. Armstead, Hudson-street.		

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.

Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities.

HENRY DOULTON and CO.'S DRAIN PIPES in GLAZED STONE WARE

OFFICES—HIGH-STREET, LAMBETH, LONDON, and Granville-street Wharf, Broad-street, Birmingham.

MANUFACTORIES—HIGH-STREET, LAMBETH, LONDON; ROWLEY REGIS, STAFFORDSHIRE; AND SMETHWICK, NEAR BIRMINGHAM.

May also be had as follows:—

LEAMINGTON	Mr. Chas. Nelson, Warwick-street.	BATH	Mr. Wm. Davey, Broad Quay.
LEICESTER	Messrs. J. and W. Jackson.	NORWICH	Mr. J. Morris, King-street.
SALISBURY	Messrs. Osmond and Son.	CARDIFF	Messrs. James and Price.

STRAIGHT TUBES WITH SOCKET JOINTS from 1 inch to 24 inches in diameter. BENDS, JUNCTIONS, TRAPS, &c. OF EVERY DESCRIPTION. Drawings, with prices, &c., will be forwarded free on application as above.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the one being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:

Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Mill bank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—W. Peters's, North Wharf, Paddington.—C. Richardson's, South Wharf, ditto. G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britten-street, Chelsea, and at the Pottery.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, E.-sex.

TO WATER COMPANIES and PLUMBERS.

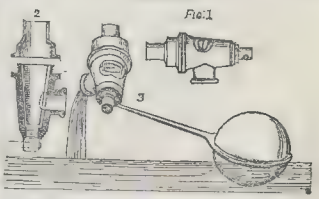

Fig. 1 represents the Cylinder Ball-valve in elevation. Fig. 2 is a Section of the Interior, showing the uninterrupted course of the Fluid. Fig. 3 shows the Cylinder Ball-valve in Action.

This Valve is peculiarly suited to High-pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more effectually prevents waste.—Manufactured solely by DEVEY and DALE, 8 and 9, Shoe-lane, and may be had of respectable Plumbers

TRAM-ROAD PLATES WANTED, new or second hand, delivered alongside in the Thames.—Apply, stating price and particulars, to Messrs. MEESON and CO. Lime and Chalk Works, Grays, Essex.

THE BUILDER.

SALES BY AUCTION.

TO CONTRACTORS, BUILDERS, CARPENTERS, PACKING-CASE MAKERS, AND OTHERS

MR. MARSH has received instructions to SELL by AUCTION, on the PREMISES, Manor-street, Plumstead, on WEDNESDAY next, MARCH 15, at ELEVEN TWELVE o'clock punctually, the dry and well-seasoned STOCK, consisting of about 3 1/2 yellow deals, planks, and boards, 1,500 pine planks, 500 first-quality pine deals, for packing Christmas goods, 1,500 white battens, 180 yellow ditto, 80 squares of white and well-seasoned framed floor grounds, panel doors, sashes and frames, a quantity of scantlings, and a large Run of timber. The above premises are situate within 50 yards of a free dock on the Thames, and offer every facility for removal either by land or water. Approved bills at four months' date from purchasers of £5 and upwards.—The stock may be viewed two days prior to the day of sale, and catalogues obtained on the premises; and at Mr. Marsh's Offices, 2, Charlotte-row, Mansion-house; or will be forwarded on application.

TO SHIPBUILDERS, TIMBER MERCHANTS, RAILWAY CONTRACTORS, AND OTHERS. Important and very extensive Fall of valuable Oak Timber, near the Trent Valley Railway.

MR. LEIFCHILD is instructed to SELL by AUCTION, at the NEWDIGATE ARMS HOTEL, Nuneaton, on TUESDAY, MARCH 14, at TEN PRECISELY, a suitable lot, about 800 capital OAK TIMBER TREES, with their tops, lops, and bark, of excellent quality, and about 8 cwt. large oak and ash pollers, now standing and growing in the well-known Wellington Wood, on the Weddington estate, about 3 miles from the railway station at Nuneaton and Attleborough, and within a short distance of the Ashby canal. The timber and pollers will be carefully marked, numbered, and lotted, and will be sold to be grubbed up by the purchasers. Full descriptive particulars, with graphic plans of the estate, will be issued early in the forenoon of each lot, will be issued twenty-one days preceding the sale, and may be had at the principal inns in Leicester, Burton, Coventry, and Liverpool, at the place of sale, and at Mr Lancaster's Land and Timber Offices, 62, Moorgate-street, London. Proper persons will attend at the keeper's cottage, four hours prior to the sale, for the purpose of pointing out the various lots.

CROYDON, SURREY.

MESSRS. BLAKE will SELL by AUCTION, on the PREMISES, Morland-road, Croydon-common, on THURSDAY, MARCH 23, at ONE for TWO o'clock, by direction of Messrs. SALES BY AUCTION.

Important Sale of Timber and Bark.—Wychwood Forest, Oxfordshire, and Whittlewood and Salcey Forests, Northamptonshire By order of the Right Hon. T. F. Kennedy, the Commissioner in charge of Her Majesty's Woods and Forests. TO BE SOLD by AUCTION, by

MR. LONG, at the CHURCHILL ARMS INN, ASTON, near Wychwood, on TUESDAY, the 21st MARCH, 1854, in Wychwood Forest, about NINETY TONS of BARK, the produce of 1852, and 200 tons, the produce of 1853; also 41 LOADS of TIMBER TREES, of good dimensions, sawn and hewn, and sided state; a large quantity of slabs off oak timber, taken from the Saws, sundry lots of top pieces, &c. &c.

In Whittlewood Forest, Northamptonshire, about Thirty-eight Tons of Timber Bark, the produce of 1852; in Salcey Forest, Northamptonshire, about Forty-three Tons of Timber Bark, the produce of 1853.

The Bark and Timber in Wychwood Forest is contiguous to good roads, and the whole is within three miles of three stations on the Great Western Railway, viz. Ascott, Shipton, and Charlbury. Also within three miles of the Oxford, Worcester, and Wolverhampton Railway, thus affording easy communication to all parts of the kingdom.

The Bark in Whittlewood Forest is on a good turnpike road, within about six miles of the London and North-Western Railway, and the Grand Junction Canal. That in Salcey Forest is on a good road, about three miles from the London and North-Western Railway, and the Grand Junction Canal.

For further particulars apply to Mr. T. LINNELL, Salcey Forest, near Stony Stratford.

Catalogues with conditions of sale, may be had at the Office of His Majesty's Woods and Forests, 3, Whitehall-place, London; of Mr. T. Linnell, Salcey Forest, Northampton; of Mr. R. Morris, Ascot, near Wychwood; at the place of sale; and of the Auctioneer, Wandy Oxon.

Mr R. Morris, jun. will show the lots of Bark and Timber in Wychwood Forest; Mr. Linnell, the Bark in Salcey Forest; and Mr. T. Gulliver, of Hazelborough Lodge, the Bark in Whittlewood Forest.

Thirty Oak, Elm, and Walnut Trees, now standing on the Gordon Estate, Enfield. Also about 20,000 Stock Bricks By

MR. RICHARDS, on the PREMISES, Chase Side, Enfield, a short distance from the railway station, on THURSDAY, MARCH 16, at TWO o'clock, by order of the proprietors, TWENTY OAK TIMBER TREES, with their lop, tops, and bark; Three large Walnut, Five Elm, and One Ash Trees. Also 20,000 BRICKS. May be viewed. Catalogues on the Premises; at the Greyhound, Enfield; and of the Auctioneer, Tottenham—Tottenham, March 9, 1854.

HAMPSHIRE Valuable Freehold Estate in the parish of Christchurch, comprising a newly-erected Residence, with suitable Offices and Farm Buildings, Six Cottages, and 145 Acres of Land, set out on the sea-shore midway between Bournemouth and Christchurch, a highly picturesque and salubrious part of the coast.

MESSRS. RUSHWORTH and JARVIS will SELL by AUCTION, at GARRAWAYS, on FRIDAY, MARCH 24, at TWELVE, in one lot (unless previously disposed of by private contract), the SPURCHIPPE ESTATE, comprising a substantial and well-arranged family residence, a cool, house and stabling for seven horses, farm buildings, six labourers' cottages, and 145 acres of land. The estate abuts on the sea shore, to which it rises with a southern aspect for a distance of nearly three miles, and from innumerable points are presented most beautiful views of the Isle of Wight, the Needle Rocks, Swanage, and the whole West Bay; to the west the Abbey Church and town of Christchurch and High Cliff, and in the distance the New Forest; while northward the views extend to the Shaftesbury and Salisbury hills. The property is within the limits of coast-guard and its patrol on one side, and Lymington on the other, presents easy communication, the wharf is generally with a depth of water nearly to it, and there are brick-kilns within a very short distance. The estate is bounded by good roads on three sides, and is seven miles from Bridport, and 10 miles from the Christchurch station on the South-West and Railway, with public conveyances running daily to Christchurch and Lymington, and by steam to Poole. Plans, and cards to view, on application to Messrs. Gates, Son, and Pitt, Solicitors, Copenham, Wilts; Mr. Page, Solicitor, Christchurch; Messrs. Long, Wood, and Slee, Solicitors, Bridport; and of the Auctioneers, Saville-row, Regent-street, and 11, Change, Cornhill.

Bay Tree Tavern, St. Swithin's-lane, March 9, 1854.

ROYAL ACADEMY of ARTS, Trafalgar-Square.—NOTICE TO ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 3rd, or TUESDAY, the 4th of APRIL next, after which time no work can possibly be received, nor can any Works be received which have already been publicly exhibited.

FRAMES.—All Pictures and Drawings must be in Gilt Frames Oil Paintings under glass, and Drawings with wide margins, are inadmissible. Excessive breadth in frames, as well as projecting mouldings may prevent Pictures of fair merit from being hung where otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

Every possible care will be taken of Works sent for Exhibition, but the Royal Academy will not hold itself responsible in any case of injury or loss, nor can it undertake to pay the carriage of any package. The Prices of Works to be disposed of may be communicated to the Secretary.

COMPETITIONS.

NEW SENATE-HOUSE for the CITY of HAMBURG.—The Commission appointed by the Senate of Hamburg for erecting a New Senate house, hereby invite Architects and Artists to prepare and present to them DESIGNS for the CONSTRUCTION of the NEW BUILDINGS. The specification accompanied with plans and other data is published at Hamburg by Mr. MEISSNER, the printer to the Senate, and sold at one mark currency, for the benefit of the Church Building Fund, and may be ordered of Messrs. WILLIAMS and NORGATE, 14, Henrietta street, Covent-garden. Three premiums are set apart for the best plans, one of 35. Frederiks d'or, and two of 25 Frederiks d'or each.

Hamburg, the 15th of February, 1854.

The COMMISSION for the ERECTION of the NEW SENATE-HOUSE.

ROYAL FREE HOSPITAL, Gray's-inn-road. TO ARCHITECTS.—The Committee of Management, having determined to erect a New Front and Wing to the Hospital, invite Architects to send in DESIGNS for the same. Premiums of twenty guineas and ten guineas will be paid for two designs which the Committee will select. Particulars may be known on personal application at the Secretary's Office, between the hours of TEN and FOUR.

CONTRACTS.

EAST AND WEST INDIA DOCK COMPANY.—TENDER for STONE for ROADS. The East and West India Dock Company are willing to receive TENDERS for 500 yards of broken Guernsey Granite, 500 yards of broken Flint, and 300 yards of Shingle Gravel, either together or for separate portions, according to a specification and particulars, which may be had at the Engineer's Office, Western Docks. Tenders to be addressed to the Secretary, and delivered at the Dock House, Billiter-square, on or before the 29th MARCH 1854

GEORGE COLLIN, Secretary.

East and West India Dock House, Billiter-square, 8th March, 1854

CONTRACTS.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a PARSONAGE HOUSE and Offices, at Elston, near Newark, can see the plans and specifications on application at the Rectory, Elston, on and after THURSDAY, the 23rd MARCH. Tenders to be sent in to Mr T. AUSTIN, Architect, Newcastle upon-Tyne, before SATURDAY, the 8th of APRIL, 1854

BOROUGH of BIRMINGHAM.—"The Birmingham Improvement Act, 1851." BIRMINGHAM SEWERS.—CONTRACT No. 22. The Public Works Committee of the Council of the said Borough hereby give notice that on MONDAY, the 27th day of MARCH next, they will meet at the Committee Room, for such Surveyor's Office, to receive and open sealed TENDERS from persons willing to CONTRACT with them for the construction of the following Works, viz.: A MAIN BRICK SEWER, 1,320 feet in length, to be commenced near the junction of the rivers Rea and Tame, and to be continued thence along the line of open course to a point near the Birmingham and Warwick Junction Canal, at Park Mills, together with other works connected therewith. Plans, sections, and specifications of the proposed works may be seen at the undermentioned Office, daily between the hours of TEN and FOUR, on and after MONDAY, the 6th inst. The party whose Tender may be accepted shall enter into a bond, jointly and severally with two responsible sureties, in a sum equal to one fourth the amount of his Tender for the due performance of the contract. Any Tender or schedule which is not strictly in accordance with the printed forms of the council will be rejected, and no Tender will be received later than TEN o'clock on MONDAY, the 27th day of MARCH next. The council do not bind themselves to accept the lowest or any Tender.

J. PIGOTT SMITH, Borough Surveyor.

Borough Surveyor's Office, Moor street, March 14, 1854.

BOROUGH of BIRMINGHAM.—"The Birmingham Improvement Act, 1851." The CONTRACTORS for PUBLIC WORKS.—The Public Works Committee of the Council of the said Borough hereby give notice that on MONDAY, the 10th day of APRIL next, they will meet at the Committee-room, for such Surveyor's Offices, to receive and open sealed TENDERS from persons willing to contract for the CONSTRUCTION of a CAST-IRON PLATE GIRDER BRIDGE, and other Works connected therewith, in lieu of the existing bridge over the Warwick and Birmingham Canal in Great Charles-street Plans, sections, and specification of the proposed works may be seen at the Offices of the Warwick and Birmingham Canal Company, in Lower Fazeley-street, between the hours of TEN and FOUR, on the 29th, 30th, and 31st days of MARCH, and the 8th, 9th, and 7th days of APRIL next. The party whose Tender may be accepted shall enter into a bond, jointly and severally, with responsible sureties in a sum equal to one fourth the amount of his Tender for the due performance of the contract. Any Tender or schedule not strictly in accordance with the forms of the council will be rejected, and no Tender will be received later than TEN o'clock on MONDAY, the 10th day of APRIL next. The council do not bind themselves to accept the lowest or any Tender.

J. PIGOTT SMITH, Borough Surveyor.

Borough Surveyor's Office, Moor street, March 14, 1854

BOROUGH of SOUTHAMPTON.—TO ENGINEERS AND OTHERS. Notice is hereby given, that the Southampton Local Board of Health will receive to receive, on or before the 3rd day of APRIL next, TENDERS for CONSTRUCTING, FURNISHING, and ERECTING TWO PUMPING ENGINES, with their boilers, and iron pump well, and an agitator, with all necessary gearing, &c. Specifications and forms of Tender may be obtained upon payment of 5*s.* on application at the Office of the Local Board of Health, Southampton, where the necessary plans and sections can be seen.—By order of the Special Works Committee,

CHARLES E. DEACON, Clerk.

Public Health Office, Southampton, March 9, 1854.

CARLISLE LOCAL BOARD of HEALTH.

SEWERAGE WORKS.

TO CONTRACTORS, IRON-FOUNDERS, EARTHENWARE SEWER AND DRAIN PIPE MAKERS, BRICK MAKERS, AND OTHERS.

The Local Board hereby give notice that they are prepared to receive TENDERS from parties who may be willing to undertake either of the following contracts:—

CONTRACT No. 1.—For the supply of EARTHENWARE SEWER and DRAIN PIPES, &c.

CONTRACT No. 2. For the supply of about 700 tons of CAST-IRON SEWER PIPES and OTHER CASTINGS.

CONTRACTS Nos. 3 and 4.—For EXCAVATIONS, and the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES and other WORKS (including the supply of bricks), and for EXCAVATING, LAYING, and JOINTING EARTHEN SEWER PIPES, FIXING SEWER CASTINGS, &c.

CONTRACT No. 5.—For the supply of about Three Millions of SQUARE and RADIATED, SOLID, and HOLLOW BRICKS.

The drawings may be examined on and after the 13th inst. and copies of the specifications, schedules, bills of quantities, and forms of Tenders may be obtained, together with any further information required, on application at the Office of the Local Board, Carlisle, or at the offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster.

The charge for specifications, bills of quantities, &c will be five shillings for each contract.

Sealed Tenders to be delivered at the Office of the Local Board of Health, Carlisle, before TWELVE o'clock on WEDNESDAY, the 26th day of MARCH, endorsed "Tender for Contract No. 1, 2, 3, 4, or 5," as the case may be.

ISAAC CARTMELL,
Committee Clerk to the Local Board.

Carlisle, 1st March, 1854.

[*For remainder of Contracts see next page.*

CONTRACTS.

WARE BURIAL BOARD.—Builders willing to CONTRACT for the ERECTION of a CHAPEL and for BOUNDARY WALL &c. for enclosing the New Burial Ground near Ware, may see the plans and specifications at the office of the Architect, THOMAS SMITH, Esq. 11, Hart-street, Bloomsbury; or Mr. NATH. COBHAM, Solicitor, Ware, on and after MONDAY, the 20th of MARCH instant. The Board do not bind themselves to accept the lowest Tender. Tenders to be sent in on or before the 27th of MARCH, addressed to the "Clerk to the Burial Board, Ware." A bill of quantities will be prepared.

By order
Dated the 8th of March, 1854. NATH. COBHAM, Clerk to the Board.

FALMOUTH BURIAL BOARD. — TO ARCHITECTS and BUILDERS.—The Burial Board for the Parish of Falmouth in the County of Cornwall is prepared to receive DESIGNS for LAYING OUT the proposed NEW BURIAL GROUND for that parish, comprising about 8 acres, with suitable entrances and lodge, and for the ERECTION of TWO CHAPELS, with all requisite internal fittings, and either in one or separate buildings. Each design to be accompanied with specifications and estimates of the cost of the execution of the several works. A premium of 10l. will be given for the selected design, which is to become the property of the Board; and designs, specifications, and estimates are to be sent sealed, on or before the 25th day of MARCH next, addressed "To the Clerk of the Burial Board, Gallyng-street, Falmouth," where a plan of the ground may be seen, and further information obtained.

JOHN J. SKINNER, Clerk, *pro tem.* to the said Burial Board.

Falmouth, February 28, 1854.

TO CONTRACTORS, IRONFOUNDERS, AND OTHERS.

ROCHESTER BRIDGE.—The Wardens and Assistants of Rochester bridge are prepared to receive TENDERS from persons willing to CONTRACT for the REMAINING PORTION of the above BRIDGE in a fit and proper state for the use of the public.

The Contract will include one Cast-iron Centre Arch of 170 feet span and Two Side Arches of 140 feet span each, together with the whole of the masonry, brickwork, &c. required above the springing level of the arches, the foundations, piers, and abutments being already built to that level.

The estimated weight of cast-iron is about 2,500 tons, more or less.

Plans, drawings and specifications of the intended work may be seen at the Office of Mr JOHN WRIGHT, the Resident Engineer, in Strood, any working day, on and after MONDAY, the 6th of MARCH, 1854 between the hours of TEN and FOUR, where all requisite particulars may be ascertained.

Sealed Tenders for the above works, on a schedule of prices, are to be delivered at the Bridge Council Chamber, Rochester, and marked on the outside—"Tender for Superstructure of Rochester Bridge," on MONDAY, the 17th of APRIL, 1854, at or before TWELVE o'clock at noon after which hour no Tender will be received) accompanied by a letter from two persons engaging to become jointly bound in a bond with the party Tendering for the due performance of the Contract.

The Wardens and Assistants will not feel themselves bound to accept the lowest Tender.

ESSELL and HAYWARD.

Rochester, February 24, 1854.

TO BUILDERS, CONTRACTORS, AND OTHERS.

NEWPORT and ST. WOLLOS BURIAL BOARD.—TENDERS are required for BUILDING TWO CEMETERY CHAPELS, Boundary Walls, Clerk's Residence, Entrance Gates, Gardener's Lodge, laying out and draining ground &c. for the Burial Board of the parishes of Newport and St. Wollos, in the county of Monmouth. The drawings, specifications, &c. may be seen by applying to Mr. J. E. MULLOCK, the Clerk to the Board, on and after the 13th day of MARCH, at the Board-room, Town-hall, Newport; and all further progress regarding be procured on applying to the Architects, Messrs JOHNSON and DURUZ, 3, Johnstone, Adelphi, London. The Tenders will be required to be delivered on the 4th of APRIL, 1854. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board, J. E. MULLOCK, Clerk.

Newport, Monmouth, March 8, 1854.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.

PERSONS desirous of CONTRACTING for the MAKING of about 1,000 feet of ROADS, FOOTPATHS, and SEWERS, at DULWICH, for the City of London Tenants' and Freehold Land Society, may see the Plans and specifications, at the Office of Messrs. W. G. and E. HABERSHON, 8, Bloomsbury-square. Tenders to be delivered on MONDAY, the 20th instant, at THREE o'clock. The Architects do not bind themselves to accept the lowest or any Tender.

TO BUILDERS.

TOWN-HALL, &c. BRADFORD.—Parties desirous of TENDERING for the ERECTION of TOWN-HALL BUILDINGS and COVERED MARKET, at Bradford, Wilts, may see the plans and specifications at Bath offices, on and after the 13th inst. Tenders to be delivered to us on or before SATURDAY, the 1st of APRIL. The lowest or any Tender will not necessarily be accepted.—WILSON and PULLEN, Architects, 28, Pall-mall-east, Westminster, and 1, Belmont, Bath.

March 14th 1854

THE MELBOURNE and COLONIAL HOUSE INVESTMENT COMPANY (completely registered).

The Company having obtained extra powers to CONSTRUCT BUILDINGS of all descriptions for the United Kingdom, are now prepared to TENDER for ERECTING the same, and request that plans and specifications may be addressed to the Secretary.

Patent Concrete Portable Sewers, Churches, stores, and agricultural fire proof buildings adapted for all climates.

The thorough ventilation of these buildings is quite overcome heat and cold, being general in tropical climates, and for houses in the country they are a certain preventive against vermin and other nuisances.—By order,

WM WILSON, Secretary.

13 Gresham street City, March 11, 1854.

GREAT WESTERN RAILWAY.—Contracts for Station Buildings at Reading, Bridgewater, Bridgend, and at Uxbridge.—The Directors of the Great Western Railway Company will receive TENDERS for the BUILDING of an ENGINE-HOUSE and CARRIAGE-SHED at Bordesley, near Birmingham; also for the Building a Passenger-shed, Engine-house, and Goods Shed, at Uxbridge, in the county of Middlesex. Drawings and specifications may be seen, and further particulars obtained at the Secretary's Office, Paddington; and for the buildings at Bordesley, at the Birmingham and Oxford Junction Railway Office, at Birmingham aforesaid; and after THURSDAY, the 23rd instant. The Tenders are to be sealed and addressed to the Directors of the Great Western Railway Company, and delivered at their office at Paddington on or before WEDNESDAY, the 5th APRIL next.

CHAS. A. SAUNDERS, Secretary.

Paddington Station, 14th March, 1854.

TO IRONFOUNDERS AND GASHOLDER-MAKERS.

THE Directors of the Leeds New Gas Company are prepared to receive TENDERS for the following works:—The constructing and erection of a CAST IRON GASHOLDER TANK, 110 feet in diameter and 30 feet deep, together with the necessary inlet and outlet pipes, syphons, valves, &c.; also for the construction and erection of a TELESCOPE GASHOLDER, 118 feet in diameter and 44 feet deep, together with all requisite columns, guide-carriages, &c. Specifications may be had for each kind of gasholder separately, or for the whole of the works required. Plans and specifications may be inspected, and forms of tender obtained at this office on and after MONDAY MARCH 20th. The Tenders to be delivered by TWELVE o'clock on MONDAY, APRIL 3, 1854, endorsed "Tenders for Tank" or "Gasholder." The Directors do not bind themselves to accept the lowest Tender, or any of the Tenders.

By order,
HENRY GORE, Engineer and Manager.

The Leeds New Gas Company, Engineer's Office, Meadow Lane, Leeds.

CONTRACTS.

STOKE-UPON-TRENT, STAFFORDSHIRE.—EXTENSION of TIME.—To BUILDERS.—The Trustees of the Market-cross purpose to receive TENDERS for the COMPLETION of the SOUTH WARD of the TOWN HALL, in the Market-place, Stoke-upon-Trent, and for the ERECTION of ADDITIONAL MARKET BUILDINGS, both south and separate to each, according to plans and specifications, which may be seen at the offices of Messrs. WARD and SON, Architects, Hanley, Staffordshire Potteries. The Tenders are to be forwarded to my office, on or before the 4th of MARCH inst. The Trustees do not bind themselves to accept the lowest or any Tender.—By order,

WILLIAM FORTH, Clerk to the Trustees.

Brook-street, Stoke-upon-Trent, March 14, 1854.

BRIDGE UNION.—TO BUILDERS and OTHERS.—Persons desirous of CONTRACTING with the Guardians of the above Union for the WORKS necessary to be done, in CONSTRUCTING and FITTING-UP WATER-CLOSETS, FORCE-PUMPS, MANURE TANKS, &c. and for the thoroughly draining the Union Workhouse, may see the Contract and specifications, and obtain further particulars, on application to the Clerk to the Guardians, at the Workhouse, Bridge, near Canterbury; or at the Offices of Mr J. MESSENGER, Architect, Folkestone, any day after the 10th instant.—Tenders for the above works, addressed "To the Board of Guardians," must be delivered at the Workhouse, on THURSDAY, the 30th instant, before TEN o'clock a.m. and the Guardians reserve to themselves the right of rejecting the lowest or any other Tender.

By order of the Board,
WILLIAM FORTH, Clerk.

March 9, 1854.

TO BUILDERS.

THE Guardians of the Right Honourable the Earl Brownlow are desirous of CONTRACTING for the ERECTION of a new FARM HOMESTALL, on their estate at Milton Ernest, near Bedford, according to plans and specifications to be seen at the Office of Messrs. BROWNING, Architects, Stamford. Sealed Tenders to be delivered to Mr. SIMON HUTCHINSON, Land Agent, Bedford, or Mr. Mash, near Grantham, on or before the last day of MARCH instant. The Guardians reserve to themselves the power of refusing the lowest or any Tender then offered. Security will be required for the due performance of the contract.

Manthorpe Lodge, March 15, 1854.

LIME TENDERS.—The PHŒNIX GAS-LIGHT and COKE COMPANY are ready to receive TENDERS, for the supply of WHITE FLARE BURNT LIME, for their stations at Bankside, Vauxhall, and Greenwich, until LADY-DAY, next year. The quantity will be about 1,500 yards. The lime is to be fresh burnt from the kiln, unbroken, of the best quality, and to be delivered on the stations in quantities as ordered, not exceeding two yards at a time. Instead of White Flare Burnt Lime, parties may TENDER, to supply COMMON CHALK LIME, only taking care to describe it in their Tenders. Payment to be in cash, quarterly, or in coke at the option of the company, on the commencement of each quarter (for parts Tenderers can offer for payment in cash only or in breeze only. The Tender to state the lowest price, at per yard, for lime, and also the price for coke to be taken in exchange. The Tender to be marked with the words "Lime Tender," on the cover, and to be delivered at their Offices at Bankside, before TWELVE o'clock on WEDNESDAY, the 22nd inst. — 70, Bankside, Southwark, March 15, 1854.

BREEZE.—TENDERS.—The Phœnix Gas-Light and Coke Company are ready to receive TENDERS for TAKING AWAY all the Screened BREEZE from their three stations. The quantities will be about 2,500 chaldrons each from Bankside and Vauxhall, and 1,500 chaldrons from Greenwich; but a part or the whole or either or any quantities not less than 500 chaldrons, to be clear away at periods to be fixed by the Company. The contractor will be required to enter into an agreement under a penalty not to leave more than 60 chaldrons on the works at any one time, and to pay for the same quarterly. The Tender is to state price per chaldron of the bushels, delivered into crafts alongside of the wharfs. The Tender also to be marked with the words "Breeze Tender" on the cover, and to be delivered at their Office before TWELVE o'clock on WEDNESDAY, the 22nd inst. — 70, Bankside, Southwark, March 15, 1854.

NEWARK-UPON-TRENT WATER-WORKS.—The Directors of the Newark-upon-Trent Waterworks are desirous of receiving TENDERS for the construction of the following WORKS, &c.:—

CONTRACT No. 1.—ERECTION of ENGINE-HOUSE, BOILER-HOUSE, CHIMNEY, FILTER, TUNNEL, SHAFT, SERVICE RESERVOIR, COTTAGE, FENCES, and other Buildings.

DO. No. 2. TEN MILES, or thereabouts, of IRON MAIN and SERVICE PIPING.

DO. No. 3.—PIPES LAYING &c.

DO. No. 4.—ENGINE, PUMPS and other Apparatus.

Specifications and drawings may be seen, and quantities of Contract No. 1 obtained, at the Office of Mr. C. BAILY, Architect and Surveyor, Newark-upon-Trent, on and after MONDAY, the 13th instant. The Company do not pledge themselves to accept the lowest or any Tender. Tenders to be delivered to me at or before SIX o'clock p.m. on SATURDAY, MARCH 25th instant and sealed according to the number for which the contract is intended. Any further information can be obtained upon application to the Engineer, T. HAWKSLEY, Esq. C.E. 30, Great George-street, Westminster; Mr. C. BAILY; or

W. KERSHAW, Secretary to the Company.

N.B.—Printed specifications of Contracts 2 and 4 can be had, on application to the Secretary

Newark-upon-Trent, Notts, March 1, 1854.

HARWICH GASLIGHT and COKE COMPANY.—The Directors of the above Company are desirous of receiving TENDERS for the APPARATUS, MAINS, and BUILDERS' WORK required in the Erection of Gas-works for the supply of the Borough of Harwich. The plans and specifications may be inspected, at the Office of Mr. EDWARD HAYMAN, Solicitor, Harwich, to whom Tenders are to be sent, under cover, on or before APRIL 4th. All further information may be obtained of the Engineer Mr. JADEZ CHURCH, Chelmsford. The lowest Tender will not necessarily be accepted.

March 14, 1854.

TO BUILDERS AND OTHERS.

PERSONS willing to CONTRACT for the ERECTION of TWO HOUSES in the High street, Margate, may see the plans at the Offices of Messrs. BOOKER and CAVELER and HOOKER, Margate, on and after SATURDAY, the 18th MARCH. Sealed Tenders, endorsed "Tender for Houses, High-street Margate," to be sent to the Architects on or before SATURDAY, the 25th MARCH, 1854. The lowest Tender will not necessarily be accepted. March 15th, 1854.

TO CONTRACTORS.

TENDERS for ROADS, &c. — Parties desirous of CONTRACTING for the FORMATION of ROAD and DRAINAGE, at DULWICH, may inspect the specifications at the Offices of the South-west Metropolitan Freehold Land Society, or at 97, Piccadilly.—The Contracts must be lodged, sealed, at the said Society's Offices, 1, Wellington-chambers, Londen-bridge, at or before TWELVE o'clock on THURSDAY next, the 23rd instant, addressed, "Tenders for Mitcham."

March 15, 1854.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of STOREHOUSES, ARMOURIES, and QUARTERS for non-commissioned officers of the South Gloucester Militia, at Gloucester, and of the North Gloucester Militia, at Cirencester, may inspect the plans and specifications at the offices of Messrs FULLJAMES and WALLER any time between the hours of TEN o'clock a.m. and SIX o'clock p.m. after the 2nd of APRIL. Tenders to be given in sealed, endorsed "Tenders for Storehouses," addressed to Messrs. FULLJAMES and WALLER, Architects, Gloucester, on or before the 10th of APRIL next, of whom further particulars may be obtained.—Gloucester, March 9, 1854.

CONTRACTS.

BRYNMAWR WATER-WORKS.—Persons desirous to CONTRACT with the Brynmawr Local Board of Health for providing and fixing STAND PIPES, with service branches, and other works connected therewith, may inspect the specification and form of Tender at the Office of the Board, or upon payment of five shillings to the Clerk, a copy will be forwarded on application to Messrs. ROBERT DIAMOND and SONS, of Exeter, from whom all necessary information may be obtained. The Tenders are to be forwarded to the undersigned Brynmawr on or before the 20th day of MARCH, 1854. They will be considered by the Local Board at their meeting on the 22nd. The Local Board do not bind themselves to accept the lowest or any Tender, or to consider such as are not made in the prescribed form.

E. J. C. DAVIS, Clerk to the Local Board.

TO BUILDERS.

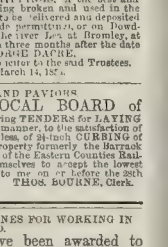
PERSONS disposed to TENDER for ERECTING a CHURCH at Tiverton, in the county of Devon, may see the drawings and specification on and after the 25th instant, either at the Offices of Messrs. J. INNERS and GILL, Architects, Bath, or at Mr. BOYCE'S, Architect, Tiverton; and any further particulars may be known at the offices of Mr RENDELL, Solicitor, Tiverton. Tenders addressed to "The Committee for building a new Church at Tiverton," to be delivered at the Office of Mr. RENDELL, Tiverton, on or before the 3rd of APRIL next. The lowest Tender will not necessarily be accepted.—Tiverton, Thursday, 9th March, 1854.

MIDDLESEX and ESSEX TURNPIKE ROADS.—TO STONE MERCHANTS.—Notice is hereby given that the trustees of these turnpike roads are willing to receive TENDERS in writing at this Office, on or before WEDNESDAY, the 29th instant, for 300 TONS of BLUE GUERNSEY GRANITE CHIPPINGS, of the best and hardest quality, for the purpose of being broken and used in the repairs of the said roads; the stone to be delivered and deposited on the trustees' dock at Stratford (tide permitting), or on Bowding's Wharf, on the opposite side of the river Lea at Bromley, at the expense of the contractor, within three months after the date of the contract.

GEORGE DACRE,
Clerk and Solicitor to the said Trustees.

Turnpike Office, Bow, Middlesex, March 14, 1854.

TO CONTRACTORS AND PAVIORS.



THE ROMFORD LOCAL BOARD of HEALTH are desirous of receiving TENDERS for LAYING DOWN, in a good and workmanlike manner, to the satisfaction of the Board, about 3,800 feet, more or less, of 24-inch CURBING of YORK STONE, 12 inches deep, on property formerly the Barrack Ground, close to the Goods Station of the Eastern Counties Railway. The Board do not bind themselves to accept the lowest Tender. Tenders to be forwarded to me on or before the 28th Instant.

By order, THOS. BOURNE, Clerk.

Romford, 14th March, 1854.

VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PRIZE MEDALS have been awarded to these celebrated Machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom by joiners, coopers, coach and cabinet makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders, and also by the British and French Governments, for planing and squaring up, moulding, tenoning, mortising, grooving, rebating, sawing, and boring.

POWER MORTISING MACHINE.

Their operations are in every respect perfect, either in hard or soft wood, and will perform all the ordinary descriptions of work required in the above trades in a very rapid and superior manner, and at a greatly reduced cost.

Sold only by
WILLIAM FURNESS,
Patentee, No. 29, Lawe's street, Liverpool, from whom full particulars may be obtained.

HART AND SON,

WHOLESALE IRONMONGERS, MANUFACTURERS, &c.

53, 54, & 55, WYCH-STREET, STRAND.

PITT'S PATENT DOOR FURNITURE.

LOCKS, HANDLES, BOLTS, &c.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm inclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles), for road side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co. after the model of the fences of this material in the Stories and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

The above can be had from all Ironmongers throughout the United Kingdom; and from the Manufacturers, WEBB and GREENWAY, Brassfounders and Lock-smiths, Steelhouse-lane, Birmingham.

212° SAFES.—MILNER'S HOLDFASTS,
fire-resisting by means of the only perfect non-conductor, vaporisation, are the strongest, best, and cheapest, because the only effectual safeguards against fire, robbery, violence, for ledger-deeds, cash, or valuables. Lord Chief Justice Campbell, in summing up on the late trials for infringement of MILNER'S SAFES, was pleased to observe:—"He must say he had been astonished to find such strong evidence of their usefulness; up to the hour he had no idea that there were any human means of so effectually preserving papers from the action of fire. It was a comfort for one to know that there was such an invention by which valuable documents might be rendered secure, notwithstanding the calamity of fire." As to whether it is useful, it appears to be allowed on all hands: IT SEEMS TO BE A MERE MARYLEBONE PRESERVATIVE AGAINST FIRE [for the water remains permanently held in artificial or natural vessels, AND THE VERY CALAMITY BRINGS THE CURE for the heat releases the water or moisture, and it rises turned into steam, and the steam moistens the substance that is to be preserved, AND SO IT IS AN ESSENTIAL GUARD AGAINST FIRE.—Milners' Patent Safe Works, Liverpool. London Depôt, 47A, MOORGATE STREET, City, London.

A PRIZE MEDAL for SUPERIOR LOCKS
was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, which marks the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut, Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. &c. 6d. each.

CHUBBS' LOCKS, FIRE-PROOF SAFES, AND CASH BOXES.
CHUBBS' PATENT DETECTOR LOCKS
give perfect security from false keys and picklocks, and also detect any attempt to open them. They are made of all sizes, and for every purpose to which Locks are applied, and are strong, secure, simple, and durable.
CHUBBS' PATENT LATCH, for front doors, counting house doors, &c. is simple in construction, low in price, and quite secure. The keys are particularly neat and portable.
CHUBBS' PATENT FIRE-PROOF SAFES, BOOKCASES, CHESTS, &c. made entirely of strong wrought-iron, so as effectually to resist the falling of brick-work, timber, &c. in case of fire, and are also perfectly secure from the attacks of the most skilful burglars.
CHUBBS' CASH and DEED BOXES fitted with the Detector Locks.
CHUBB and SON, 57, St. Paul's Churchyard, London.

PARNELL'S PATENT DEFIANCE
LOCKS, WHICH CANNOT BE PICKED.—These Locks are recommended to the public for their simplicity, durability, and perfect security: viz. Parnell's Patent NOI-ELESS BOX-STAPLE and Striking Plates, Fire-proof Safes, Deed and Cash Boxes, Copying and Letter Presses. Descriptions and lists of prices may be had at the Depôt, 62, Strand, gratis.

TO RAILWAY COMPANIES, CONTRACTORS, AND BUILDERS.
JAMES LAURIE and CO. Warehouse,
Cousin-lane, Upper Thames-street, supply Railway Chairs and Sleepers, Fishing Pieces, Bolts and Nuts, Spikes and Tie. Also, Gas Tubing, Glanders, Socket Pipes, Rain-water Pipes, Gutters, Railing and Palisading Bars, and all kinds of Iron Casting. Also, Henderson's Patent Derrick Cranes.

LOSH, WILSON, and BELL,
NEWCASTLE-ON TYNE,
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Sise-lane, London.

TO GAS-FITTERS, ENGINEERS, BUILDERS, DECORATORS, &c.
F. P. M'CARTHY, 7, Beech-street, Barbican,
begs to inform the above and other trades, that he is now SELLING, wholesale, all requisite FITTINGS for GAS WORKS—pendants, brackets, chandeliers, &c.; composition, tin, and iron gas piping, and fittings in general; sheet iron, galvanized iron, tin plates, iron wire, &c.; best lacquer, is per gill. Old metals bought or taken in exchange. List of prices sent on receipt of stamp.—Observe, 7, Beech-street, Barbican.

BRASS WORK.—The advantages of direct communication with a bond fide Manufacturer are too obvious to need attention from Architects, Builders, and the trade generally these advantages in their fullest extent are afforded by C. JONES and S. N. 36, Monkwell street, City. TRELLIS and FRONT of every pattern and dimension. Rod and rail work for every purpose. The oldest house in London for door and shall-board plates.

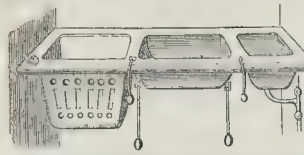
THOS. B. LAWRENCE and CO. Zinc
Dealers and Manufacturers, 10, York-place, Lambeth, having removed to their new premises, are selling SHEET ZINC at 23s. per cwt.; Perforated Zinc, at 4d. per foot; Rain-pipes, 2½d. per foot; Gutters, 4d. per foot; Flashings, 2d. per foot; Chimney-shafts, Cowls, &c. equally cheap. Plumbic Zinc, 42s. Zinc Paint and Galvanized Iron Plates. A prize medal was awarded them at the Great Exhibition.

THOMAS EDINGTON,
IRON MERCHANT AND CONTRACTOR,
Inspector of Railway Iron and Castings,
17, GORDON-STREET, GLASGOW.

NEW HOUSES OF PARLIAMENT.—
DEFRIES'S GAS STOVES RANGES, and BATHS, just completed for two kitchens in the above building. A great variety in use for the same principle. Gas Baths from 2l. by which a warm bath may be obtained for the expense of a halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. Defries's celebrated Dry Gas Meters. Lamps in use. Testimonials at the office, 145, Regent-street. Manufactories removed from Hampstead road and St. Martin's lane to more extensive premises, New-road, near Albany-street.

HEATING by HOT WATER.—J. JONES,
Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, furnace and plain supply cisterns, double doors and frames, furnace grates, ash doors for the same, hot water pipes, elbows, trees, syphons, throttle valves, stop cocks, flange and socket elbows, &c.; also, trough pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf, No. 6, Bankside, London, near the Southwark-iron-bridge.

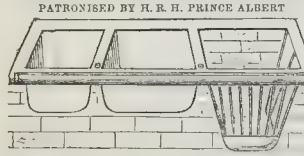
TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.
THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOILESVE'S PATENT CALORIFERE, evaporating in twenty-four hours about 6,000lb. of water, without altering the finest fermentation, with the purity of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of room, large stoves, or wheels saved, and rent thereby considerably reduced by the use of it. Several machines above at work in operation at Wood paving Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vesan, Son, and Raymond, Deck-head, and several maltsters, distillers, and manufacturers in London and country. Apply, per post to P. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55, King William street, City.



FIRE-PROOF CONSTRUCTION.—
FOX and BARRETT'S PATENT.
This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.
The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.
The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete, so constructed that each floor becomes virtually a beam of artificial stone, without any of the strain upon the supporting great strength and regularity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.
Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast iron girder and brick arches, and as bringing the great desideratum of fire proof construction, even for ordinary dwelling-houses, and therefore within the reach of everyone.
Plans, and all information, to be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES.
a complete LIST of which
will be forwarded upon application.
FREDERICK HUTTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.



GAS FITTINGS, &c.—TO ARCHITECTS, SURVEYORS, AND BUILDERS.—Messrs. JAMES JONES and CO. 28, 29, and 30, Bow-street, London, are prepared to lend out gasworks and materials for temporary lighting during the erection of buildings at a small per centage on the prime cost. Buildings in carcase fitted up with service and branch supplies for the distribution of gas and water in wrought iron tubing or other wise, at the lowest competing prices. Every description of materials supplied at the lowest terms to those who fix their own work. Plain and ornamental brass work, gas fittings and apparatus for cooking, heating, and ventilation in the greatest variety, and on most approved principles. Price-lists sent on application, enclosing postage-stamps.

BARTON'S PATENT STABLE FITTINGS, PLAIN, ENAMELLED, and GALVANIZED.

The Improvements in these Fittings consist of the economical Ventilating Hay Box, the Revolving Safety-guard Roller, and the superior manner of working the Halter Balls, and removing them away from the horses' legs. These, together with the compactness of the general arrangement, and superior workmanship, render them indispensable to all desirous of the most perfect and economic stable management. Stable Furniture of every description, Iron Gates, Railing, Strained Wire Fencing, Hurdles; Sheep, Poultry, and Game Wire Netting; Registered Poultry Fountains, Troughs, Feeders, &c.
JAMES BARTON, Ironmonger, &c. Manufactory and Warehouse, 370, Oxford-street, London, a few doors east of the Pantheon.

PATRONISED BY H.R.H. PRINCE ALBERT

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled
Castings Warehouse, 81, Upper Thames-street.

FOUNDRY AND IRON WORKS,
88, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.
Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.
A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.
Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.
Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book safes and Strong Rooms, Tanks and Boilers, and every description of Ironwork to specification, and the work executed with every attention to quality and despatch.
GLOVERS' IRONWORKS.
168, DRURY-LANE, and CHARLES STREET.

ECONOMIC COOKING STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post. DEANE, DRAY, and CO. (opening to the Monument), London-bridge. Established A.D. 1700.

TO BUILDERS.
ON SALE, the following new SELF-ACTING RANGES:—1-36 in. at 7s.; 1-38 in. at 7s. 6d.; 1-39 in. at 7s.; 2-40 in. at 8os.; 1-42 in. at 82s.; 1-43 in. at 86s.; 2-60 in. at 120s. each; and COTTAGE RANGES, 2-35 in. at 5s.; 1-42 in. at 58s. each. Also one new Wrought-iron Warehouse Crane, to lift 30 cwt.—At S. HOOD and CO.'s Castings Warehouse, 81, Upper Thames-street.

TO BUILDERS, CARPENTERS, &c.
THE following are the present Prices of IRONMONGERY, at YOUNG and CO.'S, 29, Duke-street, Grosvenor-square, all other articles in the same proportion for cash:
Cut Clasp, 4d.—6d.; 7½d.—9d.; 10d.—1s. 7d., 90d. 2s. 4d. per 1,000.
Patent Line, No. 3, 5s. 6d.; No. 4, 7s.; No. 5, 8s. per gross.
6 in. Mortise Locks, Brass Furniture, 3s. 3d. each.
6 in. ditto ditto, China Furniture, 3s. 6d. each.
Bottom Springs for Swing Doors, 1½ in. 21s. each.
Cast Butts, 2 in. 1s. 0½d.; 3½ in. 1s. 4d.; 3 in. 2s. per dozen.

CORRUGATED IRON ROOF TO BE SOLD, nearly new, 34 by 33 feet, fitted with fanlight in one end, and two glazed ventilating skylights.—Apply to D. ASH, 12, Southwark-bridge road, Newington causeway. Price 9l.

PLUMBING.—T. STANWAY, 10, Dorset-street, Portman-square, begs to inform the building trade generally, that he executes every description of Plumbing at the lowest prices; baths, closets, and every description of hydraulic apparatus fixed, and action warranted. Estimates for any quantity, in town or country.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge. Office, 8, Crescent-terrace, Millbank, Mr. THOS. THOMPSON, Agent.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention, that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath, Hackney. WM. HUNTLER, Proprietor.

TO BUILDERS, MASONS, AND CONTRACTORS.
OBSERVE!!! the cheapest Depôt in England for MARBLE CHIMNEY-PIECES of superior quality and workmanship is the Westminster Marble Company's Patent Works, Earl-street, Holywell-street, Millbank. An inspection of their superior Stock of Statuary, Sienna, Black and Gold, Vein, and other Chimney pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Hardills, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Harehill, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England.—THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarry Proprietor, Quai des Allatoirs, Caen, and at 8, Red Lion-street, Borough-market. Contracts taken for any quantities. Cargoes shipped to order from Caen to any port.

GATES and GEORGE, late LUARD, BEDDHAM, and CO., Caen, Aubigny, and General Stone Merchants Caen Wharf, Rotherhithe, London. Goods delivered to order, by land or water conveyance, and by ship to any part of the United King dom.

WEETWOOD BRAMLEY FALL QUARRIES and POTTER'S NEWTON QUARRIES.
ANN HUSLER, administratrix of the late John Husler, begs to inform her friends and the building public that she is carrying on the Stone Trade in all its branches; that she has appointed SAMUEL TRICKETT, of VICTORIA STONE WHARF, ISLE of DOGS, her sole Agent for London, who will furnish samples and prices on application. Estimates given for the supply of large contracts, docks, locks, bridges, or buildings.

TO BUILDERS AND SHIPPERS.
TWENTY ENAMELLED CHIMNEY-PIECES, complete, to be SOLD by AUCTION, on TUESDAY, 21st MARCH, at the ARTIFICIAL STONEWORKS, 74, Borough-road.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, numerous Union Asylums, Northumberland Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—Mr. MAGNUS having, at great expense and hazard, and by dint of unwearied perseverance during a period of FOURTEEN YEARS, succeeded in obtaining for his invention of Enamelled Slate to imitate Marbles the PATRONAGE of HER MAJESTY, PRINCE ALBERT, the chief of our nobility, and almost every Architect, Builder, and Decorator of any note, and having been rewarded with the MEDAL of the SOCIETY of ARTS and the PRIZE MEDAL of the GREAT EXHIBITION, finds that his success has given rise to a number of petty imitators, who, though they may not affect him in a pecuniary light, inflict vast injury by their wretched imitations of his productions, which are, in most cases, passed off as "MAGNUS'S ENAMELLED SLATE." He therefore respectfully requests those who are disposed to patronize his establishment, to assure themselves that they are supplied from his manufactory, as unfortunately AT LESS THAN HALF THE COST AND LABOUR NECESSARY TO SECURE PERMANENCY, a counterfeit can be made which will not endure, and damages the reputation of his Enamelled Slate. This caution is particularly necessary in regard to the fittings of the retiring places at railway stations, and wherever there is much wear. N.B. The Tariff for 1854 is now ready.
Pimlico Slate Works, 39 and 40, Upper Belgrave-place.

A LOT of CHEAP SLATE SLABS, &c. Mr MAGNUS being about to erect some additional buildings, is desirous to dispose of several lots of Slate Slabs, suitable for LANDINGS and PAVING, which are now on the way.
Also a lot of DRAIN COVERING, and some PLANED SLATE GARDEN EDGING, from 5 to 8 inches deep and ¾ of an inch thick, at 9d. to 3l. per foot run.
PIMLICO SLATE WORKS—39 and 40, Upper Belgrave-place, Pimlico.

SLATES, Slabs, Cisterns, Enamelled Chimney-pieces, Plain ditto, Urinals, Baths, Sinks, Lining, Skirting, Roofing, Malting Floors, Patent Ridge and Roll, and Slab-work generally. Export orders supplied without detention, a large stock of slates and manufactured goods being usually kept on hand. Price-lists may be had upon application, either personally, or by post. Address, JOSEPH BRADLEY, Slate Merchant, Steam Slate-works, Bermondsey-wall, Lond n.
N.B. Wharf opposite the Wapping Entrance of London Docks.

BANGOR SLATES, direct from the Quarry.—5000 COUNTESSES, and 1000 LARGEST LADIES of finest quality.—Apply, by letter prepaid, to J. W. "Builder" Office, 1, York-street, Covent-garden, stating highest price that will be given for each sort, at per thousand of 2,350 Slates.

GRANITE BLOCKS, in sizes suitable for bases, templates, &c.; also curbs, posts, ledgers, trams, steps, pitchings, and all the usual descriptions of granite stock for sale at Bridge Wharf, Millbank, Westminster.

RUBBED YORK PAVING.—About 10,000 sup. feet of 2 in. Rubbed York Paving, best quality, to be sold reasonably.—Apply to WILLIAM FOSTER, Stone Merchant, Bridge Wharf, Millbank, Westminster.

PAVING, in great varieties.—Sinks, sills, steps, &c.; rubbed coping; tooled ditto; rubbed and tooled sills; Harehill and self-faced slab; rubbed York paving; pipes, pots, &c. all at low prices. Builders and masons are invited to inspect a list sent free on application to E. and W. STURGE, Bridge-wharf, City-road.—Established 1821.

TO BUILDERS AND OTHERS.
FOR SALE, a quantity of good PAVING STONES, for stables or mews; also pumps, coachhouse doors, horse-troughs, mangers, &c.—Apply to Mr. J. FEW, Builder, Highbury.

GRANITE.—The Cheesewring Granite Company, of Liskeard, Cornwall, are now prepared to supply Granite of excellent quality, and the largest sized blocks. Prices may be ascertained on application to N. TREGELLES, 3, Pinner's court, Old Broad-street, City; or to JAS. J. TRATHAN, Liskeard.

CORSHAM-DOWN and other BATH STONE.—Prices for the above, delivered either in town or country, may be had on application to MARTIN and WOOD, Marsh-wharf, Regent's-park-basin.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
(DEPOTS.)

Great Western Railway Station....	PADDINGTON.
Great Western Railway Station....	BRISTOL.
Hope-street, Mount-pleasant	LIVERPOOL.
Castle-fields	MANCHESTER.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

CAEN WHARF, ROTHERHITHE.—GATES and GEORGE beg to invite the attention of Builders, Pavors, and Stone Merchants, to their stock of YORKSHIRE PAVING, and general assortment of Stone goods, which are offered at the current prices, and on their usual terms of credit.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Ground Stone, Scallett Block, Ashlar, Rangework, &c. &c. Supplied direct from the Quarries; also every description of Stonework for Building purposes, both plain and ornamental, prepared ready for fixing, and forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

By Her Majesty's — Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressings and Details for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary.
London, 8, John-street, Adelphi.

TO ROADMAKERS, CONTRACTORS, AND OTHERS.
TWO superior descriptions of GRAVEL, one for Concrete and the other for Road-making, may be had upon application at the Office of the Park Estate, Plumstead, near the Royal Arsenal, Woolwich. Price 2s. 6d. per yard. Delivered into barge alongside Woolwich.

SEASONED FLOORING.—A large stock of dry WHITE and YELLOW FLOORING, prepared by machinery, always on hand, at reduced prices, as under, for cash.

4-inch Yellow, 17s. per square.		¼ inch White, 16s. per square.	
4-inch	" 18s. "	5-inch	" 17s. "
3-inch	" 22s. "	7-inch	" 21s. "

Dantzic Timber, 80s. per load.
Mouldings by machinery in very great variety.
ARCHBUTT and LEVERTON, Pancras Saw Mills, Old St. Pancras-road.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export. Southwark bridge Wharf, Bankside.

MUIR'S PATENT — PLANING MACHINE.

SAW MILLS, GILLINGHAM-STREET, PIMLICO.
TIMBER of any size, PLANKS, DEALS, and BATTENS, &c. sawn on the most approved principle; boards, &c. prepared, matched, and grooved, by Muir's Patent Machinery. The Mills have all the advantages of railway and water-carriage, being connected with the Thames by the Grosvenor Canal. Goods fetched from the docks, and carted home free of charge. Address to HENRY SOUTHAM,
Saw Mills, Gillingham-street, Pimlico.
N.B. Estimates given for Sawing and Planing.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER. DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff, Slating, Battens, Pantile Laths, Oak Planks, Sash Sills, &c. Timber of all sizes. Planks, Deals, and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 4a, and 5a, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

PADDINGTON TIMBER-YARD SAWING, PLANING, and MOULDING MILLS, 3, Irongate Wharf, Praed-street, Edware-road, near the Great Western Railway Station, and abutting on the Grand Junction and Regent's Canals, affording the advantage of railway and water carriage.

GEORGE W. FRY, in returning thanks for the liberal support received by the late firm of W. R. Fry and Son, begs respectfully to solicit a continuance of the same, and calls attention to his large and well-seasoned stock of Flooring Boards, Deals, Battens, and Mouldings, of every description, prepared in a superior manner from the best goods, at the lowest remunerative prices.

GEORGE W. FRY can also offer every advantage to purchasers of any description of Timber and Deals. The extensive Mills afford convenience for immediate conversion on the most moderate terms. All sawn and prepared goods delivered free to any part of London, or carefully packed and delivered at any railway station in town.

G. W. F. has published an enlarged and improved sheet of Moulding Designs, which will be forwarded, with prices of flooring, &c. post-free, on application.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

FREEHOLD BUILDING LAND, on the borders of Surrey and Sussex, commanding extensive views, and most eligibly situate, being within one mile of the Worth station on the East Grinstead line of railway, three and a half miles from the three bridges, five from Horley, and eight from the Red-hill station on the Brighton line of railway. This important freehold building land, in all about sixty acres, is situate at Worth, within four miles of East Grinstead (a capital market town), very high, remarkably healthy, commanding most extensive views, within reach of three packs of hounds, in the neighbourhood of good shooting. Excellent bricks made on the estate; sand, gravel, and peat earth.—For particulars, apply to Mr. GEO. FULLER, Land Agent, 34, Great George-street, Westminster.

BUILDING LAND, with BRICK-EARTH, TO BE LET.—TWICKENHAM, MIDDLESEX.—TO BE LET, on Building Leases, a valuable SITE, facing the high-road leading from Richmond bridge to Twickenham, with extensive frontages to the existing high-roads and proposed new roads of 2,900 feet, or thereabouts, together with the privilege of making bricks from brick earth on the property.—For particulars, apply to Messrs. PALMER and SETTLESHIP, Solicitors, 4, Trafalgar-square; or Mr. ATWOOD, Surveyor, Mortlake, Surrey.

SYDENHAM.—BUILDING LAND TO BE LET for the term of 99 years. Most eligible frontage by 300 feet deep for Villa residences. Advances made if required.—For further particulars apply to Mr. A. C. HOOK, Land Agent and Surveyor, 13a, Great George-street, Westminster.

BUILDING LAND TO LET, at very low ground-rents, for ninety-nine years, close to Regent's-park, and on the East of Primrose-hill, a few minutes' walk from the city station, for third-rate eight-roomed houses, for which there is a great demand in that locality, and would readily let or sell. There are some frontages suitable for shops with dwelling-houses over; also some with great depth behind, where workshops or public establishments might be erected. For plans and particulars apply to F. KILOARR, 8, Harrington-square.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL.—TO BE LET, on Building Lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been appropriated for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly 3 acres in extent. The roads, garden, and drains are being formed. Advances will be made to responsible parties.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane.

BUILDING LAND TO BE LET, at ACTON, HOMERTON, WIMBLEDON, CHERTSEY (close to the Station), HALLSVILLE adjoining the Harlington Road Station on the North Woolwich Railway), at CROYDON (within a mile of the Station), and at NORWOOD (within three minutes' walk of the Station), and LOWER NORWOOD, near Tulse Hill, admirably situate for Building purposes.—For particulars apply to Mr. W. F. LOW, Solicitor, 67, Wimple-street, Cavendish square. Leases direct from the Freeholder. Money advanced if required.

NORWOOD.—BUILDING LAND TO BE LET within three minutes' walk of that Station in Wimpole (hereafter to be called Lincoln) Road, South-hill, with a full view of the Crystal Palace and Grounds, and only one mile distant, southern aspect, with some of the most magnificent views in the county of Surrey, on which Building has commenced, and 4 Houses nearly completed for occupation. The Roads are being substantially made, and the Water of the South Lambeth Company, from Thames Ditton, laid on to the houses erected. Builders and gentlemen desirous of a first-rate site will find this spot worthy their attention, and advances will be made if required.—For further particulars and plans of the Estate, apply to Mr. W. F. LOW, Solicitor, 67, Wimpole-street, Cavendish-square. Upwards of 40 trains stop at the Norwood Station during the day. Leases direct from the Freeholder.

EARL'S-FIELDS, Grantham, Lincolnshire.—TO BUILDERS, CONTRACTORS, TIMBER MERCHANTS, CAPITALISTS, AND OTHERS.—TO BE LET from APRIL 5th, 1854, a very desirable BUILDING ESTABLISHMENT and TIMBER-YARD, with a good dwelling-house, offices, spacious workshops, engine-house (with high chimney), and other outbuildings, replete with every convenience, &c. offering an opportunity for investment rarely to be met with. These old established premises are most admirably situated in all respects for carrying on a first-rate and lucrative business, as they adjoin the Ambergate Railway Station, and are within a few hundred yards of the Great Northern Railway Station. The tenants can be accommodated with about 15 acres of good grass land adjoining the premises; and as there is abundance of excellent clay and sand close to the surface in one of the fields, the tenants will be permitted, if they choose, to open a public brick and tile-yard in the said field. For rent and particulars apply to the Agents of the Earl of Dysart, at the Office, Buckminster-park, Coltersworth, Lincolnshire.

BUILDING GROUND, PUTNEY, adjoining the railway station, for private houses, two shops, and railway tavern, TO BE LET, for long terms, at moderate ground-rents. Land-tax redeemed.—For particulars, apply to Mr. LEADER, on the Ground; or to Mr. T. H. CLARKE, Surveyor, 1, Dalby-terrace, City-road.

BERKSHIRE: READING.—FOR SALE, by PRIVATE CONTRACT, or TO BE LET on LONG BUILDING LEASES, several commanding and desirable PLOTS of FREEHOLD BUILDING LAND, possessing frontages of 50 feet and upwards, and depths of 210 to 310 feet, situate on the rising ground between the Oxford and Bath turnpike roads, and commanding extensive views of the Oxfordshire hills and adjoining country, and within fifteen minutes' walk of the Great Western and South Eastern Railway Stations and of the market-place. Most of the plots are ornamented with trees and shrubs, and fenced in on all sides with good quickset hedges. The whole are admirably adapted for detached and semi-detached villa residences—a class of house much sought after in Reading and its neighbourhood. The selling price varies from 2l. 10s. to 3l. per foot.—For further particulars apply to Messrs. WRIGHT and WEEDON, Solicitors, 4, Farnival's-inn, Holborn, London; or to Mr. WM. WEEDON Solicitor, 61, Minster-street, Reading.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES, part of a bold crescent, TO BE LET on building lease, at moderate ground-rent. Two-thirds of the amount will be advanced on mortgage.—Apply at the Offices of GEORGE MORGAN, Esq. 5, Chancery-lane.

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD BUILDING GROUND TO LET for a term, Islington and Turnham-green, 300 years.—Apply to view to Mr. GREEN, Grove-road, Upper Holloway; HARRIS, opposite Lee Arms, Brownlow-road, Queen's-road, and joining Bellingham's Distillery, Dalston; PHILIPS' Counting-house, near Acton-lane, Highroad, Turnham-green; or Mr. D. HUGHES, 13, Gresham-street.—N.B. Populated localities; roads and sewers made.

BUILDING LAND at PUTNEY, within three minutes' walk of the Putney Railway Station, TO BE LET for the term of ninety-nine years, suitable for villa or other residences. Advances made if required.—For further particulars apply at Mr. HOOK'S Offices, Land Agent and Surveyor, 13a, Great George-street, Westminster, where plans of the estate may be seen.

FREEHOLD BUILDING LAND at TWICKENHAM—8 acres, situate near the Church and Railway Station, with 1,600 feet frontage to Kingston New-road, and with private access to the river Thames at Cross Deep. The land is thoroughly drained by a capacious sewer newly constructed, and will be LET or SOLD in parcels, to suit the convenience of buyers.—Apply, for plan of the ground and further particulars, to JAMES CLARK, 34, Bullter-street, London. N.B. About three acres of the ground consist of a productive well-stocked walled garden, with a large range of substantial forcing-houses.

ON THE COAST of HAMPSHIRE.—TO BE LET on BUILDING LEASES, LAND on the shores of the Solent, opposite Cowes and Osborne, commanding uninterrupted views of the Channel from Spithead to the Needle Rocks. Excellent harbour for yachts, and good bathing. The proposed site forms part of the sea cliff of Lepe, in the Exbury estate, and in the parish of Fawley.—Apply to Mr. WM. ROSS, Steward of the Estate, the Grange, Alresford, Hants.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in this desirable locality, commanding extensive views. To gentlemen desirous of selecting a site for the erection of villa residences, this affords an excellent opportunity. Bricks may be had, delivered on the site of the intended building, at 30s. per thousand. For particulars apply to Mr. C. HAMBRIDGE, Architect, 73, Coleman-street, City.

FREEHOLD BUILDING GROUND, of a first-class character.—TO BE LET, a very attractive PIECE of superior LAND, advantageously situate within three miles of the Post-office, with a considerable frontage to the high road, in the immediate vicinity of a contemplated national undertaking, and most admirably adapted for erecting detached or semi-detached villas, which are much needed and constantly sought after. The respectable and healthy character of the locality, and its proximity to the metropolis, make it a very desirable situation. All roads are formed.—For particulars, apply to Mr. HERBERT PRICKETT, Surveyor and Estate Agent, 15, Chancery-lane, and 21, Paddington-green.

BUILDING LAND, ISLEWORTH.—TO BE LET, on BUILDING LEASES for ninety-nine years, TEN ACRES of LAND, very eligibly situate for the erection of first-class villa residences, having double frontages to the high road from London to Twickenham and the Great Western road, and within ten minutes' walk of the Isleworth and Brentford Stations on the loop line of the South Western Railway.—For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, HESTON.—TO BE LET, on Building Leases, for ninety-nine years, 1a. 2r. 3p. of LAND, in lots of 50 feet frontage, and great depths, eligibly situate for the erection of villa residences of from 35l. to 40l. per annum, on the Great Western road, in the immediate vicinity of the Spring Grove Estate, in the parish of Heston, and within five minutes' walk of the Isleworth Station, on the loop line of the South-Western Railway.—For plans and particulars, apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth.

BUILDING LAND, TWICKENHAM.—TO BE LET on BUILDING LEASES for Ninety-nine Years, 3a. 3r. 36p. of LAND, with extensive frontages to the Richmond and Windsor Railway, and the high road from Isleworth to Richmond, in lots of 65 feet frontage, with depths varying from 125 feet to 275 feet. It is very eligibly situate for the erection of villa residences of from 45l. to 50l. per annum. Adjoining Twickenham-park, and the St. Margaret's estates, and within ten minutes' walk of the Twickenham and Richmond Stations. For plans and particulars apply to MOSES ADAMS and SON, Surveyors and Auctioneers, Isleworth. If the above be taken as a whole by any respectable man, it will be let at 25 per cent. less than if let in lots separately.

CRYSTAL PALACE, ANERLEY, and NORWOOD.—Most eligible PLOTS of BUILDING LAND, overlooking the gardens of the palace, TO BE LET ON LEASE for ninety nine years, suitable for shops, private houses, and taverns; also at Hackney, overlooking Victoria-park.—For plans and particulars apply to Mr. JAS. BRAGG, Surveyor, Devonshire-villas, Rotherhithe.

GROUND TO BE LET, for building of fourth-rate Houses, in a neighbourhood surrounded by factories.—For particulars, inquire at the Hamilton Arms, Hamilton-street, Wandsworth-road.

BRENTWOOD, ESSEX.—TO BE LET or SOLD, TWO PLOTS of FREEHOLD BUILDING GROUND, most eligibly situate close to this town and railway station. Three-fourths of the purchase-money allowed to remain on mort-age, or money advanced to builders, if required.—Apply to Mr. F. HARRISON, 6, Bloomsbury square, London.

CLAPHAM PARK.—TO BE LET, in the most desirable part of Clapham Park, a few PLOTS of FREEHOLD LAND, having a southern aspect and a depth of 600 feet.—For terms and particulars apply to Mr. J. T. KNOWLES, 1, Raymond-buildings, Gray's-inn.

TO STONEMASONS

TO BE LET, from Lady-day next, an excellent HOUSE, with show-room, workshops, yard, &c. conveniently situate, adjoining the Quarry, in Blisworth, in which the business of mason has been successfully carried on many years. Inquire of Mr. SIMPSON, Potterspury, Stony Stratford.

RICHMOND-HILL, SURREY.—Some eligible PLOTS of LAND TO BE LET, upon long Building Leases, in this delightful and attractive neighbourhood, where at the present time there is a great demand for houses. Respectable builders taking this land will receive great assistance from the ground landlord, in the supply of bricks at low prices and long credit; also in moderate cash advances. For plans and particulars, apply at the Offices of Mr. BLENKARN, Architect, 3, Sise-lane, Bucklersbury.

TO BE LET, on a long Lease, from the freeholder, a PIECE of GROUND, measuring 400 feet by 75, suitable for the erection of fourth-rate houses, situate in Battersea New Park, near the Duchess of York. Low ground-rent.—Apply to Mr. LTCHES, Rectory-grove, Clapham.

HAINAULT, ESSEX.—The Commissioner in charge of her Majesty's Land Revenue is desirous of LETTING, in one Lot, or in plots of from 10 to 50 acres, for the purpose of building Detached Villa Residences, or otherwise, for which it is admirably adapted, that section of the Queen's Allotment within HAINAULT FOREST, lying east of the high road leading from Romford to Chigwell-row, containing about 45 acres. This portion of the Queen's Allotment lies very compactly within a ring fence, abutting on a good road, within three miles of the Romford station, and twelve miles of London. The soil is gravelly, and well supplied with water. The surface of the land is undulating, and studded with a large quantity of fine oak timber, and highly ornamental white-thorn. From it extensive and picturesque views can be obtained, embracing the River Thames, with the Kent and Surrey hills in the distance; and the whole of this extensive plot has a most park-like appearance.—For particulars apply to JOHN CLUTTON, 8, Whitehall place, Westminster.

TO BE SOLD, THREE PLOTS of BUILDING GROUND adjoining the Belvidere, at the favourite and fashionable Watering-place of Weymouth, in the county of Dorset. They are eligibly situated in front of the celebrated Bay, and close to the terminus of the Wilts, Somerset, and Weymouth Railway.—For particulars, apply to Mr. HENRY DEVENISH; or Mr. GEORGE ARDEN, Solicitor, Weymouth.

FREEHOLD and LEASEHOLD BUILDING LAND.—TO BE SOLD, several acres of valuable Freehold and Long Leasehold BUILDING LAND, situate close to the railway station at Reigate, fronting the sea, and adjoining the town of Ramsgate, on the Hill at Highgate, and fronting two roads, within a few minutes' walk of two railway stations, and close to Windsor and Eton.—Apply to Mr. SPEARMAN, Estate Agent, &c. 63, Pall-mall.

RICHMOND.—ST. MARGARET'S, on the banks of the Thames, opposite Richmond Gardens.—This most beautifully situated mansion, recently erected by Messrs. Cubitt for a nobleman, TO BE SOLD, with such a quantity of land as may suit a purchaser, so be viewed by cards only.—Apply to Messrs HARRISON & LEWIS, 14, New Boswell-court, Lincoln's-inn, or GEORGE MORGAN, Esq. Architect, 5, Chancery lane.

FREEHOLD.—For SALE, EIGHT ACRES of BUILDING LAND, at Bow, situate a few minutes' walk from the railway station, surrounded by roads, and commanding peculiar advantages. Also, several eligible Sites for third and fourth rate houses, within half a mile of Mile-end turnpike.—Apply to Mr. HAMMACK, Sen. 59, Bishopsgate-street, City; and Bow, Middlesex.

TO SMALL CAPITALISTS.

TO BE SOLD, FOUR PLOTS of FREEHOLD BUILDING GROUND, for the sum of 250l.; viz. one at Bushey, Herts, 33 feet by 165 feet; one at Hook, near Kingston, in Surrey, 47 feet 3 inches by 240 feet; one at Merton, Surrey, 37 feet 6 inches by 160 feet; and one at Clapham Station, 27 feet by 140 feet.—Apply to J. IVISON, Builder, Bowling-green-street, Kennington.

TO FOUNDERS AND TIMBER MERCHANTS.

TO BE DISPOSED OF, for a long or short term, the LEASE of extensive PREMISES, near the Surrey Canal, containing engine, blast and pot furnaces, annealing ovens, &c. and very suitable for planing and sawing mills. A corrugated iron house upon the premises, for residence and offices.—Apply at Bell's Patent Cement and Colour Works, 2, Wellington-street, Goswell-street, London.

TO LAND-OWNERS, ESTATE AGENTS, AND OTHERS.

FREEHOLD or COPYHOLD (to be enfranchised) LAND.—WANTED to PURCHASE from TEN to FIFTEEN ACRES, not beyond fifteen miles from London, and within an easy distance of a railway station. Kilburn or north-east of London would be preferred. The ground must have good means of drainage, but frontage to road not essential provided an access to broad road easy.—Full particulars, with lowest price, to be addressed to JOSEPH JENNINGS, Esq. Architect, Kingstreet, Portman-square, before the 31st inst. Letters to be endorsed, "Offer of Land."—Dated March 3, 1854.

TO BUILDERS AND BRICKLAYERS

AT REIGATE.—The BUSINESS of a BRICKLAYER, Stonemason, and Plasterer, carried on by the deceased for a period of upwards of thirty years, having become vacant by the death of Mr. C. Briggs, it is proposed that the GOODWILL should be LET by TENDER, for the benefit of the widow. The delightful scenery of Reigate and its almost unparalleled facilities of railway communication is now appreciated by the public, and the increased demand for house property in the neighbourhood has been spiritedly met by the landowners, several large estates having been devoted to building purposes. To a man of energy and capital, therefore, the present offers a very unusual opportunity for embarking at once in an old-established trade. An annuity to the widow, who is advancing in years, will be preferred. The highest Tender will not necessarily be accepted.—Full particulars may be known on personal application at the Office of Mr. WM. THORNTON, Land Agent and Surveyor, Reigate.

TO BUILDERS

TO BE SOLD, the LEASE and BUSINESS of a BUILDER, with extensive premises, situated in the main road to Kennington, five minutes' walk from the Elephant and Castle. Lease, sixty years.—For particulars, apply to Mr. TARCEY, 24, Commerce-place, Brixton-road North.

TO ENGINEERS, IRONFOUNDERS, &c

TO BE DISPOSED OF, by Private Treaty, the extensive PREMISES and STOCK of the PHŒNIX FOUNDRY, in Lancaster, and the well-established business connected therewith, full particulars of which may be obtained on application to Messrs. GWYNNE and PRICE, 46, Basinghall, London; Messrs. CHESSHIRE and GIBSON, Birmingham; Mr. JOHN GRANTHAM, C.E. Liverpool; Rev. PETERCRILL, C.E. Manchester; Messrs. EVANS and EVANS, Bond-street, Leeds; JACKSON and MAWSON, Architects, Bradford; Mr. THOS ACKRIN, Architect, Newcastle-on-Tyne; Messrs. ANDREW WOODROW and SON, 57, Buchanan street, Glasgow.

FAMILY COLONIZATION LOAN SOCIETY (Originated by Mrs. Chisholm), 29, Bucklersbury, London.—The Legislative Council of New South Wales having placed at the disposal of this Society funds for the promotion of Emigration to that Colony, the Committee give notice that they are prepared to receive APPLICATIONS from Parties desirous of EMIGRATING to SYDNEY, for LOANS, to be applied in part payment of their passage to that colony.—Further particulars may be obtained on application to SAMUEL COGDON, Secretary.

MONEY on LOAN, at 3½ per Cent. per Annum.—ARNEWAY'S CHARITY.—NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are enabled to lend on the Trust Money to poor occupiers or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes and Prince's, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent-garden. The amount of each loan is not to exceed 15l. is to bear interest after the rate of 3½ per cent. per annum, and is to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No. 14, Great Queen-street, St. James's Park.

By order, EDWARD S. STEPHENSON, Clerk and Solicitor to the Trustees.

NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

ONE FIFTH of an ACRE of FREEHOLD BUILDING LAND for 5*l.*—The freehold estate at Staines, Middlesex, fronting the high turnpike road from London, and in proximity to the Ashford and Staines railway stations, on the South-Western Railway, purchased for the members of the National Provident Freehold Land Society, is now ready for allotment, with frontages of 40 feet, by a depth of 240 feet. Allotments, with frontages of 20 feet, for 2*l.* each. Plans of the estate may be inspected at the Offices of the Society.

The next PUBLIC BALLOT will take place at the Theatre of the Literary Institution, Staines, on TUESDAY, the 28th inst. at HALF-PAST SIX p.m.; the Right Hon. Viscount Chewton in the Chair. JOHN P. COX, Secretary.

47a, New Oxford-street, London.

HOME COUNTIES and METROPOLITAN FREEHOLD LAND SOCIETY.—A PUBLIC MEETING will be held at RADLEY'S HOTEL, New Bridge-street, on WEDNESDAY, the 29th of MARCH, at EIGHT o'clock in the Evening, when a Ballot will take place for Forty Shares. Each share drawn (if the subscriptions are paid) will confer a right to choose land on the superior Estates at Wood green and Wimbledon-park. Shares can be taken up to that meeting. Interest at the rate of 5*l.* 8*s.* 4*d.* per cent. per annum is given to subscribing members. HENRY KNIGHT, Secretary.

Office, 14, Chatham-place, Blackfriars.

The Builder.

SATURDAY, MARCH 18, 1854.

AT last the PANOPTICON, in Leicester-square, is open for its purposes, and we may congratulate the architect, Mr. T. Hayter Lewis, on the completion of what must have been a work of much labour. A large crowd filled the building on the 16th, and the general effect was certainly very satisfactory. In 1851 we gave a plan of the building, and a view of the intended elevation,* and these have been carried out without material alteration, excepting as regards the dome, for which glass and iron were at that time proposed. We afterwards printed a paper by the architect, containing details of the construction and decoration of the building,† and in our present number will be found a view of the interior.‡ We may briefly repeat that the hall is 98 feet in diameter, the dome 72 feet, and the central light in the dome 32 feet in diameter. The total cubic contents of the hall and of the recesses for the boxes are about 500,000 feet. The superficial quantity of light is equal to about 1,300 feet of horizontal light, or 1 foot to every 385 cubic feet, and this is found sufficient.

Mr. Lewis has bestowed much pains on the decorations, the whole of which, with the exception of the paintings on the flat ceilings, were designed by him. The latter were executed by Messrs. Harland and Fisher, decorators. Mr. Lewis had early determined to put in the chief part of the decoration in positive colours. To get an aërial effect, the mode usually adopted in decorating an apartment is to get lighter in tone towards the top. In this case, however, it was thought necessary, as all the light was at the top, to get a mass of colour there, and the fear was lest it should have the effect of bringing the ceiling down. The plan on which the architect proceeded, to use his own words, was this:—"I put in the ground of the dome of a deep blue, beginning with the most intense colour at the bottom, and carrying it up lighter as it approached the top: the projecting faces of the ornaments were put in of a deep red, lightened like the blue, and the relieved edges were left white. This was sufficient to separate the positive colours on the one side, the ornaments being seen in profile; but on the other side the edges were hidden by the perspective, and the positive colours would have been thus seen directly against each other. To obviate this harshness, I had at first left a light margin round the outer edges, but eventually an edging of gold was put all round, and this has quite answered the purpose. This free use of gilding made me apprehensive of producing a gaudy effect; and numerous experiments were made, with a view of testing what comparative amount of gilding would best harmonise with certain proportions of the primary colours. I searched through every work that I could think of, but could find no experiments to demonstrate this." It is clear, for many reasons, that gilding does not take the place of yellow: for instance—if gold leaf be held up against the light, the yellow is lost, and a brilliant green appears. If a layer of gold leaf be driven into glass or paper by a violent electric shock, the gold is resolved into almost its ultimate atoms, nearly disappears, and a purple ground results. But a more practical proof is given by the effect of the mosaics in the Italian churches; these are commonly of the deepest positive colours, brought out strongly on a gold ground: were this gold exchanged for yellow, there can be no question that the effect would be harsh and gaudy in the highest degree; yet there is none of that effect produced by the gold, which only forms a rich and harmonious background. If a red ornament be put upon a blue ground, the effect is harsh; separate them by a light line, and this effect is removed: a gilt edging does the same, but a yellow will not, unless very light.

In trying experiments, to form white light (as nearly as possible) with blue, red, and gold, the results contradicted the received theory. The proportions usually considered necessary for making white light, which are adopted at the Government School of Design, are taken from Field's work, published in 1835, and are yellow 3, red 5, and blue 8 parts. But it was here found that the proportions are red 3, yellow 5, and blue 8, or in 100 parts, red 19, yellow 31, blue 50. Trying gold in the same way, the red, gold, and blue neutralized each other in the proportions of 15, 55, and 30; the gold thus taking one-third from the blue, and one-fourth from the red. By gas-light, the yellow tint told powerfully, and the red, yellow, and blue were as 12, 42, and 46; the red, gold, and blue as 9, 66, and 25, an immense difference. "Now, this would seem clearly to prove that, with ordinary positive colours, at least one-half of the surface by day and two-thirds by gas-light might be gilt without producing a gaudy effect."

Mr. John Willson, of Southwark, was the builder: the ironwork was executed by Messrs. Grissell: the chandeliers (partly designed by the architect, and partly by Mr. Brock) were made by Messenger, of Birmingham. The business of warming the building was entrusted to Mr. Goldsworthy Gurney. It is effected by a "warming battery," constructed by connecting a series of about fifty zinc plates, of 10 inches by 8, with a copper or iron tube which passes through the centre of the plates: these plates are arranged about half an inch asunder, at right angles with the tube, thus presenting the appearance of a galvanic battery. The tube is connected with an iron pipe, leading to a boiler, from which steam passes into it. By this means the centre tube and the plates attached are heated, and communicate warmth to the air passing over their surface. The air is thus rarified, and then, ascending through gratings into the hall, diffuses a uniform temperature throughout the whole building, being replaced as rapidly as it rises by the cold air below. The batteries may be connected in groups, or divided over a building. In the Panopticon there are two groups of sixteen each in the basement, which are found sufficient, we are told, to warm the whole of the rotunda.

The cost was small. In such an arrangement it is of course necessary to prevent the possibility of the air being burnt by remaining in contact with an overheated pipe. To cool the air, the fountain in the centre of the hall will be put into operation two or three times during the day: this has seventeen jets, and the water can be thrown up, by a pneumatic apparatus, 90 feet, from an artesian well, 346 feet deep. The decorations are in enamelled slate, by Mr. Magnus, with glass mosaic enrichments, by Mr. Stevens. The green and blue do not go well together. Some of our readers may find it worth while to look at the Derbyshire alabaster, which has been used in parts of the building.

The exterior presents a larger amount of coloured decoration than has yet been attempted in our streets; its duration will be matter for notice. Much of it consists in tiles, prepared by Mr. Minton. These were at first unglazed, but it was found these would not wash: glazed tiles were, therefore, introduced. The entrance porch is of Ransome's artificial stone. The iron portcullis here is worth notice. The escutcheons by the way, which form a prominent feature in the front, are those of Bacon, Watt, Barry the painter, Shakspeare, Herschel, Goldsmith, Newton, Davy, and Purcell the composer, together with the Royal arms, and the bearings adopted by the Panopticon itself.

The objects of the institution, we suppose, are understood by all. The charter says it is "to exhibit and illustrate, in a popular form, discoveries in science and art, to extend the knowledge of useful and ingenious inventions, to promote and illustrate the application of science to the useful arts; to instruct, by courses of lectures, to be demonstrated and illustrated by instruments, apparatus, and other appliances, all branches of science, literature, and the fine and useful arts; to exhibit various branches of the fine and mechanical arts, manufactures, and handicrafts, by showing the progress to completion in the hands of the artizan and mechanic; to exhibit the productions of nature and art, both British and foreign;" and to do a variety of other useful and agreeable things. We hope the committee will always bear their real purpose in mind. The name (from the Greek *pan*, all, and *optomai*, I see), was originally given, if we remember rightly, by Jeremy Bentham to a prison on the radiating system designed by his brother, wherein the inspector could see the prisoners without being seen himself. We hope the Panopticon of our day will prove one of those educational levers which will gradually lessen the necessity for bestowing thought on any prisons at all.

We will not now attempt any description of the various fittings of the building.

An ascending-carriage to take visitors to the photographic rooms has been constructed by Messrs. Bunnett and Co. This machine consists first of a column composed of cast and wrought iron of the entire height of the room (seen on the left side of our engraving). Around the shaft is suspended, by means of four ropes, an ornamental carriage capable of holding eight persons. The entire weight of the carriage and its contents is balanced by a counterpoise in the interior of the column attached to the four ropes suspending the carriage, and free to move through the entire length of the column. Underneath the counterpoise is secured a strong rope connected at the other end to a wallower, firmly fixed on a spindle, to which is attached a worm wheel, worked by a strong wrought-iron worm. Motion is communicated to the carriage by an arrangement of pulleys carried on a spindle, on one end of which is placed a bevel wheel, geared into another fixed on the worm shaft.

There is a glass cistern to exhibit a diving apparatus: various machines from Mr. Whitworth and others, including the universal shaping and planing machine, and Brock's vertical sawing machine, will be found; together with the largest electrical machine ever constructed, and a battery of corresponding power. For music there is an organ of great size and compass, exceeding, it is said, every other in the metropolis; and art is represented by the works of several of our best sculptors.

We have now to see how the directors will use the means at their command.

THE LOUVRE AND THE TUILERIES UNITED.*

THIRD EPOCH, OR THE EXTENSION.

HAVING stopped Le Vau, Colbert determined to throw open the whole matter to public competition, and the architects of Paris were invited to send in designs. It appeared, however, that although the professional brethren of Le Vau had been willing and ready to prove, by very sound arguments and criticisms, the defects of Le Vau's design, they were incompetent to conceive others of superior merit, and they were rejected. But there was an eminent physician, a mere amateur of art, who submitted a project, which, novel in idea, bold in conception, and

* See p. 129, *ante*. For "Le Mesurier" *read* "Le Mercier."

dignified in character, seemed to equal the expectations of the magnificent Louis XIV. and his minister. Claude Perrault, supported by the personal influence of his brother Charles, who was secretary to Colbert, was fortunate enough to have his plan regarded with great favour, particularly as Le Vau's, which had been sent to Rome to Nicolas Poussin to submit to the judgment of the architects there, had been generally condemned. Then the artists of Italy were invited to submit designs for the completion of the Louvre; and although numerous projects were sent in, still it appeared that the Italian artists, yielding to too lively and irregulated a fancy, did not limit themselves to practical ideas, but gave themselves up to fantastic notions, which did not fulfil any of the conditions and restrictions required by the actual state of the building.

Louis XIV. and his advisers, disappointed at this result, and distrusting their own judgment as to the design of their own countryman Perrault, a physician and not an architect by profession, were anxious to try whether the palace of the capital of France might not find its architect, worthy of S. Peter's by the enchanting porticoes of its fore-court, and had embellished Rome and other parts of Italy by conceptions of the highest class. Rome was essentially the republic of the fine arts in all periods. Sculptor, decorator, painter, or what not,—every one conceived himself capable of being an architect; and Rome owes some of its most remarkable, though, perhaps, not its most beautiful monuments to men who, without going through the preparatory ordeal of professional study and apprenticeship, had the courage —perhaps I should say temerity—to think themselves competent,—prepared designs, and by favour were appointed to execute them.

Bernini, then in the ascendant, had certainly, by his colonnade of S. Peter's, the Baldachino, and staircase of the Vatican, and the Church of l'Arricia, proved that he combined fancy with judgment, skill, and taste, to a very eminent degree. His reputation dazzled the French king; and Bernini was invited to come to Paris to see the Louvre, and prepare a design. The cavaliere anticipated a Cæsar's victory, and the "*veni, vidi, vici*" result of the great Roman. His journey to Paris was a triumphal progress. Deputations went out to meet him with speeches and memorials, as he approached the principal cities of Italy and France. When he neared Paris, an officer of the Court offered him the greetings of the *Grand Monarque*, and a royal equipage and princely retinue conducted the no less illustrious artist to the anticipated scene of his future triumphal glory, where a noble mansion and munificent allowances awaited him and his assistants. But although caressed by the king and Colbert and the courtiers around the royal presence, the noble-minded Bernini found that there were attacks which genius, generosity, and frankness could not resist. The men he was brought to supplant called in question his talent, caricatured and maligned his intentions, defamed his works: a tide of defamation set in upon him. Under such unexpected malignant persecution, his imagination left him; he made a design, given in Durand's Parallel, which too much ignored all that had been done before. Although remarkable for simplicity, and nobleness of plan, and breadth of effect in the elevations, it certainly did not answer the expectation formed, and he soon left Paris disappointed, yet not without munificent tokens of the regard and esteem of Louis XIV. and his courtiers, who admired his brilliant talents, and respected his fine personal character.

Perrault then resumed the place which his previous success had gained him. His plans were adopted, and on the 17th October, 1665, Louis XIV. laid the first stone with great ceremony; and so great had become the impatience to which all the above-mentioned obstacles had given rise, that the works were commenced, and carried on with such order, that the new façade with the colonnade was completed in five years. It would seem that Perrault had adhered to the plan originally laid out by Le Mercier and carried on by Le Vau, and had merely increased the depth of the mass of buildings on the south and east sides of the court. I shall not stop to describe the features of Perrault's design, so well known to those who have visited Paris and admired the noble colonnade of the Louvre. I shall only allude to one remarkable evidence of the character of the execution. The two inclined cornices of the central pediment consist each of a single block of stone, 54 French feet long, 8 feet broad, and 18 inches deep. Practical men will understand the difficulty of raising such colossal masses 100 feet high and setting them in their place; and it is but just to bear this testimony to the architects of this period, that the constructions executed for Louis XIV. though carried on with extreme haste, are of the most solid, durable, and substantial nature: they were composed of the best materials, set out with all the most intricate skill of their celebrated science of the "*coupe des pierres.*" I inspected a portion of the grand flight of steps of the terraces of Versailles with my friend Mons. Nepveu, under whose direction that palace, during the reign of Louis Philippe, underwent considerable alterations and received extensive additions. That gentleman pointed out to me the extreme care, regardless of expense, with which the constructions generally of Louis XIV. were executed, and he assured me that the whole palace was carried out with the like scientific skill and attention.

The Louvre, by 1671, received its external coating of the colonnade, and had had 380,000*l.* expended upon this new part, without receiving any of the internal fittings: in fact, we may consider that Perrault had laid out an amount equal to 800,000*l.* of our time on the mere carcase, as it were, of his operations during these eight years. But a new fancy, and that one no trifling project, had been begun about the same time as the Louvre—I mean, the new Palace of Versailles, where Louis XIV. wished to create a new city and palace for the residence of himself and courtiers, in the midst of a sandy barren desert. In twenty-seven years Versailles absorbed 3,246,000*l.* money of that period, which we may consider equal to seven millions of the present time. About 900,000*l.* of our money were expended in the year 1686 alone. This new project cast into the shade the old Louvre of his ancestors, and as the purse, even of Louis XIV. could not bear the continued drain of two such palaces, the Louvre was left unfinished as it was, little more than a bare carcase.

This state of neglect continued for seventy or eighty years, until the middle of the last century, when the Louvre, instead of being a complete palace, with its internal fittings duly in order and a degree of arrangement prevailing, was but a mass of incoherent divisions, appropriated to various incongruous uses; devoid of the finishings usual even in ordinary dwellings, many of the windows unglazed, nay, unsashed; in parts without roof; portions occupied as warehouses and stables, or used for ateliers by painters, sculptors, modellers, and various trades, and even for baser purposes. In some parts on the north side private dwellings were attached to the very walls. Mons. de Marigny, superintendent of the royal buildings, remedied many of the gross abuses to which the Louvre had been subjected. Mons. Gabriel, the most celebrated architect of that period, and who erected the elegant "*garde meuble*" in the "Place de la Concorde," was charged with the completion of the façades and other works, which he carried on with great zeal and taste; and after his death Soufflot continued the operation. But the usual fate of this unfortunate palace never abandoned it; and after a few years the energy of reparation and completion relaxed, and this noble building, which, during the 120 years of the joint reigns of Louis XIV. and XV. had been begun, left off, and resumed, abandoned again and again, was still, when Louis XVI. mounted the throne, an incomplete palace, and almost as uninhabitable as when Mons. de Marigny commenced the Herculean task of cleaning out the Augean stable. The sad misfortunes of Louis XVI. and the horrors of the French revolution supervened, put a stop to all public works, whether useful or ornamental, and matters resumed their usual state of chaotic disorder, leaving the occupation of its corridors, halls, and chambers to the chance of the most violent, daring, and ungovernable "*sans culotte,*" who claimed a portion for his right, as a citizen privilege of "first come first served." It was as a town taken by storm.

FOURTH EPOCH, OR THE IMPERIAL.

At length Napoleon Bonaparte was declared emperor in 1804, the star of the conqueror revived the past glories of the Tuileries and the Louvre, and a new era opened upon these palaces. The most valued spoils of his Italian victories consisted in the treasures of art which he directed to be transported to Paris; but where were they to be placed? The vast scale of accommodation which the Louvre offered proved to be peculiarly adapted for the purpose, and M. Raimond, architect, was directed to prepare the halls and chambers to receive the new acquisitions—a vast and difficult operation, which he carried on with much ability and rapidity until his death in 1805. He was succeeded by Messrs. Percier and Fontaine, who had to reconcile the various incoherent parts which existed in the elevations of the different sides of the court—to add in one part and to suppress in another; and they, with consummate skill, at length completed the court in about twenty-four years' time, giving it that harmonious *ensemble* which it at present offers, and which seems to be the result,—not of several ages, each with its peculiar style,—not of numerous architects with different views and various tastes,—but almost as though it were of one period and of one master-mind. Thus the completion of the Louvre, both with regard to its structure and decoration, was accomplished within the first thirty years of the present century. It is not my intention to enter upon a critical review of the discrepancies of style, arrangement, or taste in the various parts of the Louvre. It appears rather a matter of congratulation than of criticism, when we consider that, amidst all the fatalities of its career, it should have escaped a total shipwreck; and that the noblemindedness of great men of state, and the exquisite skill of her architects, and their respect for the labours of their predecessors, should, under such obstacles, at length have preserved and handed down to us a monument of the very highest class of art. The Louvre forms a precious historical page in the annals of architecture, tracing, with little interruption, the various modifications of taste during three centuries. The exterior façades and the internal elevations are in themselves harmonious, though discordant from each other, and yet not offering so strong a contrast as to shock one's prepossessions; and, in fact, they nowhere evince deficiency of study, nor an absence of the very highest qualities of artistic merit, whether in the conception or execution.

FIFTH EPOCH, OR THE COMPLETION.

We will now turn to contemplate the great architectural fact of the present day, the completion of the Louvre and Tuileries, by their combination in every part, so as to form a congruous whole. Perrault had originally designed a project for this purpose, but here the deficiency of his ability as an architect made itself apparent. If executed, the addition would have thrown into the shade the Tuileries and the Louvre. He encumbered the intermediate space with twenty courts or vacant "*places,*" square, oblong, octagonal, round, and elliptic. He surrounded them with edifices of all sizes, and of as varied forms. He lost all the breadth of which the area admitted, and destroyed the dignity of ample space. The able Desgodetz vindicated his profession, towards the end of the seventeenth century, by a more noble arrangement, simple, and well understood; and, by a judicious disposition of certain masses of buildings, he masked the differences of levels and lines, which existed between the two palaces.

The Emperor Napoleon entertained the idea of uniting the two palaces, but the practicability seemed beyond realization; for there existed an entire quarter of the town between the two, consisting of churches, palaces, streets, public institutions, and private houses, the mere purchase of which, and compensation for the trades and privileges of the inhabitants, seemed likely to absorb a considerable portion of a whole year's income of the empire. However,

numerous projects had been prepared from 1800 to 1812, by some of the most distinguished architects of the day. That of Messrs. Percier and Fontaine was approved by the Government, and in consequence, the north side of the Carrousel was, in 1811, begun to be enclosed for the length of about 700 feet, by a building corresponding with the Gallery of Henri IV. on the south side. The Triumphal Arch of the Carrousel from their design had already been erected. The first stone was laid in 1806, and the cost, which amounted to 40,000*l.* was paid by funds derived from the conquest of Holland. Thus did the conquered provinces of France provide the means for the memorials of their own subjugation.

One great difficulty, in the geometrical disposition for the union of the two palaces, consisted in the want of verticalism and parallelism between the block of the Louvre, the long wing that united the palaces, and the extended front of the Tuileries. To reconcile these differences and produce symmetry of effect, was the great stumbling-block of all parties, who, forgetting how ill able the eye is to detect slight differences in execution, and small divergencies of parallelism in distant masses of building, sought to reconcile these incongruities by intermediate masses, and expedients of circular ends to the court, or by subdivision and diminution of the "Place du Carrousel," sacrificing the noble character produced by vast space, and limiting the "*Colpo d'Occhio*." It was apparent, also, to some, that the Tuileries was deficient in domestic offices, residences for the household officers and persons attached to the court, and particularly in residential accommodation for the immediate family of the sovereign, the grand suites of saloons and apartments for court ceremonials absorbing almost entirely the rooms required for domestic comfort. Some of the projects provided new wings, and *corps de bâtimens* attached to the Tuileries, next the garden; others on the other side of that palace, next the Carrousel. It had been, ever since 1805, a favourite project to transfer the great national library of the Rue Richelieu to the new constructions; and, throughout, one of the absolute conditions was to maintain the two main thoroughfares for even public vehicles, which have existed ever since the time of Louis XV.

Louis XVIII. continued, in 1820, the wing constructed by Napoleon, for an extent of some 70 or 80 feet. He died in 1823, and the brief reign of Charles X. succeeded, but no further addition was made. Louis Philippe, although promoting architectural works in Paris, thought it wiser to complete the other public edifices, which he found in progress when he mounted the throne, rather than to begin a new project of such enormous cost. These were numerous and expensive operations, and certainly Paris, at his expulsion, had assumed a more complete aspect than it had ever hitherto done. After the Revolution of February, when the Republic was proclaimed, the project of the junction of the palaces was revived, as a judicious mode of tranquillizing the turbulent disposition of the working classes, apt to create "*émeutes*" when not employed.

In 1835, Mons. Brunet-Debaines, now of Havre, prepared a very fine and comprehensive plan for the additional family and household accommodation in connection with the Tuileries, and for the allocation of the National Library, galleries for the exhibition of works of industry, and also for the opera house and *chateau d'eau* in the Place du Palais Royal. He forms a central square in the Carrousel, 900 feet wide by 750 feet long: at each corner of the present Carrousel, next the Tuileries and next the Louvre, he forms masses of buildings with a central court, projecting about 200 feet into the court from the long sides, north and south, extending 400 feet from the Tuileries and the Louvre respectively; thus resolving the great court into a species of Greek cross. In each of the masses of buildings next the Tuileries he forms two courts for stables and coach-houses, domestic offices, accommodation for the persons attached to the court, and family conveniences for the Royal Family, compactly disposed. The courts next the Louvre are respectively appropriated to buildings for the library, and to an extension of the picture galleries.

My friend Mons. Dusillion exhibited a design in 1849, the leading features of which are similar to Mons. Visconti's. He continues the wing begun by Napoleon up to the place opened in front of the Palais Royal: here the line of frontage then breaks back about 25 feet, and its direction is changed so as to be at right angles to the place and to the axis of his new building. By another slight break just beyond the place it forms another recess, and is continued until it comes in a line with the wing of the Louvre built by Percier and Fontaine, where it turns round to meet the Carrousel. At the distance from the Tuileries of about two-thirds the length of the court, Mons. Dusillion throws a building quite across on the line of the axis of the Place du Palais Royal, with two projecting wings producing a noble inner court next the Louvre, 500 feet wide by 400 feet deep, called that of the Bibliothèque Nationale, and smaller courts, 100 feet wide are enclosed within the "*corps de bâtimens*." His conception is simple and dignified. He preserves the axial *alignements*, and still a noble extent for the Carrousel of 1050 feet by 900 feet. Faithful to one idea, Mons. Dusillion devotes the whole of his new building to the reception of the vast collection of books, medals, and other objects of the great National Library, by a very imposing and convenient distribution of halls, staircases, and galleries; and their junction with the Louvre is direct and easy. Any addition to the domestic accommodation of the palace of the Tuileries forms no part of this design.

THE DESIGN OF MONS. VISCONTI.

To comprehend properly this project, we must understand the programme traced by the hand of his sovereign, and which it had to satisfy. The idea of transferring the National Library to this site was abandoned. The Emperor Louis Napoleon wished that accommodation should be provided for the residence and administration of his two ministers, to whom was confided the execution of all public affairs. His Majesty also desired that provision should be made for the periodical exhibition of the works of modern artists, so as to relieve the pictures of the old masters in the Louvre from being covered up, and those galleries from being appropriated for that purpose, as had hitherto been necessarily the case. There was to be stabling for 140 horses, and coach-houses for fifty carriages for the use of the Emperor and public purposes.

Let us now see how this has been accomplished. Mons. Visconti has continued the line of front next the Rue de Rivoli in one continuous direction, and without any other break than slight projections here and there to relieve the monotony of an uninterrupted façade. On the axis of the Place du Palais Royal he introduces a central entrance to the ministries, and carries out into the Carrousel a block of building 700 feet long by 290 feet deep, projecting into the grande place 230 feet, and containing two large courts averaging 200 feet by 140, and one less court 140 feet by 80. This block he appropriates to the two Ministries of State and their dependencies. From the long gallery next the Seine he throws out a like block into the Carrousel, 600 feet long by 230 feet deep, with two courts larger than those previously described, and a similar smaller court. A very grand staircase will lead to the first floor, which, as well as the entrance floor, is to be appropriated to the annual exhibition of modern works of art: they will also connect with the galleries of the Louvres containing the old masters. In the centre will be a most splendid hall, two stories high, richly decorated, 67 feet wide, 200 feet long: this will be used for the meeting of the "Corps d'Etat" when the Emperor wishes to convoke them. There will be a riding-house of like size beneath in one clear span, and in the basement story the stabling for 140 horses, and under the old gallery next the Seine the coach-houses for the fifty carriages.

The central block in the right wing facing the Palais Royal, and on the same axis as it, will form a noble entrance-hall, vestibule, and thoroughfare for foot-passengers and private carriages going from the Place du Palais Royal to the Place Louis Napoleon, as the space between the two wings is to be called, the centre being occupied by ornamental gardens, like the square gardens in London, with fountains and statues of Louis XIV. and Napoleon I. In the centre, porticoes will face the Place Louis Napoleon, decorated with marble statues of the great men of France, and the whole architecture will correspond in style with that of the Louvre, with a more discriminate use of decoration and a greater relief by contrast. The present plain front of the Louvre facing the Tuileries will be made to correspond with the new building by a little more ornamentation than it at present possesses, for when originally designed by Pierre Lescot, it only faced inferior streets and dwellings, and was therefore executed with great simplicity and absence of decoration. To those so well competent to judge of the ability and reasonableness of this disposition of plan, it is needless for me to offer any comment upon the skill and taste which have conceived it.* But I cannot forbear to observe that it harmonizes and blends together the two incongruous and apparently incompatible masses of the old palaces—it reconciles the obliquity of the wings—it preserves the vista from the façade of the Tuileries up to the Louvre—by the judicious contraction of the Place Louis Napoleon it renders appreciable the vastness of the Carrousel,† still of gigantic extent, about 900 feet square, sufficient to manœuvre squadrons of cavalry, and encamp (in case of need) its thousands of troops. There still, however, remains to be provided domestic, family, and household accommodation for the comfort of the Royal inhabitants, and hereafter will have to be added in contiguity to the Tuileries, and, either in the Carrousel or on the garden side, masses of building, to render this a comfortably habitable, as well as the most vast and sumptuous palatial residence in the world.

These colossal operations of the Louvre are but part of a vast series of improvements now carrying out, as you are aware, in Paris. The present Emperor, with his usual penetration, feels the full importance of giving employment to the industrial classes, of encouraging the fine arts, as among the finest illustrations of his reign, and contributing to the refinement of the people and the improvement of manufacturing productions. He equally appreciates all the influences upon the health of the metropolis, and the advantages to commerce derivable from clearing away the old closely confined quarters, and opening up new lines of thoroughfares. The works at the Louvre are a portion of this extensive scale of operations to be promptly and vigorously carried out. The decree for the works necessary for this object was dated the 12th March, 1852, and a sum of one million and twenty-seven thousand pounds to be expended in five years, judged requisite. The first stone was laid on the 25th July following, and at the end of the same year the north wing had been carried up 6½ feet above the level of the Rue de Rivoli. During the last year the contracts were entered into for the masonry, carpentry, and iron work for nearly all the parts of the new buildings to the extent of 800,000*l.* In March last year, 1,200 workmen were employed, increasing in numbers until November, when 3,000 were on the works, and in December, 2,000.

192,000 cubic yards of earth have been removed; and there have been worked up—109,000 cubic yards of stone and concrete: 300,000 kilogrammes of iron are already used.

In 1852 were expended	.....	£47,800
„ 1853 „	.....	227,040
Making together	.....	274,840
Besides other outlays, amounting to...		48,714
Already expended..	.....	£323,554

The premature death of our lamented friend Mons. Visconti, the highly gifted architect, in December last, was a grievous loss; but so unremitting had been his attention, so ready his conception, that, when I visited Paris in October last, he showed me between 150 and

* The plan will be found in our vol. x. p. 444.

† Size of Lincoln's-Inn-square, 845 feet by 625. Size of Russell-square, 700 feet square.

CHANCEL SCREEN: CHURCH OF CHAPEL-LE-FERNE.

200 drawings of details, which he had prepared; and in which the particulars were so minutely specified, that the work, if carried out agreeably to them, will have that unity and grandeur of conception and refinement of taste in every part, that will stamp this as one of the greatest works of the age. The architect, with noble disinterestedness casting aside all personal considerations, has conformed to the style of the original type, and will leave it as an inspiration of the sixteenth century, matured by the experience, refinement, and masculine good sense of the nineteenth.*

T. L. DONALDSON.

CHANCEL ARCH IN CHURCH OF CAPEL-LE-FERNE.

THE church of Capel le Ferne consists of a nave and chancel only, divided by a stone screen somewhat similar to that of Westwell, given in the *Builder*, p. 31, *ante*. The annexed drawing represents the screen, together with the details. The church stands on high ground, between Dover and Folkestone, but is surrounded with large trees, so that it is difficult to find without a guide.

J. E. C.

PRESENTATION OF THE ROYAL MEDAL FOR ARCHITECTURE.

ON the 6th inst. Earl de Grey presided at the meeting of the Institute of British Architects, and presented to the several successful competitors the prizes awarded to them. These (independently of the Royal gold medal) were as follow:—To Mr. Edward Tarbuck, for an essay, entitled, "An Historical Sketch of the past Development of Architecture as a Fine Art," the silver medal of the Institute; to Mr. Hayward, for an essay "On the Pre-Gothic Age of Architecture in Germany, and the Romanesque Development of the Rhine and Central Europe," a medal of merit, with an honorary addition; to Mr. Elgood, for an essay on "Architecture, its Past, Present, and Future;" and to Mr. T. A. Britton, for an essay on "Timber and Deals, with some Remarks on Seasoning and Dry Rot," each a medal of merit; to Mr. Gompertz, for a set of Designs for a Metropolitan Railway Station, a prize in books. To each of these gentlemen the Earl de Grey, with his usual cordiality, addressed some encouraging remarks. His lordship then proceeded to present the Royal gold medal to Mr. Philip Hardwick, R.A. and said—The next prize is that which the munificence and kindness of our sovereign authorizes me to distribute. Mr. Hardwick, you will, I am sure, from what you know of me, feel that no part of the duty which devolves upon me from my position in this chair, is more grateful to me than that of being the means, as the interpreter of the feelings and wishes of your professional brethren, of offering you the mark of their respect and admiration which I am now authorized to present to you. You know me well enough to feel that what I say is not a mere compliment. It is not for me, in speaking to a man like yourself, and in such a society as the present, to enumerate the various claims you have on our admiration and approbation. It is not for me, however fond I may be of architecture, and anxious to encourage it,—to set up my opinion; but I think I may honestly appeal to everybody when I say that the prize now in my hand is given to a man who has great talent of invention, and the power of accomplishing many different objects in many different ways. I am one of the Goldsmiths' Company, and therefore have enjoyed many festive meetings in their magnificent hall. I also am occasionally obliged to travel by the railroad; and the young gentleman who has just now received a prize for his suggestions on that subject, has an excellent specimen before him of a man who can form a grand railway station. Again, when we remember by whom the most ornamental and important part of one of the great legal institutions of this country, Lincoln's Inn, was constructed and decorated,—when we recollect that for one of the largest systems of docks in this country we are indebted to my friend, and to his energy and capability in satisfying the wishes and wants of a great mercantile body—I do not believe it is necessary for me to say that he affords an exemplification of what man can do, devoted to the purposes which his country calls upon him to fulfil; and when his brethren around him pay a tribute to his merits, I think it is, indeed, well deserved. It is, therefore, a source of the greatest gratification to me that it has fallen to my lot to be the means on the present occasion. If you were not present, I might, perhaps, say more. I have alluded to the professional and public character of Mr. Hardwick; I might say a great deal more with regard to private circumstances. I might allude to the integrity of his character,—the confidence which has been placed in him by all classes,—the references to him in cases of arbitration and similar matters. Omitting these, however, I am satisfied that all who hear me agree with me that the prize which I have now the pleasure of giving, is fully deserved.

Mr. Hardwick replied—It is now my pleasing task to thank your lordship, and you, gentlemen, for having this year selected me to receive this Royal medal, a selection that may be considered a very proud distinction for the member who receives it. I must in the first instance, almost before I thank his lordship for the kind expressions he has used towards me, express on the part of the Institute our gratitude to our sovereign for the interest her Majesty has been pleased to show in the Institute by this mark of her Royal favour. Let me also for one moment advert to her Royal consort, Prince Albert. I believe that through the extreme devotion and attention he has paid to the advancement of art in this country, there is no period that we can look back upon when art was so greatly encouraged as it is at this moment; and I think, without using too flattering expressions, we may date that encouragement from the time when his Royal Highness first came to this country. Let me now for one moment advert to the expressions with reference to myself which have fallen from his lordship. They are to me much too flattering. I cannot take the credit to myself of deserving the very kind manner in which his lordship has brought me to your notice; but this I may say, that having had the honour of enjoying his personal and courteous kindness many years, that however great the gratification I feel for this honour, that gratification is very much increased by the mode in which it has been conferred. Gentlemen, however high the reputation of an architect may be in public estimation, I hold that it is equally important that an architect should feel himself placed highly in the estimation of his professional brethren; and it is that very circumstance which increases the gratification of this honour; for her Majesty, with great kindness, has allowed the members of the Institute of British Architects to determine among themselves the selection of the member who is to receive it; and I cannot imagine, after a long professional career, a prouder position than that in which I am this night placed. Gentlemen, I feel that another point which affords considerable gratification to the architect of Great Britain who receives this medal is, that it is well known to him that it is not confined to architects of this country; but that her Majesty has most wisely considered that excellence in art is peculiar to no soil, and that, therefore, this honour may be participated in by every

* The preceding historical details are founded upon the information contained in the following works, in addition to the writer's personal knowledge of the buildings in question:—"Des plus excellents Bastiments de France," par Jacques Androuet Du Cerceau, 2 vols folio, Paris, 1576-1607; "Mémoires sur la Réunion du Palais Impérial des Tuileries et du Louvre, et Plans de diverses Dispositions pour l'Achèvement de la Place du Carrousel," par Baltard, Architecte, folio, Paris, 1811; "Arc de Triomphe des Tuileries, exécuté en 1808, d'après les Dessins et sous la Direction de MM. C. Percier et P. F. L. Fontaine," oblong folio, Paris, no date; containing numerous projects by various authors for the union of the Louvre and Tuileries; "Projet de Restauration et de Réunion des Tuileries au Louvre," par L. Fortuné Ricard et Delaines, Architecte, small folio, 1835; "Description Historique et Graphique du Louvre et des Tuileries," par M. le Comte De Clarac, Conservateur des Antiques du Louvre, 8vo. Paris, 1853.

part of the civilised world. But, my lord and gentlemen, I cannot but feel that I owe in some degree the position in which I am now placed to the loss which architecture has just sustained by the death of one of her most distinguished professors; and France must deplore in particular that architect who, I am sure, would have had this medal, and would most justly have deserved it. With consummate talent he had surmounted the great difficulty of uniting the Louvre and the Tuileries. After having matured and perfected that scheme with the approbation of the sovereign and the universal consent of the country, he was charged with the completion of that great work in which so many architects of great celebrity had preceded him. But, alas! in the zenith of his high career, M. Visconti was arrested by the hand of death; and it should be a warning to us all, whenever a large work is entrusted to us, not to be too confident that life may be spared to us to witness its completion. My lord and gentlemen, allow me again to assure you that I return you my most sincere and respectful thanks for the distinction you have thrown upon me in having selected me to receive this Royal medal.

FALL OF CORNICE IN THE NEW ROAD.

CONSIDERABLE alarm and much damage were caused last week by the fall of the cornice and parapet of a large repository, similar to the Pantechnicon, which is being built by Mr. Rudkin in the New-road, not far from where Tottenham-court-road crosses it. Several of the workmen were severely hurt, and some of the inhabitants of adjoining houses had a narrow escape. The cause of the accident is obvious. The finished cornice (of cement) projected 20 inches. The stone core projected 14 inches, with a mass of brickwork upon it standing out still further, and to balance this there was simply a low parapet of 9 inches work. The drawings show the binders of the roof resting on the core to keep it down, but it seems that following the figuring on the section, the binders were put in below the core. If it had not been so, however, as there are only four or five of these binders in the length (70 feet), an accident might still have happened. So many disasters have resulted from the same arrangement, that if death had been caused, the consequences, either to architect (Mr. Horace Jones) or builder, might have been serious.

PROPOSED ADDITIONS TO BRITISH MUSEUM.

. . . "The present buildings may usefully serve as a warning, rather than a model, to the architect of any additional structures and his employers."—*Vide page 36 of the Report of the Royal Commissioners on the British Museum*, 1850.

I AM informed that the Lords of the Treasury have consented to the project of a glass building to cover the quadrangle of the British Museum for a reading-room, and as an addition to the printed book department, capable of accommodating 500,000 volumes more; and that the same architect employed for the old buildings is employed for this additional structure. And if my information is correct, the House of Commons will, in the course of the next or following week, be asked to vote a first instalment for this project, which, in its most important bearings, is utterly unknown to the public, to her Majesty's Government, and to the trustees themselves.

Having devoted much more attention to this scheme from its very origin than any person who has ventured yet in public to express a free opinion on it, since the plans were already published so long ago as the 30th June, 1852,—and having had not only ample opportunities but particular occasion afforded to me by the peculiar nature of several services for which I was employed as assistant in the printed book department in the last seven years, to observe, study, and make due note of the requirements in the whole establishments, and of the capabilities in the building,—I consider it a duty now to acquaint the public with the results of such observations as I made in the daily performances of their service.

By dint only of perseverance in the assertion that all the departments, particularly the reading rooms with the printed book department, required a considerable increase of space which the building did not afford, all internal evidence on the matter has been entirely neglected. The principal librarian, in his letter to Sir Chas. E. Trevelyan, dated 25th July, 1851, reports that the trustees

"Have availed themselves of every resource which the existing buildings were capable of affording."

Any person endowed only with the courage to inquire into the origin of this report would see first of all that it rests at least upon mere assertions, without even an attempt at any proofs. And further, by using only his own eyes and judgment, with the aid of a little practical knowledge, he could not fail to arrive at the very opposite conclusion—*that the waste of every resource which the existing buildings were capable of affording, is so manifest*, so proverbial in the whole establishment, as to leave no other question open except whether the evil is past remedy.

This question has led me to the gradual discovery of one of the very rare instances in which the improvement and enlargement of an establishment is absolutely dependant on greater economy in the means allowed for it. And this refers particularly to the printed books department, inclusive of the reading-rooms. All the arrangements in that extensive portion of the library are so singularly and unnecessarily confused, and rendered so remarkably inconvenient through the most wilful extravagance, in space, in services, in expenditure of every kind, as to render the projected increase now of such a mass of confusion, a dangerous experiment for the existence of the whole establishment. At the same time, however, it is easier there than anywhere else to show, by foot and by inch, that nothing but a systematical *re*arrangement is required to afford double the accommodation now existing for the number of visitors to the reading-rooms and for the number of volumes on shelf; with a considerable diminution of the present expenditure for service, to which the present staff, though now consisting of eighty-five persons, is already inadequate, as it is constantly growing at the same time as the arrears in that department are ever growing in number and in importance.

Thus, whereas the projected construction in the quadrangle is completely preventing such a *re*arrangement, however necessary, and considerably increasing all the present evils past remedy, there are at present still vast and extraordinary resources in the building *to remedy those evils;* and the *re*arrangement of which I speak implies above all an immediate extension of the present reading-rooms to nearly double their size; or speaking by figures, the entire plan of this rearrangement implies an increase of room, by utilizing the waste of 2,400 square feet in addition only to the reading-rooms; 14,631 feet to the printed books department; 1,938 feet to the manuscript department; 1,560 feet to the print-room; 6,088 feet to the antiquities department; 17,900 feet to the natural history, zoology, and mineralogy; 616 feet to the botanical department; and 785 feet to the secretary's department; making a total of 45,919 square feet recovered from absolute waste, by collecting and rendering compact each of the great departments which are now broken and dispersed all over the immense pile of buildings.

The main principle of this internal *re*arrangement and organization of such distracted elements of building, is:—

1. To prevent the great loss to the public and expenditure of again disturbing the collections, which in their main body are now at last, after a great number of years, definitively placed and arranged with care, and by an instructive system, and to remove only their outlying and scattered, or at least much more moveable portions, from inconvenient to convenient localities.

2. To render each of the seven departments as above enumerated totally independent of each other, with direct access from the entrance-hall, and to the secretary's department with the governing board.

3. To remedy the extreme deficiencies of light, and of free circulation in each department, particularly in that of printed books, and remove the principal eyesores for architects and persons of good taste.

All these important objects can be accomplished at once, without even the erection of so much as a single front wall, and at an expense very much below the amount of the yearly vote hitherto passed by the House for the building purposes of the British Museum.

But this plan of rearrangement is further calculated also to secure a future increase of about 82,000 square feet, principally convenient for printed books or for antiquities, at an expense of 720 feet of front walls alone, of one story, with basement, and without purchasing for it new lands, or covering the quadrangle.

And, finally, in the event of purchases of the contiguous property being found expedient, perhaps at some future period this plan of rearrangement is particularly calculated to provide a gradual development for each of the seven departments, singly, as enumerated, and always independent of each other.

Before knowing the sense of the public or Government upon such results in their general outline, it would be premature to enter upon particulars. Yet these, it must be understood, are fully prepared and drawn out from materials collected in the service of the Museum, and in the consultation on single points with practical architects, and particularly with foreign visitors.

The plan is undoubtedly susceptible still of great improvement by any architect who might be impelled to take it up, with a comprehensive mind on the present and the future exigencies and resources for real utility and for grand effects. Although proceeding from motives of enthusiasm natural to the discoverer of a curious and important fact, the proposed *re*arrengement is indispensable. It *must be recommended* to the public at some future day in a much worse state of complication if that extravagant practice of "*additional structures*" be not discontinued now at once, and without any reference to projects at Kensington or anywhere else.* The trustees having "entered a disclaimer, both of credit for the perfections and of responsibility for any alleged defects of the present buildings," their necessary rearrangement before anything else, is not a mere question of opinion, but one of facts and figures which cannot be disputed.

J. F. VON BACH.

PURIFICATION OF THE METROPOLITAN GAS.

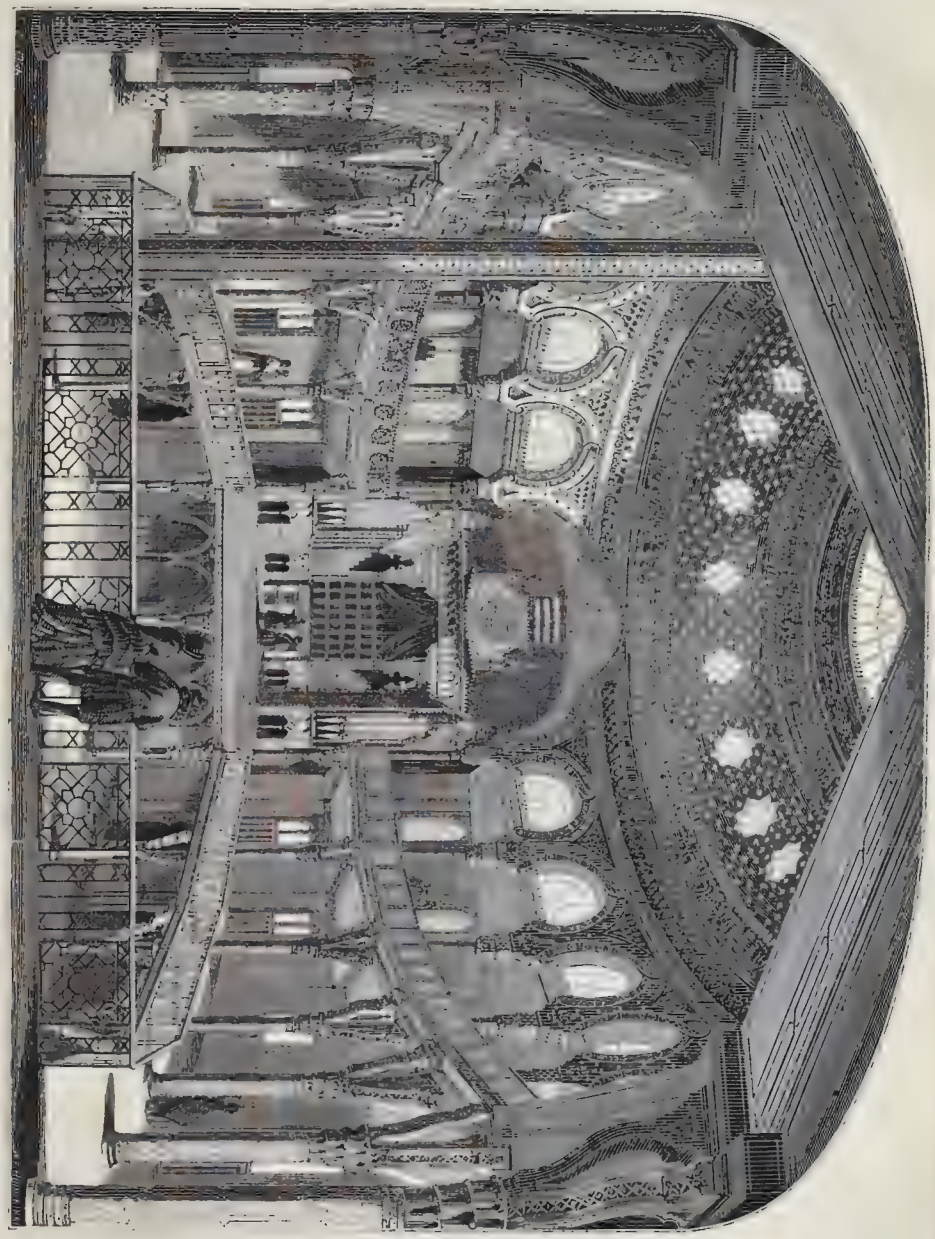
ON one occasion, we remember, while listening to a friendly discussion, in which a professor in the Edinburgh University took part, his antagonist treated rather unceremoniously some "fact" which the professor had adduced, by ejaculating vehemently,—"I deny the fact—I deny the fact:" the gentleman whose veracity, or whose "fact" at least, was thus set at naught, very quietly silenced his somewhat more boisterous than polite adversary by coolly retorting,—"Ah! my good fellow, if you deny facts, I have done—there's an end to all argument with *you*." We have been reminded of this little *contretemps* by the no less unceremonious denial of Dr. Letheby's fact as to the existence of oil of vitriol in the products of combustion from the London gas, not only in the quantity alleged to have been actually obtained, but in any quantity, however small. This denial, however, is made by a gentleman (Mr. Lewis Thompson, M.R.C.S.) whose authority in chemical questions we have reason to respect; and as it is not only positive, but something more,—involving not only Dr. Letheby's accuracy as a chemist, but his character as a gentleman incapable of either the "misrepresentation" or the "falsehood" with which he is actually charged,—we are curious to know how the Dr. will receive and treat such a mode of dealing with his facts. Meantime, the style in which he is treated in respect to this important matter would naturally induce one rather to question than to assent to the counter assertion of Mr. Thompson, at least till his antagonist had an opportunity of defending his own accuracy, both

* Whether it be determined or not hereafter to give up the entire building, or any part of it, to the library alone, its re-arrangement as indicated still remains the first and essential condition for the proper and *immediate* enlargement of reading-rooms and library, and is absolutely prevented by the present project of additional structures.

professionally and morally speaking,—if indeed he would deign to notice at all an antagonism so strongly put.

It so happens, however, that since the two contradictory statements were made, both of which we have in fairness laid before our readers, not only Dr. Letheby, but Mr. Thompson himself, has modified his own original statement; so that between the two shifting positions a not inconsiderable approximation has been mutually made towards an intermediate and common though as yet somewhat indefinite agreement and understanding. Thus Dr. Letheby, in a report to the City Sewers Commission, subsequent to that already given in our pages, explains, or, at least, repeats in a very much modified form, that "a large portion" of the "21 grains" of "sulphuric acid" actually got from the products of the City gas combustion "would, doubtless, be neutralized by the ammonia of the gas;" whereas he had previously stated, according to the reporters for the daily press, that the products, if not, in fact, the gas itself, contained so much "noxious matter" that "he had obtained 21 grains of oil of vitriol from 100 cubic feet of gas, which was getting into the atmosphere." In regard to this amended statement we must add that we transcribe from a quotation made in a second communication by Mr. Thompson, which appears, as his first also did, in the *Journal of Gas-lighting:* we hope, therefore, that we are not doing Dr. Letheby an injustice in supposing that he *has* so explained or modified his somewhat startling original statement. On the other hand, Mr. Thompson himself, in this second communication, no longer alleges that there is "*no* oil of vitriol whatever in the products of combustion got from any coal-gas," but limits his previous and scarcely less startling statement to a declaration that "nothing like twenty-one grains of oil of vitriol ever were obtained, or ever can be obtained, by any living being, from 100 cubic feet of any coal-gas, as consumed by the British public throughout her Majesty's vast dominions. I admit no exception," he somewhat supererogatorily adds; —and a very safe challenge this is *now*, quoad Letheby, if *he* meant, as is now implied, that "a large portion" of the 21 grains of "sulphuric acid" did not exist in the shape of free "oil of vitriol" in the "100 cubic feet of gas" at all. If, however, it was intended, notwithstanding, to startle the public into the idea that it *was* free oil of vitriol of which he spoke, there was certainly a spice of chemical quackery in this that was by no means justifiable. But, as the question now stands, what are our doughty champions fighting about? If a "large portion" of the corrosive under consideration be neutralized, the implication is, that there is only a small portion of it in the corrosive state. Does Mr. Thompson still deny that there is even a small portion of it in that state, or does he not *now* deny this? As to his *reason* why there is not, or cannot be *any* oil of vitriol in the products from the combustion of coal-gas, namely, not so much *because* of any counter *facts* disproving it, but "*for* [or because] the ammonia it constantly contains is more than sufficient to neutralise and render harmless both the sulphurous and sulphuric acid caused by its combustion,"—we freely admit the probability that there is quite enough and more than enough of ammonia in coal gas for such a purpose, but ammonia itself is decomposible, and consists of hydrogen and nitrogen; and it does not seem to occur to Mr. Thompson that it is perfectly possible that in a somewhat complicated chemical conflict, such as that which must occur in the combustion of impure coal-gas, not only may the sulphur of the sulphuret of ammonia or other ingredient be oxygenated by the air into acid, but the hydrogen of the ammonia itself may also at the very same time be oxygenated into *water*, freeing the nitrogen, while this very water is precisely what the sulphuric acid requires or demands in order to constitute oil of vitriol; and every chemist knows that nature often *compromises affinities*, and is induced to *modify* them by *à priori requirements* or *demands* of this very kind. The question, however, is one of *fact* much more than of *reasoning;* and we are very much mistaken indeed if the facts of the case, independent altogether of those adduced by Dr. Letheby, are not precisely in the teeth of Mr. Thompson's facts as well as of his reasoning. Thus the remarkable rotting and destruction of book-bindings in one of the London clubs, *investigated by Professor Faraday*, and a like mischief to the library of the Literary and Philosophical Society of Newcastle-upon-Tyne, appear to have led to the discovery that gas *is* frequently impregnated with corrosive substances, oil of vitriol being proved at Newcastle, if not also in London, to be at least one of these substances; and be it noted here that it is a matter of small importance to the public whether such corrosive agencies be sulphuric acid, oil of vitriol, sulphuret of carbon, or indeed anything else of a corrosive nature; so that to disprove the possibility of its being oil of vitriol matters very little to the point of real importance in the question at issue,—a point, however, with which Mr. Thompson fully identifies his own antagonism to Dr. Letheby; but, more than this, we are greatly misinformed if *oil of vitriol* has not been already *proved* to be the very corrosive agent which does, or at least once did, all this mischief,—a mischief which is notorious.

A correspondent of our own quite recently drew attention to this subject in a communication wherein he describes the effects produced in the library referred to at Newcastle, and the means taken to obviate them. By reference to our impression for 24th January of this present year, page 17, it will be found that in describing the peculiar apparatus there put up, with a tube for the ventilation of the products of gas combustion in the library, after it had been *ascertained* that the rotting and destruction of the book-bindings were attributable to these corrosive products alone, he says,—"At first a tap was put at the bottom of this tube, but it could not be kept tight *from the corrosive nature of the water:* the arrangement now adopted is to suspend a *glass* vessel, by means of a brass collar and a bayonet-catch below the open end of the tube; and the water collected is removed every morning. Notwithstanding the rapid updraught, and that, consequently, a considerable portion of the water flies off by the chimney, the quantity collected every morning from four chandeliers is at present upwards of half a gallon. *This water, when analyzed, has been found to contain a large quantity of sulphuric acid, and sulphate of ammonia, as well as sulphate of iron and sulphate of copper*, which last, of course, it gets from the pipes." Now the "sulphuric acid" in this "water" must have been "oil of vitriol," as all sulphuric acid is so long as it is in contact with water, its affinity for which is so great, that it has been used as a drier of moist air from its very power of absorbing water even after it has been already converted by it into oil of vitriol.



Will Mr. Thompson venture to "deny" any of these "facts?" And if not, what become of his own bold assertions? There are more reputations at stake, we fear, than Dr. Letheby's.

But although the question, as we have seen, is not limited by Dr. Thompson to metropolitan gas, being put so as to extend to the combustion of coal-gas anywhere or everywhere, what we are more particularly interested in at this moment is the question of the purity or impurity of the London gas. This is a question for decision by chemists, but it does not seem to be likely to be settled in the way the present antagonists have gone to work. If, as Mr. Thompson states in his second communication on "The Oil of Vitriol Bugbear,"—"Davy, Faraday, Wollaston, Henry, Ure, Graham, Brande, Cooper, and, in short, every chemist of celebrity in Great Britain has been fee'd and consulted on the purification of coal-gas by the different companies," and if the eyes of the metropolitan companies are now opening, as we are happy to say they seem to be, to the importance, to their interests, of the vast field of profit still lying fallow in private dwellings, and hence to the absolute necessity of not only rendering their gas perfectly pure, but of convincing the private families of the metropolis that now it *is* perfectly pure,—why do they not at once procure such overwhelming chemical evidence to that effect as will carry everything before it, and so open the way by degrees into every dwelling throughout the metropolis, however humble or however high? It has ever been our opinion that to this great end they must and will come; and it was mainly to prepare the way for this that we became, as the public organ of the companies themselves declared we were,—"The *monopolist* of *incendiary* [that is, of light-spreading] gas intelligence"—the soul and spirit of the movement, which we alone originated and successfully carried out, in favour of "cheap and good gas." We have steadily looked forward to the time when the London gas would and *must* be made pure enough for use in private dwellings. Are we to understand that that period has now arrived? If so, let it at once be proved that it is so, and the companies may depend on our strenuous efforts to promote their interests by assisting in the extension of their gas throughout the private dwellings of our fellow citizens. Of this we have often assured them. Thus, on 15th December, 1849, in an article titled "Success to the Gas Movement," we remarked—"The manufacturers, old and new, will soon find that *increased consumption* IN PRIVATE DWELLINGS will constitute their grand field of profitable operations, *and with all our heart we will second their efforts in this direction*, for that is the real goal of all our past exertions in this good cause. But to this anticipated and almost illimitable diffusion in private dwellings—from hall to kitchen, from kitchen to parlour, from parlour to drawing-room and bed-chamber—purity, extreme purity, is absolutely essential: there can and will be no such diffusion without it, *and hence the bringing of the price within reach of all classes in domestic life will inevitably be accompanied by an increase, not by a deterioration of purity.*" At that time and subsequently, threats had been held out, in order to prevent the reduction in price for which we had been fighting, that the companies would adulterate the cheap gas 37 per cent.! Have they done so? We freely give them the credit of believing they have not. On this point we insisted, again and again, that the very contrary must unavoidably be the result, and therefore urged consumers, and would-be consumers, to "persist in their demand for *cheap* gas, without any fear of this threatened bugbear." Most sincerely do we trust, then, that Mr. Thompson's communications, in which he speaks so pointedly of "the enormous advantages of gaslight in private houses," as well as other communications, urged upon us in the interests of the companies, are an earnest and an assurance that we were right, and that the time has now arrived when our anticipation is about to be fulfilled. But again we must press the suggestion, that the *bad odour* in which metropolitan gas has long been held by the heads of resident families can only be dissipated—even though "the oil of vitriol bugbear" really now be nothing but a bugbear—by an overpowering weight of first-rate chemical evidence, once for all procured and widely published, to the effect, that *the metropolitan gas is now so pure as to be perfectly eligible for use in private dwellings.*

ROAD FROM BROMPTON TO THE PARK.

THE miscalled "Kensington Improvement Act Amendment Bill," to facilitate access from one large district to another, was thrown out on the second reading, not because any one doubted the importance of getting the desired road, but because of the form in which the Bill had been introduced. The result is much to be regretted. It is hoped that something will yet be done to obtain the desired improvement: both the Kensington Improvement Commissioners and the Royal Commissioners of 1851 ought to stir in it. If a building be placed in the way of obtaining the improvement it will be a sin against the metropolis. If those who have the right to prevent the formation of a road are determined against allowing carriages to pass, they might surely be led to admit a gate for foot passengers. Private feeling ought to yield to the general good.

"BUILDINGS BILL."—The *Observer* says, "Government have instructed the General Board of Health to prepare suggestions for a Buildings Bill, to serve for the country as well as for the metropolis."

THE ROYAL PANOPTICON, LONDON.—Mr. T. Hayter Lewis, Architect.

THE NATIONAL INSTITUTION OF FINE ARTS.

The collection at the Portland Gallery, opposite the Polytechnic Institution, Regent-street, is now open to the public, and consists of 438 pictures, mostly landscapes. Mr. R. S. Lauder, and Mr. J. E. Lauder, take the highest place, the former for his "Portrait of a Lady" (71), a relation of one well known in the arts, and "The Lady of Shalott" (232), and the second for his "Tambourine Player" (263). Miss Howitt exhibits a very clever first picture from Faust, bought by Mr. W. Herbert; Mr. Duffield a very first-rate still-life piece (56); Mr. Middleton a good portrait, "Mr. Xeminès" (217), and Messrs. Williams, Sidney Percy, Gilbert, and Boddington, a large number of their usual pictures, scarcely equal, however, to previous works by the same hands. Mr. Wingfield's "Poins" (46), Mr. Willis's "Pleasant Nook in North Wales" (270), Mr. Egley's "Charles V. at the Monastery of Yuste;" Mr. Wyburd's "Day Dreams" (386); "Ghent," by Mr. A. Montague; and the "Flight of Mary Stuart from Lochleven" (408), by Mr. Glass, are amongst those which will obtain attention; and Mr. Barraud, Mr. Elen, Mr. Wells, Mr. Herring, and Mr. Dukes, should not be passed by. Some small landscapes by a young artist, Mr. E. Hargitt, are promising.

PROVINCIAL NEWS.

Boston.—The project of erecting a building for a corn exchange, athenæum, &c. has been revived in a way likely, it is said, to be successful.

Peterborough.—The statement respecting the removal of the organ-screen erected by Dean Monk in Peterborough Cathedral has been contradicted.

Torquay.—The proceedings of the local board of health here, since its introduction, have been anything but satisfactory to the ratepayers generally, says the *Shrewsbury Chronicle*, "for whilst on the one hand there has been a great expenditure of money (for salaries), not the slightest improvement has taken place in the state of the streets. Meetings are convened from time to time, but for what purpose? It appears to do nothing."

Birmingham.—The inscription-stone of the building in course of erection in Bishop-street, to accommodate the Sunday-schools in connection with the Moseley-street Wesleyan Reform Chapel, was laid on Tuesday in last week by Mrs. John Wright, of Sparkbrook. The new school-room will be 75 feet long by 18 wide, and the erection will cost 450*l.* The number of scholars is 256, who are instructed by thirty-three teachers.

Loughborough.—The town-hall movement appears to have received an impetus during the last week or two. About 5,000*l.* have now been raised by donations and shares. An offer, it is said, has been made for a site, adjoining the Loughborough Bank, which will enable the projectors to make a street through from the Market-place, opposite Mill-street, to Woodgate, for the convenience of the public.

Higham-on-the-Hill.—A correspondence has taken place between one of the tenderers for the erection of the parish church here and the rev. gentleman at the head of the church building committee in respect to the decision announced by us on 4th inst. The result of this correspondence is by no means satisfactory. The rev. committeeman appears to admit that he had explicitly promised that the builders tendering should have fair play, and even that no special understanding was come to that the lowest tender might *not* be accepted. He at the same time disclaimed what would have been his only excuse under such circumstances for not selecting the lowest tender, namely, that the tenderers were not of sufficient *status* as to character and responsibility. What he must have meant by fair play, therefore, it is hard to conceive: we question whether he himself knows. The only fair play in such a case that could be honourably observed was to select the lowest tender. By, on the contrary, rejecting it and accepting one 80*l.* higher on a sum of about 800*l.* the committee cast a deliberate slur on the business reputation of every one of the lower tenderers, while probably the only motive was mere favouritism towards the one selected. There is a recklessness of conduct in such procedure which every honourable mind will reprobate.

Newark.—Barracks for the Notts militia are about to be erected in this town. On the northern side there will be a long range of buildings looking south, having in the centre the stores and armoury, with residences for the quarter-master and serjeant-major on either side, each communicating with the centre building. In the rest of the range will be provided comfortable dwellings for about twelve serjeants. At the south-east corner of the ground the magazine will be placed, and a building consisting of guard-house, cells, orderly-rooms, &c. will occupy the north-west corner. Ample space will be left for all military exercises, and the whole will be enclosed by a strong brick wall.——The Newark improvement commissioners have ordered that the drain recently laid down from Bridge-street, across the north side of the Market-place, and along Church-street and Kirkgate, should be forthwith taken up and relaid. "The contractors (Messrs. Tomlinson and Harper, of Derby)," says a local paper, "are bound to do it entirely at their own expense, as the agreement into which they entered with the commissioners contains a stipulation that they (the contractors) shall be responsible for the proper working of the drains for twelve months. Nor are the streets above referred to the only places where work must be amended, for it has already been found that a similar mistake has occurred in Spring-gardens. The streets, too, have been newly paved on an improved principle, and just when the inhabitants have begun to reap the advantage of this improvement, it is absolutely necessary to tear it up again. Many parties threw the blame on Mr. Bailey, the town surveyor, but we are informed that the commissioners consider that it was no part of his duty to test the levels as the drains were being made; his duty being merely to take the levels in the first instance, and to prepare the plans, which he did correctly. If the first twelve months had passed over before the error had been detected, the contractors would have been released from their agreement, and the whole burden would have fallen upon the town."

Sunderland.—The Monkwearmouth baths and washhouses, the foundation of which was laid on 20th June, 1853, were opened by the corporation of Sunderland on Thursday in week before last. The building is situated on the site of the old fish-market, opposite Hallgarth-square, and has been erected from a design by Mr. Crozier, engineer to the corporation, by Messrs. Brown, Brothers; under the inspection of Mr. Thomas Ewart, builder. The machinery has been fitted up by Mr. Watson, of Newcastle. The interior is fitted up with every convenience. In the gentlemen's bath-room there are five warm baths, one of which is of the first class. There are also cold and hot shower-baths. In the ladies' room there are five baths, exclusive of a shower-bath and vapour-bath. The washing-room is 56 feet in length by 27 feet in breadth. There are thirty-two stands, each of which contains a cast-iron boiler for the clothes, which are boiled by steam. The floor of this room is formed of cement, and a wooden frame is placed for the washers to stand upon. Manlott and Alliott's patent wringing-machine is placed in the room. In the drying-room there are thirty-two drying-horses. This room is heated by a serpentine-formed steam-pipe; and there are four valves in the roof for letting out the damp vapour from clothes while drying. The ironing-room is 37 feet in length by 20 feet in width. All the rooms are ventilated through the roof. In the upper part of the engine-room there is a water meter capable of measuring 2,000 gallons per hour. There are also two large cisterns capable of containing 2,500 gallons. The total cost of the buildings is about 2,400*l.*

Edinburgh.—The last annual report of the managers of the Royal Edinburgh Asylum for the Insane states, that from the overcrowded state of the pauper department, a great necessity exists for immediately proceeding with large additions to the asylum buildings. From the great rise of late in the prices of building and building materials, the managers are unable to accomplish all that was contemplated in obtaining borrowing powers under the late Act, but they have resolved to proceed with such works as their borrowing powers enable them to execute. These works consist of a new kitchen, &c. having three stories above, to contain accommodation for six higher class patients; an octagon building, and the completion of the southern portion of the unfinished wing of the western department, calculated to accommodate 174 pauper patients; a separate building for noisy patients; new washing-house, laundry, &c. A large portion of the original design of the building appropriated to pauper patients will still remain unexecuted; and an urgent appeal is to be made to the public for assistance.

Kinnaird.—The ancient, roofless, and ruinous Castle of Kinnaird, built nobody knows when, but in the time of slingers and bowmen, is at present undergoing a process of restoration in as far as the roof and battlements are concerned. The estate of Kinnaird, forfeited, with the rest of the Fingask estates, after Culloden, was recently repurchased by the family of Fingask; and the lovers of antiquity are indebted to that family for thus taking measures to prevent the further decay of Kinnaird Castle-keep. Mr. Charles Spence, the bard of the locality, is also both architect and mason for the proposed restoration.

Glenelg.—An Inverness paper states, that the ancient Glenelg towers, known generally in the district by the name of "the Danish Towers," but supposed by Pennant and others to be of Pictish origin, and admired as among the most entire specimens in Great Britain of the primitive architecture to which they belong, have been seriously injured by the removal of stones for building purposes. The proprietor, Mr. Baillie, of Glenelg, has brought the case before Sheriff Colquhoun, for replacement of the stones.

POISONED WELLS.

It certainly does not require a conjurer to explain the mystery of "R. C. C.'s" well, and adjoining cesspools and drains, mentioned in page 134. The "place" may not have been "discovered" where putrid matter "oozes" into the water; but the facts that the bricks below the compo are "black," and "smell disagreeably," that "the water is tainted," and that "diarrhœa and typhus have prevailed," the fever in one instance "having proved fatal," should be taken as proving that drains, cesspools, and well do communicate, and the use of water from this well should at once, and for ever, be discontinued. No repairs will make the water sweet. The present mystery may be explained thus:—Well, cesspools, and drains are sunk in the same subsoil (alluvium): for a certain length of time the refuse is filtered, but gradually the pores choke, and the cesspools fill until there is a vertical head, producing pressure sufficient to force the foul material, unfiltered, into the well: hence the recent palpable fouling of the water, and the consequent excess of disease. The first mistake was making well and cesspool in the same subsoil: contamination was certain, and in a degree has taken place since they were first used. Mere filtration does not purify cesspool refuse, though it may cause the water to look "bright and sparkling." Dr. Angus Smith has analysed the water from scores of wells within and near towns, cesspools, and graveyards, and never found one specimen of water untainted. Many waters, regularly used, were found, on evaporation, to leave a residuum, the smell of which was "awful;" and some waters, said to be "very good," were "positively poisonous with matter from graves, cesspools, and drains." I have personally inspected hundreds of instances where wells and cesspools are sunk in alluvial deposits of sand, gravel, &c. and have heard the owners of such wells and cesspools maintain, in the most positive manner, that no better water could be found than their particular pump produced; although they would acknowledge that the cesspool had received the contents of one or more waterclosets, as also all the house slop-water refuse, and had never required emptying for twenty years. This had been set forth as matter for special congratula-

tion, and as proof positive that sewers and drains of transmission were not required, and that a public water-supply, from a pure source, was not needed.

I would recommend "R. C. C." to drain his house, fill up his cesspools, abandon the present well, and obtain water, at any cost, from a source more pure. Better bore through the London clay, although 200 feet deep, than use "the water of a land spring," contaminated by drain and cesspool matter. Earthenware pipes, 6 inches in diameter, properly laid, will effectively drain the house; and an artesian boring, of 4 inches in diameter, may bring up water enough from beneath the London clay. At all events, if health and life have any value, the present order of things must, at once and for ever, be abandoned. To patch old drains, cesspools, and well, will be to waste money, and to tamper with health and life. R.

Another correspondent writes:—I have no doubt but that the cause arises from a greater abundance of water, which has become stagnant. I have had to deal with several wells like his, and have cured them in the following manner: should the well be of the common size, bring up within the old brickwork a new lining, to the height of the water level, leaving a space of 3 inches between each wall: get some of the coarsest sand he can find, and wash it: fill the said space up with the same.

N.B. The bricks must be laid in moss, to prevent the sand washing through the joints: a very thin layer will do. After that is done, shorten the pump 2 feet and fill the well up those 2 feet with fine washed gravel. I have no doubt but that it will prove a sure cure. G. T. C.

And a third writes,—I cured a well similarly situated to that of your correspondent "R. C. C." by driving a vat or tub, the staves of which were made of (21 feet by 7 by $2\frac{1}{2}$) floor battens, driven their whole lengths, and into the bottom of the well as far as they could be by hand hammers and drifts: the battens should be shot in the edges to the radii of the internal curvature of the well, and then ploughed and tongued as for sheet piling: they should be driven as close to the brickwork as possible, and kept so by wedge-shaped battens if required: as soon as the vat is completed, the back between the vat and brickwork should be grouted with Portland cement, quite full to the top of the vat. The top of the vat must be above the bricks laid *without* mortar in this case at least one foot. W. THOROLD.

CLEAR THE WAY FOR KING CHOLERA!

WE know too well the powerful influence of fear over the human frame,—and especially its influence in the positive production of the dread plague we call cholera, wherever circumstances may tend to induce a predisposition to its ravages,—to be much inclined, at any time, to assist in the excitement of alarm for its impending advent; but it is our bounden duty ever and anon to stir up the slumbering public into something like a consciousness, at least, if not a fear, of this king of terrors. Were the fear a timely and a moderate one it would be entirely beneficial: it is the sudden alarm of immediate, unexpected, and unprepared for danger which is most injurious; and to obviate the latter it is absolutely requisite, at this perilous juncture, to excite the former. But our present purpose is simply that of a reporter, to record, within available compass, the salutary warnings and advices of those—such as Lord Shaftesbury,—who have given this subject anxious consideration.

In the House of Lords on 9th inst. a lengthened discussion took place on a motion by the Earl of Harrowby, "for a copy of the report of the General Board of Health on the administration of the Public Health Act and the Nuisances Removal Act from the year 1848 to the year 1854, and also a copy of a memorandum addressed to the Secretary of State for the Home Department on behalf of a deputation of sanitary reformers on the 7th of February last." His lordship said he wished to call the attention of the house to the sanitary condition of the country, and more especially of the metropolis. He believed it was extremely desirable that the consideration of Parliament should be directed, at the earliest possible moment, to that subject, for it was too much the habit with mankind in general to defer precautionary measures until the emergency which those measures might have averted had actually arrived. The cholera had already reappeared among us, and had reappeared with increased intensity. It was not only more fatal than it had ever been before, but it gave fewer warnings of its arrival in individual cases, and the premonitory symptoms were more rapidly followed by the most dangerous stage of the disease. It was, therefore, most important that they should look around them and see whether they were taking the best means in their power for meeting so great an evil. In point of legislation they were in no better position than that in which they had been placed in 1849, when the epidemic last raged in this country, and when their legislation had been found so inadequate to meet the exigency of the period. He believed that if a central board were entrusted with the power of making those drains which in some districts were absolutely necessary even before a supply of water could be given to such districts, a very considerable improvement would be effected in no small portion of the metropolis. The Bill for the Removal of Nuisances might be rendered much more efficient. In his opinion the ordinary law of the country with respect to sanitary arrangements ought to be suspended whenever we were visited by cholera, and extraordinary powers ought then to be committed to some central authority, which might insist on the adoption of every necessary precaution for the preservation of the public health. That was, he thought, the first step they ought to take in that matter. They might afterwards consider what were the best means they could adopt for the permanent removal of the refuse of great towns.

The Earl of Shaftesbury said he rejoiced to find that his noble friend had brought this important subject under the notice of their lordships. There could be no doubt that this fearful epidemic was about to repeat those ravages which it had committed in 1831-32, and again in 1848-49. It was taking exactly the same course, and it was selecting precisely the same localities, as in those former years. There had on these occasions been preliminary outbreaks of the malady, which, after having gradually abated, had been followed by attacks of ten times greater virulence; and there was but too much reason to fear that the same circumstances would recur during the present visitation. There was a lull now in the progress of the cholera, but there had been a similar lull in the years 1848-49, when the disease, after having fallen to five, four, and even one case a week in the metropolis, had eventually risen to as many as 2,000 cases a week. There was no reasonable ground for supposing that we should not be similarly visited upon the present occasion. The renewed attack which was at present impending over us would not be merely ten times, but twenty times more virulent than any which had ever before been experienced, not only in this country, but in any other part of the world. In 1848 and 1849, it was rare for persons to perish within twenty-four hours; but now it was not uncommon for death to take place within twelve, ten, and even eight hours. In short, hours were now as precious as days, and the neglect of a space of time which, in 1849, might have been retrieved, would in all human probability, in 1854, be attended with the certain loss of life. No ordinary exertions would enable the Board of Health to meet the impending evil: the most steady and energetic exercise of extensive and enlarged powers would be requisite. In very many instances the epidemic had on each occasion broken out in precisely the same localities; and we were utterly without any excuse for not having taken the necessary steps to purify the well-known original seats of the disease. It was a remarkable fact that wherever the houses in which it had first broken out had been examined—and they had in many instances been examined—it had always been found that there had been ample local causes for its attacks. They had either found in them cesspools, or they had found on the walls putrid and reeking matter waiting to enter into unholy alliance with the cholera for the destruction of human life. Their lordships could form no idea, from any description which he might give, of the abominations which rendered certain portions of our towns unfit to be the habitations of human beings—in fact, they could have no notion of the filth, the miseries, and the horrors of every kind which subsisted within a gunshot of the very house in which they were assembled. He believed that to establish a preventive to cholera there was no one thing more useful than a sufficient supply of pure water, not only for the purposes of cleanliness, but also for the purposes of general domestic use. The result of the unlimited supply of pure water in Hamburg had been such, he could state from his own experience, as to put a stop to the ravages of diseases of the skin, which previously, owing to the scarcity of good water, had, to a great extent, prevailed. The permanent and durable advantages of good drainage, good ventilation, and a sufficient supply of pure water, the better construction of dwelling-houses, and the great reduction of the numbers inhabiting these houses, could alone be of lasting advantage in putting an end to those evils which it was so desirable to eradicate. In order, however, to carry out these great works, considerable time and considerable deliberation would, no doubt, be requisite. The churchwardens in the various districts had much in their power with respect to procuring a good supply of water; but he was afraid that unless some central authority were appointed, which would compel these churchwardens to do their duty, the supply of water would continue to be no better than it had hitherto been. There were causes of disease at work in London as well as in all populous localities, which were well worthy of their lordships' attention—he meant those standing nuisances called slaughter-houses, cow-sheds, piggeries, and such like abominations. His lordship then adverted to the state in which Paris stood with reference to these matters. He had himself been over the whole of the city of Paris in search of nuisances, and had been much struck by the cleanliness—he might almost say the attractiveness—of the butchers' shops. There were also in the metropolis manufactories of solid manure. These establishments consisted of large yards, into which the cleansings of all the cesspools were conveyed, and kept there in a mass 20 feet high, until it formed one consistent and solid heap. Now that was a state of things which prevailed in the very heart of the metropolis, and by the existence of which he had not the slightest doubt thousands of human beings had been immolated. He believed that he had said enough to show their lordships what that state of things was for which they were called upon to provide a remedy. What he should propose with reference to the question of the removal of nuisances was, that the central authority should have power, after a certain time, to give orders that the works necessary to be entered upon should be carried out at the expense of the guardians. With respect to means of prevention, houses of refuge should be provided, not for those who had been attacked by the disease, but for those who continued in a state of health

Earl Granville stated that the Secretary for the Home Department was in communication with both Lord Shaftesbury and Lord Harrowby, and with other persons, at this moment, requiring information as to the best mode of proceeding. The powers which had been given to the Board of Health for the last six months would, by an order in Council, be continued for another six months. The Home Secretary was at present considering what powers should be given to Government which would be efficient, and which would receive the sanction of public opinion, without interfering with the exercise of local authorities.

Lord Beaumont asked why the Board of Health had not indicted those persons who stored up manure and kept a number of pigs? They might be proceeded against at law for a nuisance.

The Earl of Shaftesbury said that under the Act the Board of Health had no such power. It was true that private persons might indict persons guilty of such nuisances, but the proceedings were slow and uncertain. A Bill ought to be introduced declaring all these abominable trades to be nuisances in a town, and in this manner they might be got rid of.

Notices of Books.

The Conservation and Improvement of Tidal Rivers. By EDWARD K. CALVER, R. N. London: Weale. 1853.

MR. CALVER has here set forth some general views on hydraulic engineering as applied to marine works, the result of personal observation and practice, and having more special reference to the Tyne. Although, as he says, the book is little more than an explanation of certain examples, rather than a statement of scientific deductions, it contains much that may be usefully studied. For a true system of river improvement he would look to the operations of nature, and he maintains that such a system would have for a primary doctrine,—"that tidal quantity determines sectional capacity nearly throughout the tidal development; that a decrease of one is surely followed by a decrease of the other, *and that this relation is not only coincident, but derivative;* next, that several leading theories are highly objectionable, inasmuch as they are opposed to common observation; and lastly, that river operators of the present day are divisible into two sections, and their systems may thus be classed. One is natural, for it is regulated by a judicious attention to the form in which the river has been received from the hands of Nature; the other unnatural, as it involves a radical change in its entire features. One in its character is ductile,

concentrating the power of the stream, but allowing its superficial range; the other inflexible, confining it within a space it was never intended to occupy. One is a conservating process, insuring the greatest improvement in the navigable condition of the river, without any sacrifice of power; the other is destructive, being the promotion of depth in the interior channel at the expense of the outlet, *and consequently of life itself*."

We fully agree with him in saying that the subject is of national as well as local importance: the want of available harbours is more and more felt.

The Rambler in Worcestershire; or, Stray Notes on Churches and Congregations. By John Noake, Author of "Worcester in Olden Times," &c. Longman and Co. 1854.

THIS is the concluding volume of Mr. Noake's very pleasant and entertaining "Rambles," to which we have already drawn the attention of our readers. The author, who is a reporter for the *Worcester Herald*, here, as elsewhere, shows himself capable of something of a higher order of literary merit than that of mere reporting; and, although he tells us he does not wish to be spared, if we think him worthy of castigation, we claim no gratitude for not doing what he has taken care to give us very little opportunity for doing.

VARIORUM.

"The Russians of the South," by Shirley Brooks, is a small shilling volume of Longman's "Travellers' Library," recently issued, on a subject not only interesting to us all at this moment, but treated so as to sustain its interest. "Adventures in the Wilds of North America," by Charles Lanman, edited by Charles Richard Weld, is another work belonging to the same series, but in two small volumes, or parts, full of narrative and adventure. Messrs. Longman have also published the first part of a people's edition of Macaulay's "Critical and Historical Essays," contributed originally to the *Edinburgh Review*, to be completed in seven shilling parts. A pamphlet, by Lord Stanley, titled "What shall we do with our Blue Books; or, Parliament the National Schoolmaster," has been issued by Savill and Edwards, of Chandos-street. "Observations," by R. Pashley, one of her Majesty's counsel, "on the Government Bill for Abolishing the Removal of the Poor, and Redistributing the Burden of Poor-rate," is the title of a pamphlet just published by Messrs. Longman: it contains a proposal for more equitably redistributing the burden of poor-rate.

Miscellanea.

SCENERY AND COSTUME AT THE PRINCESS'S THEATRE.—In the revival of "Richard III." now being played at the Princess's Theatre, Mr. Kean appears to have attached more importance to the costume than to the scenery,—not that the latter has been neglected, but it has not that distinctive character which it was made to take in "Macbeth" and "Sardanapalus." The first scene, the Garden in the Tower of London, with grass-plot, dial, and terrace-wall is very nicely painted (by Gordon), and so are the Cloisters of Old St. Paul's, and some of the chamber scenes, with their tapestry hangings and fittings, by F. Lloyds. A clever and novel effect is produced in the Tent Scene, and the charge of spearmen and archers in the same act is exceedingly well managed. Still we do not hesitate to say that the most striking part of the revival is Mr. Kean's performance of *Richard*. It is a most complete and admirable performance.

VENTILATION OF THE HOUSE OF COMMONS.—The following have been appointed a select committee to consider of the best means of improving the ventilation of the house, the lobbies, and the libraries, and to report thereupon to the House as soon as may be:—Mr. Spooner, Sir W. Molesworth, Mr. T. Greene, Lord R. Grosvenor, Mr. Hume, Mr. Drummond, Mr. Bankes, Mr. Cayley, Lord J. Manners, Mr. C. Fortescue, Mr. W. Patten, Sir B. Hall, Mr. Bouverie, Lord Elcho, and the Marquis of Chandos. Lord J. Manners suggested that, as the House of Lords had appointed a select committee on the same subject, it would be advisable if the two committees could sit together as a joint committee, with a smaller number of members. He confessed he did not anticipate much benefit from their inquiry.

GAS IN THE PROVINCES.—In reference to a late note on Bridgewater, we observe one or two little circumstances which we may record. The Blackburn Gas Company lately met, and declared a dividend at the rate of 8 per cent. per annum, free of income-tax; when it was stated by the chairman, that although the company had been lately paying as much as 1*l.* 4s. per ton for cannel coal, which they got, for several years past, for 10s. 6d. a ton, they intended to *reduce* the price of gas to the consumers from and after the end of this month. At a meeting of the Wolverhampton Company, the price of coal was also referred to, and in reference to a statement made by the chairman as to a virtual reduction of price being given, as demanded in a consumer's circular, signed by four of the company's own directors, the company not intending to raise the price, although the price of coal had risen so high, — one of the shareholders remarked, that it was evident from this statement itself, that the price of coal had very little to do with the price of gas; for if they paid more for their coal, they got more for their coke; and that in reference to the chairman's assurance, that *when* the company could realise 10 per cent. profit, they would farther reduce the price, he considered that they would soon have 10 per cent. *if* they *now* reduced the price.

SOCIETY OF ANTIQUARIES, NEWCASTLE-UPON-TYNE.—The monthly meeting of this society was held on Wednesday in week before last, at the Castle of Newcastle-upon-Tyne, the Rev. Dr. Bruce in the chair, when an attack upon the society, in the *Newcastle Chronicle*, as a lifeless and profitless one, by Mr. Sidney Gibson, who was said to be a member, four years in arrears, was brought under the notice of the meeting. Mr. G. B. Richardson then read a paper on Sir John Marley and his descendants, some account of which appears in the *Gateshead Observer*. Mr. H. Hinde, in redemption of his pledge, again brought under consideration his proposal to urge the resumption of the printing of a selection of the national records, and read a memorial to the Society of Antiquaries in London, praying that body to be the medium of communication with the Government on the subject. The memorial was approved and adopted, and a committee was appointed to take charge of it, and adopt such measures as might be thought advisable for effecting its object. As Mr. Kell was about to proceed to London, it was proposed that he should be intrusted with the memorial for personal presentation to the society or its secretary. Dr. Charlton stated, in reference to the memorial to the trustees of the British Museum, adopted at the last meeting, that its prayer had not been acted upon, and the Faussett collection had passed into private hands, having been purchased by Mr. Mayer, a munificent citizen of Liverpool, with a view (it was understood) to throwing it open to the public in that city.

SANITARY LECTURE.—A lecture was delivered last week, at Bilston, by Mr. Wigginton, architect, on the "Homes of the Poor, and their several Relations to the Questions of Sanitary Reform." The lecture concluded by giving a sketch of the Metropolitan Association and its charters, explaining its workings and detailing some of its several extraordinary results, physical, social, and moral, backing them up by the excellent financial aspect of the association, caused in a main degree by the punctual payment of the rents, and the trifling deficiencies from bad debts. We are glad to hear that it is not at all unlikely that the president of the institution, the Rev. J. B. Owen, will take the matter up and make another branch of this association in the "black county."

THE SOUTH-EASTERN RAILWAY CRISIS.—A small sixpenny tract, addressed to the proprietors of the South-Eastern Railway, under this title, and with the signature "Lancastriensis," has been published by Cash, of 5, Bishopsgate-street Without. The writer takes the opportunity of the retirement of several of the directors to urge a total change of management, and blames the present directory for reducing the profits of this "highway of all Europe to the metropolis of the world" down to 3 per cent. and rendering it "a by-word of reproach with the public." He thinks that "their contemptible dividend is their own confession of incapacity." Ill-advised branch extensions are mainly blamed for this result, and even now he says the board are about to "construct a railway from a swamp at Lewisham to a gravel-pit at Bromley."

THREATENED STRIKE OF BRICKLAYERS AT LIVERPOOL.—At a recent meeting of the dock committee, the chairman stated that a communication had been received from the contractors for the new warehouse now being erected at the Stanley Dock, praying for a fortnight's delay of the works in consequence of being threatened with a strike of the bricklayers. The men now receive 4s. 8d. per day, and have demanded an advance to 5s. It was stated that the work is already twelve months in arrear. It was decided that no delay could be allowed.

THE NEW YORK INDUSTRIAL EXHIBITION.—A general report, with regard to the New York Industrial Exhibition of last year, has been presented to Parliament by the Earl of Ellesmere, Sir Charles Lyell, Mr. C. Wentworth Dilke, Mr. George Wallis, Mr. Joseph Whitworth, and Professor Wilson, the Commissioners deputed by the British Government to attend the Exhibition. After a statement of their arrangements for inspecting and reporting on the various classes of articles exhibited, they thus proceed:—"In its general character the Exhibition at New York may be said to be successful. The lessons conveyed in the contributions from Europe cannot, we believe, fail to exercise a beneficial influence over the taste, skill, and industry of the United States. There can be little doubt, that in nearly all essential points the Exhibition will prove to the intelligent and industrious artisans and enterprising manufacturers of America much more of an instructor in what has to be done, than an expositor of what has been done by them, for the latter can be alone fairly judged of in the manufactories." Certain departments were assigned to each member of the Commission, with the view of having a special report from each. In raw materials, the report on mining, quarrying, and mineral productions, maps, charts, &c. and philosophical instruments in connection with the latter, was undertaken by Sir Charles Lyell; whilst the report on minerals in their economic relations and metallurgical operations, chemical processes and products; substances used for food; vegetable and animal substances used in manufactures, including also tanneries, was to be prepared by Professor Wilson, together with a report on agricultural implements and machines; manufactures in mineral substances, cements, &c.; manufactures in animal and vegetable substances; miscellaneous manufactures; and also, the progress of scientific education in relation to industry. In machinery, Mr. Joseph Whitworth undertook to report on machines for direct use; manufacturing machines and tools; civil engineering; and on the character and action of the patent laws, and on the system of electric telegraphs, so extensively used throughout the States. In manufactures, the report on cotton, woollen, and worsted; silk; flax and hemp; mixed fabrics; leather (except tanneries); paper, printing, &c.; printed fabrics; tapestry, lace, and carpets; clothing; cutlery and edge tools; iron and general hardware; precious metals, jewellery, &c.; glass; ceramic manufactures; decorative furniture; and on the position of art education as applied to manufactures and the copyright of designs, was undertaken by Mr. George Wallis. The report on the section of the fine arts was assigned to Lord Ellesmere. Of these reports only two have as yet been printed; the others are, however, in a forward state of preparation. The two already presented to Parliament are by Mr. Wallis and Mr. Whitworth.

A NEW SAFETY MINING LAMP has been invented by M. de St. Simon Sicard, and patented both in England and in France. It is an adaptation of the oxy-hydrogen lime light, and, unlike the "Davy" lamp, is hermetically sealed when placed in the hands of the miners. By a supplemental apparatus, this lamp, it is also said, can be made to light the whole of the galleries of a mine, thus placing the means whereby these accidents take place entirely out of the reach of the unskilled pitman.

DWELLINGS FOR THE WORKING CLASSES.—A Society for Improving the Dwellings of the Working Classes has been formed, it appears, in Paris on a large scale, in connection with a committee in London. Its capital is to be 480,000*l.* of which 120,000*l.* will be raised in the first instance by an issue of 30,000 shares of 4*l.* each, the company, in consideration of that expenditure, receiving a subvention from the Government of 60,000*l.* The first buildings are to consist of lodgings for single men, to contain 1,800 beds, and of dwellings for about 600 families. Ultimately it is contemplated to extend the system to some of the principal provincial towns.

BRIDGENORTH CEMETERY COMPETITION.—The designs selected in competition for the erection of chapels, lodge, boundary wall, &c. for this cemetery are by Mr. George Truefitt, and Mr. James Edmeston.

THE STATUE OF RICHARD CŒUR DE LION.—"A." suggests one more site in addition to those already proposed, namely, the open space at the bottom of Waterloo-place, between the Athenæum and United Service Clubs. "Here the statue would not interfere in the least with the traffic, and would still be in one of the most frequented spots in London, and where there is no architecture to interfere with, as in the old Palace-yard."

WESTMINSTER BRIDGE.—We understand that the tenders received for the construction of Westminster-bridge are as follows:—

Meyers. .	£305,000
Crawshay	275,000
Mare	201,000

THE METROPOLITAN DRAINAGE QUESTION.—On the motion in the Commons for reading the Great London Drainage Bill, and after considerable discussion, adverse to the interests of the Bill, especially on the ground of the required power to tax the community, Lord Palmerston said, the Government were now going to re-organise the Commission of Sewers, and had matured plans, after due consideration, which he thought would be of advantage in the drainage of the metropolis. He thought these operations should be under the management of one single authority, acting in concert with the Government; and, moreover, that it might be possible to realize by this drainage some commercial advantage, in order that the profit arising from such might be applied to the diminution of the expenses incurred. The present Bill had no chance of being carried through committee, in consequence of the guarantee clause; and, as far as he was concerned, he should advise that the Bill be negatived. In reply to a question by Lord J. Manners, as to what plans his lordship referred to, Lord Palmerston replied, that he referred to the great arterial lines of drainage, which were to run parallel, or in some relation to the course of the Thames. The point on which his opinion differed from those of the commissioners was as to the detailed manner of constructing the subordinate drainage. It was well known that a controversy was waged as to the nature and size of the sewers to be constructed for the purposes of drainage. The motion for second reading was then negatived without a division.——In reference to the general question, and to the sewerage of Charing-cross and the Strand, a correspondent of the *Morning Herald*, Mr. G. K. Corfield, while alluding approvingly to the Home Secretary's decisive conduct towards the Board of Sewers, but doubting that Mr. Fitzroy's letter to the Board had reference only to the house-drainage, and that no particular system as to the main drainage was yet matured, suggests the experimental adoption of Mr. Bardwell's system of rapid filtration by gravitation, aided by atmospheric or hydraulic pressure, to the sewage of the Essex-street and Northumberland-street sewers, and the disposal of the separated solid sewage to the market-gardeners. At 3*l.* a ton, he says 10,000*l.* a year would thus accrue.

THE EDINBURGH OLD CITY WALL.—The Crown authorities, we learn, have decided on taking no proceedings against any party with regard to the late accident at Leith Wynd. The dean of Guild Court has ordered the removal of about 150 feet of the wall north of the part which had fallen. This portion of the wall belongs to the city, and on evidence that its present state is dangerous to the public, the court has ordered that it be reduced to the height of 4 feet from the level of Leith Wynd, and that the embankment which belongs to the North British Railway Company, shall be sloped at such an angle as to prevent any fall of earth from taking place.

THAMES EMBANKMENT BILL.—On a motion for postponement of the second reading of the Thames Improvement Bill till 2nd May next, in consequence of the engineer's absence abroad, some discussion took place in which objections were made to the arbitrary character of the Bill, which proposed to embank both sides of the river from London-bridge to Westminster-bridge, and run a railway along the whole of it, all claims on the bed of the river to be foreclosed, if not given in within three months from the passing of the Bill. Mr. Wilson said the Government objected to its provisions, and it was resolved to postpone it for six months, or, in other words, to throw it out.

INSTITUTE OF BRITISH ARCHITECTS.—The paper to be read on Monday evening next, the 20th instant, is on "The Drainage of Buildings and Streets in the Metropolis," by Mr. Boulnois. It will doubtless serve as a peg for a long discussion.

THE WORKINGS OF STRIKES.—Previous to the strike, upwards of 30,000 operatives were employed in the cotton manufacture at Preston, and the production of their labour, when trade was in full activity, was estimated at more than 20,000 miles of calico per week. The average of the wages amounted to between 1,600*l.* and 1,800*l.* per week. In consequence of the strike, upwards of 20,000 of the hands have been out of employment for twenty-four weeks, or nearly half a year; the effect of which upon the Manchester market is, that the supply of shirting gives a weekly decrease from Preston of 70,000 pieces. The "turn-outs" have subsisted for the last twenty-four weeks on the earnings of the artisans of neighbouring towns, from whom they have received on an average of 3,500*l.* per week, 84,000*l.*; upon which they have managed to feed their delegates and eke out a miserable subsistence for themselves; while their own losses from wages, assuming the low average of 12,000*l.* per week, already amounts to 288,000*l.* to say nothing of the losses which the masters have incurred from the stoppage of their works, and the permanent damage which the town has sustained.—*Manchester Courier.*

RAILWAY COLLISIONS.—Some time since a correspondent, Mr. E. G. Muddoch, suggested a mode of checking the force of collisions by means of truck fenders fitted up with gutta percha tube cushions and a powerful air apparatus, as already described. The same correspondent now suggests as an improvement that the cushions at the end of each truck be supplied with a double set of concave spring ribs, like the spokes of a wheel without the tire; these, he remarks, being in exact conformity would form a series of arches counteracting each other like the springs of a carriage, and with the air apparatus and tubing could not fail to offer a most powerful resistance to concussion.

FALLING IN OF A RESERVOIR AT WESTON-SUPER-MARE.—A large portion of the eastern walling of the huge tank or reservoir of the Weston-super-Mare Water Works Company, fell in lately, in consequence, it is alleged, of confined air having been forced down the back of the wall during the process of "puddling," which burst forth with the noise of artillery.

FIRE IN MR BIELEFELD'S PAPIER MACHE WAREHOUSE.—The upper part of the premises in Wellington-street North, in the Strand, occupied by Mr. Bielefield, were burnt on Thursday night in last week, and the lower part damaged both by water and fire. There were 10,000*l.* worth of property, it is said, in the premises destroyed, when last the stock was taken.

PARTNERSHIPS WITH LIMITED LIABILITY.—At a meeting of the council of the Liverpool Chamber of Commerce, lately, a resolution was adopted by a vote of eleven to eight, affirming the principle set forth in the report of their special committee—viz. "That the present law, in so far as it prohibits the formation of partnerships with limited liability, is unsound, and an alteration in this and other respects is urgently required." The attendance of directors was larger than usual, and the council sat three hours and a half, during which a very animated discussion took place. A special meeting of the chamber is to be convened on an early day, for the discussion of the council's resolution.

HOUSEHOLD SMOKE PREVENTION.—Dr. Neil Arnott has recently effected improvements upon the principle of Cutler's stove. The supply of fresh coals is put in below, the coked cinders left from the previous day's consumption being piled at the top and igniting readily. A rod attached to the bottom of the grate (which is moveable), descending from it perpendicularly into the hearth, is raised as occasion requires, by a lever, thus carrying the coals upwards into contact with the superincumbent embers. The connection between the grate and the chimney shaft has a funnel-shaped form, terminating in a throttle valve, which can be regulated to any size, and gives control over the current of air passing up into the chimney. With this grate 18 lbs. of coal, it is said, will keep a moderate-sized room at a temperature of 65 degrees for twenty-four hours.

THE IRON TRADE.—There has been a partial falling off in the export trade during the last month or six weeks, but no diminution in the make of iron. Increased orders from France are anticipated. No change in prices has taken place since last quotation. The malleable-nail casters of Birmingham have struck for a rise in wages, and it is expected that the strike will spread throughout the district. It is said to be the unsettled feeling manifested in such strikes which has induced the Government to withdraw the national contracts for fire-arms from Birmingham from a fear of idleness at critical moments.

COMPARATIVE COST AND ADVANTAGES OF IRON AND WOODEN SHIPS.—Mr. James Hodgson, of Liverpool, who states that he was the builder of one of the first iron sailing ships, and of the first iron screw steamers running between Liverpool and several foreign ports, has issued a circular in which he states some of the alleged advantages of iron over wooden ships. From documents quoted it appears to be considered that a well-built iron ship does not depreciate more than 2 per cent. per annum, and that with good care in cleaning and painting the durability of iron vessels will be very great, and their rate of speed considerably beyond the average. The managing owner of one built on Mr. Hodgson's patent, however, starts a serious question. "Would it not be well," he says, "to give more longitudinal strength in some of the very long vessels; for do not the rivet holes in the vertical joints of the plates, and in the rivetting of the bulkhead, almost cut the vessel in two?" Was it not on this account, we may ourselves ask, that some iron ships have actually broken up suddenly into two halves? Surely something has already been done, however, to remedy so serious a fault. Yet the question quoted is dated no further back than June, 1851, and if obsolete, why is it quoted at all, especially in such a circular? An iron ship of 1,000 tons is stated to cost only 13,500*l.* a wooden one 16,500*l.* and in cost of working such ships there is said to be an annual total of 2,295*l.* in favour of the iron ship.

SURVEYORSHIP, MERCHANT TAILORS' COMPANY.—The retirement of Mr. Beachcroft has caused a vacancy here, for which of course there are several candidates. Mr. John Shaw and Mr. P'Anson are amongst those most spoken of.

MALLEABLE IRON CASTINGS.—A patent has been taken out by Messrs. Robertson and Co. of Fleet-street (a communication), for an improved method of producing malleable castings at one operation. The iron employed may be either scrap, wrought, bars, or plates, cut in small pieces: it is to be melted in small crucibles covered in, and to the iron is added from ½ to 1 per cent. by weight of charcoal, or other carbonaceous matter, 1 per cent. of manganese, and 1 per cent. of muriate of ammonia. This mixture is kept melted for about three hours, cast in chill moulds, as railway wheels, or other similar large castings requiring great strength, and subsequently turned, hammered, or forged, as may be required.

ABERDONIAN INDUSTRY.—Two active Aberdonians who arrived at Oban for the emigrant ship *Themis*, says the *Banffshire Journal*, "finding that the ship would take six weeks to repair, heard of a granite quarry in operation at Macniven's Isle. They started, and found employment; and as they are excellent stone-dressers, they earn 30*s.* per week. These are the class of men who will give a standing in progressive and persevering industry to the future empire of Australia. They will clear 6*l.* a-piece while the vessel is repairing." Characteristic and exemplary though this be, we mistake the sharpness of these Aberdonians if they do not also make the contracting shippers "pay up" for their delay and breach of contract. "Had we been six weeks sooner in Australia," they will say, "as by your agreement to sail we ought to have been, we would have been earning something more like 6*l.* a day at the gold diggings than 30*s.* a week in the granite quarry: you must therefore be our diggins for this six weeks' loss, so down with the dust."

TENDERS

For New Baptist Chapel, School-room, and Minister's house, Commercial-street, Whitechapel:—

Locke and Nesham	£8,500	0	0
Wm. Cubitt and Co.	8,238	0	0
Gammon	7,537	0	0

In a few days, price One Shilling.

LONDON SHADOWS;

A GLANCE AT

THE "HOMES" OF THE THOUSANDS.

By GEORGE GODWIN, F.R.S. &c. &c.

With numerous Illustrations by John Brown.

ROUTLEDGE and CO.; and No. 1, York-street, Covent-garden.

[ADVERTISMENT]

Destruction of Warehouses at Manchester by Fire:—

Messrs. RYLANDS and SONS' Books, Papers, and Bank-notes preserved in one of CHUBBS' Safes, after fourteen hours' exposure to intense heat.

Copy of Messrs. RYLANDS and SONS' Testimonial.

"24, High-street, Manchester.

"Mar. 6, 1854.

"Messrs. Chubb and Son,—

"Gentlemen, we have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you twelve years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the Evening of the First of March, when our entire premises were destroyed by fire. The Safe, after being subject to fourteen hours' intense heat, was unlocked on the Morning of the 3rd of March, the locks all answering to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

RYLANDS and SONS."

CHUBBS' LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fire-proof Safes and Chests; Iron Doors and Frames for Strong-rooms: all fitted with the Detector Lock. Complete illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

ADVERTISEMENTS.

Superior Chimney-pieces of beautiful Statuary Marble, several of Belgian Marble, Marble, and Dove and Vein Marbles, in great variety

MESSRS. ROBINS will SELL by AUCTION, at their ROOMS, in Covent-garden, on WEDNESDAY, MARCH 29, at TWELVE, STATUARY MARBLE CHIMNEY-PIECES, some richly sculptured, suitable for first-rate drawing-rooms; others of a less expensive character, with trusses; several of rouge-royal, black, and beautiful Belgian marble, for dining-rooms and libraries; also, a great variety of vein and dove marble, and a stone sarcophagus monument, now on view in Cov-nt-garden.

TO BUILDERS, HOUSE OWNERS, PAINTERS, PAPER-HANGERS, AND OTHERS.

MR. GLASIER is honoured with Instructions from the Commissioners of her Majesty's Works and Public Buildings to SELL by AUCTION, on the PREMISES, on WEDNESDAY, MARCH 29, at TWELVE, for ONE, in lots, all the valuable BUILDING MATERIALS of the Mansion called Clarence House, Wilderness-row, Queen's-road, Chelsea, comprising about 150,000 capital stock bricks, several tons of lead, timber in joists, rafters, &c., mahogany doors, semi-circular stone staircase, iron railings, Yorkshire paving, slates, fixtures, and fittings.—May be viewed the day prior and morning of Sale, and Catalogues had at the Office of Works, 12, Whitehall-place; of JAMES PEMBERTON, Esq. 7, Whitehall-yard; at GARRAWAY'S, Change alley, Cornhill; on the Premises; and of the Auctioneer, 41, Charing-cross.

BURRAGE ESTATE.—Plumstead, near Woolwich, Kent.

MR. G. HUDSON will SELL by AUCTION, on WEDNESDAY, 22nd MARCH, 1854, at ELEVEN for TWELVE o'Clock, upon the Ground, commencing at Brook-hill-road, near Dundas terrace, Woolwich, 230 OAK Trees, 30 ELMS, 800 BIRCH, LARCH, and FIR Poles, 3,000 Bavins, and 10 Stacks of Cord Wood.—May be viewed, and Catalogues had at the Bull, Dartford; Castle, Eltham; Greyhound, Greenwich; Lion and Lamb, Lewisham; at the Burrage Estate Office, Plumstead-place, near the Royal Arsenal; of Messrs. HUDSON, SPARROW, and Co. Solicitors, Bucklersbury, London; and of the Auctioneer, Brewer-street, Woolwich

TO ROAD SURVEYORS.

WANTED, immediately, by the Trustees of the Torquay Turnpike, a SURVEYOR, duly qualified to undertake the care and management of about forty miles of roads, the surface repairs of which are under contract. The person appointed will be required to devote his whole time to the duties of his office, and to find sureties to the amount of 200*l.* for the due performance thereof. The salary will be 100*l.* a year And testimonials of character and ability must be sent, free, on or before the 7th day of APRIL next, to Messrs. W and C. KITSON, the Clerks of the Trust, Torquay, Devon, from whom any information with respect to the office may be obtained

N.B.—The Election is arranged to take place on the 13th of APRIL next.

Torquay, March 10, 1854.

TO ARCHITECTS' ASSISTANTS.

WANTED, immediately, in an Architect's Office, an ASSISTANT, capable of making finished and detailed Drawings with neatness and accuracy, and possessing also a knowledge of Construction.—Address, stating age, terms, and qualifications, to J. G. care of Mr. James, No. 3, Francis-street, Ilagley-road, Birmingham.—The Advertiser is also in want of a respectable and well-educated YOUTH as a PUPIL.

WANTED, ACTIVE AGENTS for the AMAZON LIFE ASSURANCE and LOAN COMPANY, and SICK BENEFIT SOCIETY. A liberal commission and procuration fees allowed. Applications to be made to ROBERT GEORGE WEAR, F.R.G.S. Manager and Actuary. 1, Ironmonger-lane, London. Loans on personal security.

TO PARENTS AND GUARDIANS.

WANTED, by a Grainer, an OUT-DOOR APPRENTICE. A youth about 16 years would be preferred. A moderate premium required.—Address, C. W. at Mr. Hopkinson's, No. 33, Hampstead-road, St. Pancras.

WANTED, a person about thirty years of age, as permanent ASSISTANT to a BUILDER in the country. He must be of steady business habits, write a good hand, capable of making detailed and finished drawings, able to assist in measuring, estimating, and keeping the books. One accustomed to bench work or carpentry would be preferred. Wages, 30*s.* per week. Satisfactory references will be required.—Apply by letter to A. B. 74, Charlwood-street, Pimlico.

WANTED, a Person fully conversant with the duties of a Builder's Office, capable of taking charge of a complete set of books, measuring up works, taking out quantities, and estimating from architects' plans; he must also be a tolerable draughtsman, and an acquaintance with the valuation department would be desirable. Good testimonials as to respectability, sobriety, and ability are indispensable. Apply to Messrs. NICHOLSON and SONS, Builders, Wandsworth, Surrey.

WANTED, in a Surveyor's Office, a YOUTH who writes a good and expeditious hand, can square dimensions, and trace drawings neatly.—Address in own handwriting, stating age, terms, and reference to last engagement, to Mr SHOPPEE, 61, Doughty-street, Mecklenburgh-square, London.

TO FOREMEN OF MASONS.

WANTED, an experienced FOREMAN of MASONS.—Address, stating age, wages required, and where last employed, to T. H. Office of "The Builder."

WANTED, in a Contractor's Office, an experienced PERSON; will be required early in the morning. Apply, by letter, stating where last employed, with testimonials as to character, before the 28th instant, at Messrs. MOWLEM and CO. 13 Wharf, Paddington.

WANTED, a competent BUILDER'S FOREMAN or CLERK OF WORKS, to finish an extensive building a few miles from Town. The situation will most likely be a permanent one, to a person of strict integrity, sobriety, and capability.—Apply by letter only, stating particulars and salary required, to A. B. 8, Addison-road North, Shepherd's-bush.

WANTED, a SITUATION as YARD or OUT-DOOR FOREMAN, by an experienced Carpenter and Joiner, having held similar situations; or piece-work in the above line. Just finished a large job. References given; or willing to engage with any parties going to Australia.—Address, T. S. Y. Office of "The Builder."

TO BUILDERS, PAINTERS, OR OTHERS.

WANTED, by a respectable Young Man, CONSTANT EMPLOYMENT as Painter, Glazier, and Paperhanger and Writer. Willing to make himself useful. No objection to town or country.—Address to A. B. Mr. Bayly's, 11, Herbert-street, Hackney-road.

TO CARPENTERS AND BUILDERS.

WANTED, by a steady, respectable young Man, aged 20, article agreement to finish himself as a CARPENTER and JOINER. He has worked four years at the cabinet making. Wages low, and a first-rate reference given by his present employer.—Direct, pre-paid, to J. D. 7, Silver-street, Bridgewater-square, Barbican

WANTED, by an experienced practical Man, aged 35 years, a SITUATION as CLERK of WORKS, on a nobleman or gentleman's estate. The Advertiser has been accustomed to the superintending the erection of farm and other buildings on an estate of great magnitude. References of the highest character can be given as to abilities. Apply, by letter, to G. L. 4, Buckingham-place, Fitzroy square, London.

TO SAW-MILL PROPRIETORS.

WANTED, a SITUATION as SAW-SHARPENER, by a man of long experience; can give six years' character from his last situation.—Direct to J. L. 80, Borough-road, Southwark, London.

TO ARCHITECTS AND BUILDERS.

WANTED, a SITUATION as CLERK, by a middle-aged Man; can prepare finished and working drawings, is quite conversant with builders' accounts, and can have twelve years' recommendation from his last employer.—Address to A. R. at Mr. Gilford's, 14, Cumberland-street, Middlesex Hospital.

TO CABINETMAKERS, &c.

WANTED, a SITUATION, by a Cabinet-maker, who is also a practical polisher, and has a thorough knowledge of the jobbing department. Town or country.—Apply to F. BOWYER, 6, Lisson-grove North, New-road.

WANTED, by an experienced Person, an ENGAGEMENT as CLERK of WORKS, or general Foreman to a Builder. Good reference given as to character and ability where last employed.—Address, A. M. 19, Penton-place, Kennington-road, Walworth

WANTED, a SITUATION as CLERK of WORKS; is well experienced in all the branches of building, can get up plans, working drawings, and has unexceptionable reference from previous engagements.—Address, C. D. CLOSE, 3, Bloomsbury-terrace, Vauxhall-road, Pimlico.

WANTED, by an active Young Man, aged 27, a SITUATION as FOREMAN or BRICKLAYER'S; has superintended the brickwork of several large jobs, can be highly recommended, is a plain draughtsman, and can measure up work. Address, J. G. H. care of Mr. Mitchell, 10, Caledonian-place, Caledonian-road, Islington.

TO WINDOW GLASS CUTTERS, BUILDERS, AND OTHERS.

WANTED, by a Young Man who thoroughly understands his business, a SITUATION as CUTTER, or CUTTER and GLAZIER, who is capable of taking the entire management of a business.—Address, W. C. R. Mr. Mann's, 8, Old Church-street, Paddington.

TO PLUMBERS AND BUILDERS.

WANTED, by a respectable Young Man, a SITUATION as PLUMBER, and will fill up his time in painting, if required. Wages no object. In town or country.—Address, post-paid, to J. G. No. 6, William-street, Marylebone-lane, London.

WANTED, by a practical Man, who thoroughly understands his business, a SITUATION as MANAGING FOREMAN in a STONEWARE POTTERY, is well acquainted with all kinds of glazes, closet enamelled glaze, &c.—Address, G. B. 15, Durham-street, Upper Kennington-lane, London.

WANTED, a Man to Superintend the formation of a Filter Bed. No one need apply that has not been engaged on Water Works.—Apply to A. B. Office of "The Builder."

WANTED, by a respectable YOUNG MAN, a SITUATION as BELL-HANGER and GAS-FITTER; is willing to make himself generally useful.—Address W. Y. 25, Ranelagh-street, Pimlico.

TO SANITARY SURVEYORS, WATER COMPANIES, AND OTHERS.

AS CLERK of WORKS; has had several years' experience superintending drainage and road making in London and the country. Has just completed some works for a leading freehold land society. Satisfactory testimonials. No objection to go abroad—Address, B. B. Office of "The Builder."

A YOUNG MAN, who has served five years in an eminent architect's office, and has since been employed upwards of a year under another gentleman of eminence, is desirous of EMPLOYMENT, in any situation where close attention is required, together with ability as to working plans, drawings, and knowledge of architecture.—Letters to be addressed to W. A. care of Messrs. Maxwell and Co. 31, Nicholas lane, Lombard-street.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN, who has a few hours disengaged of an evening, is desirous of meeting with EMPLOYMENT, either in drawing or writing, specifications, &c.—Address, C. G. Honeysett's Library, High-street, Camden-town.

TO ARCHITECTS.

AN ARCHITECT'S DRAUGHTSMAN, accustomed to fair, working, and perspective drawings, is open to an ENGAGEMENT.—Address, M. J. Office of "The Builder."

A GENTLEMAN about to leave for Australia, and who has had considerable professional practice in ORNAMENTAL GARDENING, is desirous of DISPOSING of his PLANS and SPECIFICATIONS. Rural architecture could be very advantageously combined.—Apply to A. B. 50, Mr. Bishop's, Newmarket, 1, Lillypot-lane, London.

TO ARCHITECTS, &c.

A GENTLEMAN is desirous of a Re-engagement in an Architect's Office. He is a good draughtsman, well acquainted with the different styles, and competent to prepare fair working perspective and coloured drawings.—Address, E. N. L. Post-office, Park street, Gloucester gate, Regent's-park.

TO ARCHITECTS.

A GOOD and Expeditious DRAUGHTSMAN, who is perfectly capable of Getting up Working and Finished Drawings, Perspectives, &c. is a good Colourist, and understands the routine of an Office, is desirous of meeting with an ENGAGEMENT. Salary moderate.—Address, C. R. 5, Caledonian-road.

TO DECORATORS, PAPERHANGERS, CARVERS AND GILDERS, UPHOLSTERERS, &c.

A GENTLEMAN above the middle age, without family, whose time is much occupied with other business, wishes to meet with a respectable young man with 500*l.* or 600*l.* to join him, and conduct the business in a good town within a short distance from London.—Address letter, B. No. 201, Office of "The Builder."

A THOROUGHLY Qualified BUILDER'S CLERK is open to an Engagement in Town or Country. He is a good Draughtsman, writes a fine hand, understands book-keeping by double and single entry, measuring, taking off quantities, &c. Any gentleman having a mixed contract and jobbing trade, would find the Advertiser a valuable aid. Excellent references and security, if required.—Address, Mr. PHILLIPS, 2, Claremont-cottages, Tunbridge Wells, Kent.

TO ARCHITECTS, BUILDERS, LAND AGENTS, INSURANCE AND OTHER PUBLIC COMPANIES, &c.

A SOLICITOR of considerable experience, who is about to relinquish practice, is willing during a portion of his leisure, and in consideration of a moderate remuneration, to RENDER ASSISTANCE to an individual or company engaged as before, as secretary or agent, or in superintending the letting, sale, or purchase of properties, the borrowing or advancing of money, the preparation of leases, contracts, agreements of purchase, or of sale and purchase, conveyances, mortgages, &c. &c. or in any capacity where accurate legal knowledge is desirable. Unexceptionable references will be given, and none but parties of the highest respectability will be treated with.—Apply to W. X. at Messrs. Witherby's, Law Stationers, 54, Parliament-street, Westminster.

CLERKSHIP.—Wanted, by a Young Man, 24 years of age, a SITUATION. Understands Book-keeping by single and double entry; has had a good experience. Good references will be given, and security if required. No objection to the country.—Address C. J. 26, Cardington-street, Hampstead-road.

ECCLESIASTICAL DECORATIONS.—To ARCHITECTS.—A. O. P. HARRISON having lately completed the embellishments of the reredos panels, at St. Andrew's Undershaft, City, begs most respectfully to inform them, that he is open to another ENGAGEMENT. — Address, A. O. P. HARRISON, Heraldic and Mediæval Artist, Gothic Writer, &c. 50, Great Titchfield-street, Portland-place.

GENTLEMEN finding their own Material in the Building Trade, can meet with a practical Man to CONTRACT for the LABOUR of the Brickwork, Carpenter's Work, and Joiner's Work.—Apply by letter, post-paid, to A. B. No. 94, Star-street, Ed.ware-road.

TO MILLWRIGHTS AND ENGINEERS, BUILDERS AND COACHMAKERS.

THE Parents of a respectable Youth wish to APPRENTICE him to one of the above trades. If he can board in the house would be preferred.—Apply to R. M. Mr. Leech's, High-street, Wandsworth.

WANTED, a PARTNER in a small established Carpenter's and Builder's Business, with about 150*l.*; any young man a good joiner and sash-maker, or person accustomed to estimating and the management of work, and willing to take a practical part, will be liberally dealt with, the assistance of a good tradesman being the principal object.—For further particulars apply by letter to K. H. Office of "The Builder."

TO ENGINEERS AND OTHERS.

PARTNERSHIP.—The Principal in an extensive and increasing business in one of the Midland Counties is willing to admit a PARTNER, who is either conversant or not with engineering, and can command a capital of between 7,000*l.* and 8,000*l.*—For further particulars and to treat apply personally to Messrs. LEWIS, WOOD, and STREET, Solicitors, No. 6, Raymond-buildings, Gray's-inn, London.

PARTNERSHIP.—A Timber Merchant, in a good way of business in London, is in want of a PARTNER, with a capital of 3,000*l.* or 4,000*l.* for the purpose of extending the trade.—Address, P. Q Office of "The Builder."

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It being universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLEY and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms —

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish, Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE,

87, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES RHODES,

No. 6, MACCLESFIELD-STREET NORTH, CITY-ROAD, LONDON.

MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY.

Glass for the country packed with great security.

Prices on application at Counting-house, as above.

CHARLES WM. WATERLOW AND CO.
MANUFACTURING JOINERS,

121, BUNHILL-ROW, FINSBURY, AND BOW, MIDDLESEX.

N.B. — ORDERS RECEIVED AT THE COUNTING-HOUSE, 121, BUNHILL-ROW, ONLY.

SANDS AND EMERY,

CURSITOR-STREET, CHANCERY-LANE.

MANUFACTURED JOINERS' WORK AND MOULDINGS OF EVERY DESCRIPTION ON THE SHORTEST NOTICE, AND AT THE LOWEST PRICES, PACKED AND FORWARDED TO ALL PARTS OF THE COUNTRY.

Lists of Prices and Estimates forwarded on application.

MOORE'S PATENT MOVABLE GLASS VENTILATOR, for Windows, Partitions, Factories, Workshops, Warehouses, Greenhouses, Cottages, Stabling, Granaries, and other Buildings, Railway and Private Carriages, &c. For Farms, Dairies, Outbuildings, &c the Ventilator can be made to form a complete window, iron frames and rough plate glass, &c. Ventilators made to any size, and to most forms of sashes; also for sky or flat lights, and other purposes. A considerable saving and additional safety by having fixed window sashes.

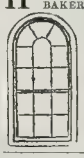
MOORE'S PATENT "LEVER VENTILATOR," forming a regular current of air, is calculated to effect all that is required for improving animal and vegetable health. The vitiated air is emitted at the opening left for that purpose. To shopkeepers they are particularly recommended, as from their capabilities of removing the foul air caused by the gas in the shop and windows, they effectually preserve the stock in good condition, and prevent explosion of gas.

Church and House Clock-makers to the Hon Board of Ordnance, the Russian Government, and the Emperor of China.

Manufactory, Sekford-works, St. James's-walk, Clerkenwell, Lond.n.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO-SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.



E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish, ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 345, OXFORD-STREET.

Sheet squares, in 100 feet boxes, varying from 14 by 10 upwards, 9d. per foot; ¼-inch rough Plate Tiles, 12s. per dozen. Also, Crown and Sheet Glass in crates, British and Patent Plate, Fluted and Stained Glass, Glass Slates, &c. Sheet Lead, Pipe, White Lead, Oils, Turpentine, Colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

REVOLVING SAFETY WOOD and IRON SHUTTERS—SNOXELL, Patentee, 96, Regent-street, and at his Steam-works, 135, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

HENRY PASK (late Johnson and Pask), BAKER-STREET, Clerkenwell, Sash, Shop Front, and Door Maker to the Trade, begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

FARMER and CO. Sash, Door, and Staircase Manufacturers. Counting-house Fittings, Shop and Public-house Fronts on the shortest notice. Estimates given for contracts of any description. By enclosing a postage stamp, a list of prices will be returned for any kind of joiners' work, &c.—125, St. John-street-road, and No 1, Edward street, Pentonville.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

WINDOW-BLINDS FOR THE TRADE ONLY.—The only Blind-maker in London working exclusively for the Trade is WILLIAMS, 1, Rutland-street, Brompton. Manufacturer of every description of inside and outside BLINDS, conservatory blinds, outside shop-blinds, horizontal blinds and awning blinds, executed on the most approved principles lower than any other house. The trade supplied with springs. A list of prices forwarded post free, on application to any house in the trade. Orders by post from all parts of the country punctually attended to, and executed with despatch.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 313, Oxford-street, adjoining Hanover-square, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 9d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

FIRST-CLASS WINDOW BLINDS.—No Extra Charges for Fixing within ten miles. Country orders carriage free.—HADLEY and CO. confidently invite attention to their scale of charges. Their system is to supply only the best articles, for which their prices will be found unprecedented.—Inside Venetian blinds, per square foot, 7d.; outside Venetian blinds, in cases, 1s. 4d.; outside blue striped cloth blinds, in cases, 1s. 6d.; best holland spring roller blinds, 7d.; best holland roller blinds, mounted with brass ends, 5d.; gauze wire blinds in mahogany or wainscot French polished frames, 1s. 9d. Estimates promptly furnished.—HADLEY and CO. Window Blind Manufacturers, 152, Sloane-street, Chelsea. The trade supplied.

STEAM SAWING-MACHINERY Wanted, for a Gentleman's Estate in the country, where there is much woodland, to cut up oak, elm, and fir for the market. The MILL to be either circular, capable of taking a 4-feet saw, or vertical, wide enough for a log of 3 feet diameter, and in either case must be simple, strong, and economical of labour. The ENGINE to be high-pressure and portable; one on the principle of the agricultural engine preferred; the power up to seven horses, and the grate adapted for wood fuel.—Apply to WM. ELLIOT, Jun. Stratford, near London.

EASTER.—NEWTON, JONES, and WILLIS, Church Decorators, Birmingham, beg to solicit the attention of the Clergy and Churchwardens to their stock of ALTAR CLOTHS, COMMUNION LINEN, CHALICE, VEILS, SURPLICES, and every requisite article for the above season, and which the extent of their manufactures enables them to offer at lower prices than any house for the same quality.

The twentieth edition, demy 8vo. of their ILLUSTRATED CATALOGUE, can be sent on receipt of six stamps for postage.

A 16mo. thin paper edition, containing much the same information, sent free.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS. External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations, Sections, Detail, and Working Drawings.—Mr. E. L. P. makes a consideration in his charge where competition drawings prove unsuccessful.

Address, 3, Bathbone-place.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their PATENT RAILS, SLEEPERS, FISH JOINTS, and other important improvements, now in use on upwards of 2,000 miles of railway.

Extract from the half-yearly report of the Directors of the Midland Railway, February 14, 1853.—

"An important feature in the contract (for the maintenance of the Permanent Way), is that the contractors are bound to reduce their charges 5d. per mile per annum, whenever the Fish Joint, or certain other improvements, are hereafter introduced!"

Every information may be obtained on application to Mr. CHARLES MAY, C.E. the Manager; or Mr. WILLIAM HOWDEN, the Secretary, 26, Great George street, Westminster.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London made instruments, and considerably cheaper.—Apply to Mr. 3, BARLOW, 3, Thurstan-buildings, between ONE and HALF-PAST THREE p.m., or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

ORGAN TO BE SOLD.—A Lady wishes to sell immediately, a small old-fashioned sweet-toned Finger Organ, having one set of keys and five stops, suitable to a school-room or small chapel. Price not exceeding 30l. It may be seen by applicat.n at 161, Devonshire-place, Edgeware-road, London.

W. TAYLOR and SON, PLASTERERS and MODELLERS, 47, Whitlebury-street, Euston-square, beg respectfully to inform Architects, Builders, and Others, that they are now ready to execute Work in the above branches to any extent either in town or country, at reasonable prices. ORNAMENT only, executed with any material, in a superior manner, and as cheap as any other house in London.

FASHIONABLE INDIAN-CARVED FURNITURE (as presented to her Majesty by the East-India Company), consisting of drawing-room, library, pricdieu chairs, couches, settees, stools, flower-stands, Tea and other tables, with Indian Paper-hangings, all of most elegant design and marvellous workmanship, at moderate prices. At ARROWSMITHS', Decorators and Upholsterers to her Majesty, 90, New Bond-street.—Parquet Flooring of any pattern.

£30,000.—Any Person having the above amount to invest, and not feeling disposed to risk the present state of the Funds, may hear of an advantageous investment, by way of mortgage on an entailed estate, for which sum four per cent. per annum can be obtained. Application to be made to Mr. GEO. FULLER, Land Agent, 34, Great George-street, Westminster.

CHURCH WINDOWS.—TO BE SOLD, FOUR GOTHIC-HEADED IRON-FRAMED WINDOWS, 11 feet by 3, glazed with ground glass, and stained glass borders, well adapted for an ecclesiastical building. May be seen at Messrs. FREWER and SON'S Warehouse, Chequer-square, Bury St. Edmund's.

TO CARPENTERS, BUILDERS, &c.

TWO REGISTRATIONS for SALE, with a quantity of Timber, Benches, &c. &c.—Apply, by letter, to R. J. Post-office, Goswell-road.

PREMISES WANTED, between 'Change and the Blackwall Railway, with ground floor of not less than 2,500 to 3,000 square feet. Two or three floors will be required.—Address, with particulars, post-paid, to Mr. ELGER STEPHENSON, 36, Lime-street, City.

TODD'S PATENT METALLIC PROTOXIDE PAINT.

THE PATENT METALLIC PROTOXIDE PAINT now offered has been found, after the most severe trials, to be peculiarly efficacious in preserving Iron from Oxidation, Wood from Decay, and Masonry and Brickwork from Dampness. Applied to Iron, it unites with it most intimately, forming a complete coating; so that thus protected, it will be found equal to the best galvanized iron. Hence its great value to all Engineers and Iron Founders as an application to iron vessels, iron roofs, steam and water pipes, &c. &c. It adheres firmly to iron, even at a red heat. For stuccoed buildings it will be found to be effectual in preventing the discolourations formed by vegetation, and keeping out all dampness.

For terms, application to be made at the Offices of the Company, 12, Bishopsgate-street Within; or to the following Agents:—
Messrs. PITCHFORD, Island Lead Works, Limehouse, } LONDON. | Messrs. D. and G. BRYMNER ..... GREENOCK.
Messrs. G. and T. WALLIS, 64, Long-acre,..... }

JOHNS'S PATENT PERMANENT STUCCO WASH, STUCCO CEMENT, AND STUCCO PAINT.

JOHNS'S PERMANENT WASH, WITHOUT SIZE OR OTHER CORRUPTIBLE INGREDIENT, is now fully established. It has been adopted EXTERNALLY and INTERNALLY at some of the largest Hospitals and Asylums, and is acknowledged to be the most useful Colouring Material in the trade, for its ADHESIVENESS, NON-ABSORBENCE, UNIFORMITY OF COLOUR, and APPLICABILITY to small or large surfaces. IT MAY BE EXPORTED TO ANY CLIMATE.

JOHNS'S STUCCO CEMENT.—This Cement, which has been established many years, is now manufactured on such improved principles that its acknowledged advantages and its usefulness for INTERNAL as well as EXTERNAL purposes are unquestionable. It NEVER CRACKS, BLISTERS, or VEGETATES; has no Caustic qualities, becomes as hard as stone in a few days, when it may be painted or papered; may be cleaned with a brush and water, and will STAND THE TEST OF ANY CLIMATE.

JOHNS'S STUCCO PAINT.—The merits of this Paint are so justly appreciated by the trade, for its ready affinity to Stucco, Brick, or other Rough Surfaces; its durability, comparative cheapness (two coats being equal to three of lead paint), that it is of the first importance to the public generally, AND WELL WORTH THE ATTENTION OF SHIPPERS AND EMIGRANTS.

Each Material in Casks of 1 to 3 cwt.
MANUFACTURERS,
PHILIP HARE and CO. 22, STEEL-YARD, UPPER THAMES-STREET.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK.—LONDON.—PATENT.

not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of whitelead, it may be employed in the apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of precipitation, or from admixture with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy resulting therefrom by the purchase of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. G. B. MORLEY and CO.; and by the Company's Grinding Agents, In London, Messrs CHARLES DEVAUX and CO. wholesale agents, 63, King William-street City; Mr. CHARLES JACK, wholesale and retail agent, 3, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling houses, &c In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Leeds, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

PATENT LIQUID CEMENT for Fronts of Houses, &c. This valuable and economic material is always ready for use, simple in application, and only one-fourth the cost of oil paint. It will not decompose or wash off. For beauty it stands pre-eminent, giving the appearance of fine cut stone, and 1 cwt. will cover 400 to 500 square feet. Sold in casks of 1, 2, and 3 cwt. at 8s. 15s. and 21s. each, casks exclusive.

PATENT PERMANENT COLOUR is particularly suited for halls, kitchens, school-rooms, railway stations, &c. as a substitute for oil paint; is without smell, dries in an hour, and may be applied over wood, oil paint, stucco, or any other surface. Sold in casks of 1 cwt at 16s. 6d. each.

PATENT ZINC PAINTS. These paints are ready mixed for use, of non-rot, unchangeable in colour, greatly superior to, and will last much longer than common oil paints, and will cover a much larger surface than the same quantity of white lead paint. Price 6s. per gallon, ordinary colours; Mineral chocolate brown, 5s.

Permanent Brilliant Black, for all kinds of outside work, barges, park railing, &c. 3s. per gallon.

PATENT INDIA-RUBBER PUTTY, which never shrinks, but remains in a tough plastic state, and is permanently waterproof. Price 4s. per stone.

DAMP WALLS PATENT ELASTIC PAINT, an effectual remedy, by which they are rendered fit for papering or hanging in oil colours. Price 10s. per gallon, which will cover and finish about 120 square feet.

PATENTEES, GEORGE BELL and CO. Steam Mills, 2, Wellington-street, Goswell-street, London.

PERMANENT ZINC COLOURS and WHITE.—Emerald and Brunswick Greens, Chromes, Blues, Reds, and all other Colours, are now produced from Zinc, at prices which render them an advantageous substitute to the Lead, Arsenic, and Copper Colours. These Zinc Colours are most brilliant, and never change by exposure to any Gases, Salt Water, &c. For Ships and Machinery, also for all kinds of House Painting, no other but Zinc Colours ought to be used to insure durability and economy.—For Prices, apply to the Patentees, Messrs. GEO. K. GEYELIN and CO. White Zinc and Permanent Colour Works, Victoria-wharf, Regent's-park-basin, London.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the makers. JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. Manufacturers of the very best PORTLAND CEMENT for all purposes for which it is applicable, solicit a continuance of that patronage with which they have so long been favoured.—Orders received at Great Scotland-yard, and at the Works

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and Architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cement, resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Westminster, London; at their Works, Gateshead-on-Tyne; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Swalf, Purfleet, for Manufacture of the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, or from his Agent, Mr. Anderson, at Blackfriars or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as harf-walls, docks, &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for internal purposes, being preferred by London Agents. BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made Manufacturers also, and dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no pointing.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Steel-street, Liverpool.

CALEDONIAN INSURANCE COMPANY.—Established 1805. Life Insurance of every description. Loans granted. E. F. SEALY, Manager.
27, Mourgate-street, London.

ATHENÆUM LIFE ASSURANCE SOCIETY Incorporated by Act of Parliament.—Chief Office, 30, Sackville-street, London

The Athenæum Life Assurance Society was founded with a view to afford to its members all the recent advantages of Life Assurance, and a most convenient form of policy has been invented, by which all payments are made to the holder, so that a policy can be transferred with the convenience and security of a bill of exchange

Special attention is also solicited to two points peculiar to this society:—

1. The granting annuities according to the probability of life, thus giving to annuitants, whether diseased or healthy, the opportunity of obtaining the largest possible return for their investment.

2. The equitable assurance of diseased lives.

This society having completed a valuable and unique set of tables for diseased lives, from unquestionable and scientific data, are enabled to transact this peculiar business with the same facility as the ordinary such life being taken at the proper rate on a specific table, classifying the stage of disease, and exemplifying the probable duration of life. These principles they are now ready to apply both to the assurance of sums at death and granting annuities, and appeal to the medical profession and general agents for their aid and co-operation.

Prospectuses, with further particulars, and tables for average lives, can be had on application.

30, Sackville-street, London. HENRY SUTTON, Manager.

BRITON LIFE ASSOCIATION, 36A, Moorgate-street.

Assurers in this Office may receive the amount assured during Life, without increased Premium

Loans can all times be obtained and repaid by small instalments.

Investment Policies secure a payment of the amount assured in 13, 10, or 7 years, or at death if it should previously occur, on which advances can be obtained

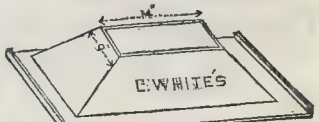
Persons about to subscribe to Building Societies, will find the Building Policies issued by this Office combine the Assurance of Life with all the advantages derived from a Building Society.

Medical Gentlemen remunerated in all cases for their reports.

Annuities granted. All descriptions of Life Assurance transacted.

Policies indisputable. Office hours from 10 a.m. to 4 p.m.
EDWARD PARSONS, Secretary.

SUCCESSFUL VENTILATION.—WATSON'S PATENT SELF-ACTING DOUBLE-CURRENT VENTILATORS have been successfully applied to Courts, Chapels, Public Halls, Stables, and almost every kind of Building, as well as to withdraw Steam, Smoke, Dust, and Heat. Testimonials and other information forwarded on receipt of a 2d. stamp. The Ventilators delivered carriage free in London and Bristol. Instructions sent for fixing. Apply at the Manufactory to CHARLES WATSON, King Cross-lane, Halifax, Yorkshire, who is the patentee and sole maker.



VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 136, Blackfriars road, and 127, Union-street, Borough; and of all respectable ironmongers, builders &c.

BARRETT, EXALL, and ANDREW, Kate's Grove Ironworks, Reading. Agents in London, DRAY and CO. Swan-lane.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,

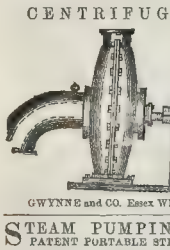
which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.



The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or slide or telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 2-inch single to double 15-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

CENTRIFUGAL PUMPS.

Contractors, Builders, Engineers, Paper-makers, Brewers, Manufacturers, and all who may have water, or other liquids (hot or cold, to raise, will find it their interest to use these Pumps For ECONOMY, EFFICIENCY, SIMPLICITY, DURABILITY, & POWER, they have no equal Every information can be had on application to

GWYNNE and CO. Essex Wharf, Essex-street, Strand.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURSON & SONS,
Engineers and Contractors,
John's-place, Holland-street,
Southwark, London.

PORTABLE STEAM-ENGINES.—TO CONTRACTORS.—TO BE LET on HIRE, or for SALE, several strong and simple STEAM-ENGINES, mounted on wheels, with iron chimney, &c. complete, ready for immediate use, without any brick, of 8-horse, 10-horse, 15-horse, 18-horse, 30-horse power, and upwards, adapted for pumping, winding, sawing, and general contractors' purposes.—Apply to MEDWIN and HALL, Engineers and Portable Engine-makers, 92, Blackfriars-road.

STEAM-ENGINES, of various sizes, from two-horse power upwards, always in stock, made on the most improved principles, and of the very best quality; single and double purchase crabs also always ready for immediate use or exportation; saw benches and saw frames, with all the most recent improvements, and every description of machinery made to order by ANDREW McLAREN and CO. Windsor Iron Works, Windsor-terrace, City-road, and 174, Upper Thames-street.

TO MILLERS AND OTHERS.

STEAM-ENGINE TO BE SOLD, of 12-horse power, working on the high pressure expansion principle, with 2 WOOLF CYLINDERS, the cylinders and most of the working parts made by Easton and Amos, of London. To be seen working at the Silk Mills of Messrs. BALLANCE and SONS, Taunton, who will furnish price and other particulars.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

CAUTION.—BEART'S PATENT PERFORATED BRICKS.—Mr. ROBERT BEART, the patentee, to prevent complaints of proceedings being taken to stop the making of Perforated or Hollow Bricks with a series of holes, without his license, hereby declares his intention to proceed against all parties infringing his patent without further notice. Applications for licenses to be made to and information obtained of W. J. and G. BOULTON, Solicitors, Northampton-square, London.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21 WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REVERSE OF THE MEDAL," page 881, of the Great Exhibition, rank the Manufactories known as long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

MAW'S ENCAUSTIC TILE PAVEMENTS.
MAW and CO. send free, per post, their NEW BOOK
with prices, adapting this most durable, economical, and decorative production of mediæval art to entrance-halls, passages, conservatories, verandahs, and every description of modern and ancient building.
BENTHALL WORKS, near Broseley, Shropshire.
Specimens at 11, Aldersgate-street.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at R. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

130, Strand, London.
11, Hope-park-street, Glasgow
27, Dale street, Manchester.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr C. Hacker, surveyor to the Duke of Bedford: "Office of Works, Woburn-park, Jan. 10, 1852. —In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not any effect it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours &c. C. Hacker." N.B. The Company's Illustrated Circulars containing instructions for jointing or forming tubes, lining lead, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City road, London.

QUANTITIES, SPECIFICATIONS, SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK
MANUFACTURER OF
GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.
65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY,
COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2-FEET LENGTHS
Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

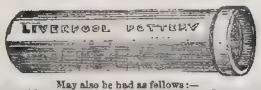
DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

DOULTON AND WATTS'S
REGISTERED CLOSET PANS IN
ENAMELLED STONE WARE,
LAMBETH POTTERY, LONDON.

These Closet Pans are manufactured in a new kind of stone-ware, HIGHLY GLAZED, vitreous, of a white colour, are much improved in form, and are used and recommended by the engineers connected with the General Board of Health.
The Traps are smaller at the inlet, gradually enlarging towards the outlet, as a security against the introduction of improper substances into the drain.
They may also be had turned down.
PRICE 7s. 6d. each,
The same as for ordinary stone-ware, and may be had fitted with copper fans of the best construction at 1s. 3d. each extra.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,
BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.



N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.
Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Dover's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. J. TURNER 2, South Wharf, Praed-street, Paddington; and at COLWILL, Brothers, 33, Bridges-street Covent Garden.
Drawings and List of Prices will be forwarded free on application.

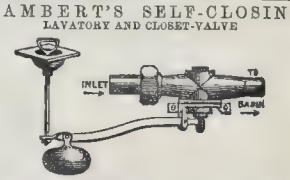
Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 89, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.



MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c., &c. Agents.—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

GREAT SIMPLIFICATION and Economy
in FIXING CLOSETS.

By the use of Underhay's Patent Regulators, the separate cistern, service-box, valve, cranks, and wires are dispensed with, making a closet as simple to fix as a lift-cock, and yet ensuring a perfect flush of water.
The Manufacturers, CHARLES BOTTEN and SON, solicit a call from all parties interested, they having Pan, Valve, Self-acting, and Jennings's Closet fitted with this apparatus, and fixed for inspection, or will forward drawings of the same.
CHARLES BOTTEN and SON, Brass Founders, Engineers, Gas Meter and Fitting Manufacturers, Crawford-passage, Clerkenwell.

LAMBERT'S SELF-CLOSING
LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.
DEVEY and DALE'S CYLINDER BALL-VALVE and BALL, Registered Oct. 28, 1853. No. 3,526.

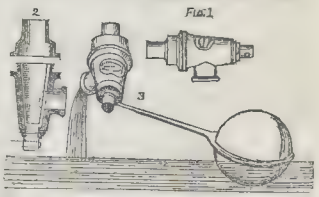


Fig. 1 represents the Cylinder Ball-valve in elevation. Fig. 2 is a Section of the interior, showing the uninterrupted course of the Fluid. Fig. 3 shows the Cylinder Ball-valve in action.
This Valve is peculiarly suited to High pressure. The greater the weight of fluid, the more secure the Valve becomes, and the more effectually prevents waste.—Manufactured solely by DEVEY and DALE, 8 and 8, Shoe-lane, and may be had of respectable Plumbers.

GUEST and CHRIMES, Brass Works,
Rotherham — London House, Mr. THOS. BEGGS, 37, Southampton-street, Strand, London.—ole Manufacturers of CHRIMES'S PATENT HIGH-PRESSURE SINGLE and DOUBLE LOOSE VALVE and SCREW-DOWN COCKS.
The decided preference given to these cocks has called forth many imperfect imitations, which, without being less in price, are very inferior in quality, and inefficient in action. Sir William Clay, in recommending Screw-down Cocks in his letter on "London Water Supply," says "Guest and Chrimes's are best."
The attention of Boards of Health, of architects, and surveyors, is invited to a new and improved COTTAGE WATER-CLOSET, on an entirely new principle. It provides for a thorough flushing of the pan when used, prevents waste, and is not liable to get out of repair. It is adapted to every situation, and is cheaper than any efficient closet offered to the public.
Bateman and Moore's, and Chrimes's Patent Hydrants or Fire-cocks, Siemens's Patent Water Meter; Tilbrow's Patent Water-waste Preventer; Kirkwood's Registered Tubular Water-closets, Self-acting and Cottage Water-closets, and all leading articles for drainage, sewage, and water-works purposes, and for liquid manure distribution.
Drawings, particulars, and prices sent on application to Mr. BEGGS, 37, Southampton-street, Strand, London, or Messrs. GUEST and CHRIMES, Rotherham.

TERRA COTTA.—Vases, Figures, Capitals, Coats of Arms, Friezes, Cornices, Chimney-shafts, Flower-trays, &c. &c. manufactured by J. M. BLASHFIELD, Mill Wall, Isle of Dogs (near the West-India Docks), and sold at No. 1, Praed-street, Edgware road, Paddington.

THE BUILDER.

SALES BY AUCTION.

GARRAWAY'S COFFEE HOUSE, CORNHILL. FRIDAY, MARCH 24, 1854, at FOUR. TIMBER.—500 Loads Foreign and Colonial DEALS, BATTENS; 50,000 pieces ditto, ditto, with other wood goods.—HY FREEMAN, Broker, 3, Crooked-lane, London-bridge

TO PLUMBERS, ENGINEERS, HOUSE PAINTERS, AND BUILDERS.—Capital Fresh-built Business Premises and Dwelling-house, at Kones-on-Thames, Surrey. N.B. An artesian spring overflowing the surface commends this property to the attention of dyers, distillers, or any trade requiring a supply of pure and soft water

MR. JOHN DAWSON is instructed to SELL by AUCTION, at the MART, on FRIDAY, 24th of MARCH, at TWELVE, a valuable FREEHOLD ESTATE, consisting of a comfortable residence, with domestic offices, a shop fronting the street, and a spacious yard, in which are all the erections, workshops, stabling, &c., required for a first-rate business, with all the accessories for carrying it on, the fact that for nearly two years in this spot, and for many years by the family of the present retiring, well conducted, and in every respect respectable plumbing and engineering trade has been established. Notwithstanding the publication to this announcement having been given of the vendor's intention to invest his capital and energies in another direction, it is believed which is in full activity, will be found to have proved to be the best of the purchaser. To be viewed. Detailed particulars may be had at the Mart, of CHARLES EDWARD TARRETT, Esq., Solicitor, Kingston; and at Mr. JOHN DAWSON'S Auction and Land Offices, Kingston; and Marlborough-chambers, 49, Pall-mall.

TO BUILDERS AND OTHERS.—Desirable Leasehold Dwelling-house, Carpenter's Shop, Sheds, Blacksmith's Forge, Stable, Chaise-house, and Two Cottages, and valuable Freed-old Building Ground, situate in the parishes of Chatham and Gillingham, in the county of Kent, TO BE SOLD BY AUCTION, by

MR. JOHN THOMAS, at the SUN HOTEL, Chatham, on MONDAY, the 27th of MARCH, 1854, at SIX for SEVEN o'clock in the Evening, unless previously disposed of by Private Contract

Lot 1.—All that valuable Property, now in the occupation of Mr. W. Holliday, builder, situate near the Lord Duncan, Newroad, Chatham, and comprising a good yard, spacious workshop, 30 feet by 26 feet, with loft over, saw-pit, sash, light, and drying shed, 22 feet by 6 feet 9 inches, and 25 feet high.—estimated rental, 5l per annum. Also a stable and chaise-house, let at a weekly rental of 3s. 6d., two cottages, each at weekly rentals of 2s. and a blacksmith's forge, let at a weekly rental of 2s. There will be a right of way reserved to the whole of the above premises from the New-road in front, and from James street in the rear. The foregoing lot is held for a term, of which sixty-three years were unexpired on the 25th of December last, and is subject to the ground-rent of 11l. per annum, of which the sum of 2l. 10s. is payable in this lot.

Lot 2. A leasehold plot of building land, situate in Hards'-Town, in the parish of Gillingham, having a frontage of 25 feet, and measuring from front to rear of feet 6 inches, more or less.

Lot 3. Ditto ditto.

Lot 4. Ditto ditto.

Lot 5.—A plot of valuable freehold building land, land-tax redeemed, situate in Fox-lane, in the parish of Gillingham, having a frontage of 17 feet, and measuring from front to rear 100 feet.

Lot 6. Ditto ditto.

Lot 7.—Ditto ditto.

Lot 8.—A plot of Building Ground, situate in Fox-street, and in the rear of Lot 7, with a frontage of 19 feet 6 inches, and measuring from front to rear 100 feet.

Lot 9. Ditto ditto,

Lot 10.—Ditto ditto.

The purchasers of Lots 5 to be inclusive, to erect, at their own expense, a substantial wood fence, not less than 6 feet in height, on the south side and at the rear of their respective lots. The landtax on all the building land is redeemed. Particulars and conditions of sale may be had of the Auctioneer, and of Messrs. ESSELL and HAYWARD, Solicitors, the Precinct, Rochester; at the King's Head Inn, Rochester; at the Sun Hotel, Chatham; and of the Auctioneer, at his Offices, Eastgate, Rochester.

Important Sale of Timber and Bark. Wychwood Forest, Oxfordshire, and Whittlewood and Salcey Forests, Northamptonshire.

By order of the Right Hon. T. F. Kennedy, the Commissioner in charge of her Majesty's Woods and Forests. TO BE SOLD by AUCTION,

MR. LONG, at the CHURCHILL ARMS INN, ASCOT, near Wychwood, on TUESDAY, the 21st MARCH, 1854, in Wychwood Forest, about NINETY TONS of BARK, the produce of 1852 and 1853 tops, the produce of 1833; about 1,000 OAK TIMBER TREES, of good dimensions, in a round hewn, and sided state; a large quantity of slabs off oak timber, taken from the Survey; quantity lots of top pieces, &c. &c.

In Whittlewood Forest, Northamptonshire, about Thirty-eight Tons of Hitchen Bark, the produce of 1852; in Salcey Forest, Northamptonshire, about Three Tons of Hitchen Bark, the produce of 1852.

The Bark and Timber in Wychwood Forest is contiguous to good roads, and the whole is within about three miles of three stations viz. Charlbury, Ascot, and Shipton, on the Oxford, Worcester, and Wolverhampton Railway, thus affording easy communication to all parts of the kingdom.

The Bark in Whittlewood Forest is on a good turnpike-road, within about one mile of the Blisworth and North-Western Railway, and the Grand Junction Canal. That in Salcey Forest is on a good road, about three miles from the London and North-Western Railway, and the Grand Junction Canal.

For further particulars apply to Mr. T. LINNELL, Salcey Forest, near Northampton.

Catalogues, with conditions of sale, may be had at the Office of Her Majesty's Woods and Forests, 2, Whitehall-place, London; of Mr. T. Linnell, Salcey Forest, Northampton; of Mr. R. Morris, Ascot, near Wychwood; at the place of sale; and of the Auctioneer, Witney, Oxon.

Mr. R. Morris, jun. will show the lots of Bark and Timber in Wychwood Forest; Mr. Linnell, the Bark in Salcey Forest; and Mr. T. Gulliver, of Hazlebrough Lodge, the Bark in Whittlewood Forest.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brothers) and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," in York-street, in the Parish of Saint Paul, Covent-Garden, all in the County of Middlesex.—Saturday, March 18, 1854.

Bay Tree Tavern, St. Swithin's-lane, March 3, 1854.

ART-UNION of LONDON.—(By Royal Charter.)—Every Subscriber of One Guinea will have an impression of a large Plate of deep, national, and historical interest, "TILBURY FORT, WIND AGAINST TIDE," by J. T. Willmore, A.R.A. after C. Stanfield, R.A. now delivering at the Office on payment of the Subscription. Each Prizeholder will be entitled to select for himself, as heretofore, a Work of Art from one of the Public Exhibitions.

GEORGE GODWIN, } Honorary
LEWIS POCOCK, } Secretaries.

444, West Strand, March.

ROYAL ACADEMY of ARTS, Trafalgar-Square.—NOTICE to ARTISTS.—All Works of Painting, Sculpture, Architecture, or Engraving, intended for the ensuing EXHIBITION at the ROYAL ACADEMY, must be sent in on MONDAY, the 3rd, or TUESDAY, the 4th of APRIL next after which time no work can possibly be received, nor can any Works be received which have already been public y exhibited.

FRAMES.—All Pictures and Drawings must be in Gilt Frames (oil Paintings under glass, and Drawings with wide margins, are inadmissible. Excessive breadth in frames, as well as projecting mouldings may prevent Pictures obtaining the situation they otherwise merit. The other regulations necessary to be observed may be obtained at the Royal Academy.

JOHN PRESCOTT KNIGHT, R.A. Secretary.

Every possible care will be taken of Works sent for Exhibition, but the Royal Academy will not hold itself accountable in any case of injury or loss, nor can it undertake to pay the carriage of any package. The Prices of Works to be disposed of may be communicated to the Secretary.

CONTRACTS.

BOROUGH of SOUTHAMPTON.—TO ENGINEERS AND OTHERS.—Notice is hereby given, that the Southampton Local Board of Health will be prepared to receive, on or before the 3rd day of APRIL next, TENDERS for CONSTRUCTING, PURSHING, and ERECTING TWO PUMPING ENGINES, with their boilers, an iron pump, well, and an agitator, with all necessary gearing &c. Specifications and form of Tender may be obtained upon payment of a certain application at the Office of the Local board of Health, Southampton, where the necessary plans and sections can be seen.—By order of the Special Works Committee,

CHARLES E. DEACON, Clerk

Public Health Office, Southampton, March 3, 1854.

CARLISLE LOCAL BOARD of HEALTH.

SEWERAGE WORKS.

TO CONTRACTORS, IRON FOUNDERS, EARTHENWARE SEWER AND DRAIN PIPE MAKERS, BRICK-MAKERS, AND OTHERS.

The Local Board hereby give notice that they are prepared to receive TENDERS from parties who may be willing to undertake any of the following contracts.

CONTRACT No. 1. For the supply of EARTHENWARE SEWER and DRAIN PIPES, &c.

CONTRACT No. 2. For the supply of about 500 tons of CAST IRON SEWER PIPES and OTHER CASTINGS.

CONTRACTS Nos. 3 and 4. For EXCAVATIONS, and the CONSTRUCTION of BRICK SEWERS, GULLIES, MANHOLES and other WORKS connected therewith, and for ENCUMBERING, LAYING, and JOINTING CAST-IRON SEWER PIPES, FIXING SEWER CASTINGS, &c.

CONTRACT No. 5. For the supply of about Three Millions of SQUARE and RADIATED, SOLID, and HOLLOW BRICKS.

The drawings may be examined on and after the 13th inst. and copies of the specifications, schedules, bills of quantities, and forms of Tenders may be obtained, and all requisite further information required on application at the Office of the Local Board, Carlisle, or at the Offices of ROBERT RAWLINSON, C.E. 31, Parliament-street, Westminster.

The charge for specifications, bills of quantities, &c. will be five shillings for each Contract.

Sealed Tenders to be delivered at the Office of the Local Board of Health, Carlisle, before TWELVE o'clock on WEDNESDAY, the 29th day of MARCH, endorsed "Tender for Contract No. 1, 2, 3, 4, or 5," as the case may be.

ISAAC CARTMELL,
Committee Clerk to the Local Board.

Carlisle, 1st March, 1854.

TO CONTRACTORS, IRONFOUNDERS, AND OTHERS

ROCHESTER BRIDGE.—The Wardens and Assistants of Rochester Bridge are prepared to receive TENDERS from persons willing to undertake to COMPLETE the REMAINING PORTION of the NEW BRIDGE in a substantial and workmanlike manner.

The Contract will include the Iron Centre Arch of 170 feet span at 17 feet 6 inches above high water, and all together with the whole of the ironwork, brickwork, &c. required also all the wrought iron of the arches, land abutments, piers, and abutments already built (Portland).

The estimated weight of cast iron is about 2,500 tons, more or less.

Plans, drawings and specifications of the intended work may be seen at the Office of MR. JOHN WRIGHT, the Resident Engineer, on Strood, on and after Monday, the 1st day of MARCH next, and Tenders of the Forms of TEN and FOUR, where all the particulars may be seen at that place.

Sealed Tenders for the whole or for separate portions of the work to be delivered at the Bridge House, Rochester, addressed to the Wardens, Rochester Bridge," on MONDAY, the 17th day of APRIL, by TWELVE o'clock at noon, after which hour no Tender will be received. The Wardens do not bind themselves to accept the lowest or any Tender, but will be at liberty to accept such Tender as they may consider most advantageous for the due performance of the contract.

The Wardens and Assistants will not feel themselves bound to accept the lowest Tender.

ESSELL and HAYWARD.

Rochester, February 24, 1854.

CONTRACTS.

TO BUILDERS, CONTRACTORS, AND OTHERS.

NEWPORT and ST. WOLLOS BURIAL BOARD.—TENDERS are required for BUILDING TWO CEMETERY CHAPELS, Boundary Walls, Clerk's Residence, Entrance Gates, Gardener's Lodge, layingout and draining ground, &c. for the Burial Board of the parishes of Newport and St. Wollos, in the county of Monmouth. The drawings, specifications, &c. may be seen by applying to Mr J. F. MULLOCK, the Clerk to the Board, on and after the 20th day of MARCH, at the Boardroom, Townhall, Newport; and all further information may be procured on application to the Architects, Messrs. JOHNSON and PURDUE, 3, John-street, Adelphi, London. The Tenders will be required to be delivered on the 4th of APRIL, 1854. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,
J. F. MULLOCK, Clerk.

Newport, Monmouth, March 8, 1854.

TO IRONFOUNDERS AND GASHOLDER-MAKERS.

THE Directors of the Leeds New Gas Company are prepared to receive TENDERS for the following works:—The construction and erection of a CAST-IRON GASHOLDER TANK, 110 feet in diameter and 22 feet deep, together with the necessary inlet and outlet pipes, syphons, valves &c.; also for the construction and erection of a TELESCOPE GASHOLDER, 108 feet diameter and 44 feet deep, together with all the requisite columns, guide girders, &c. Persons may tender for either the tank or gasholder separately, or for the whole of the works required. Plans and specifications may be inspected, and forms of Tender obtained at this Office on and after MONDAY, MARCH 20th, 1854. The Tenders to be delivered by TWELVE o'clock on MONDAY, APRIL 3, 1854, endorsed "Tenders for Tanks" or Gasholder. The directors do not bind themselves to accept the lowest Tender.

By order of the Board,
HENRY GORE, Engineer and Manager.

The Leeds New Gas Company, Engineer's Office, Meadow-lane, Leeds.

HARWICH GASLIGHT and COKE COMPANY. The Directors of the above Company are desirous of receiving TENDERS for the APPARATUS, MAINS, and HOLDERS Works required in the Erection of Gasworks for the supply of the Borough of Harwich. The plans and specifications may be inspected, at the Office of Mr. EDWARD CHAPMAN, Solicitor, Harwich, to whom Tenders are to be sent, under cover, on or before APRIL 4th. All further information may be obtained of the Engineer, Mr. JABEZ CHURCH, Chelmsford. The lowest Tender will not necessarily be accepted.

March 16, 1854.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of STOREHOUSES, ARMOURIES, and QUARTERS for non-commissioned officers of the South Gloucester Militia, at Gloucester, and of the North Gloucester Militia, at Cirencester, may receive the plans and specifications at the Offices of Messrs. PULLJAMES and WALLER, any time between the hours of TEN o'clock a.m. and SIX o'clock p.m. after the 2nd of APRIL. Tenders to be sent in sealed numbered Tenders for Stonework, addressed to Messrs. PULLJAMES and WALLER, Architects, Gloucester, on or before the 10th of APRIL next, of whom further particulars may be obtained.

Gloucester, March 8, 1854.

TO CONTRACTORS.

THE MACCLESFIELD LOCAL BOARD of HEALTH will be prepared to receive TENDERS for SEWERING, PAVING, and LAYING DOWN the necessary HOUSE DRAINS and other Works, in Great-street and the low parts of Park-roads and Parliament-street, Macclesfield. Tenders, sections, and specifications of the above works may be inspected and forms of Tender, with any other particulars, may be obtained at the Office of the Board, Town Hall, Macclesfield after the 27th day of MARCH instant. Tenders to be delivered and addressed to me on or before the 12th day of APRIL next, and endorsed "Tender for Sewering, &c."

THOMAS TARROTT, Town Clerk.

Macclesfield, 16th March, 1854.

NOTICE—WARE BURIAL BOARD.—The time for RECEIVING TENDERS for the New Cemetery is EXTENDED until TWELVE o'clock at noon on MONDAY, the 27th APRIL next.—By order,

NATH. COBHAM, Clerk to the Board.

Ware, 22nd March, 1854.

TO CONTRACTORS, BUILDERS, AND OTHERS.

PERSONS desirous of CONTRACTING for ERECTING a THEATRE, from the plans, drawings, specifications, quantities of wood, iron, &c. to be seen, and received, by JOSEPH LAVENDER, Esq. Architect, 74, Chancery-lane, on and after the 25th instant.

TO STONEMASONS, IRONFOUNDERS, AND OTHERS.

THE RATCLIFF PAVEMENT COMMISSIONERS are desirous to contract with a party or parties for the following WORKS required in the ensuing year, viz.:—

For the supply of about 1,000 yards of Granite Kerb, and the laying down of the same, with the necessary Stone Gutters, Channels, and Footpaths, in Wellington-street, Ratcliff-road, Ratcliff-cross, Pell-street, Wapping-wall, Cable-street, Cable-street-gardens, Watney-street, Commercial-road-east, Commercial-road-east-gardens, Upper-road, Poplar, and Blackwall-road.

For the supply of about 1,000 yards of Granite Kerb, and the laying down of the same, with the necessary Stone Gutters, Channels, and Footpaths, in Wellington-square, Ratcliff-cross, Wellington-street, Ratcliff-road, Ratcliff-terrace, and Pell-street.

For the supply of about 1,000 yards of Granite Kerb, and the laying down of the same, with the necessary Stone Gutters, Channels, and Footpaths, in Wellington-street, Ratcliff-road, Ratcliff-cross, Pell-street, Wapping-wall, Cable-street, Cable-street-gardens, Watney-street, Commercial-road-east, Commercial-road-east-gardens, Upper-road, Poplar, and Blackwall-road.

For the supply of about 1,000 yards of Granite Kerb, and the laying down of the same, with the necessary Stone Gutters, Channels, and Footpaths, in Wellington-square, Ratcliff-cross, Wellington-street, Ratcliff-road, Ratcliff-terrace, and Pell-street.

Plans and specifications may be seen at the Office of Mr. W. S. FRANCIS, the Surveyor to the Commissioners, on and after Monday next, the 27th instant, between the hours of Ten and Four o'clock.

Sealed Tenders for the above Works, addressed to the Commissioners, to be left at the Office of Mr. FRANCIS, on or before TWELVE o'clock at noon on the 10th day of APRIL next.

By order of the Board,
CHARLES FOULGER, Clerk.

2, Temple Bar, Temple, March 15, 1854.

[For remainder of Contracts see next page.

CONTRACTS.

TO MASONS, PAVIORS, AND OTHERS

THE Limehouse Conjunct Trustees will MEET at the TOWN HALL, Church lane, Limehouse on WEDNESDAY, the 5th day of APRIL next, at SEVEN o'clock in the evening, to receive TENDERS from such persons as may be willing to CONTRACT for PROVIDING, LAYING, and BACKING-UP with the districts of the Trustees, at per yard, about 12 square hundred of 9 inches by 6 inches Aberdeen or other GRANITE-EDGED KERB, in lengths not less than 3 feet each, and about 30 yards of 3 feet radius circular-edged KERB, and 6 inches GRANITE PITCHERS, 9 inches deep, to form a channel around the above-mentioned kerb. The Tenders to specify the particular granite to be supplied. The whole of the works to be completed within ten weeks from the 1st day of April next. Proposers or their agents, or a duly authorized Surveyor, only, Tenders will be received after SEVEN o'clock. Each contractor will be required to enter into a written contract, to be prepared by the Trust's solicitor, and give two approved sureties for its performance. The Trustees do not bind themselves to accept of any Tender. For further particulars may be had of Mr. LINDON, Surveyor, Fore-street, Limehouse, between the hours of NINE and ELEVEN in the forenoon, and the 3rd day of the month may be seen at my Office, from the 23rd instant.

P. GELLATLY, Clerk to the Trustees.

1, Albion-terrace, Limehouse, March 18, 1854.

BREEZE! BREEZE!—TO BRICK-MAKERS AND OTHERS. The Directors of the Chartered Gosport Railway will receive TENDERS for the whole Plant of the BREEZE HILL BRICK-YARD, Bedhampton, St. Lukes, for One Year, commencing from APRIL next. Tenders to be sent in to the Secretary, WEDNESDAY, the 5th of APRIL, addressed to the Committee Gasworks, Brick-lane, St. Luke's, endorsed "Tenders for Breeze."

TENDERS for BUILDING, by Contract, TWELVE LABOURERS' TENEMENTS, within seven miles of London (upon plans to be learnt at 24, Horndon-street, Kent-street), and received until the 1st MAY, 1854. Also FIVE ACRES of LAND, to lease for building small tenements.—Apply, by letter as above.

WARWICK LOCAL BOARD of HEALTH.—CONTRACT for DRAINAGE and WATER-WORKS. The Board hereby give Notice that they are prepared to receive TENDERS from parties who may be willing to CONTRACT for constructing certain BRICK SEWERS, to intercept Stoneware and Cast-iron Drain-pipes and Cast-iron Water-pipes; building an Engine-house, Boiler-house, and a Cottage, and sinking a Pump-well. Also for supplying a Wrought-iron Tank, and the construction of a Service Tower and other works. The contract, drawings, and specification may be examined at the Office of the undersigned, at Warwick, on or after the present instant, where a copy of such part to be and forms of Tender may be obtained. Further particulars will be given at the Offices of Messrs. RAMMELL and LISTER, Engineers to the Local Board, 4, Trafalgar-square, London, to whom Tenders must be sent in on or before the 10th day of APRIL next. No Tender will be entertained unless it is made upon the printed form.

By order of the Board, JAMES TIBBITS, Clerk.

Warwick, 14th March 1854.

TO CONTRACTORS FOR CURING.

THE TRUSTEES for LIGHTING and otherwise IMPROVING the HAMLET of MILE-END OLD TOWN will meet at the Town-house, Mile-end-road, on WEDNESDAY the 5th day of APRIL next, at SEVEN o'clock in the evening precisely, to receive TENDERS for 5,000 feet of GUERNSEY or DEVON GRANITE CURB, at 9s. per lineal foot run, to be laid down in the Hamlet as the Surveyor may direct. The Tenders to be LEFT at the Town-house, and to contain the names of two persons as sureties for the due and faithful performance of the contract. No Tenders will be received after the hour of meeting, nor will the Trustees bind themselves to accept the lowest or any Tender.

JAMES SADGROVE, Clerk.

No. 2, Sydney-square, Mile-end.

BOROUGH of MAIDSTONE.—To BUILDERS. Persons willing to CONTRACT with the Town Council for the ERECTION of a BUILDING, on the site of a house adjoining the Town-hall, Maidstone, are requested to send in sealed Tenders to the Town-clerk, addressed to the Guildhall, on or before FRIDAY, the 7th day of APRIL, 1854. Plans and specification may be seen at my Office, and at the Offices of Messrs. SCHIPTEL and WHISHEARD, Architects, 2, Poet's-corner, Old Palace-yard, Westminster, from TEN till FOUR o'clock daily. The Council will not pledge themselves to accept the lowest or any other Tender.

JOHN MONCKTON, Town Clerk.

TO BUILDERS

PERSONS desirous of CONTRACTING for the complete RESTORATION and REPAIRING of the PARISH CHURCH of ST. WOOLOS, in Newport, Monmouthshire, may see the drawings and specifications, and receive full particulars at the Office of the Architects, Messrs. W. G. and E. HABERSHON, 28, Bloomsbury-square, London, and at Park-place, Newport. Sealed Tenders to be delivered at the Vicarage, Newport, on THURSDAY, the 13th of APRIL, 1854, at ELEVEN o'clock precisely. The Architects do not bind themselves to accept the lowest or any of the Tenders.

TO BUILDERS

PERSONS desirous of CONTRACTING for the BUILDING of a CHURCH at Machen, near Newport, Monmouthshire, may see the Church or Mortuary-chapel drawings and specification, and receive full particulars at the Office of the Architects, Messrs. W. G. and E. HABERSHON, 28, Bloomsbury-square, London, and 5, Park-place, Newport. Tenders to be delivered at the Office of the Architects, Newport, on THURSDAY, the 13th of APRIL, 1854, at ELEVEN o'clock precisely. The Architects do not bind themselves to accept the lowest or any of the Tenders.

TO BUILDERS

HAVERSTOCK-HILL SUNDAY SCHOOLS.—Builders desirous of CONTRACTING with the Building Committee to ERECT and FINISH the above-named School-rooms and Out-buildings, in connection with Haverstock-hill Chapel, at Malden-place, in the parish of St. Pancras, Middlesex, may inspect the Working Drawings and Specification, prepared by Mr. JAMES WILD, Architect, of Great George-street, Westminster, on and after the 4th day of MARCH next, at Sealed Tenders for the works, endorsed "Tenders for Haverstock-hill Sunday Schools," to be delivered to Mr. EDWARD GOFFIN, on or before the 31st day of MARCH in-stant. Proper sureties to be required, and the successful Tenderer to bind himself to enter into a formal contract. The Committee do not bind themselves to accept the lowest or any Tender.

WILLIAM S. CRAKE, Hon. Secretary.

TO BUILDERS

THE COMMITTEE for the ERECTION of the proposed DISTRICT CHURCH at BEXLEY, near Knights Hill, Kent, are desirous of CONTRACTING for the WORKS. Plans, specifications, and quantities may be obtained, upon written application to the undersigned.

HENRY LEE, Architect.

Seymour Chambers, Adelphi, March 18, 1854.

THE NATIONAL PROVIDENT FREE-

[illegible] TENDERS for CONSTRUCTING ROADS, FOOTPATHS, and DRAINAGE in the ESTATES at TAPLOW, Bucks, are hereby invited, according to Plans and Specifications to be seen at the Offices of the Society, No. [illegible] Parliament-street, Westminster, on and after the 20th instant. Sealed Tenders are to be delivered on or before TWELVE o'clock at noon on the 31st instant, addressed to the Secretary, and endorsed "Tender for Taplow Roads." The Directors do not bind themselves to accept the lowest Tender.

JOHN [illegible], Secretary.

[illegible], March 18, 1854.

CONTRACTS.

METROPOLITAN COMMISSION of SEWERS.—To BUILDERS and OTHERS.—The Metropolitan Commissioners of Sewers hereby give Notice that they will be ready at the Court-room, No. [illegible], Greek-street, Soho-square, on TUESDAY, the 4th day of APRIL next, at HALF-PAST ONE o'clock in the precise forenoon, to receive sealed TENDERS from parties who may be willing to CONTRACT for the LAYING DOWN, CONSTRUCTING, and COMPLETELY FINISHING of SEWERS, or thereabouts, of BRICK and PIPE SEWERS, with other works in connection therewith, in the Southwark bridge-road, Tooley-street, Tower-street, Newington, Walworth-road, and other streets and places in the several parishes of Saint George-the-Martyr, Saint Saviour, Southwark, Saint Mary Bermondsey, Saint Mary, Newington, and Saint Mary Lambeth, in the county of Surrey, and for the maintenance of such works in complete repair for twelve calendar months thereafter, according to a specification and set of Plans which may be viewed in the form of Tender, may be perused, and other particulars obtained, at the Principal Office of the said Commissioners, No. [illegible] Greek-street, Soho-square, until the 1st APRIL between the hours of NINE a.m. and FOUR p.m. The Commissioners do not bind themselves to accept the lowest or any Tender, and the party whose Tender shall be accepted will be required to enter into two sureties for the due performance of the works. No Tender will be received after the hour above mentioned.

By order of the Board, L. H. WOOLCYCH, Secretary

No. 1, Greek-street, Soho-square.

Dated this 21st day of March, 1854.

GREAT WESTERN RAILWAY.—Contracts for Station Buildings at Bordesley, near Birmingham, and at Uxbridge.—The Directors of the Great Western Railway Company will receive TENDERS for the BUILDINGS and ENGINE-HOUSE required at Bordesley, near Birmingham; also for the Building a Passenger-shed, Engine-house and Goods Shed, at Uxbridge, in the county of Middlesex. Drawings of the above works may be seen, and further particulars obtained, at the Secretary's Office, Paddington (and for the building at Bordesley, at the Birmingham and Oxford Junction Railway Office, at Birmingham), on and after THURSDAY, the 23rd instant. The Tenders are to be sealed and addressed to the Directors of the Great Western Railway Company, and delivered at their Office at Paddington on or before WEDNESDAY, the 5th APRIL next.

CHAS. A. SAUNDERS, Secretary

Paddington Station, 16th March, 1854.

TO GAS COMPANIES AND OTHERS.

THE TRUSTEES for REPAIRING LIGHTING, &c. GROSVENOR-PLACE and the squares and Streets adjacent, do hereby give Notice, that they intend MEETING at their office, 43, LOWER BELGRAVE-PLACE, Pimlico, on FRIDAY, the 31st of APRIL next, at THREE o'clock in the Afternoon, to receive TENDERS for LIGHTING the whole of the PUBLIC LAMPS in the GROSVENOR-PLACE DISTRICT, for a term of not less than Five Years. Companies or others desirous of contracting must send their Tenders endorsed "Tenders for Lighting," &c. to the Office, sealed up and addressed to the Clerk before THREE o'clock on the day above mentioned. Further particulars may be had on application at the Trustees' Office. The expense of the stamp and surveyor to be defrayed by the Contractor. The Trustees do not bind themselves to accept the lowest or any other Tender.

GEORGE A. WALMISLEY, Clerk to the Trustees.

43, Lower Belgrave-place, March 24, 1854.

ISLINGTON DISPENSARY, next Islington Church.—The Committee are desirous to receive TENDERS, from builders and others, for pulling down and completing, with the best materials and workmanship, certain ALTERATIONS and REPAIRS to the DISPENSARY PREMISES, according to the specifications, which may be seen at the Dispensary. Tenders stating time within which work will be completed to be sent in not later than the 4th APRIL, at FIVE o'clock, addressed to the Secretary, to be left at the Dispensary at NEW-YEAR'S-EVE next precisely of that day. Payment in one month after completion. Surveyor's certificate. The Committee do not bind themselves to accept the lowest Tender.

GEORGE WILLIAM BRADY, Hon. Sec.

Stapleton, March 21, 1854.

COLCHESTER—NAVIGATION IMPROVEMENT ACT.—Tenders for Deepening the River Colne from the Hythe to Rowhedge.—All persons desirous of entering into a CONTRACT with the Commissioners for deepening the above River for a distance of about two miles, are requested to send sealed Tenders to my Office on or before FRIDAY, the 31st instant, specifying the work they may be ready at. Mr. GEORGE LEWIS, Surveyor to the Commissioners, East Stockwell-street, Colchester.

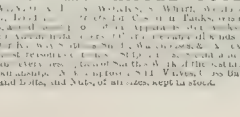
HENRY S. GOODY, Clerk to the Commissioners.

North hall, Colchester, March 15, 1854.

TO BUILDERS

THE Guardians of the Right Honourable the Earl Brownlow are desirous of CONTRACTING for the ERECTION of a new FARM HOMESTALL, on their estate at Mill-a-Ernest, near Hertford, according to plans and specifications to be seen at the Office of Messrs. BROWNING, Architects, Stamford. Sealed Tenders to be delivered to Mr. SIMON HUTCHINSON, Land Agent, of the Estate Office at Ernest, on or before four day FMARCH instant. The Guardians reserve to themselves the power of refusing the lowest or any Tender. Good sureties will be required for the due performance of the contract.

Mauritius House, March 15, 1854.



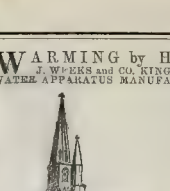
ST. MARYLEBONE BURIAL BOARD, Mortuaries, &c.—The Board is willing to accept the plans marked B, enclosed in a triangle and circle, for laying out the ground at Finchley for a new Burial-ground. The Authors of the other designs are requested to send to the Court-house for their papers and plans as early as convenient.—By order,

W. E. GREENWELL, Clerk.

HART AND SON,

WHOLESALE IRONMONGERS, MANUFACTURERS, &c.

53, 54, & 55, WYCH-STREET, STRAND.



PITT'S PATENT DOOR FURNITURE.

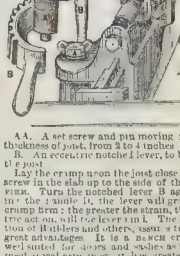
VENTILATORS OF EVERY DESCRIPTION.

GEORGE and SAMUEL CUTLER, Manufacturers of Improved Wheel, Oscillating, Rotary, Lever, and Centrifugal Pumps, Steam Engines, Pumping Apparatus, and Machinery for Mines, Waterworks, Shipping, Drainage, &c. Cutler's Improved Pumps, Steam Engines, and Machinery, may be seen at the Manufactory, Bankside, Southwark, and at 3, Queen-street-place, Upper Thames-street, London. Also Cutler's Improved Wheel, Oscillating, Rotary, Lever, and Centrifugal Pumps, Steam Engines, and Machinery, may be seen at the Manufactory, Bankside, Southwark, and at 3, Queen-street-place, Upper Thames-street, London. Also Cutler's Improved Wheel, Oscillating, Rotary, Lever, and Centrifugal Pumps, Steam Engines, and Machinery, may be seen at the Manufactory, Bankside, Southwark, and at 3, Queen-street-place, Upper Thames-street, London.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the opposite statement in the "Builder" of Jan. 14, 1854, which fully bears out by actual address of the Rev. H. J. Rogers, delivered at a meeting of the Congregational Society, wherein Mr. Rice shows that heating by hot water is the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in working, and produces perfect ventilation with a uniform comfortable warmth throughout the driest buildings. Messrs. JOHN WEEKS and Co will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. A Brick cubic foot room warmed by 1 gas only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, and economy in machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carried out instantaneously, by a new well-improved process, all damp eliminated, that may be at any time visible for churches, schools, theatres, hospitals, manufactories, clubs, and houses of any size, laundries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Apply, per post, to T. BOILESVE, French Engineer, 88, King William-street, City.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park street, Southwark, Manufacturers of COPPER and PATENT GROOVED CONCAVE IRON BOILERS, as Conservatory and Hot-house Hot Water; either in wood or iron, respectfully call the attention of the nobility, gentry, and market-growers to their simple and efficacious method of warming both small and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.



S. TRICKETT, VICTORIA STONE WHARF, Isle of Dogs, informs his friends and the building public generally, that he is prepared to execute orders to any extent, wholesale or retail, by vessel or rail, or from his Depôts, Isle of Dogs, for all kinds of Rock Block, Weare and Bramley Fall, New Brancy Fall, Pottemewton, Harewell, Westhall, Rawdon hill, Portland, and other Block Stones, as sewells, sinks, copings, landings, headstones, fire bricks, &c. Expeditiously, despatch, good articles, and low prices guaranteed. Estimates given for the supply of large contracts.

TO ARCHITECTS, MERCHANTS, BUILDERS &c.

TRICKETT and PERKIN can supply any quantity of their IMPERISHABLE RAWDON HILL STONE from their quarries at Hanwood, near Leeds. The use of a fine grit, perfectly uniform in colour, can be seen to advantage in the much admired buildings now being erected in Albion street, Leeds, for the Leeds and Yorkshire Assurance Company, R. Dennis, Esq. architect; and also at Harewood House, where it was used for the extensive alterations and improvements made by Sir Charles Barry. They have a high opinion of the stone; no part of the most exposed buildings, or carved stonework, shows the least signs of decay. The stone has been analysed by an eminent chemist as of greater strength, and durable stone is required. The stone can be got of any size or length, and is most suitable for steps, stairs, balcony landings, ashlar fronts, columns, tombs and monumental work, &c. &c. Superior grindstones, large or small. Address, S. TRICKETT, Victoria Stone Wharf, Isle of Dogs, side London agent, who will keep a stock for selection for immediate use or supply, direct from the quarries, by vessel or railway, to order.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

W. BISSELL, PATENTEE, WOLVERHAMPTON.

A A. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against the joist.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw firm. Turn the notched lever down against the joist, then, by turning the handle B, the lever will gradually fix itself and the cramp firm: the greater the strain, the more tightly by its eccentric part will the lever bind. The patentee would call the attention of Builders and others, assuring them that his cramp possesses great advantages. It is a machine cramp of the best kind, and as well suited for doors and sashes as for floors. From its superiority to most joist cramps, it has greater power, and will be found to be quicker and handier than any yet brought out, and at the same time it is light and portable.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE EARL GARDEN LEAD WORKS, SOUTHWARK.

S. le Manufacturers of Bellruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to this Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Cisterns, or any leaden vessels, made or repaired on this principle, are then complete, without the introduction of any foreign metal.

Plumbers and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, and to any amount, on EXCHANGE of OLD LEAD, on the LOWEST TERMS.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY, at PEILL and STEPHENSON'S, Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the best in the trade. A price list sent on application.

J. TYLOR AND SON'S BATH APPARATUS.

FIG. 2.

To heat a Supply of Water for a Bath from an open Fire in a Hall, or any Apartment, either below or on the same level as the Bath.

A. Copper Saddle Boiler.

B.B. Stove Front, which covers the face of Boiler, and entirely conceals it from view.

In order to set the Boiler to the greatest advantage, a 4-inch Flue, if practicable, should be carried over it and stopped off along the middle of both sides (see fig. 2), to within about 6 inches of the front. The Fire will pass from the back, along the sides, over the top, and up the chimney at the back (see fig. 2). Nearly the whole of the boiler is thus exposed to the action of the fire.

For the convenience of cleaning the Flues, the Stove Front being screwed up can be readily taken down.

C. Cistern for Hot Water, having a small Feed Cistern *E*, supplied from the Cold Cistern *D*.

This Cistern can be made of Tinned Iron or any suitable material and fixed in a Water-closet as shown in engraving, or in any convenient position.

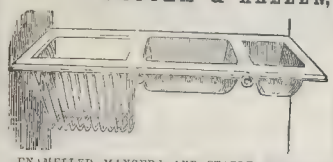
The overflow can be carried into waste of Bath, or any convenient outlet.

F Copper or Tinned Iron Bath, having three Pipes for Hot, Cold, and Waste Water, as indicated by the engraved levers on the cocks. The overflow is carried into Waste Pipe.

G. Inch Pipe from top Pipe of Boiler, and standing up 6 inches above bottom of Cistern. A branch from this Pipe supplies the Bath with Hot water.

H Inch Pipe from side of Boiler to bottom of Hot Cistern.

These Pipes *G* and *H* should be cased in and well packed with sawdust, to prevent the heat being given off to the atmosphere.



I. Inch Pipe to supply Cold Water to Bath.

K. Inch Pipe to carry Waste Water from Bath into Soil Pipe, or other convenient outlet, and must be well trapped before entering a drain.

For particulars of Shower Baths, and estimates for fixing ditto, see Catalogue.
Illustrated Catalogue showing every method of fixing Warm Baths, to be had on application.

J. TYLOR and SONS, Warwick-lane, Newgate-street, London.

COTTAM & HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

ENAMELLED MANGERS AND STABLE FITMENTS, Registered Lessen any draughts, spoor annoy, cleanliness consequent to which feeding, and entirely impervious to any infection by exhalation, are some of the improvements of these fitments.

SAMUEL HEMMING'S PATENT IMPROVED PORTABLE BUILDINGS.

A great variety may be seen at the Works, consisting of Churches, Chapels, Two-storied Hotels, handsome Row of Two-storied Shops and Dwellings, with Balconies and Verandahs; and many Ornamental Villas. Also, an Emigrant's Home, fitted up complete, with accommodation for Seventy-two Persons; and many other Buildings, covering an area of Ten Acres of Ground.

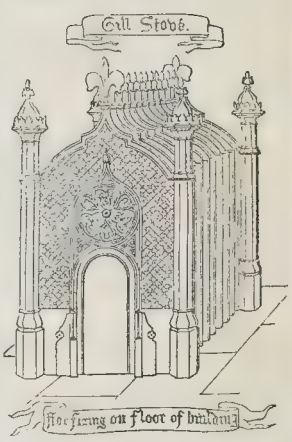
Every Building may be seen perfectly erected previously to its being taken down for shipment. All the Timber-work is dried in extensive Drying-sheds.

STUART AND SMITH'S
PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Betteanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

IRONMONGERY, NAILS, STOVES, RANGES, &c.
AT WALMSLEY'S,

126, 127, and 128, LONDON-ROAD, SOUTHWARK.

FOR THE SUPPLY OF BUILDERS, CARPENTERS, UPHOLDERS, CABINET-MAKERS, SMITHS, WHEELWRIGHTS, AND OTHERS, AT WHOLESALE PRICES.

Best Sheet Floor-brads, 15s. 6d.

Dr. Arnott's Ventilators, 4*s.* 6*d.* each.
An extensive stock of bar, rod, hoop and sheet iron Brick Moulds kept in stock. Any size made to order.

WIRE STRAND FENCING, as furnished with all its fittings, by R. S. NEWALL and CO. having elicited the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm enclosures, or such purposes, for temporary agricultural inclosures instead of any kind of hurdle), for road-side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S. Newall and Co., differs in the mode of the fences of this material in the Slopes and Home Park at Windsor, has the subsequent principle of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded by application

OFFICES.—Gateshead-on-Tyne.
140, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale street, Manchester.

GEORGE HART, 253, STRAND, Near Temple bar.

WHOLESALE, MANUFACTURING, AND FURNISHING IRONMONGER.

Proprietor and Manufacturer of Pitt's Patent Self-adjusting Hudled Door Fur niture.

Patent Brass and Wood Knob

MARBLE.—Mr. J. FABBRICOTTI, of Carrara Bay, Proprietor of Marble Quarries, and the sole person in the United Kingdom who has Built a Marble Ship of his own Quarries, begs to call the attention of Gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary Veined Sicilian Dove and Black, and Gold Marbles, at ARCARA WHARF, THAMES BANK, PIMLICO, adjoining Vauxhall Bridge, where, by Cheque at Sight, Bill at Six Months, or Cash alone, we can execute all Orders at the lowest prices. Hard stones, Jet, Slates, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARKET-WHARF, REGENT'S-PARK-BASIN WEST END DEPOT, for Yorkshire Paving, Portland and Derby stone, Ramsey Slates, Slabs, &c. Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. MARTIN and WOOD (late the Executors of Baldwin, Wood, and others), beg to give notice that they will sell at the above premises, at the lowest prices. Hard stones, Jet, Slates, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE CHIMNEY-PIECES manufactured by Modesty, and sold by the proprietor, Swan Mason, Builder, Cornice-maker, Upholsterer, and Cabinet-maker, 3, Bridge-street, Millbank. An inspection of their new and elegant Stock of Chimney-pieces, in Statuary, Sienna, Black and Gold, Veined, and other Marbles, many pieces, Tombs, Monuments, Tablets, &c. is earnestly solicited.

NEW PATENT MARBLE CHIMNEY-PIECES.—Messrs. BARRY and SON, of Scarborough, invite builders and the public to inspect their new Patent Marble Chimney-piece, which for variety of kind, and perfection of manufacture cannot be surpassed. Many specimens of the above, may be seen at their Marble Works, Scarborough, and all necessary information may be obtained at THOMAS RICHARDSON'S, 113, London-wall, Sole Agent in London for the sale of the same.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London. THOMAS JACKSON begs to draw the attention of the public to the most extensive Stock of Marble Chimney-Pieces in the Metropolis, consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, on the most improved principle, the details and finish of which are necessarily of a superior kind. The Stock consists of elegant Inlaid Real Carrara and Sienna Slabs in Scagliola work, many of which Pieces are Black and Gold, Veined, Statuary, Sienna, Verd Antique, Brocatella, Red St. Anne's, and other Marbles, suitable for Dining-rooms, Libraries, Drawing-rooms, Entrance Halls, and every variety of others. Verd Antique, Jaune, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-rooms, Halls, and Vestibules. Black Marble, for Halls, Monuments, Tombs, Tablets, &c. Pedestals for Busts and Statues, and Screens for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

TO MARBLE MERCHANTS AND OTHERS.

SAMPLES of BELGIAN MARBLE may be seen at the Office, 2, Bridge-street, Adelphi, Strand, Mortgate-street, and Parliament-street.

CAEN WHARF, ROTHERHITHE.—GEORGE PHILIPS and FOSBROKE beg to inform the Public of Builders, Paviors, and Stone Merchants in their stock of YORKSHIRE PAVIN., and general assortment of other Stones which are offered at the current prices, and on their usual terms. Lond. t.

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box Wilts. Box Ground Stone, Scallett Block, Ashlar, Rangework, &c. &c. Squared to patterns or Quarry templets, executed at Stone works for Building purposes, which will be forwarded to any part of the Kingdom. Yards in Londo, where Samples can be viewed. Orts, Pedestals, Chimney pieces, Tombs, & &c.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying stone in blocks for Architectural Works of any description, for which Estimates will be forwarded on application. E. MENDHAM, Secretary. London, 8, John street, Adelphi.

SCAGLIOLA done on an improved principle. I refer to the Gothic Arch done by Mr. BOYS, in the Great Exhibition in Hyde Park, which gained the only Prize Medal for Scagliola. Also the Arch in the British department. Specimens to be seen at 102, Bedford-street, Strand. A collection of ornamental friezes for halls, fronts, always ready, royal colours, forms at half the original prices.

TO ROADMAKERS, CONTRACTORS, AND OTHERS. TWO superior descriptions of GRAVEL, one for concrete and the other for road metal, may be had upon application at the Office of the Park Estate, Chiswick, and the Rectory Estate, Wimbledon. Price 2s. 6d. per yard. Delivered into carts alongside Wimbledon.

Just published,

A SET OF DRAWING MODELS. Designed by Mr. J. D. HARDING, Author of "The Principles and Practice of Art," "Elementary Art," "Lessons on Art," "Lessons on Trees," &c. &c.

Of the many requirements of the present day for whatever may facilitate or extend education, a system which will enable teachers to communicate, and pupils to acquire, a knowledge of art seems among the foremost.

These models are readily arranged into picturesque forms, and adapted to almost infinite combinations, and by their varied, well-separated contours and surfaces, and bold forms, the law of the light and shade in their various positions may be seen and appreciated at a glance. Each model is also a faithful transcript of reflected light, and the student may thus, without the aid of a master, learn the most difficult of all elementary studies. By their portability, which will enable teachers to carry them to their pupils, and by their cheapness, they are brought within the reach of the poorest student, and will enable the ability to be acquired, and to draw the like from nature afterwards.

Price Fifteen Shillings.

The Models made of pine wood enclosed in box ..... 25s.
Ditto ditto Mahogany ..... 42s.

Drawing, with full explanatory Text-book (which may be had separately, price 1s.) by Mr J. D. HARDING, with many fine illustrations on wood, entitled "Models and their Use."

Works direct and published by WINSOR & NEWTON, Artists' colourmen, by special appointment to Her Majesty, and H.R.H. Prince Albert, 38, Rathbone-place.

DELIGHTFUL AMUSEMENT, IN EXTENSIVE RETURN, AND PROFITABLE PURSUIT

THE NATIONAL DRAWING-MASTER: an invaluable work, as enables all to learn or teach rapid and correct drawing from nature, without a master, in the shortest time. By the Author of many books for Young Persons, price 1s. 6d. Illustrated instruction sheet, a specimen of the system, 1s. 6d. Office, 34, Paternoster-row.

THE GARDEN ADVERTISER, edited by Mr GLENNY, which precedes on Saturday, April 19, price 4d. stamped 5d. All communications, advertisements, &c. at present to be sent to 41, Cheesecake North, Camden New Town, London.

Just published, in post 8vo. price 6s. cloth,

THE ART of CLEANING, DYEING, and FINISHING, with the most approved English and French Methods; being a perfect Compendium of all that is essential to be known to the Silks, Woollens, Cottons, Feathers, Bonnets, &c. Taught by actual practice. Instructions for Cleaning and Scouring Carpets, Hearth-rugs, Ancient Tapestry, Lace and Window Curtains, &c.

By THOMAS LAE. Thirty-five Years a Working Dyer and Scourer.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE ARTISAN CLUB ON THE STEAM ENGINE. The Third Edition, in one Volume, 4to. with 30 Steel Plates and 349 Wood Engravings, price 27s. cloth.

A TREATISE on the STEAM ENGINE, in its Application to Mines, Mills, Steam Navigation, and Railways.

By the ARTISAN CLUB. Edited by JOHN BOURNE, C.E. London: LONGMAN, BROWN, GREEN, and LONGMANS.

A Corrected Reissue, in 8vo. with 2000 Wood cuts, price 42s.

LOUDON'S ENCYCLOPÆDIA of COTTAGE, FARM, and VILLA ARCHITECTURE and FURNITURE.

Edited by MRS. LOUDON.

Also, uniformly with the above,

AN ENCYCLOPÆDIA of GARDENING 8vo. 50s.

AN ENCYCLOPÆDIA of AGRICULTURE. 8vo. 42s.

AN ENCYCLOPÆDIA of PLANTS. New Edition in the press.

HORTUS BRITANNICUS. 8vo. price 31s. 6d.

AN ENCYCLOPÆDIA of TREES and SHRUBS. 50s.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A NEW EDITION, in 1 vol. fcap. 8vo. with 300 Engravings, cloth; 12s. bound in embossed roan; or 15s. in calf lettered,

MAUNDER'S HISTORICAL TREASURY; comprising a General Introductory Outline of Universal History, Ancient and Modern, and a Series of separate Histories of every principal Nation. New Edition, revised.

Also, uniformly arranged, price 10s.

MAUNDER'S BIOGRAPHICAL TREASURY.

MAUNDER'S TREASURY OF KNOWLEDGE.

TREASURY OF NATURAL HISTORY and SCIENTIFIC AND LITERARY TREASURY.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW PATENT LAW (15 & 16 Vict. c. 83), The CIVIL SERVICE and GENERAL INFORMATION, with full particulars of the Competitive Examinations for Appointments in the Civil Service, Indian Civil Service, Military and Naval Examinations, Law, Medical, Universities, Commissions in the Army, &c. &c. By DAVID BRYCE, Esq. Author of "The Practical Accountant," "The Shipowner's Assistant," &c. &c. Price 5s. 6d. cloth lettered.

Published by the Author, 2, Adelphi-terrace, Strand.

On the 31st March will be published, price 3s.

THE ENGLISH CYCLOPÆDIA.—Part XI. extending, in the Natural History Division, from CYPRESS to DUCKS; and, in the Geographical Division, from CANADA to CHELTENHAM. Includes Articles on Canada, Cape Colony, Canada, Cape of Good Hope, Carolina, North and South, Carlsbad, Carthage, Caspian Sea, Castile, Catalonia, Caucasus, Ceylon, Chatham Islands, &c. &c.

*** Publishing also in Weekly Numbers, price 6d. each.

Published by CHARLES KNIGHT, 13, Ludgate-street.

By the Author of "Vanity Fair," on the 31st inst. will be published, in 1 vol. post 8vo. with Illustrations,

THE NEWCOMES. By W. M. Thackeray.

With Illustrations by Richard Doyle.

BRADBURY and EVANS, 11, Bouverie-street.

NEW TALE BY MR. CHARLES DICKENS

Just published, in

Part I. of HOUSEHOLD WORDS.

ON WEDNESDAY, the 29th MARCH, will be published, in HOUSEHOLD WORDS, a New Work of Fiction, called "HARD TIMES," by CHARLES DICKENS.

An explanation of the Story will be continued in "HOUSEHOLD WORDS" from Week to Week, and complete in Five Months.

Price of each Weekly Number of "HOUSEHOLD WORDS" (containing, besides the usual Variety of Matter), Twopence; or Stamped, Threepence.

"HOUSEHOLD WORDS" conducted by CHARLES DICKENS, is published also in Monthly Parts, and in Half-yearly Volumes.

Office, 16, Wellington-street North, Strand.

This day is published, Part I. (to be completed in Twelve Monthly Parts), price 1s.

DRAWING MODELS and THEIR USES. By J. D. HARDING, Author of "The Principles and Practice of Art."

With numerous Illustrations by the Author.

London: WINSOR & NEWTON, Rathbone-place, and Sold by all Booksellers and Artists' Colourmen.

ARCHITECTURAL PUBLICATION SOCIETY. Abbeville to Boulogne in a Series of Etchings by Pugin, Roberts, &c. to be completed in Twelve Parts. Part I. will be published on the 1st of April.

Part II. on the 1st of May.

The Library of Architecture, with Part III. will be published on the 2d inst.

WYATT PAPWORTH, Hon. Sec.

No. 1, Great Marlborough-street.

JOURNAL of the PHOTOGRAPHIC SOCIETY of LONDON. No. I. published on the 1st of March, 1854, post 8vo. with original Papers, by

Sir E. A. Bunbury, on the Application of Collodion.
Mr. G. Shadbolt, on Photographic Paper Frames.
Mr. W. Shadbolt, Jun. on the Stereoscope.
Mr. E. Lloyd on a Decimal System of Measures.
Dr. Diamond, on Photographic Portraits.
Mr. Bevan, on Colouring.
"A Man of the Week" on the Adjustment of Focus, the Stereoscope, &c.
Mr. Scott, on his Paper Process.
With a Leaflet on the Progress of Photography, and Answers to the Queries of Correspondents. The Journal appears on the 1st of every month, price 2s.

Communications for the Journal should be addressed to the Editor, and Advertisements to the Publishers, at the office of Messrs. Longman and Co. 39, Paternoster-row, where also all Applications for Admission as Members are to be made.

Just published, in the press and will be ready for delivery in a few days,

LAXTON'S BUILDERS' PRICES, for the Current Year, containing a Revised List of Prices for Carpenters' Joiners' and Bricklayers' Work, and a Complete Table of Rates of Wages, &c. &c. Also, a Table of Prices for Plumbers' Work, and Lists of Prices for Slaters' Work.

To be had at the Office of Mr. Baker, Newspaper Agent, 26, Wellington-street, Strand; of Mr. Hodson, 24, Portugal-street, Lincoln's-inn-fields; and of all Booksellers; also of the Proprietor at the Office of the "Civil Engineer and Architect's Journal," 16, Arundel-street, Strand.

IMPORTANT TO BUILDERS, BUILDING SOCIETIES, AND OTHERS.

THE METROPOLITAN BUILDINGS' ACT, for regulating the Construction of Dwelling-houses, Warehouses and Public Buildings, and removing all Nuisances and Deleterious Manufactories, with all the Forms prescribed by the Act.

Arranged and Explained by R. THOMPSON, Esq. Author of "Popular Treatises on the Laws of Landlord and Tenant," "Law of Wills," &c.

London: G. BARCLE, Holywell-street, Strand.

THE HIGHEST STYLE OF ARTISTIC LITHOGRAPHY WILL BE FOUND IN THE WORKS PRODUCED BY

DAY & SON, LITHOGRAPHERS TO THE QUEEN.

Landscape, Architecture, Shipping, and Figure Subjects.—Portrait and Action Figures, Machinery, Diagrams, Drawings on Wood, Medical and Scientific Subjects, executed in a superior style peculiar to this establishment. Oil copies copied.

The large Staff of Draughtsmen required by Messrs. DAY and SON to execute the

MAPS, PLANS AND SECTIONS, DIAGRAMS, &c. &c. FOR HER MAJESTY'S STATIONERY OFFICE,

Offers to Scientific, Engineers and Surveyors, Printers, Publishers, throughout the country, great advantages for the rapid and economic execution of their Lithography. If required, a plan or proof by the printing post may be first supplied and despatched by the return post.

To meet the growing demand upon LITHOGRAPHY FOR COMMERCIAL PURPOSES, Messrs DAY and SON have just erected the largest premises for the purpose in the world. In soliciting orders from Manufacturers and others for

PATTERN-BOOKS, SHOW-CARDS, LABELS, &c.

and every other description of Lithographic and Colour Printing, Messrs DAY and SON promise a style of work of the highest excellence, with economy and rapidity of execution. The unrivalled powers of the printing machinery in each department of the kingdom have been added to Messrs DAY and SON for the same, and it will be found, owing to the extent to which the Establishment has been carried, that every description of work can be executed, and moderate charges, can be secured with satisfaction and saving to the customer.

PRINTING IN COLOURS,

As perfected and practised by Messrs DAY and SON, has assumed a position hitherto unattained for artistic excellence, rapidity of execution, and economy of production. The highest perfection in the art of printing in colours "The Illuminated Bible," after Pictures executed at this establishment, is stated by itself the description of a printing Print, of a character and class of great interest, more particularly illustrating rapidity and economy of production, combined with artistic excellence, will be found in the three important works by

MATTHEW DIGBY WYATT, Esq.

Namely, "THE GEOMETRICAL MOSAICS OF THE MIDDLE AGES;" "METAL WORK AND ITS ARTISTIC DESIGN;" and "THE INDUSTRIAL ARTS OF THE NINETEENTH CENTURY."

These works, although elaborately printed in colours and gold, have been sold at the price of uncoloured works. The first named, consisting of Fifty Plates, is now in the Fourth Edition, and proves the possibility of artistic Chromo-Lithographic Printed Works to Book Plates requiring long numbers cheaply and quickly and to Geological and Coloured Maps.

Messrs DAY and SON are prepared to estimate and undertake Works of any extent, and to meet every requirement as to quantity and speed, or necessity as to price.

STEEL AND COPPER-PLATE PRINTING OF EVERY DESCRIPTION.

LADIES, Amateurs of Drawing, will find the reproduction by themselves of their own sketches, by means of Lithography, a most delightful occupation for leisure time. Materials and instruction can be had of

MESSRS. DAY AND SON, LITHOGRAPHERS TO THE QUEEN, 17, Gate-street, Lincoln's-inn Fields, London.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water-Colours, and other Artists, is prepared to execute in the finest manner, &c. and of "London as it is," after the manner of "Pugin and Roberts's Public Buildings of London," Perspective Views, Interiors, &c. From the Large Experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in the most expeditious manner. Address Mr BOYS, 82 Albany-street, Regent's-park.

DECORATIVE ARTISTIC PAINTING.—Mr. F. SANG, from the Royal Academy at Munich, whose works have secured the highest public approbation throughout the north of Europe, and the country, has the honour to inform the public that he is now ready to undertake any of the important STYLES of ARTISTIC EMBELLISHMENTS INCLUDING, in the modern and ancient styles. Address Mr. SANG, 58, Fulham, London.

QUANTITIES, SPECIFICATIONS SCHEDULES of PRICES, WORKING DRAWINGS, &c. copied, lithographed, or printed.

PLANS, SECTIONS, and WORKING DRAWINGS of MACHINERY, &c. lithographed or printed.

BUILDERS' and CONTRACTORS' ACCOUNT BOOKS.

DRAWING PAPERS, ditto, mounted and continuous.

TRACING PAPER and CLOTH; ditto in lengths.

GENERAL STATIONERY, for the use of BUILDERS, ARCHITECTS, SURVEYORS, and ENGINEERS at the lowest current rates.

WATTALL and SONS, 65 to 68, London-wall; and 6, Parliament-street, London.

Contracts for the supply of large establishments.

BILLS of QUANTITIES, &c. Lithographed with the greatest accuracy, and in the shortest time on record. Many Hundred Pounds saved in Architectural Engineering and Mechanical Drawings executed by the process adopted by the undersigned, by which any number of Copies can be taken off at a trifling cost. WILLIAM DUNCAN, Architectural and Engineering Lithographer and Wood Engraver, 22, BEDFORD STREET, COVENT-GARDEN, LONDON.

SURVEYING, ARCHITECTURAL, and ENGINEERING ESTABLISHMENT.

The Proprietor, who has had many years' practical experience in the Levelling Department of the Ordnance Survey, Railway Engineering, Mining, Mineral Valuations, Valuation of Property, Land, and Building Surveying, Architectural Drawing, Perspective, and Working Drawings, Plans, Specifications, and Quantities, is prepared to undertake any of the above Professional Duties, and from his knowledge of the various branches of the Profession, can confidently promise to those who may intrust works to his hands, the most prompt attention, and moderate charges. Address, 34, Howland-street, Fitzroy-square.

TO ARCHITECTS, &c.

MR EDWIN T. DOLBY (pupil and assistant of the late Mr. George Hawkins) will be happy to undertake the colouring of perspective and other large designs of cemeteries, &c. at moderate terms. Mr. Dolby's thorough knowledge of architecture (the result of several years' practice) may be relied on by those who intrust works to his hands.—Address, 34, Howland-street, Fitzroy-square.

The Builder.

SATURDAY, MARCH 25, 1854.

IS the statements and discussions we have reported on the French and English methods of forming fire-proof floors have taken an important shape, and as a whole present a very valuable body of information on the subject, we have thought it right to engrave diagrams of the French modes of constructing iron floors described by Mr. Burnell which will be found overleaf, and we refer our readers to a previous page (28), for the particulars.

In our report of the discussion which took place at the Institute of Architects (Feb. 6), we mentioned that Mr. Christopher had put forward some objections to part of Fox and Barrett's system, including the want of key for the plastering of ceilings, the difficulty of drying, and the question of cost. At a resumed discussion on the 20th these statements were met by strong counter statements from Mr. Wyatt, Mr. J. Clarke, Mr. Hawkins, and others, to reconcile which it would be necessary to go into a long examination of the various instances given. One point appeared clear, namely, that the system had been used by all these gentlemen in large works with great advantage and without great additional cost, in some cases without involving the expenditure of a single shilling beyond the original estimates.

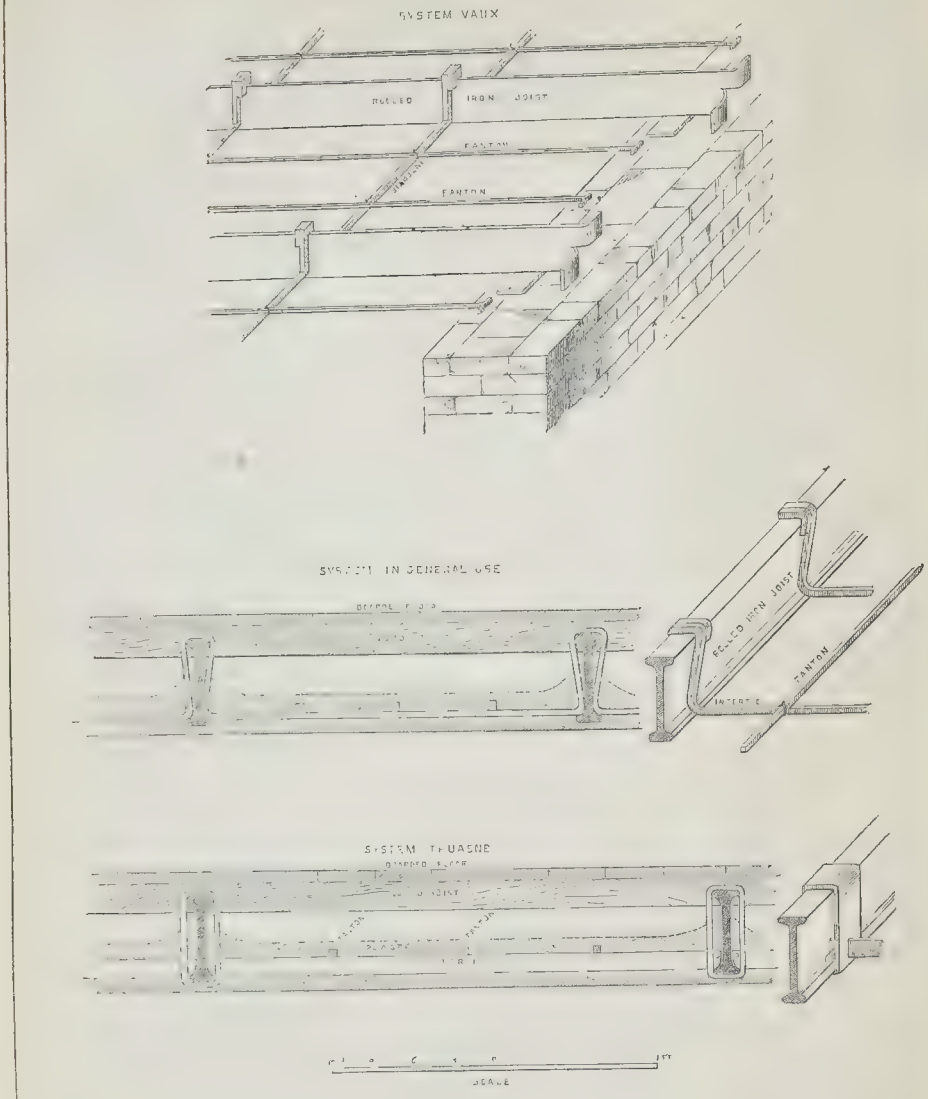
Amongst matters of detail it was shown that Portland cement is not to be depended on as a finished covering for roofs. Mr. Christopher said he had found Orsi and Armani's metallic lava quite successful as a covering after two years' trial.

At the resumed discussion Mr. C. C. Nelson read a communication from Mr. H. J. Stevens, Fellow, of Derby, as to the nature of the floors to which Mr. Garling had alluded during the discussion on the 6th instant, wherein the writer said,—

"Gypsum or plaster from the quarries near Derby, and parts of Nottinghamshire, is very extensively used for chamber flooring in this district, and its durability, when properly prepared and laid down, fully equals what Mr. Garling asserted. The coarsest description of gypsum is used, and after calcination, is broken down with wooden flails. It is kept in a dry state, and when laid, is mixed with water to the consistence of rough mortar, and spread over the wood joists on reeds or laths to a uniform thickness of 2 inches to 2½ inches. It hardens very rapidly, and the workmen use a long float of wood for levelling it, and on the second or third day it is polished off with boulder stones or trowels. It is desirable that the surface should not be broken by using the floors too soon after they are laid: it is also usual to give an increased hardness by a coat of linseed oil, and in Nottinghamshire the floors are painted, and look extremely well. Two sides of the room have wood fillets laid down, varying in thickness with the superficies of the floor, which, being removed immediately after it is laid, allow for the expansion, which is not only very considerable, but continues for some time. The floors of this material are very strong, and are extremely well suited for cottages, being, in this district, much cheaper than inch white deal—2s. 3d. to 2s. 9d. per superficial yard is the builder's price for laying them down, including reeds, laths for securing the reeds, and plaster. The under surfaces of the joists are edged, and sometimes planed, and the ceiling is formed by the plastering of the reeds between the floor timbers, for which an extra 3d. per yard is sufficient. These floors are to a certain extent fire-proof, and having a smooth surface are easily cleaned, and afford no harbour for vermin: in these accounts, as well as for their cheapness and durability, plaster floors, as they are called, are almost universally adopted in the Midland Counties, where the carriage of the material does not operate as an objection. Mr. Garling is wrong as to the *finer quality* being laid over the coarser material. I believe what is herein stated will give you the detail of the process, and I have only further to observe, that it admits of being burnt over again, and it is considered desirable that a certain proportion of old plaster should be mixed with the new: when that is the case the floors are found to set harder. I have seen this coarse flooring plaster used externally as pane work in half-timbered construction, and believe it to have been 200 or 300 years since it was worked into the building."

The writer offered these observations for the information of the members of the Institute, because he thought there was not a clear notion of the uses to which the gypsum of that neighbourhood had been applied for many centuries. It is not improbable that the material may be adopted for flooring in connexion with a system of fire-proof construction, and it may be desirable for some of the members to examine and analyse its composition.

Relative to the amount of space in proportion to the whole superficies which should be left around a plaster surface to allow of its expansion, Mr. Papworth said, his own experience suggested that an inch and a half on every side of a floor for every ten superficial feet would not be too much. Mr. Wyatt concurred in this opinion, and referred to a loft at the seat of Lord Cardigan, in Northamptonshire, where the walls had bulged from the expansion of a plaster floor, although a space had been left originally to provide for this occurrence. The chairman, Mr. Inman, stated that floors of plaster, sometimes mixed with coal ashes, were in general use in large mansions in the vicinity of London about eighty or a hundred years ago. This was the case in some of the upper floors at Hampton Court Palace, where a layer of cockle-shells, about 2 inches in thickness, was also introduced in the floors, for the purpose of deadening sound.

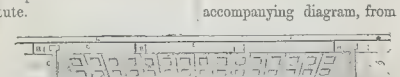


Mr. Barrett spoke as to the plan referred to by Mr. Tite at a former meeting. He said,—The stone landings were merely a modification of the iron girder and brick arch system; they were a dead weight upon the girders, and not an element of strength; while in his own plan the union and combination of the different materials produced a great increase of strength and rigidity, and at a small expense. In the one case these important qualities were derived from the *iron*,—a costly material; and in the other from the *concrete*, a very inexpensive one. But the real question was, not whether any of these materials had been previously used in the construction of floors,—it was rather whether they had been so arranged and combined as to produce a satisfactory floor of incombustible materials at a cost little, if at all, exceeding that of the ordinary timber construction; whether, in fact, it could be said before the introduction of this system (as it had been said by Mr. Wyatt) that a large and important public building had been constructed on a fire-proof principle without incurring 1s. additional expense. Reckoning the cost of the 4-inch and 6-inch self-faced stone landings, at prices furnished to him by a contractor, viz. 1s. 6d. and 2s. per foot, and assuming the iron to be no heavier than in his own case, the actual cost would be more than double that of his construction. He thought, therefore, there was sufficient reason for such a system never having come into general use. Mr. Tite had also referred to the decoration of ceilings, but he could not imagine any difficulty whatever to exist on this head; and if none was found in erecting a residence for the highest personage in the realm, there was little probability of its occurring elsewhere. Certainly any kind of decoration that could be combined with the girder and arch system could, with at least equal facility, be applied to his construction; but upon this point any member present might satisfy himself by inspecting the new offices and station of the Brighton Railway Company at London-bridge, where the system was carried out on a very extensive scale, some of the bearings exceeding 35 feet, and where many of the ceilings were of a highly decorative character. Mr. Tite had also spoken of the possibility of the concrete yielding under the action of fire if it were formed with flints. This material was, however, never used for the purpose; the concrete being made of fine gravel or ballast, broken brick or tile, burnt earth, and lime. Upon this point he thought an important consideration had been overlooked, viz. the fact that in warehouses where large fires occurred, they were mainly owing to the circumstance that the timber floors themselves afforded both the fuel and a ready supply of air to support and extend the fire, which would burn but slowly till it had consumed a portion of the floor, so as to obtain a supply of air. The case, however, was very different, if instead of a floor being of a highly inflammable nature, it was formed of a solid mass of incombustible materials 12 inches thick, by which the supply both of fuel and of air would be cut off.

Mr. Scoles, inquiring whether concrete had been really found to be fire-proof, and stating that a large mass which he had put into an ordinary fire had crumbled entirely in less than five minutes,—Mr. Barret argued that this was not a conclusive test. It was in evidence that his concrete floors would be protected by the plaster ceiling, and where injury had arisen it was only by the long-continued action of fires made for drying the plastering of the walls.

Mr. Papworth observed that, in his opinion, no really fire-proof floor or roof had yet been mentioned. An obelisk erected in 1776, on Putney-heath, by order of the Corporation of London, commemorated the satisfaction felt by committees of that body with experiments made in 1776, described in a pamphlet, printed in 1785, and entitled "An Account of the Invention and Use of Fire-plates for the Security of Buildings and Ships against Fire." The author, Mr. David Hartley, was Member of Parliament for Hull. A reprint, with additions by his nephew in 1834, stated that "resistance to every possible degree of fire, such as in distillers' shops, or turpentine warehouses, may be accomplished by applying the fire-plates above and below the timbers with dry sand or rubbish between them: in experiments repeatedly tried with this double application, the room was filled from the floor to the ceiling with faggots and pitch and tar. As to common dwelling-houses: when the single application of the fire-plates was used in the experimental house, where also air bricks were provided to the floors, the trials were continued from day to day to the same part of the ceiling and timbers of the house a great number of times after the plasterwork was burnt down and destroyed, but the timbers could never be set fire to, so as to burn of themselves, nor could the fire ever spread sideways: as long as the burning faggots were applied to the timbers, they were charred, perhaps, to the depth of an inch of their substance; but the fire-plates over them acted as an unconquerable extinguisher, preventing them from taking fire and burning of themselves." Rolled copper-plates are specified as well as those of painted iron: tinned or galvanized iron or zinc would be equally applicable. In 1774, the sum of 2,500*l.* was voted to the inventor by the House of Commons; and in 1777, the patent was extended for thirty-one years from that time. The experiments he made, however, showed that the only way to check a fire was to prevent the access of air; for flame would inevitably calcine such materials as concrete and plaster.

Mr. Tarring, Fellow, said that in the west of England, where concrete or lime ash floors were much used in common houses, the concrete failed or became rotten in the parts nearest to the fire-place, but when formed of lime mixed with sand and hair, it would last longer in that position than when composed of gravel. Plaster ceilings would resist fire, but cement would not, as that material soon yielded to heat. In old malt-houses in the west of England, with concrete floors 5 to 6 inches in thickness, he had seen the walls, though built of stone 2 feet



CONSTRUCTION OF FRENCH FIRE-PROOF FLOORS.

6 inches to 3 feet thick, bulged out 3 to 4 inches on each side by the expansion of the concrete.

So far the Institute.

In connection with the subject, we have received from Mr. Pritchett, of York, the accompanying diagram, from which about 150

A. Board or plaster floor.
B. Do. joists for board.
C. Iron beam, 1 inch thick.
D. Arching.
E. (Dotted) Tie-rod.
F. Ceiling for common rooms.
G. Do. with joist, for better rooms.

Section of Fire-proof Floor for a Room 20 Feet Wide (¼-inch Scale).

squares of flat brick arching has been lately executed at the "Retreat," near York (the lunatic asylum belonging to the Society of Friends). The beams are from 4 feet 6 inches to 5 feet apart, of a strength calculated to bear the arch, floor, and everything likely to be laid on them in the usual way: some of the rooms are 25 feet by 20 feet.

"I first adopted this mode of arching," says the writer, "in the erection of the pauper lunatic asylum, at Wakefield, in 1817: an account and section of them was published in 1819, with the plans, &c. of that building. These bricks were not hollow, and the size was limited by the Act of Parliament; but at the 'Retreat' they are 12 inches long, and of the size and shape shown in the drawing. The arches weighed, when finished, 31 lbs. to the superficial foot, and cost in York, 16s. per square in mortar, and 25s. in cement. The soffit is very nearly flat. I used to allow an inch of camber, but found the settlement so very small that the camber occasion-

a waste of plaster, as nearly all the buildings at Wakefield were finished flush with the beams. At the 'Retreat' the beams are beaded on the edges to quirk the plaster to, except in the best rooms, where light ceiling joists are used.

Where the arches abut against internal walls the springing bricks are walled in, but in outer walls they spring from a light iron beam in the wall, to which tie-rods are attached to prevent thrust till the whole gets set and becomes one solid mass."

It is most desirable that all our dwelling-houses should be fireproof; and there is no valid reason that they should not be so.

THE ARCHITECTURAL HISTORY OF LIVERPOOL.

AT a recent meeting of the Architectural Society of Liverpool, Mr. Picton read an interesting paper on the architectural history of that town, a sequel to two others previously read, which had brought down the progress of building and architecture in Liverpool to the year 1769, being the date at which Perry's large map was published. We gave some account of the former papers, and now add the more salient features of the last.

The progress of commerce and the consequent increase of population during the first half of the eighteenth century was so rapid and unexpected that we cannot feel surprise at the contracted views and want of foresight exhibited in laying out the streets of the town, nor at the ignorance of the splendid future which lay in store for the future generations. * *

The resources of one generation have been exhausted in undoing the work of a previous one. We are now about to expend probably some hundred thousand pounds in the work of destruction and pioneering, which, had timely forethought been exercised, would have been available for the beautifying and embellishment of our public places of resort.

Such has been the history of the past in this locality; ever working, so to speak, from hand to mouth,

> Letting I dare not wait upon I would;

sacrificing future renown to the petty wants of the present. Will the present generation take warning, and act a wiser and nobler part? The future alone can resolve the question.

The first map of Liverpool published after 1769 was that issued by Charles Eyes in 1785. During the sixteen years thus elapsed the population had increased from about 40,000 to 56,000, and the number of houses from 6,100 to 8,600.

St. Anne's Church was erected in the year 1770. It was originally plain red brick, with stone jambs to the windows and doors, supporting ogee arches, intended, we may suppose, for the Gothic style of architecture. Any attempt at criticism on such a piece of composition would be superfluous. It is worthy of notice on another account. It is one of the very few public edifices in Liverpool which terminate a vista. Standing at the extremity of a long straight avenue on a slightly rising eminence, shadowed by trees, the effect of the perspective was striking and effective when seen from a distance at which the paltry detail was lost in the general outline. Effects of this kind are easily obtainable when proper foresight is exercised in laying out the streets of a town. To say nothing of the grand avenue of the Tuileries at Paris, George-street, Edinburgh, perhaps one of the finest avenues in existence, owes the greatest part of its effects to the noble terminations formed by the Melville Monument at one end and St. Andrew's Church at the other.

The Theatre Royal was completed and opened in June, 1772, at a cost of about 6,000*l*. The original façade was built with brick, and set back in a line with the houses on each side. Its principal decoration consisted of a large carving of the king's arms in the pediment.

St. John's Church was commenced in the year 1775, but was not consecrated until the year 1783. Thomas Lightholder, or Lightoller, was the architect of both St. Paul's and St. John's. The former, to which we already referred, is a very creditable performance. The latter, in point of design, it would be scarcely possible to place too low. The deplorable absence of any knowledge of the simplest elements of the Pointed style is far from being compensated by anything pleasing in the outline or general design. This building at the present has obtained considerable notoriety from its very ugliness, and the obstruction which it offers to the west view of St. George's Hall, and to the projected improvements in the locality.

> "We know the thing is neither rich nor rare,
> The wonder's how the d——l it got there."

The only mode of getting out of the difficulty seems to be that of praying for its removal elsewhere.

The inhabitants taxed themselves eighty years ago to raise this abortion. Is there sufficient love of beauty and taste in the inhabitants of the present day to tax themselves for re-erecting it, on an improved design, in another part of the dense neighbourhood where it is situated? We fear we may pause for a reply.

After the peace with America, in 1783, the commerce of Liverpool began to increase so rapidly that additional dock accommodation was imperatively called for. The act for constructing the King's and Queen's docks was obtained in the year 1785; but previous to this, the town, which only extended to the north side of Mason-street in 1769, had extended itself to Parliament-street, the streets in this interval being laid out, though as yet incomplete, and only partially built on.

St. James's Church was built in the year 1774, under the authority of an Act of Parliament. It is a plain brick building, altogether out of the pale of criticism. Its square tower and the little semicircular-headed windows by which it is lighted give something of a quaint Norman character to the structure.

The sixteen years (from 1779 to 1785) of which we have been treating, constituted a period of great prosperity and progress in the history of Liverpool, a little interrupted towards the close of the American revolutionary war. Architecturally speaking, it was the lowest point of depression with regard to taste and design. The early part of the century had produced several public buildings of which Liverpool had some reason to be proud. The Town-hall, old St. George's, St. Paul's, and St. Thomas's churches, the Infirmary, with several private residences of some pretention, exhibit an amount of architectural feeling far from contemptible. As the century advanced, these indications of promise were far from being realised. Few public buildings were erected, and these, for the most part, of plain brickwork. The designs for the churches were of a more ambitious character. A mania for the Gothic style appears to have prevailed; but being based in utter ignorance of the simplest principles or details of the style, the result was brought out in such grotesque specimens as we see in St. John's and St. Anne's churches.

In 1786 the first Improvement Act for the town of Liverpool was passed, giving power to the corporation to widen certain streets therein named. The work was undertaken in good earnest by the authorities of that day, and the results were soon apparent, as any one may perceive by comparing the map of 1785 with the one of 1796.

From 1785 we will now advance to the year 1803. Harwood's large map published in that year affords the means of an accurate estimate of the progress made during this space of time. The prosperity of Liverpool within the eighteen years now comprehended had gone forward in an accelerating ratio. The population had increased in 1801 to 77,653, the houses to 11,466.

Commencing our survey at the north end of the town as before, the first object which strikes us is the new gaol, erected in the year 1786. By whom this building was designed no record exists. Just previous to the time of its erection public attention had been strongly attracted to the state of our prisons by the philanthropic John Howard. Howard visited Liverpool several times in the course of his journeys in the cause of suffering humanity, and there is reason to believe that the plan of this structure was suggested, as it was certainly approved, by him.

Cockspur-street claims a special notice at our hands. The diversions of the people of Liverpool during the last century were not always of the most refined description. In the early part of it bull-baiting was the favourite sport of the populace: at the latter part cock-fighting seems to have obtained the supremacy, not being without patronage amongst the upper classes—the gentry, and some even amongst the nobility, giving it their countenance openly. Some time between the years 1785 and 1790 a cockpit was erected on the north side of a new street leading out of Pinfold-lane, thence called Cockspur-street.

All Saints' Church, Gravsenor-street, was built in the year 1798. The site had been previously occupied as a tennis-court and bowling-green. It was erected by the friends of the Rev. Robert Banister, who had previously officiated at St. John's Church, and was considered one of the most popular preachers of the day. He retained possession of the building until his death, about the year 1820. After being occupied for some years as a church, under a license from the bishop, it was finally sold to the Roman Catholics in the year 1847, and is now called St. Joseph's Church. It is a large brick building, capable of accommodating about 2,500 persons, having a renovated gallery at the north end. There was formerly a lofty brick tower at the south end, which, showing symptoms of decadence, was lowered nearly to the roof of the church about twenty years ago.

Soho-street and part of Fox-street were laid out before 1796. Between that year and 1803 Great Homer-street was opened as far as Virgil-street and Great Nelson-street. Virgil street and Dryden-street are shown on the plan, though not built on. About 1790, the curious building called Richmond Fair, entering from Fox-street, was erected by Mr. Doob, who built and resided in a large house with extensive gardens immediately to the east of St. Anne's Church.

St. Anne-street, in 1785, had not a single house. In 1796 nearly the whole of the west side, from Springfield-street to Birkett-street, was built. Trinity Church was completed in the year 1792. It is well situated in a square plot of ground, open on all the four sides. It is a stone building, standing in the orthodox position, west and east, with a tower at the west end, and is capable of accommodating a large congregation. Its architecture, however, is utterly beneath criticism, and strikingly shows the deplorably low state of the art in Liverpool at that period. Solid as its appearance might be externally, sixty years have sufficed to manifest its insufficiency, the building being now under process of entire renovation, the roof and the upper part of the walls having to be entirely reconstructed.

The Olympic Circus, in Christian-street, latterly called the Queen's Theatre, was erected about the year 1793, for equestrian performances, and was for a long time a very popular place of resort.

Christ Church, Hunter-street, was built in the year 1797, at the sole expense of Mr. John Houghton. Though built of brick, with a wooden dome and cupola, there is a certain air of majesty about its aspect, and considerable merit in the design. The principal features are bold and striking. The composition presents unity of effect, with sufficient variety in the disposition of the parts. Internally, the church is large and commodious. The two heights of galleries, however, rather too much resemble the tiers of boxes in a theatre, and the want of height between the galleries, and the rudeness of finish of the upper tier, detract from what would otherwise have been a fine interior.

On the east side of Bolton-street, Copperas-hill, a large building was erected about 1800, which for a long time formed a very conspicuous object in this part of the town. It was originally a cotton factory, and was so continued for some years. Afterwards it was converted into the extensive printing establishment of Messrs. Nuttall, Fisher, and Dixon, known by the name of the Caxton Printing-office. For many years, before the modern system of cheap literature was heard of, an immense quantity of publications printed at this office were circulated in periodical numbers, principally amongst the poor, by means of travelling agents, by which the proprietors realised an ample fortune. After

being successfully carried on for many years, the building was unfortunately destroyed by fire in 1821, after which the establishment was removed to London.

Great George-street was laid out before 1785, but was not built on for many years after. The east side was partially built on about 1797. Trade being at that time in a state of great depression, owing to the suspension of cash payments by the bank, and the war recently broken out, the houses remained empty, to the loss of the builders; but the rebellion in Ireland of 1798 causing many families to fly for refuge to England, created such a demand for houses that every new house was speedily occupied. The builder of these houses in Great George-street, Mr. Watkinson, lived to extreme old age. He resided many years in Kensington, and died within a period comparatively recent.

In April, 1801, the scheme for constructing the present Exchange-buildings was set on foot, and met with a hearty support from the commercial classes.

It was within the period of which we are now treating that public newsrooms were first established in Liverpool. Previous to the erection of the first Exchange, and indeed for long afterwards, the merchants met in the open street for the transaction of business. For the purpose of consulting the newspapers, or of shelter from the weather, resort was had to the coffee-rooms established by individuals, of which there were several. One was established in Exchange-alley, another at the hotel at the bottom of Lord-street, the last remains of which have only just been taken down; a third was provided at the merchants' coffee-house, Old Churchyard.

In 1797 the Athenæum was projected by Mr. Roscoe and other lovers of literature, and was opened in 1799. The design of the building, though unpretending, is not devoid of character and merit. Its principal fault is a degree of flatness in the façade and feebleness in the details.

The Lyceum, in Bold-street, arose out of the requirements of the Liverpool Library, which was first established in 1754. For some time it occupied premises in John-street, but, its importance increasing, additional accommodation was required. A plan was projected of issuing shares for the erection of a building which should combine a newsroom, library, and coffee-room. Land was purchased at the bottom of Bold-street, and competition plans were advertised for. The choice fell on Mr. Harrison, of Chester, from whose designs the present structure was erected. Although it would not be difficult to criticise some portions of the exterior, yet, on the whole, it is a noble and effective design, and well adapted for its intended purpose. The interior, both of the newsroom and library, is especially worthy of notice: the latter, which had its prototype doubtless in the Radcliffe Library, at Oxford, is a model of arrangement and convenience within a moderate extent. Bold-street, at this time, was entirely built up on the west side, but on the east there was still much open ground.

The new suburb of Toxteth-park had not, down to 1803, made any very great progress. Although the streets west of Mill-street were mapped out as far south as Northumberland-street, yet the houses were few and far between. Parliament-street only extended eastward as far as the stone quarry, now St. James's Cemetery. Beyond this, the boundary between Toxteth-park and Liverpool was indicated by a hedge and footpath. Edgehill had its summit crowned with a cluster of houses, looking over their gardens and green fields beyond, to the distant town.

On the whole, the eighteen years, the rapid survey of which we have just completed, form a very important chapter in the architectural progress of the town. It may be looked upon as the transitional period from the quiet, semi-rural, country town—in which crooked streets and narrow thoroughfares were of little consequence, the access to green fields being short and easy—to the crowded commercial mart, the rolling tide of whose business demands spacious avenues for its flux and reflux, and the laborious poverty which it attracts from all quarters requiring special attention to sanitary regulations. To the demands of commerce an ample response was given: new docks were opened, noble piles of warehouses erected, an effective commencement was made towards widening the principal thoroughfares and opening new lines of street. The principles of hygiene, as applied to the construction of buildings in towns, were not, in the latter part of the last century, as well understood, or at least did not occupy public attention to the same extent as at present. The evils of a damp subsoil, and the vast importance of thorough drainage, were for the most part overlooked; yet undoubtedly some progress was made. The streets were better paved than they had previously been. An excellent supply of water was provided to every house by the establishment of the water companies in the year 1800.

The public taste in architecture, as evinced by the buildings erected during the period under consideration, will not bear testing by a very high standard, though there are some splendid exceptions. The twenty years from 1770 to 1790 may be considered as the lowest point of depression in the art of architecture in Liverpool. The churches and chapels built at this time were deplorable in their design and execution. The earlier part of the century had produced the dignified and classical designs of old St. George's Church, the light and elegant campanile of St. Thomas's, and the noble dome of St. Paul's. The twenty years just alluded to could produce nothing better in church architecture than the burlesque Gothic of St. John's, the bald nakedness of Trinity, or the humble brickwork of St. James's. The Dissenting chapels were not worse than the churches, simply because no attempt whatever at design was made. Plain brick walls, with semi-circular-headed windows, and an enormous roof in a single span, were the characteristics of nearly all. The octagon chapel in Paradise-street is the only exception to this general classification, and fully deserves to shine out from the general darkness for whatever merit the design may claim. After the year 1790, a manifest improvement is visible in the style of our buildings, and the dawn of a brighter day for architecture begins to appear. The new façades on the west side of Castle-street, a few years earlier than this, gave the first indications of improved taste. The town-hall, the interior of which was burnt in 1795, and restored about 1797, with the dome, which dates from 1802, exhibits very great advancement both in design and execution. The other public buildings erected between 1790 and 1803, such as the Athenæum, Lyceum, and Theatre Royal, are much superior to anything of the kind previously erected. The places of worship were not much improved until a later period. Private houses were externally mere masses of brick, with holes cut out for windows; and the design of a doorcase which happened to be in vogue amongst builders at the time usually runs through a whole street or more. Shops were usually distinguished by a projecting bow window, with a very flat curve, divided into a multiplicity of small squares. Plate-glass was scarce and dear, and had not yet been applied to shop-windows, and the meretricious aid of compo had not yet been put in requisition to vamp up rottenness and decay, and to give to our streets that jaunty air of vulgar pretence which is too much the characteristic of our modern great thoroughfares. Hence the town acquired what it has never yet been able to shake off—an aspect of dingy sombreness, almost amounting to meanness, which is only relieved by the busy bustling crowds which throng its avenues. This somewhat mean appearance is increased by the lowness of the houses, which, except in a few of the leading thoroughfares, are never more than three stories above the pavement. The character thus stamped upon the architecture of the town, and which partly arises from the nature of the building materials employed, will probably never be entirely eradicated. The picturesque has never been an attribute of the architecture of Liverpool: the magnificent we may probably aspire to. In this direction the Exchange quadrangle, designed in 1803, gave the greatest impulse of any building ever erected in Liverpool down to the time of St. George's-hall.

ISLINGTON, NOW AND THEN.

Islington has its "Directory," a stout book, nearly as large as the "Court Guide," and the new edition of this is now before us.* As a preface, there is "a Glance at the Islingtons of 1563 and 1854," by J. Dacres Devlin; and, although we intend one day to give our own view of this extraordinary and important part of Monster London, we may in the meanwhile give our readers the advantage of the sketch in question. Of the care bestowed on the "Directory" itself we should have spoken more positively, if the compiler had not omitted the names and addresses of two out of the three district surveyors with whom Islington is provided.

With this year's "Directory" is given, for the first time, a map of the district, by which can be seen at a glance the populous manifestation of the place, in its roads, streets, and other evidences of growth; while we have before us, even as we are now writing, a very rare map of "Old London" and its suburbs; and looking on these representations in proximity with each other, we cannot but marvel the more at the extraordinary differences exhibited between the two scenes—the wide-spread display of house accommodation which the map of our own time suggests to the mind, and the almost positive absence, as regards Islington, of anything which may be considered as "town," on the ancient engraving.

And, yet, something may be discovered, even on this map of the "London and Westminster" of the year 1563, which may be supposed to mark at least the site of this same "Iseldone"—for so the place is called in that celebrated ancient record, "Domesday Book."

Stow, one of the first both in time and ability of our London historians, some forty or fifty years after the date of this old map, mentions a way, "turning without the gate [Newgate] into Smithfield, and through Iseldon into any part north;" and so, taking this hint, and using the map of 1563 as a guide, let us now carry the eye from Newgate onward into Smithfield, and then into Clerkenwell, and beyond the church far across the open fields, in the requisite northern direction, and a small cluster of houses may be traced, lying out against the hill-like margin of the picture; a few other houses, scattered still more east; while rising behind, and much overtopping any of these buildings in appearance, is what, probably, is intended to represent Canonbury Tower, as it then was—a castellated mansion, which, in the Catholic age of England, was used as the country residence of the priors of St. Bartholomew, when there was a priory where now stands the hospital of that name.

The place so denoted on the map may be this —the palace of the Prior, or a church, or neither one nor other, but something else: still Islington itself must be meant; and in this belief we shall leave that tall, square-topped erection—whatever may have been its purpose—standing harmlessly where it stands, far, far, in the unencumbered country, and make our way into London again, by getting as quickly as possible to the quarter which is now so well known as the "City-road."

Forward, then, and still more forward we proceed in our proposed route, but, nevertheless, find no "New River," nor yet the "Angel," at Islington; but, as we now begin to turn obliquely towards the spot of our immediate destination, three windmills appear in the fields, while there is still a "Windmill-street" skirting the lower portion of the eastern side of the City-road, and thus, as it were, vouching for the truthfulness of the ancient map-makers, the brotherhood of the windmills giving, doubtlessly, such appellation to the thoroughfare.

On our right, close to the spacious roadway we have now at last got upon, lies the manor-house of the district, called on the map, "Finsbury Court," "Finsbury Fyelde" spreading and widening out eastward and northward of this road; while from the south verge of this "fyelde" descends or falls the "marish," or swamp of "Moor Fields," a large portion of which was to be seen so late as during the second decennial of the present century.

* Trounce, Cursitor-street, Chancery-lane.

Thus, 300 years ago—200 – 100—nay, less—but the greater the difference the further we go back—Islington was fully in the country, a petty, though, no doubt, always a pretty village; and as such was much beloved of, and resorted to by, the Londoners, as it still is, notwithstanding it is no longer in the fields, and can number its thousands of houses, and inhabitants of those houses, and also has its share in legislating for the country at large in our National Parliament; and even, like royalty itself, is possessed of a "park"—a park, now so essential, since the green fields have been almost obliterated from every part of the entire parish. Yet have we indications of the ambitious and improving spirit of Islington at a period long antecedent to the present—evidence of a far earlier germination of the endeavour to be something, and not permit even lusty London to win all the importance to itself.

This fact may be gathered plainly enough from what Hall says in his "Chronicles," a still earlier collector than Stow. He, in recording the events of the fifth year of the reign of Henry VIII. says:—

Before this time the inhabitants of the towns about London, as Iseldon, Hoxton, Shoreditch, and others, had so enclosed the common fields with hedges and ditches, that neither the young men of the city might shoot, nor the ancient persons walk for their pleasure in those fields, but that either their bows and arrows were taken away or broken, or the honest persons arrested or indicted, saying "that no Londoner ought to go out of the city, but in the highways."

Thus, then, these dwellers in the northern suburbs of London had to fight for their fields, if not for their "homes," early in the sixteenth century, resolutely enclosing them with hedge and ditch, that the freebooting city apprentices might be debarred from injuring such property—those fields, perhaps, nourishing the choicest medicinal herbs; or, as it may have been, only the coarser products of corn, or the pea and broad bean.

The Londoners, however, being so much the stronger—stronger a thousand-fold than all Hoxton, Shoreditch, and Islington combined,—and *might* making the *right* in this case, as it often does in others—would not be confined within their own walls, or to the "highways" of the adjacent district: so at the cry of "Shovels and spades! shovels and spades!" a wild gathering of the younger citizens took place; and then hurrying beyond the city boundaries, a thorough manifestation of that which is now called "physical force" was the result, every enclosure being broken through, and ditches levelled or filled up, so that, as our authority further states, "everything was made plain, such was the diligence of these workmen!"

Having in this way so far overmastered all impediments, the Londoners themselves began now to fence off, for their own purposes, portions of the land so thrown open, and formed gardens, and "built many fair summer-houses, such as," observes Stow, moralising upon these proceedings, "betray the vanity of men's minds, much unlike the disposition of the ancient citizens, who delighted in building hospitals and almshouses for the poor, and therein both employed their wits and spent their wealth in preferment of the common commodity of this our city."

But, withal, may not the worthy Stow be somewhat too severe in these strictures, and this rash anxiety of the population of the City to get beyond its "London Wall" bounds, be solely the result of the impulsive outpouring of its growth, and thus more room was essential, come it from whence it would? Hence, therefore, Hoxton, Shoreditch, and "Finsbury Fyelde," and the "town of Islington," must be made, as it were, to *shake hands* more familiarly than ever; and then, as the necessary result of these friendly recognitions, a still closer connection has since been formed, till now the *union* is so complete that the Polygamist City has fairly and fully espoused each and all of these fair demoiselles; so that, to finish the story, in calling either place by its own distinctive name, the phrase might be "Lady Hoxton-London, Lady Shoreditch-London, Lady ISLINGTON-LONDON; the, the latter, being the handsomest of these sister wives, and as such, the most to be honoured, in having her maiden name thus set forth in larger type.

Take any of the modern maps of London, and the truth of what has just been stated will be perceived at a glance, even as the contrary is as readily discoverable in the map of 1563. Open any such map, and lo! the whole scene is *town*—houses, all closely-clustered houses, without show of a single bit of green—not to speak of *fields*, for even Copenhagen-fields are no longer fields, but brick, and mortar, and tiles, and the hidden region of deep sewers, to be filled with all nastiness! for there the great Cattle Market—not of Islington nor of the "City" alone, but of the whole metropolis, will be held in a very short time, and no longer butter-cups and daisies be allowed to peep forth from under the heavy tread of the dirty-footed drover or butcher-purchaser.

* * * * *

In 1563 what was Islington? A wild expanse of hill and dale, though, doubtless, a beautiful wild; but, now, what does this Islington map of the present year testify? Houses — all houses, along and about that now much misnamed place, the "City-*road*;" and houses, too, on all other "roads," and in all well-know localities, however sylvan may be the diverse appellations of these places, or otherwise uncharacteristic of a numerous population. Thus there are houses—and these in plenitude—on each side of the Regent's Canal; houses accompanying the Shoreditch division line of the New North-road; houses all about the Downham-road; at the Rosemary Branch; along by the Hackney partitioning of the Southgate-road; at Ball's-pond;" at Newington-green; here and there, on the route of the "Green-lanes," contiguous to the Newington run of the "New River;" a College at Highbury; a "Crescent" in another part of Highbury; a rapid sprinkling of handsome villas throughout the whole range of the Hornsey-road; proud regiments of streets near Grove-road; almshouses—the "Whittington," close upon Highgate, the furthest we can go in that direction; a park, called "Tuffnell-park," on the western verge of the map, where the parish of St. Pancras is now become a neighbour; while another park, the "Albert," on the opposite or eartern side of the parish, and much more spacious, is also being at present actively mooted; a large prison, not for Islington alone, but the City, not far from the first-named piece of imparked land; the intended New Cattle Market, adjacent to the prison—the Park, Cambden, and Ramsbury roads only intervening; the Great Northern Railway passing across the south-western angle of this market, and having a long tunnel, too, there, because of the height of the ground. Then, east of this tunnel, and on the eastern side of the Caledonian-road, is another prison, the far-famed, so called, "Model" one of Pentonville; and next comes the "Station" known as the Caledonian, an extensive range of building belonging to another railway, the North London; and near to this station, diverging westward and eastward from the Caledonian-road, fine streets beyond number extend, and a handsome new church is seen, and a beautiful square, opening before this church, in befitting companionship. And, getting still further round, is a large tile-making establishment; and next is observed another tunnel of the Great Northern Railway; and afterwards the terminus of the same railway, the magnificent King's-cross Station—King's-cross, close to Battle-bridge, the entire of this neighbourhood being far in the fields in the map of 1563, and even within the last 100 years.

From Battle-bridge the remainder of our circuit is now an easy accomplishment; for, being here, we come at once upon what is called the Pentonville Hill-road, which stretches directly eastward, dividing Islington from Clerkenwell, and leading right on to the "Angel," where the City-road and the road we have just parted with unite; and thus we return to the very spot whence we started on this tour of observation.

Now, the tracing thus given measures in all about six square miles; and over no portion of this extensive space is the human habitation absent to the sight; but in the greater half at least of the ground so enclosed, house closely neighbours upon house, and street leads to street; while, throughout all the great thoroughfare, omnibuses, hacks, and cabs are constantly passing and repassing on their passenger journeys, the railway carriages being equally if not still more actively employed; and to all which bustle may be added the constant presence of tradesmen's carts and light waggons, as also the more interesting display of the carriages of the wealthier classes.

Such, then, is the contrast, as set forth in as concise a manner as possible, between this populous and proud Islington of the present period, and the Islington of three hundred years ago.

THE ROYAL PANOPTICON.

AN "Inquirer" wonders, with reference to the last sentence of our notice of the Panopticon, if we have reason for doubting that the directors will efficiently use the means at their command. If the truth must be told, we are not very sanguine in expecting that they will, but hope for the best. We would not mar what was intended to be a compliment to the architect of the building last week by any fault-finding addressed to the direction, or we might have commented on the manner in which, up to this time, they have failed to make good their asserted intentions. The opening had been postponed, not month after month, but quarter after quarter, to the great loss, of course, of the shareholders; and when they did open it, and had filled the building with visitors, they failed to produce a single illustration of their purpose, although they had proposed an address by Lord John Manners, and an exhibition of optical illusions. Of the actual omission of these on that occasion we are not complaining; but, as indications of a want of proper management, or, indeed, of any management whatever, they must be viewed by the shareholders with considerable alarm. If anything like a proper return on the money which has been spent here is looked for, a very different course must be pursued. Where the fault lies we need not now say; but if indiscreet "friends" of the establishment lead us to speak, they may, perhaps, induce an unsatisfactory statement.

IMPROVED DWELLINGS FOR THE LABOURING CLASSES ON THE CONTINENT.

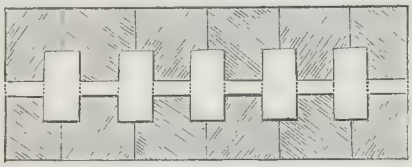
THE following account of instances in which the example of improved dwellings for the working classes set by Great Britain is being followed on the Continent, has been transmitted from Florence, by Mr. Henry Roberts, to the Society for improving the Condition of the Labouring Classes.

Geneva.—In a fine open situation, near the new English church, and almost opposite the Orphan Asylum, a model house has been built by an association of ten gentlemen, and was opened last spring. It is five stories high, the front on the ground floor being occupied by shops: the four floors above, which are divided by a central corridor, and approached by a spacious staircase, contain accommodation for sixteen families, some having two and some three rooms, with suitable conveniences.

The roof, which is flat, commands a magnificent view of the lake and of Mont Blanc.

A wash-house and laundry, recently added at the back, appear to be on so expensive a scale, that it is to be feared they will cause some diminution of the satisfactory return which the rents have yielded on the cost of the dwellings and shops. Such a result must be much regretted, if it should impede this or other associations in effecting those contemplated improvements which here, as well as in most large and increasing towns, are greatly required.

At Turin, the building of model houses has been much discussed; and, under the direction of a commission, or committee, appointed by the municipal authorities, a plan has been recently prepared by Signor Fecco, which contemplates a pile of building about 200 feet in length by 190 feet in depth, externally, with a spacious internal quadrangle, surrounded by galleries which give access to the separate tenements. These consist of 600 rooms, arranged for the accommodation of 200 families.



The ground-floor is proposed to be occupied as shops, connected with a Mezzanine floor; above which are four stories constructed with vaulted floors, and an attic or garret in the roof, making in the whole seven stories, together about 65 feet in height.

The erection of such a building will be in unison with the enlightened spirit of improvement which is so manifest in the capital of a kingdom in most respects greatly in advance of the rest of Italy.

At Genoa, the improvement of the dwellings of the working classes has been brought under the consideration of the public authorities, and as in few cities is it more obviously needed, it may be hoped that steps for its accomplishment will be shortly taken, notwithstanding the difficulty of obtaining ground.

In Florence, a society consisting of shareholders, and presided over by the Marquis Torrigiani, obtained in 1849, from the corporation, in the new and most healthy quarter of the city, between the Piazza Maria Antonia and the Fortezza da Basso, a very eligible, insulated site, containing about 4,800 square yards, at a greatly reduced rent, redeemable for the freehold at a sum equal to 120*l.*

On this spot a building of three stories in height, of a neat and very suitable elevation, was completed in November, 1852, from the design and under the direction of Signor Enrico Guidotti. Its external dimensions are 344 feet 6 inches, by 126 feet 3 inches: it is divided, internally, by five parallel courts, each 60 feet 6 inches by 27 feet 9 inches, connected together by a series of archways one story in height, which form a continued line through the centre of the building, and, having open iron gates, cause an uninterrupted circulation of air through the courts, whilst they are kept distinct, and at the same time convenient access is afforded for the removal of refuse, &c.

The pile of building, as shown by the plan, is divided into twelve sections: each has its own stone staircase, and together they provide 101 tenements, besides twelve stores or warehouses, and a large bakehouse.

The tenements differ in size, and consist of sets of two, three, four, and five rooms, generally larger than those in the London model houses. Each set has a communication with one of the internal courts, where wells for the supply of water, and stone troughs for washing, are provided. Each compartment of four and five rooms has, in addition, an underground cellar: every set of rooms has one of them fitted up as a kitchen, with fireplace, and also its own closet. The living and bed rooms have no fireplaces. The height of the rooms is from 10 to 11 feet. The basement, or cellar story, and the ground-floor, are arched with brick: the upper floors and roof are of the ordinary construction.

In the 101 tenements there have dwelt, in the aggregate, 500 individuals, including children. The statistical accounts kept by the society show that the tenants are engaged in the following occupations:—One grinder, one coalseller, one coffeehouse-keeper, five shoemakers, two hatters, six coachmen, five needlewomen, eight servants, three smiths, five porters, three bakers' men, two gardeners, four custodes, one carver, three washerwomen, four carpenters, two booksellers, one flaxdresser, one butcher's man, one soldier, three masons, one goldsmith, four pensioners, two old-clothesmen, one fishmonger, five tailors, two stonecutters, three writers, five brokers, two hospital-servants, two cigar-sellers, three street-sweepers, two printers, four silk-weavers, one turner, one varnisher, and one glazier.

The average of the daily wages of the above artizans, &c. is equal to 1*s.* 7½*d.* English money.

The tenements are subdivided in the following manner:—Twenty-two sets of five rooms, the annual rent of which is from 6*l.* to 8*l.* per set; fifty-one sets of four rooms, from 4*l.* to 6*l.* per set; fourteen sets of three rooms, from 2*l.* 10*s.* to 3*l.* per set; fourteen sets of two rooms, from 1*l.* 10*s.* to 2*l.* per set; making 101 sets in the whole.

These rents are considered to be about one-third less than are generally paid by the same class of persons in Florence: there is no difficulty, therefore, in selecting from the applicants such as present satisfactory testimonials of character; and as, in accordance with the usual custom of the place, all the rents are paid six months in advance, the society is secure from any loss by the defalcation of tenants.

The outlay on the building, including the direction of the works, and keeping the accounts, &c. amounted to about 9,400*l.* sterling, of which the cost of the building was 93·33 per cent. the architect, 4 per cent.; legal expenses, 0·84 per cent.; general expenses, 1·83 per cent.

The annual income derived from the rents, exclusive of unoccupied apartments, of the ground-rent (redeemable at 4 per cent.), of the taxes, superintendence, keeping in order, and repairs, amounts to 470*l.* sterling, which is equal to 5 per cent. on the outlay.

The Marquis Torrigiani, who takes great interest in the society, and has kindly communicated the above details, became, during his visit to the Great Exhibition, 1851, acquainted with the Streatham-street and George-street model houses: he states that the whole of the improved or model houses in Florence has had a similar effect to that which has been found in other places,—in obliging the proprietors generally of houses occupied by the working classes to improve, and render them more fit for human habitations.

The enlightened example set by the corporation of Florence in encouraging this undertaking, by granting a most eligible site on such liberal terms, deserves much commendation. It would be followed with advantage elsewhere; and will in many ways, doubtless, more than compensate for the pecuniary sacrifice.

We learn from *Galignani* that in Stockholm, the plan for building model houses for the labouring classes, beyond the "fortifications," is being vigorously carried out by a private company, beginning with 270 two-story houses in nine blocks, which will be surrounded with garden ground, &c. The rents will be expended in providing additional accommodation of the same kind. And that at Mulhausen, the Society for Erecting Houses for the Working Classes has finished the 100 houses which it had decided to erect this year. The expense appears to be as follows:—First class house, with cellar, four or five rooms, and garden, 2,800 f.; inferior description of house, but still with four or five rooms, and garden, 2,500 f.; second class house, with small cellar, three or four rooms, and garden, 1,850 f.

Patent Railway Joint Chair. We have already noticed Norris's patented plan of casting iron-joint chairs on the line itself, after the rails are laid end to end, by fixing an iron mould to the joints, which forms a temporary chair, so that no interruption is caused to the traffic on the line. The patentee is now casting chairs on this principle near to the Walsall station of the South Staffordshire Railway. The metal to form the chair is melted in a small portable cupola furnace. Trains, it is said, may pass over the rails with perfect safety, even while the chair is red-hot. Provision for expansion and contraction is made at every third or fourth joint. The cost is said to be no more than that of other chairs, except the rovalty.

A SANITARY CONTRAST.

Some forty years since a relative of the writer's expended a considerable fortune in the erection of a monster manufactory upon the banks of the Thames. The inhabitants of the opposite bank, alive *then* to sanitary considerations, headed by the bishop, interfered, and the result, though satisfactory, doubtless, to the *alarmists*, was fatal to the enterprizing projector. Ruined by this sanitary "caveat," he emigrated with his family to one of the western states of the Union, and upon the spot where he settled, then but sparely provided with neighbours, there now stands one of the largest and most flourishing cities in the States. Of this city his son is a prosperous and enterprizing citizen, and has for many years carried on his paternal manufactory on a truly American scale. A few years ago the town-council, awakening to the direful significance of stinks, determined upon ousting the whole of their malperpetrating fellow citizens from the urban limits, and amongst the condemned again figured the manufactory to which I allude. Its owner, like our English owners, determined, if might be, to hold his own, anon betakes him to the sages of the law, when, strange to say, upon consulting precedents, the umquhile case of his own father was the very first quoted against him. Upon this he was fain to yield—happily as much to his own advantage as that of his co-citizens. Now to the fever-stills which thickly dot this metropolis, the manufacture of which I have been speaking is as the distillation of lavender to the steam of a druggist's area when he is cooking black-draughts. But I beseech your readers to complete the contrast. London, solicitous, even in the days of Lord Cochrane's lamps, to breathe the air as heaven gave it, and now, when every little ragged urchin, with his small remains of nasal consciousness, can pick you out phosphuretted hydrogen from among the compound smell of his mother's back-yard, with the accuracy of a Davy, alas! altogether listless. And again, London, wealthy, philanthropic, *progressive*, distanced in an enlightened regard for its own health by a Transatlantic city of twenty-five years' standing! Let them not be ashamed to say, "Here is a people to whom one might well be proved to belong, energetic above all others in the pursuit of wealth, yet refusing to subject to Mammon the souls and bodies of its citizens; and here, the boasted metropolis of the world, which has heaped upon the marshy banks of a polluted estuary (the common sewer and, at the same time, aqueduct of a people as numerous as that which occupies the whole area of Pennsylvania) every abominable filthiness within the compass of man's devilry amidst the homes of its children." Why in our day even bishops and archbishops are content to be poisoned without remonstrance, and under the very nose of Government (heavens! if we had a Government *with a nose*): over against that drear abode of the condemned, Millbank Penitentiary, to say nothing of others, is one of the vilest nuisances that ever wafted its poisonous breath to human lungs,—the Lambeth bone-boiler's. During the last visitation of cholera this man's name became almost a by-word of infamy, yet still the human murder goes on unheeded, unrebuked. I have often, when the wind has set across the river, fairly run for it to escape the sickening overpowering reek as I have passed along Millbank. How the health of the poor prisoners is affected is known to the Government—known to us all,—yet still the deadly trade is permitted, and here, as elsewhere, the wrongdoers go on unheeded, unrebuked, unmastered. Cholera will again come and go, and after a wordy paragraph or two in a daily paper, a faint remonstrance from some poor vicinal sufferer, all will go on again as before,—

> "If not as merry as a marriage-bell,
> Yet cheered full often by the neighbouring knell."

Sir, the day must come when these things can no longer be. If we would maintain our place among the nations, thew and sinew, health and vigour must not *much* longer be left at the mercy of every commercial poisoner. Again, of what avail all your painful strivings after an educated populace, if, ere maturity has let fall the seeds of experience, death is ever beckoned wantonly in, and in a moment strikes

down in full bloom the plant of your cunning and patient culturing? Sisyphus' labour this, engaged in which you hope to distance the nations! A harvest gathered in and eaten, and nothing remaining of it to fill the hand of the sower! Orphan generations! Youth without traditions! Manhood without experience! Broken circles! A task in which all has to be begun again! But I forbear: in a future letter I may, with your permission, point out a few measures of sanitary reform which, under an unconstitutional government, would be assuredly entered upon and despatched: at present, I repeat, "NOX ADEST."

PUBLIC HOUSES.

As the term denotes, these establishments are open for public accommodation, and the law makes it imperative on the owners holding licence, to give hospitality; besides that, it imposes on them other duties not of an agreeable nature, such as billeting soldiers, receiving the bodies of suicides, &c.; they are restrained from receiving customers during divine service, but are forced to admit them at other times; they are heavily amerced for suffering brawls or bad characters to congregate; and (will it be credited?) they are subject also to serious penalties for *adulterating liquors!* What an arduous office the publican has to perform! And still, notwithstanding all this, we find these houses increasing every year, until at length they number in England and Wales 61,040 as having spirit licence; and including those licensed for the sale of beer only, they amount to 101,953; being *in excess of any other trade*, and averaging against the whole population in the ratio of one public-house for every 120 souls!

This being the case, the importance of the subject cannot be overestimated. A recent article alluded to the extraordinary increase in the new suburban districts, and to the cause thereof; but who can explain how so many are sustained, and wherefore the licensing authorities continue to sanction them?

For a new house, it is necessary, in the first place, to show that it is required in the neighbourhood; and here is the difficulty—indeed it is a delicate point, and of such nicety, that none but the six gentlemen (three of them vestrymen and three magistrates) can judge of the matter or have any discretion in it. A case or two may show how incomprehensible the system is to the uninitiated. In a short street near Chalk-farm, where there were two public-houses, a third had been carried on as a beer-shop for ten years. The owner applied yearly during that time to the licensing vestry for a spirit-licence, but was refused; when lo! a vestryman takes a corner house within ten doors, pulls it down and remodels it; *he* presents his application on the next licensing-day, and of course he gets it! Well may this last congratulate himself that he is not as others are, nor like this publican.

Again the same man builds another imposing corner house at a short distance off, in a new street; for which he is in like manner applying for a licence; and no doubt will get it. But to complete the climax, another vestryman took a beer-shop, got it licensed, and then bought the lease of a second beer-shop not 50 yards from his own, and he likewise let that to another vestryman at 80*l.* a year (the house being worth 50*l.*) on condition that on getting his licence the rent is to be 100*l. a year, and the premium* 1,000*l.*!

Look at the enormous prices paid or to be paid, and then consider the competition! How can it tell! Verily there must be some inscrutable way to profit more beneficial than 1d. per pot on what the brewer supplies.

All these men stand their ground,—the houses are radiant of gas. As the day declines the sound of music is heard; the illumination outside indicating a *feast of lanterns*, lures the straggling wanderer in: thus the devious evening's walk of the mechanic is arrested, the saloon brilliant in chaste lunar lamps; the revelry, perchance the song, engrosses his midnight hour—he then reels home, constrained to rise at six, and pay his homage to the "garish sun."

This is the poetry of the matter to the poor man—the prose comes in the morning with an empty pocket, but a full and throbbing head—it were well if no hearts remained at home to palpitate. Alas! that is too frequently the sequel of the tale.

To illustrate the caprice of the licensing powers, one more case may be cited; it is a hard one, and yet there are many nearly as bad. A beershop proprietor for twelve years kept his house open, in a rather remote position. At length the growing suburb reached it. Year by year had he applied in vain for the coveted diploma—other competitors, and more favoured, circumvented him; and these houses just sprung up (one of them actually *not roofed in*), acquired the licence, and that, too, solely on the ground "*that they were required in the neighbourhood.*"

102,000 public-houses for twelve millions of people! How many churches are there? The latter are built at an enormous national cost, and yet do not accommodate one-half of the population—the former are supported by voluntary contributions, and suffice for all at once. The fact is startling, and ought to excite the earnest attention of Government. Whether that attention is bestowed on the subject which its importance demands, is the question. Are these places of rendezvous, of universal and habitual intercourse, at all regarded, except as sources of revenue? Is the quality of the beverage vended ever checked or tested? or are the proper guarantees for good management duly secured? These are points which concern the great moralists of Exeter-hall, and until they direct their efforts towards the reformation of white slaves (slaves of bad habitudes, of abject condition, and of neglect), *at home*, chancellors of the exchequer and finance committees, finding them promotive of revenue, in the principal branches of beer, spirits, and tobacco (producing each its five millions a year), will not interfere with them. QUONDAM.

PROVINCIAL NEWS.

Ipswich.—The committee appointed by the corporation for the purpose of making terms with the present proprietors of the different waterworks of this town have at length agreed upon terms with the proprietors, and these now await the sanction of the town council. The sum of 21,500*l.* it is said, will be given to the corporation for their interest, and an open company formed, consisting of about 10*l.* shares, and bound to give, at a fixed price, an ample and continued supply, at high pressure, throughout the town.

Aylesbury.—Several tenders for re-seating St. Mary's Church have been received by the committee, and the lowest tender, we are informed, is that of Messrs. Young and Co. of Oxford, who have proposed to execute the works at the sum of 885*l.* being under the lowest of the other tenders by 168*l.* 10s.

Northampton.—The Marquis of Northampton has presented to the Architectural Society of the Archdeaconry of Northampton all the duplicates of works of architectural and archæological art from the library of Castle Ashby.

Farringdon.—A number of hands have been employed preparing the necessary apparatus for warming and lighting the church here, and a large excavation is now made at the north side for the erection of the furnace and other necessary works.

Oxford.—The ancient church of St. Michael has been restored and re-pewed. A sum of 1,500*l.* according to the local *Journal*, having been contributed for the purpose, Mr. Street, the diocesan architect, furnished a design for the restoration of the church, and Mr. Long, of Witney, builder, was employed to carry it out. In the progress of the work, some portions of the church were found to be in so dilapidated a state that it was deemed necessary to rebuild them, and this has consequently increased the expense. The old and decayed roof, beneath which was a whitewashed ceiling, has been removed, and a new roof, ribbed and covered with Minton's tiles, has been substituted. Nearly the whole of the chancel has been rebuilt, and the roof of this is prepared for decoration and painting at a future time. The old pews, which were of a great height, have been abolished, and the low uniform sittings, in plain oak, have been substituted. The chancel is fitted up with stalls, the poppy-heads of which have been carved by Messrs. Margetts and Eyles, of Oxford. The church is paved with Minton's tiles, and the chancel with glazed encaustic tiles, presented by the manufacturer, Mr. Minton. The chancel is separated by a carved oak screen, and there is a similar screen to the north. The altar-piece is composed of marble and alabaster, and in consequence of the great elevation of the altar by so many steps, the reredos, according to the *Journal*, destroys in a great measure the effect of the painted eastern window, which was presented by the undergraduates of Exeter College. This window has figures representing our Saviour, the Virgin Mary, St. John, St. Peter, St. Paul, and St. Michael. The old stained glass which was in different parts of the church before its restoration, has been re-set in an ornamental border at the expense of Mr. Street, the architect, and now fills a window on the south side of the chancel. The altar-piece and the reredos are considered, as well as the altar-cloth, to be too showy, and partaking more of the character of a Popish than a Protestant place of worship. The re-opening took place on Thursday in last week.

Salisbury.—The memorial window to the late Dean of Salisbury has been put up in the cathedral.

Winchester.—A public meeting of the inhabitant ratepayers took place on Tuesday in last week, for the purpose of considering and deciding on the recent resolution of the town council for rebuilding and enlarging the present market-house. The resolution of the council, according to the *Hampshire Advertiser*, was adopted by the meeting. The presumed expense of the new market was stated by Mr. C. Wooldridge to be 3,000*l.* which it is proposed to raise by enfranchising a fourth of the corporation property. The improvement, it is said, does not include the erection of a council chamber over the market, that question being reserved, as an outlay of much more than 3,000*l.* would in that case be required. The plan entertained by the meeting seems to be the pulling down of the present market, and the erection of a new building more convenient and ornamental. For this purpose the purchase of the interest of St. John's Hospital in front of the site of the present market will be necessary. The new edifice will stand more to the east, as the corporation has property on that side, and the present narrow street leading to the cathedral yard and square will be widened.

Bristol.—For the erection of the proposed new church in the parish of St. Paul, about 2,000*l.* have already been promised, but to accomplish the work as it should be, about as much more is required. The Rev. Mr. Rogers and the vestry, however, have now raised sufficient to authorise them to commence the building, which will be undertaken at once. Plans, &c. have already been sent in, and in a few weeks they hope to be in a position to lay the foundation-stone.

Tuerton.—Sufficient funds have been collected for the commencement of a new school-building for 300 children, with a residence for the master, though we understand that about 150*l.* more still remains to be raised. The formal inauguration of this work was accomplished on Monday in last week, when the foundation-stone was laid. Mr. C. E. Davis is the architect.

Birmingham.—The committee for the restoration of St. Martin's tower and spire have issued a circular, entitled, "A few last Words about the old Church." From this document *Aris's Gazette* makes the following extract:—"'What are you going to do with the old church?' 'When are you going on with the spire?' are questions which have been asked a thousand times in Birmingham since the removal of the old spire from that venerable edifice. The committee answer, 'We are going to do just what the liberality and public spirit of our fellow-townsmen enable us.' To them we make a final and earnest appeal. The building season is returning, and the contractors must, in a week or two, have final instructions for resuming operations." The committee then observe that "a new, elegant stone spire, standing upon a tower cased, as at present, with dirty red bricks, will present a spectacle at once ludicrous and un-

sightly, and rear its head as a monument of the sufficiency and the parsimony of the churchmen of Birmingham. Would it not be preferable to roof in the tower, and leave it spireless until a larger hearted generation of churchmen shall do the work?" They urge the necessity of the work, and the danger of placing a heavy spire upon the old tower; and again appeal to those niggardly Birminghamites who ought long ere now to have settled this question. We understand that the total sum required is only about 6,000*l.* of which 3,500*l.* have been promised, and about 2,000*l.* paid. The past and still present state of the church reflects great discredit on the whole town.

Birkenhead.—On Tuesday in last week a portion of the embankment wall at the new dock-works at Wallasey Pool fell into the river, with a crash that was heard at Liverpool. For some weeks past the contractors have been engaged in closing up the entrance to the great float with masonry, previous to commencing the excavations within banks for the deep water basin. The retaining wall on both sides of this entrance had been erected some time, and all that was required to make the dam perfect was the completion of this masonry. The wall was 14 feet wide at the bottom, and 12 feet 6 inches at the top. It had reached an elevation of some 16 or 17 feet, but was not quite high enough to exclude the tidal waters, which still continued to flow over it at high water, and which were again let out through sluices as the tide ebbed. Had all gone on well, another week would have sufficed to have excluded the tides altogether, and the works would have proceeded rapidly, as Mr. Brassey had issued orders for the speedy progress of an important part of the contract, namely, the permanent sea-wall and the excavations for the deep water basin. The masonry for a length of 200 feet was precipitated into the river in great masses of stones, some of them carried apparently to a distance of 300 or 400 feet. The loss, it is said, will fall upon the contractors. The delay to the inner works will be about two months.

Buxton.—A triple-lancet east window of stained glass has recently been placed in the old parish church of Buxton, by the incumbent, the Rev. R. P. Hull Brown. The window is designed from one in the Cathedral of Wells, and executed by Messrs. Howard and Atkinson, of Manchester.

Blackburn.—St. Anne's (R.C.) Chapel, has been decorated by Messrs. Barff, Scott, and Bezley, of Preston. The walls of the lady chapel are covered with a diaper, principally composed of monograms of the Virgin. The panels of the roof are ornamented with centres, bearing monograms and surmounted with scroll work. The pillars at the entrance have a chevron ornament, composed of blue and gold, with the words "Ave Maria" repeated several times. The side walls of the church have been thrown into eight panels, in the centre of each of which is a large medallion, surrounded by a cresting, and having an emblem of "the eight beatitudes" inscribed on them. The remaining parts of the panels are filled up with a scroll ornament.

Sheffield.—A monumental tablet has just been erected in the new parish church of Pitsmoor. It is placed in the chancel on the south side, and its form is in the early English style, measuring 8 feet in height and 3 feet 3 inches in width. It is executed in Caen stone, with a highly-polished statuary marble back-ground, on which is a raised figure of a family crest, and an inscription.

Rotherham.—The Local Board of Health held a special meeting last week for the letting of contracts. The first was for the manufacture and supply of glazed stone-ware pipes and other articles for the drainage of the district. There were six tenders, namely, Mrs. Caroline Williams, of Budworth, Warwickshire, 4,[illegible]*l.*; Messrs. Cliff and Ingham, Utley, near Leeds, 3,191*l.*; Mr. Edley Taylor, of Bramption, near Chesterfield, 3,151*l.*; Mr. E. Brooke, of Thornton Lodge, near Huddersfield, 3,189*l.*; Mr. T. H. Simpson, Conisbro', 2,980*l.*; the Farnley Iron Company, Wortley, near Leeds, 3,363*l.* Mr. Simpson's tender was accepted. The second was for the construction of certain brick sewers, the laying of certain stone-ware pipes, and the performance of other works in connection with the drainage of the district. There were three tenders—Messrs. Ripley and James, Masbro' and Kimberworth, 5,700*l.*; Messrs. Pleasance and Turner, of Greasbro', 12,091*l.*; Messrs. Tomlinson, Harper, and Harper, of Derby, 5,022*l.* It was suggested that the Board should examine the tenders for laying the water-pipes, because it was desirable, if there was no material difference in the amount of the tenders, that both contracts should be let to one contractor, and thus obviate the necessity of the streets being opened by two sets of men. Four tenders were sent in; Messrs. Ripley and James, Masbro', 1,535*l.*; Messrs. Tomlinson, Harper, and Harper, Derby, 1,419*l.*; Messrs. Kesteven and Upton, Masbro', 2,275*l*; and Messrs. Harrison and Ducker, of Blackburn, 2,323*l.* In the second and third contracts, the tenders of Messrs. Tomlinson, Harper, and Harper were accepted. The contract for sluice cocks and hydrants was not let. There were three tenders sent in: Messrs. Guest and Chrimes, Rotherham; Mr. R. Wharton, Nottingham; and Mr. G. Jennings, of Blackfriars, London. The Board wished to inspect samples of the articles tendered for. The total of the contracts let amounted to 9,331*l.*

Grantham.—On Sunday night before last, *for the second time in about a year*, the flues under the floor of the church here took fire, to the imminent danger of the building and its occupants, during divine service. The fact was observed as the congregation was assembling: nevertheless, the congregation was most culpably allowed to assemble on the very lame excuse that a close watch was kept to give "timely" alarm in case the absolute necessity should arise. After the service, the boarded floors of some of the pews, and the flues under them, were found dangerously heated. Workmen were immediately employed, and continued engaged during the night. The flues were opened and saturated with water, and every means taken to prevent the fire breaking out, and happily with success. It is now intended, it is said, to protect the flues in a better manner, lest Grantham Church should share the fate of Doncaster. Had necessity arisen for giving the "alarm" alluded to, or had some of the sitters in the pews so "dangerously heated" had their clothes as dangerously heated, and themselves given the alarm, all know too well the probable result of the scene of confusion, and struggle to get out, which would have followed; and had such a result occurred, we should have heard nothing of the fact having been "observed as the congregation was assembling." The recurrence of such peril a second time in the course of a year shows a carelessness doubly disgraceful.

Driffield.—A new stained glass east memorial window has just been put up in the church at Nafferton, at the expense of Mr. John Dickson. It has been executed by Wailes. The principal figures represent the Birth, Crucifixion, and Ascension of Christ.

Newcastle-upon-Tyne.—A subscription has been opened for the repair of All Saints' Church in this town, which is becoming quite dilapidated.

Malvern.—The reservoir for supplying the town of Malvern with water is now nearly completed. It stands on the Wych-road, from which it takes its name. The water line of the reservoir is at an elevation of 300 feet above the centre of the town, and it is calculated that it will hold upwards of 800,000 gallons. The length between the walls is 160 feet, the width 46 feet, and the depth 22 feet, and about 450,000 bricks have been used in its construction. The design, says the *Hereford Times*, is somewhat novel the interior walls being built with openings: there are four of these placed longitudinally, and seven transversely, dividing the interior into thirty-two compartments, the whole being arched over with 9-inch brickwork. The outer walls are backed with layers of stiff clay and concrete, in order to prevent leakage. Large main pipes have been laid from the reservoir through all the streets in the town, and branch pipes into each house; while, in case of fire, an immediate and abundant supply of water will be obtained from hydrants, or plugs, inserted in the mains, at a distance of 100 yards from each other, the pressure being so great that the water will be thrown over the tops of the highest houses in the town without the aid of a fire-engine. The reservoir will be supplied with water by means of feed-pipes from small tanks placed at the different springs on the hills, thence by means of other pipes to the street mains, thus always insuring a fresh supply. The plans for the building were furnished by Mr. Simpson, president of the Institution of Civil Engineers, and have been carried out under the supervision of Mr. Anderson, the local surveyor. Our readers have heard of it before.

Newport.—A Hereford theatre manager has begun to erect a theatre in Dock-street, Newport, a part of the town which will, at the completion of the new docks, be an important thoroughfare. The building will have a frontage of 50 feet, will rise 20 feet to the roof plates, and have a lofty roof of corrugated iron. The interior will be fitted up in the style known by the name of Garrick, "with entirely new scenery and decorations," and it will hold an audience of 2,000.

Arbroath.—Within these few weeks, says the *Arbroath Guide*, the building of the proposed market-place erections has proceeded rapidly. The edifice, which we have every reason to believe will be the "lion" amongst our public structures, already begins to assume a form and shape. The architect is Mr. Edwards, of Dundee, and the contractors are Messrs. Maxwell, of Arbroath.

LOCAL BOARDS OF HEALTH.

DISTRICT OF REGENT-SQUARE CHURCH, ST. PANCRAS.

A LOCAL Board of Health was formed at the close of last year in the district of Regent-square Church, in consequence of the re-appearance of cholera and the prevalence of other diseases whose origin is identical with it, or whose presence indicates that sources of disease exist in the locality favourable to the production of epidemic diseases in general, and of cholera in particular; and they caused a house-to-house visitation to be made, the result of which was printed and circulated throughout the district.

We have now before us the first Quarterly Report of the Honorary Architect, Mr. E. Cookworthy Robins, and the Honorary Secretary, Mr. Panton, which gives an analysis of the operations of the Board from the date of the appointment of the inspector, November 16th, 1853. This Report, arranged in a tabular form, shows that the inspector has made 619 personal inspections in various parts of the district, and that no less than 411 *separate sources of infection* have been, or are about being, abolished, by the removal of cesspools, the renewal of drains, the trapping of sinks, and the removal of refuse. "Taking the average superficial area of each cesspool to be about 8 square feet, we have succeeded in closing, or are now causing to be closed, no less than 100 *square yards of evaporating surface of the most poisonous and deleterious description of infectious effluvia.* Again, taking the average length of the drains of each house to be 30 feet only, we have caused, or are now causing, the removal or cleansing of *upwards of* 1,000 *lineal yards of foul house-drains.*" The Board are convinced "that in the metropolis, as in every town and city,—the places in which typhus is to be found are the neglected and filthy parts of it."

This Report will serve to show to the public how much may be done in the way of sanitary improvement by those who are willing *to set themselves* to this good work.

The Honorary Secretary, in forwarding a copy to us, says:—"The body from which this Report emanates is unsupported by public authority, and unaided by public funds. And yet neither on the score of expense, nor by reason of resistance to their recommendations, have they had any serious difficulty in carrying out the objects for which they were constituted. Is not their example, then, worthy of imitation? and is not their success sufficient to encourage others to follow it?"

Unquestionably it is; and, moreover, their endeavours deserve the warmest praise. We are the more interested in these, as our papers on the "Homes of the Poor," admittedly, influenced the establishment of the Board.

OLD BRIGHTON CHURCH.

May I ask, through your valuable columns, of any of your numerous Brighton readers, by *what* power, and by *whose* authority, have the marble tablets from the walls of the *old* church been removed from the light, and plastered against a *dark* west wall, minus their backgrounds, and works of fine art by Westmacott, &c. thus entirely lost?

This question is asked by one strongly opposed to the marble tablet on ancient church walls, but when, no doubt, heavy fees were paid to the vicar for the site of every tablet so removed, it surely behoves those who are the guardians or wardens of the church, out of respect to those who have paid the fees, to look to the matter. The very arrangement of the tablets speaks the contempt in which they are held, and the apparent disrespect to those who *paid the fees* and erected them.

I was induced from your remarks on Brighton a few weeks since, to peep into the church, where I observed an ordinary construction on the site of the old church under the name of a "Wellington Memorial," *the memorial* itself, well executed with a small amount of the funds, like a high font cover is where the font should have been; a vile modern *Gothic* tablet or two, conspicuously placed, and, as I observed before, works of *fine art* in marble, &c. and the tablets, placed out of the way against a dark west wall. I trust those who have paid fees for such purposes will also insist on their right or have their money returned. Were this confined to the Brighton church, I might not have spoken, but I regret to say, it is a too common practice, under the plea of repairs. The Temple Church removed their tablets, but at a considerable expense contrived a suitable receptacle for them in the Triforium of the "Round."

I am told by an eye-witness that at Hereford Cathedral there is a high mass of valuable tablets, among them works of the highest art, laid one upon another, literally rotting. The fee for interment in this cathedral is stated to be from 100 to 200 guineas, and no doubt that for the erection of a large tablet is as much. At Canterbury it is 100 guineas in the nave; and in some of our metropolitan churches, the smallest amount paid to erect a tablet is 50*l*.

M. E. M.

BUILDINGS IN DUDLEY.

Upwards of 10,500 yards of land, near the Wellington-road, have been purchased by the Dudley committee of the "Metropolitan Association for Improving the Dwellings of the Industrious Classes," for the erection of their proposed model lodging house. It is also in contemplation to erect at the same time a block of model dwellings for families, that the experiment may be tried two ways. The scheme proposed to the committee for laying out the ground is a comprehensive one. The committee have increased their capital from 2,000*l*. to 10,000*l*. as an earnest of what they intend doing.

The present New Connection Methodist School, in Stafford-street, is to be pulled down, and spacious schools, class-rooms, &c. erected upon the site, from designs by Mr. Wigginton; for which tenders have been lodged.

The site for the Masonic Hall has been changed from Priory-street to a more commanding position, in deference to the wishes of Lord Ward, who will now become the principal subscriber. The outcry against the present post-office has been loud and deep, and any change would be gladly accepted by the public.

The survey of Dudley is making rapid progress under the hands of Mr. Roper, of Doncaster. The "nests" upon the ruins of the Castle-keep and the towers of Eve-hill and Netherton Church, are far from being *picturesque*, but they will serve the purpose of their erection. The local board selected civilians to execute their map.

The first quarterly report of the medical officer of health has been published, and displays some fearful results of the non-sanitary condition of the town, notwithstanding the speedy removal of enormous amounts of refuse, the unsparing use of the whitewash-brush, and the careful supervision the local pest-holes have undergone. Nothing permanent can be effected in the way of amelioration until the drainage is completed, and the new water company in the town, to insure plenty of pure water to every house, and some to spare for the periodical flushing of the "to be" sewers.

WESTMINSTER ABBEY.

It appears, on examination, that a central tower cannot be raised to Westminster Abbey, because the walls are out of the perpendicular. In other words, the whole building is coming down! Is the nation prepared for this, and will it be satisfied to look on and see an edifice fall in ruins, which is connected with all the historical associations of the empire? Assuredly not—the fall of the Abbey would be like the presage of the downfall of the nation. It may be taken for granted, then, that the nation does not intend to let the Abbey fall in ruins, in which sleeps the dust of its sages, its senators, its orators, its heroes, and its kings, and in which the sovereign receives the Crown of England and the Indies. If so, the sooner we set to work to restore it the better. Let the faulty parts be taken down before they come down, on some great occasion, and let the whole be raised upon a firm and stable condition fit to last for ages. And let a handsome lantern tower, with an open-work spire, be raised in the centre, according to the original intention. Money can never be wanted for such a purpose in England.

Clericus.

*** There is no ground for supposing the Abbey to be in a dangerous state; indeed, there is nothing that we know of to prove that the central piers are more out of the perpendicular than they were in the time of Sir Christopher Wren. It would not be wise to raise a central tower as he proposed, nor is it certain that such was the original intention, as the great French types, which seem to have been followed, have not that feature. We are disposed to think that the fabric is not *substantially* out of repair? Its defects are rather in its architectural than its structural features.

UTILIZATION OF REFUSE.

Referring to the various communications which have from time to time appeared in your journal on the subject of British manures, and the preparation of fertilizers to compete with or supersede foreign guano, I venture to request the favour of your insertion of this communication, as a contribution of the results of many years' practical experience in the deodorization and treatment of sewage and other refuse matters in the preparation of manures.

The Manchester Sewage Guano Company commenced operations in the year 1850, in the preparation of manures, which they called "Sewage Guano." The company, under the superintendence of two of the directors, one a practical chemist, and the other a practical engineer, prepared and sold manures manufactured by the following and other processes, viz.:—

1st. The filtration of sewage through animal and vegetable charcoal; 2nd. The precipitation of the solid matters of sewage by lime, lime-water, &c.; 3rd. The evaporation of the water in nightsoil, ammonia water, &c.; 4th. The desiccation and deodorization of fish, blood, flesh, and other animal matters; and 5th. The mixture of the concentrated products and other chemical materials with animal and vegetable charcoal, which absorbs to an extraordinary extent the concentrated liquid thus prepared, and which, when mixed with the solid parts of the fish, flesh, bones, &c. in the manner which experience has pointed out as the best, forms the Manchester Sewage Guano.

Dead horses, sheep, &c. &c.; diseased flesh meat and fish, seized as unfit for human food by the City authorities, have been worked up without causing any nuisance by the process. Various chemical analyses have been made of this manure, which is found to contain a larger proportion of ammonia, phosphates, urates, and other fertilizing properties, than an equal amount in value of foreign guano. The company have recently erected new works, at a large expense, with the requisite convenience of steam power, tanks, drying-stoves, evaporating pans, retorts, sheds, &c.; and although they have not yet had the gratification of receiving any return in the shape of profit, they feel confident, from the fact of the demand for their manures having last year been greater than they could supply, that a reasonable profit may be fairly expected from their future operations.

The company have never taken out a patent; and although they naturally refrain from publishing the particulars of the various processes adopted, they would gladly see a host of competitors arising for the manufacture of a British manure from waste materials which are now the cause of nuisance, sickness, and excessive mortality. Numerous patents have been taken out for processes which the Manchester Sewage Guano Company have used for some time.

The experience of the Manchester Sewage Guano Company may be valuable in exciting more vigorous efforts in the right direction for the attainment of the desirable object in view, which may with truth be considered the great agricultural and sanitary question of the day, viz. the preparation of a valuable fertilizer from the refuse and injurious waste materials of our towns. There is abundant room for every well-directed effort; and heartily wishing success to all who earnestly set about the accomplishment of the desired object, I thank you for the aid you have given to the cause.

John Thompson,
Secretary to the Company.

NOTES AND INQUIRIES.

ARCHITECTURAL AND ARTISTICAL.

Tar.—1. If a wooden building, much exposed to atmospheric influences, were painted with diluted Stockholm tar, would it be possible to paint it in the ordinary way afterwards, or would the application of the tar *prevent* this being at any time done?

2. What is the best process whereby to reduce the tar in question to a proper consistence, so as by a light application of it to, on the one hand, preserve the timbers, and on the other obtain the same effect as that of staining and varnishing?

3. There being in the building in question both oak and red deal timbers, by what process can I obtain uniformity of appearance and effect when tarred?

4. What is the relative durability, under the circumstances described, of three coats, oil paint, staining, and varnishing, and Stockholm tarring? and what the relative cost of these different kinds of works? A. P. H.

Iron Pipes, &c.—Can any of your readers offer any practical suggestion for preventing the peroxyde deposit in iron hot-water pipes, boilers, &c. in connection with bath apparatus? Also upon the best measures to be adopted for the cure of same in apparatus already constructed? W. L.

THE FRENCH PALACE OF INDUSTRY.

We find some information on this subject in the *Art-Journal* of the present month. During the summer and the mild season preceding the severe frosts we have experienced in Paris, the *Palais de l'Industrie* was forwarded with very great activity. The immense northern façade which develops itself parallel with the grand avenue of the Champs Elysées, proves that all hesitation or doubt on the subject of the plan has disappeared. The stonework has arrived at its proper height, the iron girders, &c. are on the ground, and no doubt, now the cold weather which had stopped the works is gone, we shall shortly be able to see a complete view of the vast outline. The entrance to the palace will be ornamented with friezes and statues, which have been put up to competition; the jury, consisting of M. Visconti Questel, and De Gisors, architects; Seurre, *aîné*, sculptor; Picot and Petitot, painters. The successful artists are M. Elias Robert, M. Diebolt, and M. Desbœufs. They had for opponents Messrs. Ottin, Oleva, and Villain: by an arrangement made between the artists themselves before the decision of the jury, each unsuccessful artist received the sum of 1,000 francs; a very meritorious and fraternal arrangement. M. E. Robert is to execute the

predominant group of figures which will represent "France distributing Crowns to Arts and Industry," forming three colossal statues. The second subject, by Diebolt, is a basso-relievo of two figures of "Fame supporting scutcheons with the Imperial and the Paris Arms." The frieze of the pediment is confided to M. Desbœufs. The subjects to be competed for were left to the choice of the respective artists, who have fully justified the trust reposed in them. It is, however, thought, and that in high quarters, it will be quite impossible the Exhibition can take place in 1855 as expected: the reason is this: in the southern part of the building, which is parallel with the river, a portion of the ground has turned out to be a clayey soil: in other parts the ground seems to have been made; probably when the quay was built. The consequence has been that the high water of the river, common at this period of the year, has infiltered itself, and the whole of the works have to be begun again, and most likely piles will be obliged to be sunk to make the foundation solid. This defect was not perceived when the weather was hot and the river low, but seems now very serious. It is most likely this fact, joined to the uncertainty of political matters and the apprehension of war, may cause the Exhibition to be postponed for another year: we shall let the public know if any fresh news on the subject occur. The builders of the palace have issued proposals for erecting a provisional gallery for the *Salon* of 1855, which will extend from the Bridge of the Invalides to the water-works at Chaillott, on the Quai of the Conference: this is in consequence of the building consecrated to the Fine Arts not being finished in time.

We may add to these particulars that the contract for the palace was taken by Messrs. Goldsmid and Co. at 11,327,000 francs. Two additional wings are intended, at a cost of 6,000,000 francs more, for the erection of which a great number of trees must be rooted up. M. Viel is the architect.

THE CENTRAL RAILWAY STATION, BIRMINGHAM.

The grand Central Railway Station and Hotel, erected by the London and North-Western Company for the accommodation of their own immense traffic and that of the Midland, Stour Valley, and Shrewsbury and Birmingham lines, is rapidly approaching completion. It is of an extraordinary character. The main front of the station and hotel is a building in the Italian style, 312 feet long, and consisting of a centre and right and left wings. The centre, which projects about 20 feet from the wings, is 120 feet long, and four stories in height. The lower story is composed of an arcade, divided by Doric pilasters into ten arches, each pilaster being flanked by piers of rusticated masonry. This story is built entirely of Derbyshire stone. The edifice, with the exception of the lower story, is constructed of white brick, the window frames, mouldings, cornices, and the rusticated quoins on the edges of the walls being formed in Portland cement. The hotel, which is entered by a stone porch, comprises the whole of the left wing, the centre, excepting the ground floor, and the third story of the right wing. The remainder of the edifice is devoted to railway purposes exclusively. The refreshment-room is about 80 feet long by 40 feet broad, divided into three portions by rows of massive pillars. To convey, says the local *Journal*, an idea of the appearance presented by the station,—we must ask the reader to imagine that he stands on a stone platform, a quarter of a mile long; that behind him is a range of forty-five pillars projecting from the station wall; that in front of him are ten lines of rails, four platforms, and a broad carriage-way, bounded by another range of forty-five massive iron pillars; and that above all this there stretches, from pillar to pillar, a semi-circular roof, 1,100 feet long, 205 feet wide, and 80 feet high, composed of iron and glass, without the slightest support except that afforded by the pillars on either side. The roof consists of thirty-six principals or arches of iron, strongly framed together. The upper rib is curved in the segment of a circle, and each end rests upon a pillar, but between the rib and the pillar an ingenious system of rollers is introduced, so as to allow of either expansion or contraction by atmospheric changes. From each rib depend at regular intervals twelve "struts," which are laced together by diagonal bars. The lower ends of the struts are attached to the tie-rod, and which corresponds in curvature with the rib. Each of these principals weighs about 25 tons. They are placed at intervals of 24 feet from each other. Each rib is composed of five distinct pieces, riveted together. The pillars, we may mention, weigh 3 tons 12 cwt. each. From rib to rib numerous "purlins" are stretched, and these serve to support the smaller divisions of the glazed roof. The roof is composed of glass and corrugated iron, the former bearing a proportion of three-fourths to the latter, which runs along in a broad strip on each side, and in two bands on the crown of the arches. The glass, which is fluted, was supplied by Messrs. Chance. The construction of the station roof has been effected by Messrs. Fox and Henderson, the works being placed under the immediate direction of Mr. Phillips: the architect of the station and hotel is Mr. W. Livock, of London; and all the other works connected with the station, except the engineering, have been executed by Messrs. Branson and Gwythar.

COST OF ARCHED ROOFS.

Below I send you an estimate of the cost of applying hollow brick arched roofs to farm buildings in course of erection in Northumberland as compared with timber and slate

Length of east wing, 95 feet; breadth, 16 feet.
„ west „ 77 feet; „ 15 feet.

Total length of roof, 57½ yards; average breadth over all 6 yards.

Each superficial yard costs, for bricks, 1s.; labour, 6d

57½ by 6=344, at 1s. 6d.	£25 16
57 iron springers, at 5s. each	14 5
Iron ties, 3 cwt. at 9s. per cwt.	1 7
Labour on ditto	1 7
Glazing bricks, 7,000 at 10s.	3 10
8 casks cement, at 16s.	6 4
Leading 7,000 bricks	4 4
Total cost...	£56 17

Estimated cost of timber and slate roof, materials brought by rail to the station:—

Timber 38 squares of roofing, at 30s.	£57 0
Slating, 427 yards, at 2s.	21 14
	£78 14

The only item uncertain in the first estimate is the charge for glazing, and this would be the subject for an agreement. All the others are the actual cost at which we can contract to have the work done: you will, therefore, see that with glazed bricks laid in cement the cost will not exceed (exclusive of leading the bricks) two-thirds of the slate roof. The only thing to be set against it is the necessity of some alteration in the stable fittings, which will cause some additional expense; but I should think 5*l.* will cover that: the centres we have will do the whole.

R.

THE CONDITION OF SOUTHWARK.

This is not the first time I have had to trouble you, nor the only instance in which you will have obliged by a passing notice of some of the crying evils which the ratepayers of Southwark have to endure (evils which are patiently endured, until they become insufferable), as is that which I now beg to call your attention to. Should you be by chance *en route* to Greenwich by the Old Kent-road, you would find the abominable stench from the animal deposit of several weeks' accumulation to be such as would surpass your patient endurance, and excite your pity for those who have to endure it night and day, and who, like Pharaoh of old, under his plagues, could find no release but by the hand of Moses, so can we find no respite until our authorities in parochial matters think well to awake to a sense of their duty, and require their contract scavenger to do his, for which the ratepayers are heavily taxed. I am prepared to state that for some time past there has been but one miserable sinner cleansing the road (as he would call it), by carefully spreading the soil (for it is nothing else) evenly over the surface, the more effectually to generate malaria, and from that fever and cholera under the rays of the sun, unless your pen can alter it again.

H. G.

BUCKINGHAM PALACE.

On lately viewing the new wing, on the Pimlico side of Buckingham Palace, it occurred to me that uniformity would dictate the necessity for a similar erection at the opposite or north end of the palace. Why might not this new part comprise accommodation sufficient for all the purposes of levees, drawing-rooms, &c. and so render it unnecessary to continue the present inconvenient migration to St. James's Palace on such occasions? The grounds of Buckingham Palace, and the approaches in various directions, would give facilities far greater than are now presented by the blockade of St. James's-street, Pall-mall, &c. with carriages. The site of St. James's Palace and its appurtenances might then be appropriated to valuable public objects; affording, at the same time, an opportunity for making a better entrance into the park in a line with St. James's-street.

I recollect the remark being made that we could not consistently abolish the historical associations of *St. James's*. Well, then, we can dispense with the term *Buckingham*, and let it become the future *Court of St. James's*.

A. B. C.

THE STRANGERS' GALLERY AT THE HOUSE OF COMMONS.

Any person who has listened to a debate in the House of Commons will, I am sure, agree with me in my complaint of the want of comfort and accommodation afforded to those who obtain admission to the Strangers' Gallery. On the occasion of an interesting debate there is naturally a large attendance in the waiting passage, and as the rule "first come first served" is a just one, to obtain the advantage some come as early as twelve o'clock, where they have to sit until four o'clock. There is a fire, that is something; but most of those who wait would like to read if they conveniently could: this advantage is almost denied them by the only gaslight in the passage being between the doors, which are not always shut, through which there is a great traffic, and consequently a thorough draft. This inconvenience might be avoided by simply putting a gaslight under the stairs. There is one other little alteration I would wish to speak about, and that is the hard boards of the benches in the Strangers' Gallery. Sitting in eager expectation, on the sharp edge of an uncushioned board, is, to say the least, an uncomfortable position. I trust the proper authorities will place these suggestions among the "little things" that are worthy of their consideration.

Comfort.

AMENDED METROPOLITAN BUILDINGS ACT.

In the House of Commons, a few evenings ago, Mr. James Bell inquired of the Chief Commissioner of Works, whether, considering the very unsatisfactory state of the Buildings Act, some portions being unintelligible and others inoperative, it was the intention of Government to introduce a new Metropolitan Buildings Bill this session; and if so, whether it would be a complete Bill, or one to annul the Act now in force?

Sir W. Molesworth replied, that they did not intend to introduce a completely new measure, but the Board of Health had the subject under their consideration, with the view of bringing in an amending Act.

THE COMMERCIAL TRAVELLERS' SCHOOL.

The accompanying engraving is a representation of the Educational Buildings which have been erected at Pinner, for the children of the Commercial Travellers of Great Britain—a numerous and important body. We will give some particulars hereafter.

THE COMMERCIAL TRAVELLERS' SCHOOL.—Messrs. Lane and Ordish, Architects.

THE "OIL OF VITRIOL" CONTROVERSY.

WE have had a communication of some length from Mr. Thompson on this subject, but really the tone of it is so uncalled for, and so much out of keeping with the occasion, that he cannot have expected us to publish it in our own journal. This is a simply scientific and municipal question, with which "Sir Lucius O'Trigger" and his "very pretty quarrel," referred to by Mr. Thompson with much gusto, have nothing to do. We have little desire to dip our own fingers any further into so "corrosive" a flow of discussion as that into which this "oil of vitriol" question appears *ab initio* to have led. We shall return, however, to the real question at issue on another occasion. We may add, that we have had a communication from Dr. Letheby also, but couched in very different terms, although certainly it seems to us that if either had *reason* to complain of maltreatment, it was the latter, and not Mr. Thompson.

SHOREDITCH NEW ALMSHOUSES.

SOME almshouses have been erected opposite Haggerstone Church, Brunswick-street, Hackney-road. The project was set on foot about twelve years since, and in the early part of the year 1851, designs were invited in competition, and those submitted by Mr. T. E. Knightley were selected. The houses are for twenty aged women of the parish of Shoreditch, who have been ratepayers, and have not at any time received parochial relief. Each inmate has a sitting-room, bed-room, and scullery. In the centre building there is a committee-room and a staircase communicating with a gallery at the back, which is supported upon an arcade, and access is given to the first-floor rooms by means of the gallery. A large slate cistern is placed over the central portion of the structure, from which each apartment is supplied with water. The style is Jacobian. Messrs. Wood and Son were the builders.

ROYAL INSTITUTE OF ARCHITECTS IN IRELAND.

THE monthly meeting of this Institute took place in Dublin on the 18th inst. Mr. Jacob Owen, V.P. in the chair. The attendance included Messrs. Denny, Symes, Papworth, Montgomery, McCarthy, F. Louch, Murray, Lyons, Kirk, Telford, J. Owen, and Neville, honorary secretaries. The secretaries announced the receipt of a donation of encaustic tiles from Messrs. Minton, Hollins, and Co. The announced paper on "The Results of Education on the Fine Arts," was postponed. The chairman, previous to announcing the adjournment of the meeting, urged that the members generally should endeavour to aid in furthering the objects of the Institute by contributing papers.

THE UPPER SASH.

I HAVE for the last few days been doing my utmost to give all an equal chance of deriving benefit from the copious inhalation of self. I find that where mostly wanted there I am mostly excluded, viz. in those fœtid crowded rooms with which your towns abound. I continuously strive to enter these, and find almost invariably the miserable openings called windows closed tightly against me, and hear from the pallid inhabitant within a murmur and a wish to admit me. And why does he not? Because the upper sashes of these windows are never made to open; and to raise the lower ones would be to admit too much draught upon his half-clad person.

In my *winds* around wider streets and spacious squares, I never find this to be the case. Is it that lines and pulleys are too dear for a poor man's window-sash, or is this one of the many methods of improvement those intrusted with the public health overlook, because of its simplicity?

Do, sir, say a word on this simplest method of ventilation, and thus give all a chance of the benefit which is to be derived from their best of friends,

PURE AIR.

TRAPP'S BARREL MACHINE.

MR. TRAPP, of Elmira, New York, has invented a machine for making barrels, buckets, &c. It performs all the work necessary to complete a barrel except setting up the staves, putting in the heads, and driving the hoops. The rough staves are cut from the stick of wood by a cylindrical saw of the proper diameter: the rough ends are then cut off by two circular saws, that are fixed upon the same shaft, at a distance apart somewhat more than the length the staves should be when finished: the staves are then fed to the dressing machine, which consists of a revolving circular plate, fitted with cutters that project slightly beyond its periphery, for dressing the inside or concave of the stave, and a ring that revolves upon another ring, having cutters projecting beyond its inner edge, for dressing the outside of the stave. Each dresser revolves, at a high speed, in a plane at right angles to the grain of the wood.

The staves are carried through the dressing-machine by serrated rollers, and are prevented from being carried sideways by the action of the cutters, by grooved rollers, whose projections are forced into the wood by springs: the indentations are afterwards cut out with the shavings taken off by the knives of the outside dresser.

The next operation, giving the staves the proper shape and bevel on the edges, is performed thus: they are placed, one at a time, in a light frame of wood, and forced by the action of a lever upon the bed piece of the frame which has the same curve as the side of the intended barrel. The lever locks itself, and holds the stave firmly. Upon the outside of the frame, in a line perpendicular to the cross curve of the stave, and at a distance from it equal to the half diameter of the barrel, are two projecting pins, that fit into sockets fixed to a frame that surrounds a revolving wheel, termed a jointer, fitted with cutters, which turn in a horizontal plane: the centres of the sockets are in the same plane as the cutting edges of the cutters. The pins are placed in the sockets, and the opposite side of the frame brought down until the contained stave bears upon the cutters: they remove the rough edges, and give the proper shape and bevel: the frame is turned over and the other edge of the stave finished in the same way before it is removed from the frame: this insures the same width at the ends of the staves, and consequently, the barrel made of them will be the same diameter at the heads. The "setting up" is performed by hand, and two metal hoops are driven on about one inch from each end: the barrel is then placed in two rings of metal that are arranged so as to revolve freely. One of them can be made to approach or recede from the other by a screw and handle: the barrel is secured by forcing the moveable ring towards the other, until its motion is arrested by the metal hoops, previously driven upon the barrel, over which the two rings fit. Upon the sustaining frames of the revolving rings are three moveable tools, fitted with knives of a suitable shape for smoothing the ends of the staves, giving the chamfer and cutting the croze for the reception of the head.

The barrel being made to revolve by a belt passing round it, or by some other suitable means, the tools are brought against the staves, and the superfluous wood cut away. The exact motion of each tool is regulated by a stop: this insured uniformity of length and interior diameter, which is of importance, particularly the latter, as the heads are all of one diameter, and should fit in any barrel. In making whiskey barrels, the outside is sometimes turned off by means of a tool that slides upon a bed of the same curve as that desired for the barrel, and fed by a screw; but that is not absolutely required, as the staves are smooth, and of uniform thickness.

The heads are finished in this manner: after the slabs have been cut by a circular saw, and the edges straightened upon the jointer, two or three of sufficient width to form the head are placed edge to edge, between two circular plates, one of which, having a number of sharp steel points projecting from the surface, revolves upon its axis: the other plate does not revolve, but is moved in the direction of its axis, by a screw that forces the slabs against the points, which penetrate the pieces and hold them in position. The revolving head is put in motion, and two cutters are brought by the motion of a lever against the wood, which is cut into a circular shape by their action: a further movement of the lever brings a part of the cutter in contact with the wood, giving the proper bevel to fit in the croze made in the staves to receive it. The outside of the head can be turned off if desired by a tool arranged for the purpose; but as this adds to the cost of the barrel, without bettering its quality, it is not usually done. Each machine is capable of turning out from 250 to 300 barrels in a day, depending upon the quality and seasoning of the material. The smallest kegs, as well as the largest hogsheads, can be equally well made by the machine. One for flour-barrels has been built by Messrs. Reaney, Neaffie, and Co. of Philadelphia, for a company, who have it in operation near the Navy Yard, where it can be seen by those interested in such matters.*

SMOKE FUNNELS.

THE reckless mode in which zinc tubes and large chimney-pots are now put on, is deserving of comment, as the next high wind will most assuredly testify.

These metal tubes are now commonly put on, or rather over, the ordinary chimney-pots—in the majority of cases the ordinary labourer is selected for the operation, so niggardly of expense are individuals in these cases, that a bricklayer is not employed.

It may serve as a timely warning to call the public attention to the fact, that the Act requires these tubes to be built 2 feet into the solid brickwork of flue; and that, should accident to life or limb be the result of this highly dangerous and censurable proceeding, the remedy will be in their own hands. These tubes may now be seen in all places, and at all angles of inclination, inclining fearfully.

A DISTRICT SURVEYOR.

ELECTRO-MOTIVE POWER.

AT the Bury Athenæum lately, a lecture on this subject was delivered by the Rev. A. B. Power, the principal of the Diocesan Training Institution at Norwich, in course of which the lecturer said he had no expectation that the power under consideration would supersede the agency of steam, when applied on the large scale, but there was good reason, he believed, to think it might be brought to supplement and aid it. The invention brought under notice as the leading feature of the lecture, was one patented in Great Britain, and throughout Europe, by Mr. T. Allan, of Adelphi-terrace, London. Mr. Allan, the lecturer said, had succeeded in using the force of a series of electro-magnets in such a way as to employ the attractive energy only over a distance that was practically efficient, and this series of pulls was made to actuate a crank, so as to obtain rotatory motion of any given power required. By adjusting the size and number of cranks and magnets, any force might be obtained, from one only sufficient to turn a watchmaker's drill, up to a power equal to turn the auxiliary screw of a first-class merchant ship. He spoke of this invention as one of much promise, and deserving public attention.

The lecturer then recalled the attention of the audience to the problem to be solved in the arrangement of electro-magnetic engines, viz. to connect the *great power* of an electro-magnet acting through a *short distance* into an *available stroke*. He explained the mode adopted by Mr. Allan, and expressed his conviction that this principle would be turned to good account, and that it was well worth the attention of capitalists. He stated that engines might be constructed of any power, to work in either a vertical or horizontal plane; and that the first cost would be much less than that of a steam-engine of corresponding dimensions and force. He reminded the audience that engines of small power working on the plan under consideration would be of great use to watchmakers, grinders, polishers, lapidaries, &c. He spoke of the applicability of electro-magnetic engines to locomotion on roads and railways to auxiliary screws in merchant vessels, and a variety of other purposes.

A power such as this, we may in fine remark, might be happily and easily applied, on a very small scale, indeed, even to those little four-wheeled self-impelled vehicles on one of which we have just seen a workman proceeding, in a business-like way, and at a good pace, to his daily labours, his tools, &c. in a box-like projection before his own seat. In this case the machine was worked by the

* From the *Journal of the Franklin Institute.*

feet in a couple of treddles, but how easily might some motive power, such as the electro-magnetic, were it brought into a practicable shape, be applied even to these as yet scarcely more than toy machines! By some such means, or even by the force of a powerful steel spring, like that of a watch on a great scale, and wound up beforehand, by steam power, or even by some mechanical manual power, a cheap and important aid might be given to the metropolitan industrious classes, to enable them to live out of town, in healthful byeways, and to run in all directions independent even of omnibuses, whose proprietors, by the way, are acting, nowadays, as if they wished to encourage and establish some such project as that we have just started for behoof of those whom they victimize.

MASTERS AND MEN.

OSBORN *v.* ROPER and SON.—In this case, in the Westminster County Court, the defendants, Messrs. Samuel Roper and Son, builders, Wardour-street, Oxford-street, were sued by the plaintiff for the sum of 3s. wages due.

The plaintiff stated that in November last he was engaged by the defendants as joiner, which was his trade, under a person named Diaper, the acting foreman in the construction of a mahogany glass case, which was to be done by a certain time. He was to receive 5s. 6d. per day, but be paid weekly. On the night of Saturday, the 4th of February, plaintiff received his money, after which he handed to the cashier a printed time-table for the ensuing week, thereby intimating his intention of stopping to complete the job. However, between then and Monday he heard from Diaper that men in their lines, who would receive better pay, were wanted at the Crystal Palace, Sydenham. He made application on the Sunday, but no conclusive arrangement being come to, he as usual went to the defendant's workshop on Monday morning. He left at twelve o'clock, the dinner hour, and finding that he had been along with Diaper, engaged at the Crystal Palace, neither of them that day returned. On the Tuesday morning he fetched away his tools from the defendant's, and on being asked by a fellow workman what he was doing, he said that he was in view of a better job. On the Saturday night he sent for the amount he now claimed for his holiday's work, which being refused, to try his right thereto he instituted the present proceedings.

By Mr Hughes.—It was the custom in the trade for men to discharge themselves, or be discharged, when they or their masters thought proper, on the instant, without any previous notice.

Judge (Mr. Bayley).—I never heard of such a custom, and it is not at all reconcilable to English law.

Plaintiff.—I will call Mr. Diaper to show that it exists.

Mr. Farrell, the usher, then called Diaper, who having been, before the case was entered into by the Judge, ordered out of court, started up, saying, "Here, sir:" upon which his Honour, after some observations on his orders not having been obeyed, directed him to be taken into custody for contempt; at the same time saying that he could not but receive his evidence as a witness.

Diaper's testimony was confirmatory of the plaintiff's; and after giving it he was removed in custody.

For the defence, Mr. George Marshall, clerk to the defendants, said that the rule of their firm, and he believed every respectable firm throughout England, was, in the event of discharging a man suddenly, through some unforeseen occurrence, to pay them for the whole day on which that took place, and in addition thereto a quarter of a day as compensation for the loss of time incurred in seeking other employment. Mr. Hughes quoted several Acts of Parliament showing that the plaintiff had merited punishment under the criminal law for leaving work unfinished, and was proceeding at some length, but was interrupted by his Honour observing that he never could suppose such a custom as the plaintiff wished him to believe ever had existed between masters and men, and if so all contracts at the caprice of the workmen must inevitably fail. Judgment for the defendants, with costs. At the intercession of Mr. Roper, jun. Diaper was admonished and discharged.

FALL OF A CORNICE IN THE NEW ROAD.

IN your notice of the above in your last number, you mention me as the architect of the works. I was so employed by the freeholder, and made the drawings. The ground was let on building lease: the parties building superintended the works themselves, making many deviations from my drawings (including a material one in the construction of the said cornice), and as I had not the control of the execution of the works, no blame whatever (if blame there be) can attach to me. HORACE JONES.

HOW FIRES ARE EXTINGUISHED IN LONDON AND MANCHESTER.

THE advantages of a constant supply of water, and of efficient arrangements for extinguishing fires, have been found in the case of Manchester. The *Manchester Guardian* says, in noticing the most extensive and destructive fire ever known in Manchester, commencing in the large warehouse of Messrs. Rylands and Son, New High-street, and extending to various other piles of warehouses, with more or less destructive effects:—

"Mr. Rose speaks in the highest terms of the great advantages of the street hydrants, on the occasion of large fires like the one now described. Before the existence of those useful and constantly ready supplies of water, the labour of pursuing the fire from street to street, with heavy engines, detaching and again attaching the hose to the fire-plugs, and other matters, was very great. On Wednesday night, when it became desirable to remove the force and apparatus from New High-street to Bridgewater-place, it was done with the greatest celerity, simply requiring the transfer of the hose and the stand pipes, and was made and the operations commenced in the new locality in a few minutes. Indeed, nothing can show the great value of the hydrants, and a good supply of water in the streets in the case of fire, better than the fact, that with ten engines upon the spot Mr. Rose only used one, finding he could get an equally abundant supply of water more readily and at sufficient pressure from the street mains. In narrow streets where engines cannot easily be placed or moved to and fro, the substitution of hydrants is of vast utility."

We cannot forbear putting in contrast the account contained in the *Times* of the fire at the warehouses of Messrs. Bielefields, in Wellington-street North:—

"When the engines had got out their gear and were all ready for working, there was a most lamentable want of water. From the great altitude of the building and the fire being in the upper story, an unusual force of water was required to reach the flames; and more than half an hour elapsed after the arrival of the engines before any attempt could be made to stay their progress. At length, by great exertions, lengths of hose were carried, by the means of the fire-escape ladders, to the tops of the opposite houses in Exeter-street, and by this means some water was thrown upon the fire."

WEST LONDON RAILWAY COMPANY.

WE understand that the London and North-Western Railway Company have introduced into Parliament a Bill for carrying into effect the arrangement between this ill-used company, the West London, and themselves, and it is expected that this Bill will shortly receive the sanction of the Legislature. The West London Company have appointed, under the arrangement agreed upon, Mr. Hawkshaw, the engineer, as the arbitrator to whom the interests of this company are to be confided.

Surely no director or official of the leviathan North-Western can ever reflect on their treatment of the West London Railway Company without a burning blush. One of these days the story told in plain language, and calling acts by their right names, may prove in the hands of an adversary a powerful weapon.

THE METROPOLITAN CATTLE-MARKET.

THE following is a list of the tenders sent in for builders' and (chiefly) iron works at the New Metropolitan Cattle-market, Copenhagen-fields, under the direction of Mr. J. B. Bunning, architect:

	£	A.*	B†
Lawrence, Bros.	47,296	45,286	42,773
H. and M. D. Grissell...	42,997	41,617	38,620
Charles Fox and Co. ...	42,828	(not in form.)	
R. W. Kennard.....	41,490	40,660	36,940
R. Walker (accepted)...	36,674	36,064	34,414

SELF-ACTING SIGNALS.

A CHATHAM correspondent, Mr. J. P. Rickon, C.E. speaks of a new self-acting signal, just patented by a Mr. Tyer, and called the "Electro-Magnetic Railway Signal," of which it is said that by this invention, and the agency of voltaic electricity, the train itself, upon entering any station, gives notice to the station it last left, that the line is so far clear. Upon quitting a station, the train transmits a signal to the next station in advance, and calls attention thereto by the sounding a large bell, thereby giving the signal-man timely notice. Signals can be transmitted from any intermediate point or place between any two stations, so that in the event of a break down, or other stoppage on the line, an alarm signal can be given to the stations on each side, and assistance obtained. The engine-driver can be signalled from the station he may be approaching at any distance deemed requisite, rendering auxiliary signals and fog detonators unnecessary. The signal transmitted to the engine-driver is upon his engine, and his attention is called by the sounding of his whistle. Any neglect of the signal given is at once detected, as a register is kept at the station of the signal received. In event of "shunting" at a station, notice is given the stations on each side; and should any train be approaching, the engine-driver will receive the *danger* signal. It is also applicable to all stations, crossings, junctions, tunnels, &c. All of this, according to our correspondent, has been done by this apparatus, on the North Kent line, between Lewisham and Chalton. "I have no other motive," he adds, "in writing this beyond the wish of seeing the different companies compelled to adopt some effectual means for the public safety." The apparatus described, he says, has been exhibited in town, at the offices of Messrs. Agar and Goddard. We may here remark, that in reply to a question put in the Commons by Mr. J. Batt, as to communication by electric signals between guards and drivers, Mr. Cardwell said experiments had been tried as to a system of electrical communication, and a committee of that House had recommended that such a system should be rendered compulsory. In that opinion the Board concurred, but as to the manner of carrying it out, that was a different question. We may add, too, on this subject, that whatever may be done as to electrical communication, either between guards and drivers, or between stations and guards, we can see no difficulty in at once compelling railway companies to employ an additional guard, placed on the engine itself, to look out ahead, instead of the engine-driver, who at present has both to attend to his engine, and also to look out ahead against all contingencies, duties quite as incompatible on railway trains as on ocean steamers.

* If the wrought-iron work to roofs of pig and calf markets be not galvanized.

† If the ironwork to enclosure railings, gates, &c. be not galvanized.

Notices of Books.

Gymnastics, an essential Branch of National Education, both Public and Private; the only Remedy to improve the present Physical Condition of Man. By Captain Chiosso. London: Walton and Maberly, Upper Gower-street. 1854.

CAPT. CHIOSSO has published his "Gymnastics, an essential Branch of National Education," from which we gave an extract some weeks ago. The importance of gymnastic exercises is not to be questioned, and the subject is here treated largely, and even learnedly. We are disposed to agree with the writer that,—

"It will be a great epoch of modern history, when any sovereign or government shall have ordered the erection of gymnasiums (lesser or larger) in every open space of our towns and cities—in our parks and gardens—and on our commons—to which, early and late, a serene, innocent, and happy youth may resort; when, in every country, a central gymnastic establishment, for the training of masters, will have been established, when, in fine, a satisfactory testimonial from a gymnasium will be considered as *essential* as that of any other educational department. Moreover, the gymnast requires no written testimonial: his is one impressed and marked by a higher authority than that of man—an erect, proud, manly womanly) posture, a warm and animated look, and a form of body capable of enjoying as well as enduring life. '*Contra tales non est lex.*'"

In ancient Greece body-culture was much studied.

"At Athens there were three gymnasia. First, the *Lyceum*, on the banks of the Ilissus, the building of which was ascribed to Pisistratus, Pericles, and the archon Lycurgus, who probably had all contributed towards its completion. It was here that Aristotle taught a numerous circle of pupils and followers. Its stadium was built of white Pentelic marble, and of such splendour, that Pausanias says it resembled a mount of that substance. There existed a law of Solon, that whoever stole anything from the Lyceum was to be punished with death. The second gymnasium of Athens was the *Academia*, about six stadia from the city. This place was surrounded by shady trees and lonely walks, and Euripides speaks of the 'shadowy alleys of the divinified Academos.' Here it was that Plato delivered his discourses. The place was surrounded with a wall, by Hipparchus. The third gymnasium, called *Cynosargis*, was destined for the exercises of the humbler order of society."

The circulation of this pamphlet is calculated to do much good.

Russia. From the French of the Marquis de Custine. Longman, Brown, and Co. 1854.

To meet the demand for information concerning the empire of the capricious despot for whose misdeeds thousands of men have been and other thousands will be launched into eternity, Messrs. Longman have re-published the Marquis de Custine's book on Russia. It forms *three parts* of their "Traveller's Library," and is to be had therefore for as many shillings. Here is the Count's impression of Moscow as a city:—

"I have not seen Constantinople, but I believe that, next to that city, Moscow is the most striking in appearance of all the capitals in Europe. It is the in land Byzantium. Fortunately the squares of the old capital are not so immense as those of St. Petersburg, in which even St. Peter's of Rome would be lost. At Moscow, the sites are more confined, and therefore the edifices produce greater effect. The despotism of straight lines and symmetrical plans is opposed here both by nature and history: Moscow is everywhere picturesque. The sky, without being clear, has a silvery brightness: the models of every species of architecture are heaped together without order or plan: no structures are perfect as works of art, nevertheless the whole strikes, not with admiration, but with astonishment. The inequalities of the surface multiply the points of view. The magic glories of multitudes of cupolas sparkle in the air. Innumerable gilded steeples, in form like minarets, Oriental pavilions and Indian domes, transport you to Delhi; donjon-keeps and turrets bring you back to Europe in the times of the Crusades; the sentinel, mounted on the top of his watch-tower, reminds you of the muezzin inviting the faithful to prayer; while, to complete the confusion of ideas, the cross, which glitters in every direction, commanding the people to prostrate themselves before the Word, seems as though fallen from heaven amid an assembly of Asiatic nations, to point out to them all the narrow way of salvation. It was doubtless before this poetical picture that Madame de Staël exclaimed—*Moscow is the Rome of the North!*

The massive tower, at the foot of which my footman made me alight, is picturesquely pierced by two arches: it separates the walls of the Kremlin, properly so called, from their continuation, which serves as a girdle to Kitaigorod, the city of the merchants, another quarter of old Moscow, founded by the mother of the Czar, John Vassilievitch, in 1534. This date appears to us recent, but it is ancient for Russia, the youngest of the European realms."

Concerning the Kremlin he speaks very enthusiastically:—

"To describe the contrast produced by so many edifices of various styles, crowded together in one spot, which forms the centre of an immense city, to convey an idea of the effect produced by the congregation of Arabesque palaces, Gothic forts, Greek temples, Indian steeples, Chinese pavilions, all confusedly mingled within a circle of Cyclopean walls, would be utterly impossible. Words cannot paint objects, except by the recollections which they recall; and the recollections of no one who has not seen the Kremlin can serve to picture it.

The basement of the little Moorish palace is almost entirely occupied by one enormous vaulted hall, the roof of which is supported by a single pillar, rising from the centre. This is the hall of the throne: the emperors repair to it on leaving the church, after their coronation. Everything here revives the recollection of the magnificence of the ancient Czars, and the imagination goes back to the reigns of the Ivans and Alexises. The appearance is truly Muscovite. The entirely new paintings, which cover the walls of this palace, struck me as being executed with taste: the *tout ensemble* reminds me of the pictures I have seen of the porcelain tower at Pekin."

The state of morals in Russia is described as very low, and the people in a debased condition.

VARIORUM.

The "Pocket Peerage of Great Britain and Ireland" (fourth year), by Mr. H. Rumsey Forster, of the *Morning Post*, has just been issued by Bogue, of Fleet-street, as "revised by the nobility" themselves. Mr. Forster has long been favourably known as connected with the daily press, and especially in connection with the movements of the fashionable world, and has discharged his duty carefully. The book is elegantly got up, and contains in a very small compass a large amount of information.

Under the title of "Life and Marine Assurance; Considerations which should influence Assurers in the Selection of an Office for Life Assurance" (Longman and Co. 1854), Mr. Lance gives a great deal of very curious and valuable information, deduced from published accounts and returns, deserving attention, although we are not disposed to agree with his general deduction in favour of proprietary companies. It is estimated "that the amount of assurances in force exceed in value 200,000,000*l.*; that the annual sum paid on the death of assured persons is now above 5,000,000*l.*; that the invested capital of life assurance companies, exclusive of the forty-eight established within five years, is not less than 77,000,000*l.*; that upwards of 7,500,000*l.* is annually contributed, not for personal advantage, but to secure a future benefit to others; and that in one year life assurance has been adopted to the extent of 26,000,000*l.* involving an investment in premiums of more than 900,000*l.*" All this, with much more which is to follow, has grown out of a paper written by Dr. Halley, in 1693, to fulfil his pledge to the council of the Royal Society, that he would supply a certain amount of matter for their "Transactions."——"Vital Statistics," Part I. A pamphlet, by Mr. R. Thompson Jopling (King, Cheapside), is cognate. The writer urges, with justice, that "the advantage of computing into tables the chances of individual life affected with various maladies, would be valuable not only to the public, but to the medical profession, and of course to assurance companies, who could then take every life presented to them, it being necessary only to fix the class to which each proposal would belong.—— In "The Practicability of Improving the Dwellings of the Labouring Classes" (London Stanford), Mr. Cheyne Brady has brought together a number of facts, partly from our own pages, for the advantage mainly of Dublin, where the author is seeking to carry proposed improvements into practice.——Amongst a pile of other paper-covered books we find "The Dramatic Register for 1853," to which we will allude rather for the sake of the compiler than because it is our province. It is a very good notion, carefully carried out, and it seems a pity that the publication should be discontinued. As we like to show a bit of knowledge, whatever the subject, we will set T. F. D. C. right as to the authorship of two or three pieces played at the Lyceum, the more so as it involves a story of distress. "A. S. S." and "A Fast Train" are entered, with a query, as by J. M. Maddox, and "A Bachelor of Arts," as by Pelham Hardwicke, suggested to be Mr. Tom Taylor. The fact is, however, these three pieces were writtten (or, rather, adapted) by Mr. Reynoldson, and it is a curious incident in connection with dramatic literature, that for the latter, which was certainly one of the best and most successful pieces of the year, he received but 3*l.*! and this without any reproach to the manager, who doubtless had to pay a proper sum for it to a third party. This, however, is a divergence.—— Amongst the new books of which our readers will desire to hear are a very handsome volume by the Rev. J. L. Pettit, "Architectural Studies in France" (Geo. Bell, London), fully illustrated, and a valuable practical work by Mr. Fairbairn (John Weale), "On the Application of Cast and Wrought Iron to Building Purposes." These will both receive full consideration hereafter.

FALL OF GALLERIES IN A THEATRE.—We learn from *New Orleans Paper* that on February 26th, during the performance at the French Theatre, New Orleans, two galleries, which were set apart for persons of colour, fell, owing to the iron rods by which these galleries were suspended from the roof giving way. The suspending rods had been substituted for iron columns supporting the galleries owing to the columns obstructing the view of the stage from the dress circle. There were only eighty-four persons in the two galleries, and, as the fall was a gradual one, most persons in the dress circle had time to escape. The iron rods broke near the roof, and the galleries then sank some 3 feet; but, as there was an additional support to these galleries from iron bars from the wall, it prevented the destruction of hundreds of lives.

Miscellanea.

BRISTOL SCHOOL OF PRACTICAL ART.—A public meeting of the Bristol School of Practical Art, in connection with the Board of Trade department of Science and Art, was held on Friday in last week, at the Gallery of Arts, Drawbridge, the mayor in the chair. There was a large attendance, the majority being composed of ladies. The mayor opened the business, and the Rev. J. Eagles read the report, which stated that "The Academy of Art being about to erect an edifice for the purposes of that society, in Mr. Tyndal's park, it has been proposed that the school should form a part of that building; subject, however, to arrangements for its independent existence; but still, allowing of mutual accommodation in the use of casts, models, library, &c. which have been most kindly offered on the part of the Academy: these advantages counterbalance, as it is conceived, any disadvantages arising from the distance of the locality from the centre of the city. It has been estimated that rooms of sufficient dimensions, for the purposes of the school, may be obtained on the site referred to, with the requisite fittings and furniture, for 1,000*l.* and with a view of making a personal interest in the school as general as the small amount of capital will allow, it has been proposed to raise the sum required by shares of 5*l.* each; and the provisional committee are enabled to announce that many shares have been already taken." Mr. Cole addressed the meeting, congratulating the society on having outgrown their premises sooner than any school established in the United Kingdom. Mr. Harford and other gentlemen expressed their conviction that the 1,000*l.* would very soon be forthcoming from the public; and even if not that there was a certainty of the committee providing it.

THE IRON TRADE. If there ever was any intention on the part of speculators to force up prices either previous to or during the quarterly meetings, that intention must have been abandoned, as no one seems now to dream of any advance. Doubtless the unsettled state of continental markets has had an influence, in this case merely salutary as yet, upon the iron trade of the country. A deficiency of hands to execute orders is complained of, as well as want of industrious occupation on the part of those engaged. Orders for rails are said to be accumulating.——In the Scotch pig market there has been little doing of late, prices averaging about 78*s.* to 79*s.*; but in Staffordshire good makes continue in request, and are said to have been sold as high as 6*l.* per ton.——In rolling iron, or other metals, Messrs. Roden and Thomas have taken out a patent for a new arrangement, by which the operation is said to be facilitated, and time saved. Two separate sets of rolls are placed end to end, and, by suitable toothed-wheel gearing, made to revolve in opposite directions. On passing the piece of metal through one pair of rolls, it is immediately conveyed by a suitable carriage to the others, and passed in a contrary direction, the operation being repeated until the required section is obtained.

PUBLIC LIBRARIES ACT, 1850.—With the view of ascertaining the difficulties and impediments which prevent the adoption of the provisions of the Act, 13 & 14 Vict. chap. 65, "For enabling town councils to establish public libraries and museums," the Society of Arts has just issued a set of queries to the town clerks of all boroughs included in the Act. The points on which information is particularly requested, are whether the amount of the rate, one halfpenny per pound per annum, is sufficient, and whether the rate should be limited to the provision of the building, fixtures, &c. or be extended to the purchase of books, specimens, &c.

BATHS AND WASHHOUSES FOR GLOUCESTER.—A public meeting of the inhabitants of this city has been convened by the mayor, to take measures for the establishment of baths and washhouses.

SWANSEA LOCAL BOARD OF HEALTH.—With regard to the paragraph in your journal (p. 135), as to the Swansea Board of Health, I never offered to complete the Swansea plan "within a week," on the 2nd of November last. I stated that the plan would not occupy more than a week to complete; whereupon the Board proposed a resolution offering to place the plan and drawing office at my disposal. This the Board have never yet (from causes which I need not now enter upon) *been able to do*. The paragraph is so worded as to be injurious to me; I therefore trust you will do me the justice to insert this explanation. I will furnish, in the course of a few days, for your own satisfaction, a copy of a letter (now in the press) which I have addressed to the Board on the subject. I fully sympathise with your opinion, "that it is really full time this Board were at work in earnest;" but from an intimate acquaintance with the present position and constitution of the Board, I can safely predict that it is not likely soon to be realized.

S. CASTLE GANT.

BROUGHAM'S ADVICE.—Hullmandel and Walton have printed in gold, with a pretty border of wheat and fruit in green and gold, the "Advice to the Poor," by Lord Brougham, so that it may be hung up on the walls of every cottage or small tenement, by the landowner, at a little outlay. "The advice, both economical and moral, is so good," they say, justly, "that every landlord should promulgate it amongst his tenantry, if for his own comfort only, laying apart philanthropy." Why did they mar its appearance by the caricature of gleaners at the bottom. Let them rub it out before they take another impression.

PRICE BOOKS.—Your correspondent "Z." will find a book published by Weale, called "The Student's Guide to the Valuation of Artificers' Work," of great assistance, as it contains decimal tables of constants, which are applicable to any rate of wages, and much other information as to the quantities of materials. For carpentry, he will find "The Builder's Guide," by Wm. Thorne, published by Simpkin and Marshall, a useful work. It contains tables which will enable him to ascertain the prices of labour upon nearly all kinds of carpenters' and joiners' work, at various rates of wages; and of materials when deals are at any price from 25*l.* to 60*l.* per hundred; besides other tables likely to be useful in the country. The objection raised by your correspondent to the present price books, as being "blind guides," will, I think, apply to all works of that description which do not enable the party using them to calculate the prices from the quantities of time and materials employed.—T. J. P.

CALOTYPE PORTRAITS.—In a notice of the Photographic Society some time ago, we expressed a good opinion of Mr Hennah's portraits, and said, "One would not begrudge a journey to Brighton to be calotyped by him." Some whom we know in consequence did make a journey to Brighton to get into the focus of his camera, and have favoured us with the results. They fully bear out our opinion, and must be placed amongst the most successful works yet produced. Dr. Dimond is continuing the production of reflects of the insane under various influences, and will probably publish a collection of them. It seems not improbable that useful deductions may be made from the collation of a large number of such portraits.

THE USE OF THE MICROSCOPE.—With reference to your notice at p. 117, one piece of advice, on which it is to be hoped Dr. J. W. Griffith and Mr. A. Henfrey will dwell *very impressively*, one that would have saved the writer of this much irretrievable damage to his sight, had he found out the same in time,—is for beginners *resolutely* to avoid looking at any point of the subject under examination not fully and clearly in the focus. The more interesting the matter under examination, the more powerful is the temptation to supersede the microscope in its duty by the improper use, and at the expense, of the eye, by straining the latter on obscure portions, instead of patiently bringing them up successively to focus: the loss of a little time will be amply compensated by the saving of a power the value of which is only to be duly estimated when reduced or lost.—N.

OXFORD ARCHITECTURAL SOCIETY.—At a meeting of this society, held on the 8th inst. a communication from J. H. Markland, Esq. D.C.L. corresponding secretary, was read, announcing the proposed erection of a memorial to Archbishop Leighton. The treasurer declared his willingness to receive subscriptions towards the restoration of St. Michael's Church. There is still a considerable deficiency of funds for which the churchwarden had not hesitated to make himself liable. Mr. Frederick G. Lee, of St. Edmund Hall, then proceeded to read a paper on "Ecclesiastical Vestments, chiefly as represented on Ancient Monuments." He began by affirming, that some acquaintance with the subject was absolutely essential for the architectural student, and then proceeded to describe respectively the cassock, surplice, alb, girdle amice, chasuble, stole, maniple, dalmatick, cope, rochet and chimere, &c. &c. illustrating his remarks by drawings from illuminated manuscripts and other sources, by brass-rubbings, and some specimens of ancient and modern embroidered vestments, some of which had been lent for the occasion by Messrs. Newton, Jones, and Willis, of Birmingham.

NEW BOILER.—Messrs. Smith and Phillips, gas engineers, have patented a boiler, consisting of a number of concentric hollow cylinders, in which a very thin body of water is constantly exposed to the action of the heat.

SIGN OR NOTICE BOARDS.—The London public and builders do not appear to be cognizant of the provisions on this subject in Schedule E of the Buildings Act, judging at least by what may be seen every day, namely,—"And every sign or notice board fixed against or upon any part of any house or other building standing close to any public way, must be so fixed that the top shall be within 18 feet at the most above the level of such public way."—S.

PRICES OF TIMBER. At Dymock, Ledbury, Messrs. Jones and Hartland last week sold by auction a quantity of oak, elm, and ash timber, amongst a large attendance of timber merchants and others. The sale comprised twelve large lots, and the prices realized were higher than those of former sales, owing to the great demand for ship-building purposes. The oak, for navy and furniture purposes for which there was a great demand), realised 2s. 6d. to 3s. 6d. a foot. The elm and ash also brought high prices.

THE GREAT STEAM-SHIP.—The ways for laying down the projected immense screw and paddle steamer for the Eastern Steam Navigation Company are in the course of completion at the yard of Mr. Scott Russell at Millwall. Many hundreds of tons of iron for her keel are ready to be put together, and the contracts have been signed for the completion and launching of the ship within two years. The extreme length on main deck will be 700 feet, being 430 feet longer than the *Himalaya* steamer; extreme length of keel, 680 feet; extreme breadth of beam, 83 feet; depth of hold (forming four decks), 58 feet; length of principal saloon, 80 feet; height of ditto, 15 feet; tonnage, 10,000, or builder's measurement, 22,000 tons; stowage for coals, 10,000 tons; stowage for cargo, 5,000 tons; 500 first-class cabins, with ample space for second and third-class passengers, besides troops, &c. while her screw and paddle engines will be of the aggregate nominal power of 2,800 horse. She will also carry an immense quantity of sail. The principle of construction, as designed by Mr. Brunel, will be similar to that of the tube of the Britannia-bridge. Her bottom, decks, and sides, are to be double, and of a cellular form, with 2 feet 6 inches between. She will have fourteen water-tight compartments, also two divisional bulkheads running her whole length, so that it would appear as if the principle of the T girder, as we suggested, only in this case doubled, were comprised in the new principles of construction. The great length of the ship, it is contended, according to all present experience, will enable her to pass through the water at a greater velocity, with a similar power in proportion to her tonnage, than ordinary vessels now require to make ten knots an hour, and that speed is, in fact, another result of great size. The immense proportions will admit of carrying sufficient fuel to accomplish a voyage round the world.

IMPROVEMENT OF DUBLIN.—At a recent meeting of the city corporation, a communication was read from the Lord Lieutenant, in reply to a memorial from this body, praying for a grant of public money for the improvement of the city. His Excellency states that he will recommend the Lords of the Treasury to advance a sum of 60,000*l.* towards an improvement fund for the purpose of making a new line of streets from the law-courts to the King's-inns, alluding at the same time to "erroneous" opinions entertained by the corporation in respect to "the Woods and Forests."

THE PANTHEON PICTURE GALLERY, OXFORD STREET.—There is an interesting collection of pictures here, by Haydon, James and George Foggo, E. Prentis, and other artists, chiefly historical, to which our art-loving readers would do well to pay a visit. They are exhibited free to the public.

METROPOLITAN COMMISSION OF SEWERS.—A special court has been held since the Commission resolved to resign, when another resolution was passed, that the Commission continue to act till their successors are appointed. Colonel Dawson proposed that they should not only do so, but proceed to carry out the scheme of drainage resolved upon, as if no such letter had been received as that sent by the Home Secretary. Others of the Commissioners demurred to this proposal, but it remains to be seen what course the Commissioners will pursue in this respect.

INVERNESS.—The Inverness Town Council, says a Scottish contemporary, are in a state of high dudgeon about their bridge over the Ness. It seems that about six years ago the ancient bridge was carried away by a flood, in consequence of the defective state of the Caledonian Canal. The inhabitants proposed to build another in its place, but the Government interfered, and undertook the erection of an iron bridge, which was to be completed within two years. Five years have elapsed, and the works have not progressed a fourth part. The council impute the blame to Mr. T. M. Rendel, the engineer, and have presented a strong remonstrance to the Chancellor of the Exchequer on the subject.

ARCHITECTS' BENEVOLENT SOCIETY.—Sir,—Will you permit me to correct a slight inaccuracy in your report of the meeting of the Architects' Benevolent Society? In that report I am represented as having said that the widow of a young architect, of great promise, had *received* assistance from this society. This is a mistake, and I am happy to say that, from the kindness of attached friends of her late husband, the application I intended to make in her favour will in all probability not be required.

WILLIAM TITE.

COVERING QUADRANGLE OF BRITISH MUSEUM.—Mr. Vose Pickett has sent us copy of a letter addressed to the trustees of the British Museum, relative to covering in the quadrangular area of the British Museum, wherein he suggests the "application of a domed roof, on the chain tension net principle, which would require no other support than the walls of the present building as they now stand."

FALL OF HOUSES AND LOSS OF LIFE.—Two eight-roomed houses in the district of Hornsey, fell last week, and caused the loss of one life, and damage to two other persons. We postpone the particulars till next week.

ART-UNION OF LONDON.—The subscription lists will close on the 31st inst.

"PAID DOWN UPON THE NAIL."—The origin of this phrase is thus stated in the "Recollections of Keefe," the dramatist:—"An ample piazza under the Exchange (Limerick) was a thoroughfare: in the centre stood a pillar about 4 feet high, and upon it a circular plate of copper, about 3 feet in diameter: this was called the nail, and on it was paid the earnest for any commercial bargains made, which was the origin of the saying, 'Paid down upon the nail.'" Perhaps the custom was common to other ancient towns.—*Notes and Queries.*

OXFORD-STREET.—One of the greatest benefits the *Builder* has achieved, has, I conceive, been to introduce to the public and advocate desirable metropolitan improvements, many of which are ultimately adopted. I beg then, through the medium of your journal, to suggest a West-end improvement, that would greatly embellish, and render more valuable a very central part of the town. At the Oxford-street end of Tottenham-court-road, an unsightly row of houses projects into the middle of the street, in the manner of Middle-row, Holborn. The houses are mean and dilapidated; and judging from the constant change of tenants, cannot be a very valuable property. I would suggest the removal of these, and the conversion of the large space then available, into a handsome *place* or circus, the middle of which would be a magnificent site for a statue.—E. C. S.

ST. SEPULCHRE'S, SNOW-HILL.—It has often occurred to me to be not a little singular, that St. Sepulchre's, Snow-hill, has been suffered to remain in the state it is, and that its restoration has not been effected long ago, especially when it is considered how few churches now exist of the Pointed style in the City. Few churches in London have so commanding a situation; and the effect of its venerable tower, even in its present condition, is really very fine. The entrance porch is in a very perfect state (internally), and is a very beautiful piece of the Perpendicular style. (It is described and illustrated in "The Churches of London.") If the whole church were restored in accordance with it, it would be one of the greatest ornaments to the metropolis. I would suggest, if a restoration be decided upon at any future period, that only as much be done at a time as the funds will admit of being done well, and that no more be attempted than there is money in hand to complete in the best manner. For example, the tower might be done at one time; the porch (externally), next; and the body of the church left until sufficient money be collected to restore the whole in a manner creditable to all parties.—J. C. P.

GOODLET'S NEW MOTIVE AGENT.—In a communication to the *Mining Journal* as to his patent for "Improvements in Engines to be worked by steam, air, or air and water combined," the patentee says, "You will observe that it is not proposed to create a motive power, but to deal with the powers that be differently than by the plan hitherto adopted,—that instead of boiling the water for steam, in order to give the water elasticity, I propose to take the elements of water and air in their natural state, and to mix them in a vessel by means of the double-acting force-pump, recommended in the cases of the locomotive-engine, and in draining and purifying mines. A more effective motive agent will in this way be attained to start the engine in a tenth of the time, with less manual labour than is required to trim the coals and supply the furnaces of steamboat boilers with fuel. You will observe from the specification a plan of an atmospheric vacuum valve to be fixed to the ends of the cylinder covers of steam, air, or water and air combined engines, to prevent recoil from the vacuum, which necessarily takes place when engines are worked by impulses, and the motive agents cut off during the travel of the piston."

Destruction of Warehouses at Manchester by Fire:—Messrs. RYLANDS and SONS' Books, Papers, and Bank-notes preserved in one of CHUBBS' Safes, after fourteen hours' exposure to intense heat.

Copy of Messrs. RYLANDS and SONS' Testimonial.

"24, High-street, Manchester.

"Mar. 6, 1854.

"Messrs. Chubb and Son,—

"Gentlemen, we have great pleasure in communicating to you, that the large 'Patent Fire-proof Safe' that we purchased from you twelve years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the Evening of the First of March, when our entire premises were destroyed by fire. The Safe, after being subject to fourteen hours' intense heat, was unlocked on the Morning of the 3rd of March, the locks all answering to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

RYLANDS and SONS."

CHUBBS' LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fire-proof Safes and Chests; Iron Doors and Frames for Strong-rooms: all fitted with the Detector Lock. Complete illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's-churchyard, London; 28, Lord street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

Salary, 30s per week.—Apply by letter, post-paid, stating former engagements, and giving references, to A. B. care of E. C. 5, Kirby street, Hatton-garden, London.

TO PARENTS AND GUARDIANS.

WANTED, a PUPIL, as an ARCHITECTURAL SCULPTOR.—Apply to W. M. 48, Bath-row, Birmingham.

WANTED, by an Architect and Surveyor, an ASSISTANT as an IMPROVER, for one or two years. Any one who has been in an office and used to drawing, and is anxious to gain further advancement and practical knowledge, would find this a valuable opportunity. No premium expected.—Address, P. L. M. City News-room, Cheapside.

WANTED, a SHOP FOREMAN, to superintend Joiners.—Apply at No. 1, Brook-street, New-road.

TO MASONS.

WANTED, in the Country, immediately, as WORKING FOREMAN, a steady YOUNG MAN, of industrious habits. He must be able to make out estimates, and measure work. Those only of practical experience and first-rate ability need apply.—Application to be made at 4, Bedford-place, Hastings, Sussex.

TO PARENTS AND GUARDIANS

WANTED, a respectable Youth as IN-DOOR APPRENTICE to a PAPERHANGER and DECORATOR. Address, H. S. 34, Milton street, Dorset-square.

WANTED, immediately, an experienced CLERK of WORKS for the Country. He must be competent to make good drawings, estimates, and specifications, and measure up all kinds of building works. He would also be required to make himself generally useful in an office. A person acquainted with land surveying and engineering would be preferred. None but a practical man, and one whose character for sobriety, integrity, and application to business will bear strict investigation need apply. Apply to Mr. FOULKES, Land Agent, &c. &c. &c. 61, Broad-street, London.

WANTED, a good DRAUGHTSMAN and GENERAL ASSISTANT, in an Architect's Office in London, who can give full satisfactory references as to qualifications and character.—Address, Y. P. Office of "The Builder," stating age, and the lowest salary that would be agreed to, if the engagement be a permanent one.

WANTED, a Practical Man, as FOREMAN of a GENERAL SMITHS' SHOP.—Address, stating salary required and last situation, to A. P. Post-office, Bath.

MOULDING MACHINE WORKER

WANTED, a steady, sober Man, who thoroughly understands his work.—Apply to E. SIMMS, Timber yard, Wilton-road, Pimlico.

TO FOREMEN FOR ROAD-MAKING AND BALLAST BURNING.

WANTED, one who has been engaged under a Contractor, to TAKE CHARGE of the workmen. Full particulars of former employment, and amount of wages required.—To be addressed, post-paid, to Mr. LAY, Architect and Surveyor, 5, Portsdown-terrace, Kilburn.

WANTED, a SITUATION as CLERK of WORKS; is well experienced in all the branches of building, can set up plans, working drawings, and has unexceptionable reference from previous engagements.—Address, C. D. CLOSE, 3, Bloomsbury terrace, Vauxhall road, Pimlico.

WANTED, by an experienced practical Carpenter and Joiner, a SITUATION as SHOP or GENERAL FOREMAN. No objection to the country. Good testimonials can be given.—Address to A. B. at Mr. Harris's, Stationer, &c. Upper Holloway.

TO PLUMBERS AND BUILDERS.

WANTED, by a Young Man, a Situation as PLUMBER, and will fit up his time in painting, if required. No objection to town or country.—Address, post-paid, W. P. 23, Market-street, Finsbury, London.

TO IRONMONGERS, BUILDERS, AND OTHERS

WANTED, by an experienced practical man, a SITUATION as FOREMAN. The Advertiser is well experienced in all kinds of iron-work, also hot water apparatus of every description, building of iron houses, and every description of smiths' work. Satisfactory references can be given. Should be most happy to meet with any party going abroad.—Address, A. Z. Office of "The Builder."

TO ENGINEERS AND FOUNDERS

WANTED, by a Young Man, a SITUATION in an Office. Has knowledge of drawing and making up costs of machinery.—Address, A. B. 32, Lord-street, Liverpool.

WANTED, by the Advertiser (age 25), a SITUATION in a Builder's Office, in or near London. Having had thirteen years' experience as a bricklayer and plasterer, fully understands squaring, dimensions, measuring approximate, &c. and would have no objection to take a situation as traveler to any branch connected with the trade. First rate references as to character and ability.—Address to Mr. CALDICOTT, Bo-kseller, Epworth, Lincolnshire.

TO BUILDERS AND OTHERS.

WANTED, by a Young Man, aged 20, a SITUATION as IMPROVER in the JOINERS' DEPARTMENT, where good work is executed. Has been at the trade four years, the last twelve months in London. Can read on rule, and is also good workman. References given as to ability and character.—Address, H. L. A. Office of "The Builder."

TO PAINTERS AND BUILDERS

WANTED, by a Young Man, CONSTANT EMPLOYMENT as GRAINER, PAINTER, and GLAZIER.—Address, W. ELDERFIELD, 126, Bermondsey-street, London.

TO MASTER BRICK AND TILE MAKERS.

WANTED, by a respectable Man, who thoroughly understands his business in all its branches, a SITUATION as FOREMAN in the above line, or by contract; with good references.—Address, L. M. 2, Church-street, Manor-place, Walworth.

WANTED, by the Advertiser, a RE-ENGAGEMENT in an Architect's Office. Can make fair and detail drawings, and possesses some knowledge of construction. References and testimonials of qualifications can be given.—Address, N. O. Office of "The Builder."

WANTED, by a Young Man, a SITUATION in a Builder's Office; can trace drawings, square dimensions, is quick at accounts, and willing to make himself generally useful. Competent to take the charge of a timber merchant's office. Salary moderate, not so much an object as permanent employment.—Address, ALPHA, Post office, Brighton.

A GENTLEMAN is desirous of an ENGAGEMENT in an Architect's office. He is a good draughtsman, both plain and ornamental, and can colour; can also make out specifications, and has some knowledge of quantities.—Address, G. C. L. 37, Gracechurch-street, City.

TO MASTER PLUMBERS AND BUILDERS.

A YOUNG MAN, understanding the three branches thoroughly—viz. Plumbing, Painting, and Glazing, is anxious for a permanent SITUATION. Any reference can be given required.—Address, A. Y. 41, Camden-street, Nottinghill.

TO BUILDERS AND OTHERS

A STEADY, active MAN, who has had nine years' experience, wishes to obtain constant employment as Carpenter, Joiner or Jobbing, at 4s. 6. per day. No objection to town or country.—Address, L. P. 3, Bolingbroke-place, Battersea.

TO BUILDERS, TIMBER MERCHANTS, AND OTHERS.

A RESPECTABLE YOUNG MAN, practically acquainted with bookkeeping, builders' accounts, and measurements, seeks a RE-ENGAGEMENT. Can be well recommended. Address, BETA, 21, Herbert-street, Great Cambridge-street, Hackney-road.

TO ARCHITECTS

AN Architect's Draughtsman, accustomed to fair, working, and perspective drawing, is open to an ENGAGEMENT.—Address, M. J. Office of "The Builder."

TO TIMBER MERCHANTS.

A YOUNG MAN, of business habits, is desirous to meet with a RE-ENGAGEMENT as FOREMAN or MANAGER in a general timber yard. Has been for seven years engaged in that capacity, and is well conversant with the duties of the same. Character unexceptionable, and can be well recommended by the firm he has just left. Security if required.—Address, G. W. 3, New Windsor-street, Uxbridge.

A S SHOP FOREMAN, GENERAL FOREMAN, or CLERK of WORKS. The Advertiser, with 20 years' practical experience, is open to a RE-ENGAGEMENT in either of the above situations. Satisfactory reference can be given as to capability, sobriety, and industry.

N.B. The trouble undertaken in taking out the quantities from architects' drawings, &c.—Address, prepaid, to A. A. A. Office of "The Builder."

TO LAND AGENTS AND SURVEYORS.

A YOUNG MAN, who will be leaving his present situation in April, wishes a RE-ENGAGEMENT as a Land Surveyor and Draughtsman. Salary a secondary consideration for references, address to F. F. S. T. 8, Grove, North Shields, Northumberland.

TO ARCHITECTS &c.

A DESIGNER, DRAUGHTSMAN, and good ARTISTIC COLORIST, OFFERS his SERVICES in the preparation of perspective views for finishing of working drawings, and the like, from the rough sketch. Terms moderate. Satisfactory testimonials can be sent, by addressing A. Z. 25, Bernard-street, Russell-square.

TO PLUMBERS

A YOUNG MAN wishes to BIND himself to a PLUMBER for a few years to learn the business; is a second-rate joiner, having been with one for some time; has no objection to fill up his time with other trade. Would require a small premium. Address, W. S. 1, Peter Mouse-street, Southwark.

TO MASTER PLASTERERS OR BUILDERS.

A SOBER single Man wishes to meet with an ENGAGEMENT in a respectable firm as FOREMAN PLASTERER. Capable of superintending any job; can model some good references can be had; will work if required; no objection to go to any part of the kingdom. Address, A. B. C. 10, can be known by a note to M. G. H. No. 8, Orrysstreet, Northroad, Liverpool.

TO ARCHITECTS

A GENTLEMAN is desirous of a RE-ENGAGEMENT as ARCHITECTURAL ASSISTANT. Apply by letter to W. P. (housekeeper), 38, Parliament-street, Westminster.

TO ARCHITECTS, BUILDERS, OR MASONS

A RESPECTABLE, steady Person (strictly temperate) wishes for an ENGAGEMENT as CLERK of WORKS or FOREMAN. Yard or other work. Has several years' practical experience in masonry, and the measuring of building. Age forty-five. Best of references can be given. Address, ALPHA 10, Devonshire-street, Sheffield.

A YOUTH having just left the Blue-coat School, his parents are desirous of placing him for six years as IN-DOOR APPRENTICE, either to a carpenter and builder, or any good business in that line, where he will be treated as one of the family. A moderate premium will be given. Address, A. B. 1, Lemon-street, Goswell-road.

A DRAUGHTSMAN (Engineering and Architectural and SURVEYOR seeks ENGAGEMENT anywhere for any period as sends, abroad or in country. Terms, two guineas per week.—Address, post-paid, Z. Z. at the Office of "The Builder."

TO ARCHITECTS AND BUILDERS.

AN ARTIST well established and accustomed to Architectural subjects, is open to ENGAGEMENTS for Tinting Drawings for Exhibition at the Royal Academy, or otherwise. Hearth and Stove Grates shown in the Drawings and the above Exhibition. Good taste introduced (at their own residences in the arrangement and treatment of accessories to Architectural Drawings. Terms moderate.—For further particulars, apply by letter only (post paid) to A. B. Z. Office of "The Builder."

TO BUILDERS in the locality of the HAMPSTEAD or GRAY'S-INN ROADS.—WANTED by a Young Joiner from the country, just out of his time, a JOB as an IMPROVER. Would object to either fetch or turn. Wages moderate.—Address, to C. S. 20, Commercial-street, Lisson-grove.

TO BUILDERS, PAINTERS &c.

THE Advertiser, having had the superintendence of workmen for two years, desires to be RE-ENGAGED as FOREMAN or otherwise, he is sober and steady, and is capable of taking charge and carrying on the business. Most satisfactory references as to character and ability. Address, prepaid, to Decorator, 7, Norland-place, Bayson-road, Kensington.

TO ARCHITECTS.

THE Advertiser, a neat and expeditious Draughtsman, competent to make working, finished, and perspective drawings, is open to a SITUATION. Salary moderate. Address, Z. A. Office of "The Builder."

A GENTLEMAN about to leave for Australia, and who has had considerable professional practice in ORNAMENTAL GARDENING, is desirous of DISPOSING of his PLANS and SPECIFICATIONS. Small advance required, but will be very advantageously combined.—Apply to A. B. 50, Mr. Bishop's, Newsagent, 1, Lilypot-lane, London.

REMOVAL — NOTICE.—Mr. W. CARSON begs respectfully to inform his friends and patrons, and all persons who are building, or are about to pull down or dispose of property, or are requiring, or likely to require, the services of an experienced and practical Surveyor, that he has REMOVED from Belvedere House, to 16, GRAFTON-ROAD, KENTISH-TOWN, where all business matters of a professional nature will meet with his usual prompt and practical attention. Plans, designs, specifications, and estimates, for buildings of every description, on moderate terms. Persons about to purchase or let property should and (as above) can obtain (at a moderate charge) every information, caution, and instruction needful to beginners in the above business.

*** Builders' work measured and valued with promptness and executive union very moderate terms, which, to the convenience of parties, may be sent through the post.—Grafton road, Kentish-town, near the Castle, March 25, 1854. Established 1826.

FASHIONABLE INDIAN-CARVED FURNITURE as presents it to our Majesty by the East India Company, consisting of cabinets, tables, pier tables, chairs, couches, settees, cabinets, flower-stands, tea and other tables, with Indian Parchment seats, all of most elaborate design and manufacture, may be seen at the Show-rooms of ARROW-SMITH'S, Decorators and Upholsterers to her Majesty, 61, New Bond-street.—Parquet flooring of any pattern.

CHURCH WINDOWS.—TO BE SOLD, FOUR GOTHIC-HEADED IRON-FRAMED WINDOWS, 11 feet by 2, glazed with ground glass, and stained glass borders, well wrapped, and in excellent state of building. May be seen at Messrs. FREWER and SON'S Warehouse, Chequer-square, Bury St. Edmund's.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 5, Thavies-inn, Holborn (between 1 to 3½ p.m.), or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

BUILDING LAND, with BRICK-EARTH, TO BE LET—TWICKENHAM MIDDLESEX. TO BE LET, on Building Leases, a valuable SITE for the Erection of Villas fronting the high road leading from Richmond Bridge to Twickenham, with extensive frontages to the existing high-roads and proposed new roads of approach, and hereditaments, together with the requisite Brick-ground. Plans may be inspected at the premises. Further particulars apply to Messrs. PALMER and SKITTLES, Solicitors, Bedford-square, or Mr. ATWOOD, Surveyor, Northampton-square.

SYDENHAM—BUILDING LAND TO BE LET for the term of 99 years. Most eligible plots of ground for Villa residences. Advances made if required.—For further particulars apply to Mr. C. C. HOOK, Land Agent and Surveyor, 5, Great Scotland-yard, Westminster.

BUILDING LAND TO LET, at very low ground-rents, for ninety-nine years, close to Regent's-park, and on the foot of Primrose hill, a few minutes' walk from the city station,—for third rate eight-roomed houses, for which there is a great demand in that locality, and would readily let or sell. There are some first-class well-planned and substantial private houses, semi-detached and detached, also shops, to be built to suit the taste of the intended occupiers.—For plans and particulars apply to F. EDGART, 6, Haverstock-terrace.

BUILDING GROUND, PUTNEY, adjoining the railway station, for private hous s two shops, and railway facing. TO BE LET, on Building Leases, the ground-rents. Land-tax redeemed.—For particulars apply to Mr. LEADER, on the Ground; or to Mr. T. H. CLARKE, Surveyor, 1, Old Palace-yard.

BERKSHIRE, READING, FOR SALE, by PRIVATE CONTRACT, the BUILDING LEASES, comprising valuable Plots of FREEHOLD BUILDING LAND, with the dwelling-house and premises thereon now occupied by Mr. Thomas Hedges, as a Nursery and Seedsman's Business, delightfully situate on the Bath-road, commanding extensive views of the Oxfordshire hills and a picturesque country, and within fifteen minutes' walk of the Great Western Railway South Lodge. Roads, sewers, and all the public improvements are completed. The whole of the land is well adapted for the erection of detached and semi-detached villas, and the Leases will be granted for terms of 80 or 99 years, at moderate ground-rents. Further particulars may be had of Messrs. WILLIS and WILSON, Solicitors, 11, Ely-place, London; of Mr. WM. WELDON, Solicitor, Maidenhead; or of Mr. HEDGES, on the Premises.

ISLINGTON, SHOREDITCH PARISH, DALSTON DISTRICT, and TURNHAM-GREEN.—FREEHOLD TO BUILD (the GROUND TO LET) upon, in Dalston and Turnham green, 200 years.—Apply to view to Mr. GREEN, Gravesend, Upper Holloway; HARRIS, opposite the Angel, Shoreditch; Queen's-road, adjoining Bellingham's Distillery, Dalston; PHILLIPS' Coachmaker, near Archibald's Corner, Holloway-road, Turnham-green; or Mr. D. HUGHES, 15, Gresham-street.—N.B. Populated localities: roads and sewers made.

BUILDING LAND at PUTNEY, within three minutes' walk of the Putney Railway Station, TO BE LET, for the term of ninety-nine years, suitable for villa or other residences. Advances made if required. Further particulars of Mr. BROOKS, Solicitor, 13, Great George-street, Westminster, where plans of the estate may be seen.

FREEHOLD BUILDING LAND at TWICKENHAM.—8 acres, situate near the Church and Railway Station, with 1,600 feet frontage to Kneller-road, and with private access to the Park. Planned and divided land adapted expressly for the erection of villas, and will be LET on Building Leases, or SOLD in lots, to suit purchasers.—Apply, for plan of the ground and further particulars, to JAMES CLARK, 20, Billiter-street, London. N.B. About three acres of the ground consist of a productive well-stocked garden, which is a large and valuable fruit property.

ON THE COAST of HAMPSHIRE.—TO BE LET on BUILDING LEASES LAND on the shore of the Needles, with Private Road, commanding magnificent sea view of the Channel from Southsea to the Needles Lighthouse for 15 miles, and the Isle of Wight. Also a farm-house, farm-yard, and several cottages, now in the occupation of Mr. Hall, in the parish of Lymington. Apply to Mr. WM. ROSSE, Steward of the Estate the Grange, Alresford, Hants.

TO STONEMASONS.

TO BE LET, from Lady-day next, an excellent HOUSE, with shopboards, cisterns, yard, &c. conveniently situate, adjoin ne the Quarry, in Bilsworth, in which a considerable quantity of stone has been lately raised during many years. Inquire of Mr SIMPSON, Pottesbury, near Stony Stratford.

TO LAND-OWNERS, ESTATE AGENTS, AND OTHERS.

FREEHOLD or COPYHOLD (to be enfranchised) LAND—WANTED to PURCHASE, FIFTEEN ACRES, not heavily timbered, but with a few acres of old oak coppice, and a fair proportion of Park or rich pasture. Part or the whole could be taken. Title must be good, and the land free from incumbrance. Letters, with particulars, to be addressed to JOSEPH JENNINGS, Esq. Architect, Kingsland-road, near Shoreditch, not later than the 31st inst. Letters to be delivered free. Land Agents need not apply.

HIGHBURY NEW PARK.—FREEHOLD BUILDING GROUND TO BE LET, in the most healthy, commanding extensive views. To persons desirous of erecting a site for the erection of villa residences, this affords an excellent opportunity. Plans may be had, either at the Office of the intended Architect, as per Regulations. For further particulars apply to Mr C. HAMBRIDGE, Architect, 7, Edmund-street, Liverpool.

BRIGHTON.—A most eligible SITE for TWELVE HOUSES part fashionable, TO BE LET, on building lease, a moderate ground-rent. Two-thirds of the amount will be advanced on mortgage.—Apply at the Offices of GEORGE MORGAN, Pall, 3, Clement's-lane.

FREEHOLD BUILDING GROUND at NORWOOD, SURREY.—For SALE, nearly TWELVE ACRES, about half a mile from the Railway Station, in a good situation; suitable for a building speculation.—Apply to Mr. W. CORNELIUS, Estate Agent, No. 2, High-street, Newington-butts; or to Mr. PEACOCK, No. 11, Coburg-place, Kennington-lane, Vauxhall.

REIGATE.—TO BE LET, on Building Leases, small and beautiful SITES for FIRST-CLASS VILLAS, in immediate contiguity to the railway station and town, and within a few minutes' walk of the London Inns. The most eligible for the erection of villas, with unbroken views of the surrounding country, and the choicest aspects, are now offered. For particulars apply to Messrs. PAGE and KERR, Architects, Land Agents, and Auctioneers, Reigate and Horsham.

HARROW FREEHOLD LAND, with 2,400 feet to principal road frontage, to be SOLD or LET, in building plots, on moderate terms. Advances made if required to respectable builders.—Apply to Mr. WILLIAM THOMPSON, Architect, Conduit-street West, Westbourne-terrace.

BROCKLEY-HILL PARK ESTATE, FOREST-HILL. TO BE LET, on Building Lease, or SOLD, several eligible lots of BUILDING LAND, commanding a most extensive prospect, rivalling that seen from the Crystal Palace. A site has been selected for a church on the summit of the hill, in the centre of a proposed ornamental garden of nearly six acres in extent. The roads, gravelled, and trees now forming. Advances will be made if required.—For Plans, &c. apply to GEORGE MORGAN, Esq. Architect, 8, Chancery-lane.

RICHMOND—ST. MARGARET'S, on the Road, facing the Thames, opposite Asgill's and Gardens. This most eligible site, situated between Mr. Walter Tullamy, and Mr. Bransby Cooper, is to be offered for sale by auction, on the premises, on WEDNESDAY, the 29th inst. at 12 for 1 precisely. The land is now in lots, and will be sold in such quantity of land as may suit a purchaser. To be viewed previously by cards only, which may be had of Messrs. HARRISON and LEWIS, No. 12, New Broad-court, Lothbury, and of GEORGE MORGAN, Esq. Architect, 8, Chancery-lane.

TO BUILDING LAND OR BUILDING SOCIETIES.

TO BE LET or SOLD, about 350 yards of FRONTAGE, in a beautiful situation, less than 50 miles from London, and within a few minutes' walk of a station, where cottages are wanted. Any lot as to size that may be required, and every attention will be paid to suit purchasers. Plans may be seen at the Offices of Messrs. HARRISON and LEWIS, No. 12, New Broad-court, Lothbury, and of GEORGE MORGAN, Esq. Architect, 8, Chancery-lane.

GRAVESEND CLIFTON BATHS—TO BE LET, for one or more years, and completed, the HOUSE and PREMISES known as the CLIFTON BATHS, Gravesend, consisting of the Dwelling-house, with eighteen dressing-rooms; a tepid bath for ladies, 50 feet by 16 feet, with eight dress-rooms; a cascade and plunging bath, six feet deep, with dressing-rooms; hot, cold, and shower baths, and in the whole end for river bathing.—All further particulars may be had of Messrs. HARRISON and LEWIS, Solicitors, and Tenders for hiring the same may be sent to our Office on, or before the 1st of April next. Plans and particulars will be left at the Baths to inspect the same, and parties tendering can meet at the Baths by appointment by

SOUTHGATE and SON, Clerks.

CLAPHAM PARK.—TO BE LET, in the most desirable part of Clapham-park, a few PLOTS of FREEHOLD LAND, having a southern aspect, and a depth of 150 feet. Particulars may be had apply to Mr. J. T. KNOWLES, 1, Basinghall-street, City.

BUILDING GROUND in the City, between Watling-street and Cannon-street, TO BE LET, for a term of years, a valuable piece of land, having a frontage of Thirty Feet Two Inches and a half to Watling-street, and a depth of One Hundred and Seventy-two feet and a half to Cannon-street, where the frontage is Twenty-nine feet and a depth of One Hundred and Three feet. The situation is adapted for warehouses of a first-class character, as they can be worked from Cannon-street, or let free from the APRIL next, and a shed now in the Carpenters' Hall, Fenchurch-street, where further particulars may be obtained.

TO BE LET, extensive PREMISES, within two doors of Regent-street, consisting of two large Ranges of Workshops, 50 feet by 40 feet each, and well lighted, for a long or short period. Apply to Messrs. DRUCE and CO. Baker-street.

TO BUILDERS AND OTHERS

TO BE LET, on Building Leases, several PLOTS of FREEHOLD LAND, in that healthy locality, Hollowey, two or three minutes' walk from the Archway Tavern; omnibuses pass every four or five minutes to all parts of town; situated in St. John's-road, where houses let as fast as built. For particulars, apply to Mr. H. WITHERS, No. 9, Goodge-place, Tottenham-court-road, of the Freeholder.
